A photographic tour of two hundred miles of the Maine forests.  
BY THOMAS SEDGWICK STEELE.  
WITH SIXTY ILLUSTRATIONS. The most artistic book of the season.  
**EDITORIAL NOTICES.**  
"It is one of the handsomest books of the season, fully illustrated by drawings from the author's own pencil, and from his photographs."—*Charles Dudley Warner.*  
"The book is written in the best of temper, in a fresh and breezy style, and with a zest that marks a true sportsman."—*Boston Journal.*  
"A highly elegant book, whose author needs no introduction to the lovers of literature generally."—*Hartford Times.*  
"Written with a modesty which commends itself to the reader at once, and with an enthusiasm and intelligence that will doubtless serve to entice other lovers of the fishing rod into this beautiful region."—*Springfield Republican.*  
"The word that describes this book by an Hartford author, is—charming."—*Christian Secretary.*  
"No lover of out-of-door life will fail to appreciate it. It is issued in better style than any other such book which we have seen."—*The Congregationalist.*  
"It makes one feel as if one must go over the same route."—*The Religious Herald.*  
"The publication of the book is most opportune."—*Bangor, Maine, Whig.*  
"It furnishes as delightful reading as any tourist can desire."—*Boston Herald.*  
"The author holds a facile pen. The pages are fresh from the heart of nature, and the pleasures are the pure and simple ones that never lose their charm for those who enjoy companionship with natural beauty."—*Providence Journal.*  
"It opens a new and attractive region and deserves a place in every gentleman's library."—*Hartford Evening Post.*

## GUNPOWDER.

DUPONT'S  
RIFLE, SPORTING AND BLAST-  
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

## DUPONT'S DIAMOND GRAIN.

Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

## DUPONT'S EAGLE DUCKING.

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

## DUPONT'S EAGLE RIFLE.

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

## DUPONT'S RIFLE, FG, "SEA SHOOTING."

FFG and FFG. The FG for long range rifle shooting; the FFG and FFG for general use, burning strong and fast.

SPORTING, MINING, SHIPPING, AND ELASTIC POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any regular grain or proof. Agents in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

## THE HAZARD POWDER COMPANY

MANUFACTURERS OF

## GUNPOWDER.

## Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

## Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

## Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

## Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF. MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Henry C. Squires, No. 1 Cortlandt street, New York, is not, and never has been an agent of this company.

# FOREST AND STREAM

NEW YORK, THURSDAY, AUGUST 5, 1880.

OUR MIDSUMMER NEW YEAR.—The register at the head of this page marks the first number of a new volume, and this journal to-day enters upon the eighth year of its publication.

We are duly gratified at attaining this maturity, and express our satisfaction in a substantial manner by a change for the better in make-up and the adoption of a superior grade of paper. These improvements, with the others which have been introduced within the last six months, now make the FOREST AND STREAM a model in its mechanical execution.

If we may credit the many kind words of our friends and the evidence afforded in the decided indorsement of a stanch patronage, the paper is also growing apace in the value of its contents.

That the FOREST AND STREAM has succeeded in adapt-  
ing itself to the wants of the gentlemen sportsmen of  
merica, and is in turn supported and indorsed by them,  
highly satisfactory, and is complimentary to all con-  
cerned, for it is proof positive of two things—first, of  
the wisdom of the management of the paper, and second, of  
good taste of the sportsmen.

ADVERTISEMENT.—Advertisers are respectfully re-  
sented, in all cases where it is possible, to send in their  
advertisements by Saturday of each week before the issue  
which they wish them to appear. We cannot receive  
advertisements, nor make changes in those already  
under, later than Tuesday morning.

—The portrait of Greene Smith, which we had hoped  
publish this week, has been unfortunately delayed,  
and we are, therefore, reluctantly compelled to defer it  
till our next issue.

### THE NEW GAME AND FISH PROTEC- TORS.

SEVERAL amendments to the game law of the State  
of New York were proposed last winter, but only  
one act among them received the signature of the Gov-  
ernor and became a law. As a rule, changes in our game  
laws are too frequent to be thoroughly learned by the  
people at large before they are modified or entirely su-  
perseded by others, and in many cases this frequent tin-  
kering is a worse evil than no law at all, causing many  
people to despair of comprehending or remembering the  
ever-changing clauses of the laws, and almost rendering  
it necessary for a sportsman to carry a copy of the Re-  
vised Statutes with him into the field before he dare  
wet a line or pull a trigger. The practice of having dif-  
ferent laws or different close seasons for fish and game  
in adjoining counties, is often the cause of much un-  
witting violation of the law by those who are ignorant of  
such difference; but the main trouble has been not so  
much in the law itself as in its lack of enforcement, de-  
pendent, as it has been, upon clubs, societies and in-  
dividuals, who were either actuated by public spirit or a  
desire for gain, former laws having a provision allowing  
the informer or prosecutor to receive a portion of the  
penalty imposed upon the transgressor—a clause which  
rendered the complainant liable to the suspicion of mer-  
cenary motives, and often invested the offender with the  
sympathy of his neighbors as a persecuted man.

It is a fact well known to all who have watched the  
workings of the game laws, that the local constables are  
not to be depended upon to prosecute their friends or  
townsmen for an offense which is to them a venial one,  
and in the eyes of too many others one to which no  
moral guilt is attached.

It is to be hoped that the officers appointed under the  
new law will prove to the poachers and unprincipled  
marksmen that the game law is not a dead letter. This  
law, which was very carefully framed by Mr. John E.  
Devlin, of New York City, provides for the appointment  
of eight officers, to be known as Game and Fish Protec-  
tors, who are to have full power to enforce the laws and  
arrest all offenders, and in order to secure a good class of  
men in these positions, no share in the penalties is of-  
fered, but instead of this a salary is given. We under-  
stand that the appointments are made, but the list has not  
reached us yet, and with the right men, who will do their  
duty fearlessly, there is a prospect that the laws which  
have been defied so long will now be enforced.

These protectors will be charged with the duty of en-  
forcing all statutes for the preservation of moose, deer,  
birds and fish, or other game laws, and to bring, or cause  
to be brought, actions and proceedings in the name of the  
people of the State, against all offenders. They are to be  
appointed by the Governor, and will hold office for three  
years from the date of their appointment. Section 1  
provides that the district attorney of any county in the  
State shall, upon the request of any one of such protec-  
tors, commence and prosecute to termination, action  
against any person reported to him by such protector to  
have violated any of these laws. Section 2 provides that  
any net, pound, or other means or device for taking fish  
which is set in violation of existing laws, is declared a  
nuisance, which may be abated by any citizen, and the  
protectors, if applied to, must seize and remove it. Sec-  
tion 3 gives the protectors authority to arrest persons  
violating any of the provisions of any statute now or  
hereafter enacted for the protection of fish and game  
without the formality of a warrant.

For these services the protectors are to receive a salary  
of \$500 per year, and traveling expenses not to exceed  
\$250.

We hope for a better enforcement of the existing laws  
under this new regime, and shall watch it with great in-  
terest, and think that at least one of these protectors  
should be located in New York City, to watch the mar-  
kets, which are the great inducement to the market  
poacher to violate the law. Destroy his chance of profit  
and his desire to shoot or net illegally is gone, and we  
do not think that it would be an exaggeration to say

that one-fourth of all fish and game which is unlaw-  
fully killed within the settled portions of the State finds  
its way to the markets of the great city.

### COL. BODINE'S IRISH VICTORY.

THE return of Col. Bodine and his explanations of  
his work and the work of his team in Ireland  
adds the emphasis of an official sanction to what the  
FOREST AND STREAM has already given in the regular re-  
ports of the match. With more details about the  
weather conditions, the effort of the six men who added  
another defeat to Irish rifle history only appears the more  
brilliant. On such a day the score of the Irish team  
shows that the men have fully mastered the problem of  
wind judgment, while on behalf of the Americans it  
must be said that they are entitled to a credit fully up to  
that accorded any previous team.

The Irish riflemen, more than at any of the preceding  
matches, had a clear anticipation of success; they had,  
by their successive defeats, arrived at a very distinct un-  
derstanding of the strength of the American team shoot-  
ers. Every little incident and contributory element of  
strength had been carefully gauged, and such sharp  
watchers as the Rigbys, Milner and Fenton had taken in  
the points which in their opinion helped to the line of  
victories which the Creedmoor men have enjoyed. The  
Americans have not been reticent at all in proclaiming  
the secrets of their victories. Everything has been set  
out in the plainest of terms, so that American riflemen,  
while leading the world, have not made a mystery of  
their craft. For a time the Irish riflemen did not heed  
the lesson. They did not seem to comprehend the propo-  
sition that the strength of a well organized team is far  
ahead of the mere total of the strength of its individu-  
als. The old muzzle-loaders, once the weapon beyond  
comparison at long range, was clung to in spite of the  
overwhelming proof of each match that the American  
marksmen had united accuracy with convenience in their  
breach-loaders. The proof of their error was too strong  
for the most conservative of Irishmen or Englishmen to  
withstand, and with a prospect of an unlimited series of  
annual whippings before them if they persisted in their  
antiquated methods, the Messrs. Rigby decided on a  
change. First came the change in the position when  
firing, in the adoption of the back-position, which is now  
the universal position for long-range work. In the sev-  
eral years of quiet which have elapsed since their last  
match at Creedmoor, the Irish have been hard at work,  
and when the invitation of this spring was sent out  
they were prepared to reap the victory they anticipated  
from Irish labor and American listlessness. But while  
the shooters on this side the water had done little or  
nothing in the way of showing their skill, they had lost  
none of their cunning, and with a good reasoning of that  
indefinable element—luck—another leading score was  
put on record.

Col. Bodine may do a good service for riflemen or, this  
side by giving, in his written and formal report, a careful  
survey and estimate of the several points in which the  
Irish riflemen have added to their strength, and wherein  
our chances of continued success now lie. One thing  
is certain, that from this time on none but the most  
perfectly organized teams should be permitted to go  
forth as representative ones. From what Col. Bodine  
says, and from what he significantly omits to say, it is  
pretty certain that he had much crude strength and much  
discordant material in his team; but he had the back-  
bone and the good sense to determine, when it came to  
a choice between discipline and defeat, to choose the  
former. The best the discomfited ones can say is that  
he might possibly have had a stronger team. It is hardly  
probable that he would. The good men of his squad did  
all that was expected of them, the weak men more, and  
and so the fight was won. *A priori*, we should say that  
the omission of Capt. Jackson from the shooting six  
was a mistake. There may have been some element of  
partiality and personal feeling entering into the omis-  
sion, as is claimed in some quarters; but it must be con-  
ceded that the right of judgment was given to Col. Bo-

dine, and that this fact was known to all members of the team long before they began shooting for places on the team. The proper feeling among all the team men should have been a complete abnegation of self. They were sent to conduct a campaign on behalf of America generally, and this object having been gloriously accomplished, it will be very difficult indeed to make the people of America believe that there was any very grievous error committed by Col. Bodine in making up his team. Somebody's corns may have been stepped on, but the public cannot be expected to cry therefore. The late American team leader may not be an immaculate Solon, but he certainly has been a creditable commander, and those for whom he fought and won will not be very curious to go behind the returns. If any positive injustice has been done any one, the FOREST AND STREAM will do all in its power to expose such ill-doing; but our columns cannot be made the vehicle of indefinite abuse. Until somebody can show us that Col. Bodine did not win the match at Dollymount, we must be excused in our belief that it was the men who shot and not the men on the reserve who carried the day.

### THE ANTHRACITE DECLINES.

THE challenge to the Anthracite by the Herreshoff Manufacturing Co., of Bristol, has been declined by the agents of the Perkins system on the grounds of "the different size and power of the yachts." We are not aware what claims Mr. Perkins' agents have to being considered engineers, nor that they make any such, but we do know that the excuse offered for not meeting the challenge is a very frivolous one. Everybody knows by this time that there is nothing in America slow enough to make a race in speed with the Anthracite. The working speed of the latter seems to be something like six miles, and eight miles is about the best she can do. Our steam barges do better than that; consequently, a race between the English steamer and anything in America was out of the question. But in the test of economy the difference in hull of Leila and Anthracite has no influence whatever, as the engineers aboard the latter could probably have informed the agents. It is a question of producing one horse power at the least consumption of fuel, apart altogether from what the resultant speed of the vessels may be. For that matter, they might both have been tied up to the dock during the trial without in the least violating the deductions. The only reasonable condition the Anthracite could have demanded would have been equality in the efficiency of propellers, so as to eliminate differences on that score.

The best recorded performance of the Perkins system is 1.6 pounds, whatever else the originators of the fairy tales now floating about may assert. We have before us the record of 1.9 pounds for a common collier, with ordinary cylindrical boiler and common engines and steam about 80. Given 150 pounds pressure instead, a well-designed engine, and the careful stoking and selected fuel used in test trials, and there can be no question but that the collier would have equalled the Anthracite in economy, to say nothing of steaming around her in circles, which is an irrelevant matter. The Babcock & Wilcox, as well as many other sectional boilers, produce steam inside of two pounds at comparatively moderate pressure, and we have good reason for stating that the Herreshoff coil is quite as economical as the Perkins boiler, besides being far better suited to stand the results of expansion and contraction, easier to repair, cheaper in first cost, lighter and under better control, the range of the gauge being less than a fifth of that even experienced hands aboard the Anthracite require.

It is to be regretted that the Anthracite has refused an excellent opportunity of proving what has been crammed into the space writers of our esteemed daily contemporaries. Her refusal is clearly a case of funk. The British government, in search of just such a boiler for torpedo and launch service, has given the Herreshoff coil the preference, and any one who knows how hard it is for a body of Englishmen to accept an American idea will be able to appreciate this at its full value.

The United States government will probably appoint a board to examine the claims of the Perkins system. We trust competent engineers will be put on the board, not rusty, old time skippers. Let the board be composed of men who know enough to detect the difference between clap-net and facts, and we warrant the Perkins system will show up only a clumsy adaptation of ideas much better carried out by others.

ANOTHER PENNSYLVANIA ASSOCIATION.—The sportsmen of Butler, Pa., have organized the Butler County Association for the Protection of Fish and Game, the officers for the ensuing year being as follows: President, Alex. Russell; Vice-President, Clarence W. Coulter; Treasurer, E. D. Colbert; Secretary, E. W. Vogley. Directors—Chairman, John N. Muntz; Secretary, George W. Zeigler; John S. Campbell. This club, like others recently formed in Pennsylvania, has abundant opportunity for systematic and definite work.

### BAY SNIPE SHOOTING.

#### 1.—NOMENCLATURE.

"—all our proudest lore,  
Is but the alphabet of ignorance."

MUCH has been written about the confusion which exists in the local names of our game birds and animals, and all to little purpose. Notwithstanding the gallons of ink that have been spilled, and the quantities of pens that have been spoiled in urging a general reform in local nomenclature, no steps have been taken looking toward the adoption of the simple and characteristic English names which ought to come into use throughout the whole shooting community. A ruffed grouse is still a "pheasant" in the South and West, and a "partridge" in the North and East; and while the "gopher" of the South is a tortoise, the "gopher" of the trans-Missouri region is a little rodent nearly allied to the squirrel.

It is evident that we cannot hope in our day to have the language of science come into general use among sportsmen, and, on some accounts, it is not desirable, at present, that this change should take place; for, in many departments of biology, the scientific nomenclature is only provisional and is constantly changing, and a name employed to-day is obsolete to-morrow. These changes, of course, are to be kept up with only by the specialist. It is not possible that the general reader should follow them.

What we now need are simple English appellations for our game animals—names which shall recommend themselves to everyone, and shall thus force themselves into general favor at once. The shore gunners have such names for many of our bay birds and ducks, and the humble bayman has in many cases been most happy in his namings, as there has always been some reason for homely appellations. He seizes some salient and characteristic point about an animal, and names it from that peculiarity. If we are to instruct and raise a higher standard of sport—and this, as sporting writers, is an aim that we shall not lose sight of—we must dot down our experiences in a way that can be readily understood by all, and preach our sermons with "simplicity" for our text. Therefore, we shall begin by giving a list of the birds worth shooting commonly called "Bay Snipe," and, as far as possible, the names of each species used in the districts where they are shot. By this, the sportsmen of our coast, from New Hampshire to North Carolina, will be able to distinguish the same bird under its guise of many local *aliases*, and the list will act as a key for the subject on which we are about to write. The following is such a list of birds shot over decoys or stools, including the waders and plovers commonly called

#### BAY SNIPE.

Long-billed curlew (*Numenius longirostris*), sickle-bill; sabre-bill, Sickle-bill is the name almost universally used. It is simple and descriptive.

Hudsonian curlew (*Numenius hudsonicus*), Jack; short-billed curlew. The Long Island baymen term this bird the Jack, while to both the eastward and southward he is more often called the short-billed-curlew.

Esquimaux curlew (*Numenius borealis*), fute; doe bird; little curlew. In the Eastern States it is called the doe bird; on Long Island the fute, and in parts of the South the little curlew. The origin of the first two names we have failed to ascertain; the third speaks for itself.

Black-bellied plover (*Squatarola leucellus*), black-belt; bull-head; beetle-head; ox-eye; bottle-head; pilot. On Long Island this bird is generally known as the black-belt, on account of the black markings of its plumage. The young in August are, however, gray on the belly and are often mistaken for a distinct species. In New Jersey and Pennsylvania it is called both bull-head and beetle-head, and also, in the latter, ox-eye. On the coast of Virginia, about Cobb's Island, the name of pilot has been given, as it is always seen leading the large flocks of birds which the rising tides drive from the shoals and oyster racks, and it is supposed to direct the flocks "to pastures new." This, however, is not the case. It is the fastest flying bird of all the bay snipe, and it cannot fly slow enough for the other species.

Golden plover (*Charadrius fulvus* var. *virginicus*), golden back; green back; frost bird; whistling plover; bull-head. On Long Island and to the eastward it used to be known as the frost bird, so called on account of its appearance at the time of the early frosts in autumn, but of late years it has generally been called the golden back. On the New Jersey and Delaware coasts it is termed the green-back.

Great marbled godwit (*Limosa fedra*, marlin; humility; brown-back; straight-billed curlew. Known along the seaboard, from Maine to Maryland, as the marlin, though occasionally called the humility or humilit, which name has also been given to the upland plover. On the coast of Maryland and Virginia it is known as the brown-back. In New Jersey it is sometimes called the straight-billed curlew.

Hudsonian godwit (*Limosa hudsonica*), ring-tailed marlin; white-tailed marlin; humility; Virginia woodcock. Generally known everywhere as the ring-tailed marlin, so called from the white band crossing the tail feathers. In parts of New Jersey known as the Virginia woodcock.

Semi-palmated snipe (*Tringus semipalmatus*), willet; marbled willet. Usually known as the willet, on account of its cry.

Tall-tale tattler, or snipe (*Totanus melanoleuca*); yelper; big yellow-legs; great yellow-shanks; tall-tale tattler; stone-snipe; large cucu; willet. Familiar to all sportsmen as the big yellow legs; in parts of New Jersey called the willet; on Long Island and on the upper coast of New Jersey, the yelper, on account of its piercing notes.

Yellow-shanks tattler or snipe (*Totanus flavipes*); yellow legs; little yellow legs; lesser tall-tale. Known everywhere as the yellow-legs.

Red-breasted-snipe (*Macrorhamphus griseus*); dowitch; dowitcher; quail-snipe; brown-back; grey snipe; driver. On Long Island and the northern coast of New Jersey called the dowitch;

South New Jersey, Delaware, Maryland Virginia and North Carolina, the brown-back.

Turnstone (*Streptopelia interpres*); calico-back; brand bird; chickling; cleare; and runner; horse-foot snipe; beach bird. In Virginia, Maryland, Delaware, Southern New Jersey, the calico-back, on account of its reddish brown mottled colored back; Northern New Jersey, the horse-foot; Long Island and to the eastward, the brand bird; the young on the New Jersey coast are called beach birds.

Red-breasted sandpiper (*Tringa canutus*) robin snipe; knot; ash-colored sandpiper; grey-back; white robin snipe. Generally known everywhere on Long Island and New Jersey as the robin snipe, so called in the spring, as its brown plumage resembles the red-breasted thrush, or robin. In September in the South, it is called both grey back and white robin snipe.

Pectoral sandpiper (*Tringa maculata*); krierker; meadow snipe; fat bird; short-neck; jack snipe; marsh plover; grass snipe; robin snipe; red-back. On account of its creaking, shrill cry, it is called the krierker on the Northern New Jersey coast, but further south it changes its name to short-neck and fat bird. On the inland meadows of New Jersey it is known as the robin snipe and meadow snipe. On Long Island it assumes several of the above names. It is said to never stool, but we have seen it do so occasionally.

Red-backed sandpiper (*Tringa alpina* var. *Americana*); black-breast; black-breasted plover; winter snipe; red-back. Known on the coast from Maine to Florida, its most common name being the black-breast.

Long-legged sandpiper (*Actropalana himantopus*); still; bastard dowitch; bastard yellow leg; wood snipe; blind snipe; frost bird; peep; drum-stick. On Long Island it is called the bastard dowitch, and on the Jersey coast, the blind snipe.

The above list comprises the different varieties of bay snipe that are worthy of the sportsman's aim. In addition to these there are the small plovers, called ring-necks, bench-snipe and surf-snipe, and the tiny sand pipers, such as the ox-eyes, sand-snipe, shore birds and peeps, excellent when roasted, but only fit for little beginners to pop away at.

THE BUCKS COUNTY ASSOCIATION.—A game association has been organized in Bristol, Pa., under the name of the "Bucks County Game Protective Association." Its object is the rigid enforcement of the game law in the townships bordering on the Delaware River, comprising the section between Philadelphia and Trenton. John Burton, of Tullytown, is President; George A. Shoemaker, of Bristol, Secretary; Cornwell Woolston, of Emille, Treasurer; Arthur Dorrance, Charles E. Scott, W. D. Harned, Robert W. Rogers, G. W. Kirk, M. D., Amos B. Headly, Edward S. Stackhouse, and Joseph S. Hibbs, constitute a Board of Directors. The admission fee is fifty cents, each member pledging himself to pay such necessary assessments for police, etc., as may be levied from time to time by the directors. Although the club was organized so lately as June 29th, the membership fees alone are ample to run it for the present season. Game constables were placed on woodcock ground on July 1st, and did good service up to the 5th inst. The reed and rail marshes and quail and rabbit grounds will be duly watched until the opening day. Much good has heretofore been done in the vicinity of Bristol by individual effort, and this organized action cannot fail of success. Gunners and farmers freely tender their cooperation. The officers and directors of the new association are thorough business men, some of them very wealthy, and all energetic. We hope that they may capture and punish some of the pot-hunters and self-styled sportsmen from the adjacent cities.

CREDIT WHERE CREDIT IS DUE.—In our issue of May 6th we published a description of Grand Falls, N. B., concerning which that accomplished author, Mr. Chas. Lanman, writes to us as follows:—

One of your correspondents prints some information about the Grand Falls of New Brunswick. I presume he means those of the River St. John, as he does not seem to know anything about the Falls of the Nepisiguit. If that is so, let me inform him that he has not exactly made a discovery. The Falls of the St. John were described in one of my books as far back as 1848; and in 1857 I published large woodcuts of them in the London *Illustrated News*, which *Harpers's Weekly* copied, locating the scene in Maine and passing it off as original.

I notice also that another of your correspondents thanks Mr. R. T. Grease for a copy of Washington's letter on bloodhounds. The original letter came into my possession many years ago, and I printed a copy in the London *Illustrated News*, and also in the New York *Evening Post*, so that I can testify to the accuracy of the copy printed by you.

It was once, and it may be now, the rule of the London *Times* to consider all news unpublished which had not appeared in its own columns, and sometimes acting on this principle with great arrogance, but with imperturbable gravity, it would publish matter that had appeared in all the other papers a fortnight before. In its own special field, the FOREST AND STREAM acts on the same rule, holding that no angling resort, no hunting ground, no curiosity of sporting literature has been published until contained in its own columns, and this rule it acts upon, even in describing resorts which have already had a place in such widely circulated books as those of our accomplished correspondent. This new delving in the "old fields" detracts nothing from the credit of those who have worked there before us. Indeed, we have on our desk now something that has three times been published to the world; first, three hundred years ago in Latin, then in English black letter, and again on a steam press in modern type, and this we propose to put into print for a fourth time.

We should add that the correspondent who sent us the Washington letter copied it from what he believed to be the original manuscript, bought in Washington by Mr. John Dale, and now in that gentleman's possession.

Mr. Lamson's very readable sketch, published in this issue, forms one of the chapters of a forthcoming book by that author.

**AMERICAN ARMS ABROAD.**—The recent continued depression in the Birmingham gun trade has caused great anxiety among English manufacturers, and they have memorialized the government for assistance. The result of their petition has been that the government has decided to issue large orders for guns and rifles within a short time, and thus to give substantial aid to the gun-making industry.

The Boston *Daily Advertiser* makes use of this state of things as a text for a very sensible discourse on the importance of the arm-making industry in this country, from which we extract the following:—

The principal reason for this depression in the English gun trade is that American manufacturers have been able to obtain the foreign customers that were formerly supplied by the English. The Turkish government, although desirous of retaining the friendship of England, saw that the superior arms and ammunition made in this country were essential in order to make the most effective resistance, and therefore gave to New England the trade that formerly would have been given to old England. The Providence Tool Company contracts for 605,000 Peabody-Martini rifles were given—a contract which brought to the company between nine and ten millions of dollars. The Winchester Arms Company, of New Haven, obtained large contracts for arms and cartridges, and millions of cartridges were also purchased from the Union Metallic Cartridge Company of Bridgeport. The total amount expended in this country by the Turkish government for munitions of war for use in its recent struggle with Russia is estimated at over \$20,000,000.

In case of great emergency the private workshops of this country could daily fabricate thousands of rifles and millions of cartridges; these articles could be supplied much faster than troops could be found to use them.

The valuation of the national armory and arsenals and the government property at those places amounted, in 1877, to \$40,000,000. At the Rock Island arsenal there has been spent, up to December, 1876, \$5,500,755.42, and a further expenditure of \$2,530,000, it is estimated, will be required to complete this arsenal, exclusive of the necessary machinery and shop fixtures. Would it not be better to sell these government manufacturing establishments and apply the proceeds to the purchase of the needed armament for sea-coast defense?

**A SUGGESTION FOR KENNEL CLUBS.**—In the British Islands are thousands of dog fanciers who breed dogs with the hope of producing animals of such superior merit as eventually, in one way or another, to bring in not only a return for the expense of their rearing, but a handsome profit beside. An English contemporary notes that only a very few of these breeders ever succeed. To establish a strain which shall show a distinct family type of excellence requires a large kennel and long continued care and expense. One-dog breeders cannot succeed in originating strains. It is suggested that instead of so much misplaced and fruitless, because inadequate, effort in this direction, some of the larger kennel clubs provide themselves with the requisite number of animals, and then, under the supervision of a select and competent committee, carry out the experiments which shall develop by long and judicious management the strains possessing the approved qualities. In this way, also, many of the mooted points as to inter-breeding, etc., may be satisfactorily set at rest.

**SALMON IN CALEDONIA CREEK.**—On account of the Governor's veto to the annual appropriation bill for the New York Fish Commission, there was not money enough to do all the work, and to cut down expenses the ponds of quinnat, Atlantic and land-locked salmon, which had been raised at the State hatchery at Mumford, were turned loose in Caledonia Creek, where the fishermen are catching them. These fish were from one to three pounds in weight, and very valuable for breeders, and it is much to be regretted that such a course was rendered necessary.

Surely the good work done by the New York Fish Commission is worthy of being continued, and it is to be hoped that the Governor will reconsider his veto at the earliest opportunity.

—The *Utica Game and Fish Protective Association* having formed itself into a strong body of energetic workers, is now endeavoring to secure the organization of local clubs in the adjacent towns of Camden, Rome, Paris, Sangerfield, Boonville and Trenton; and also to secure in other smaller towns a representation by membership.

We are pleased to learn that the new association is increasing in numbers and in strength.

—The officers of the Blooming Grove Park Association for the year ending July 5th, 1881, are: President and Director, John McGinnis, Jr.; Vice-President, W. F. Wharton. Directors: F. Peabody, C. A. Grimes, L. Snyder, C. H. Read, T. C. Clarke, R. L. Ward, M. B. Brown, D. B. Moulzilly; Secretary, T. W. B. Hughes. The trustees for the new issue of bonds are: P. M. Wilson, Hamilton Busby, John Arey.

## The Sportsman Tourist.

THE THOUSAND ISLANDS AND DOWN THE ST. LAWRENCE.

BY CHARLES LANMAN.

TO an old traveler, the idea of revisiting Lake Ontario, the Thousand Islands and the valley of the St. Lawrence is replete with pleasant anticipations; and aside from their own peculiar attractions, Niagara and Montreal cannot but be affectionately remembered, because of the world of beauty which lies between them. Of the five great inland seas (which should belong exclusively to the United States), Ontario, although the smallest, is not one whit behind its fellows in its achievements and possessions. Superior may well be proud of its matchless proportions, of its copper mines, pictured rocks, Royal Island, Thunder Cape, beautiful tributaries and the Sault Ste Marie; Michigan may boast of its Green Bay and great city of Chicago, and claim that no other waters of the globe are hemmed in by a more magnificent domain; Huron, with its Georgian and Saginaw bays, the Island of Mackinaw, the daughter lake of the St. Clair, and the river and city of Detroit, well deserves to occupy its central and commanding position; and Erie can well afford to let expressive silence muse its praise while pointing to the Falls of the Niagara; but of Ontario it may be said that within its bosom alone are mingled the waters of all the great lakes, and that out of the depths comes forth the most truly magnificent scenery on this continent, not even excepting the Columbia and Mississippi.

The length of Lake Ontario, originally called Lake St. Louis is 172 miles; width 59 miles, its level below Lake Erie 334 feet; elevation above the Atlantic 302 feet, and its greatest depth more than 50 fathoms. In the summer time a sail upon its waters, in either the American or British steamers, is delightful, the winds being generally cool and invigorating, and the sickening ground swell of the ocean simply a trifling and ordinary experience. The very clouds which hang over its sparkling waters seem to have a purity of their own, and its sunset and sunrise revealings are enhanced in their beauty by the mystical lore of the aborigines who once peopled its shores. It is also noted for its beautiful illusions of the mirage, and for its occasional water spouts; and especially for the peculiarity of the tides—for it has been asserted that at intervals of about seven years its waters rise to an unusual height and then subside to their ordinary level, a phenomenon which has never been explained. It may also be stated in regard to this lake that, like its four great confederates, it is never entirely frozen over during the winter months, and there have been times when ice-boats have gone from Toronto to the mouth of the Niagara, a distance of forty miles, in the incredible short space of less than an hour. One scene, experienced many years ago, will which it is associated in my mind, can never be forgotten. It was a bright, sunny day, and we were near enough to the northern shore to know that land was visible in that quarter, and the picture consisted of a sky lighted up by a burning forest, combined with a new moon shining in the marvelous beauty, while directly in front, and half way up the zenith, a purple aurora was coquetting with a retinue of clouds.

By those who travel for information, and not merely to kill time, the two land routes from the western to the eastern extremity of the lake will be found full of interest. The first attractive spot on the southern side is the Niagara, which was founded by La Salle in 1668, partially destroyed by the Seneca Indians in 1675, subsequently taken and rebuilt by the French, captured by the English in 1759, acquired by the United States in 1796, recaptured by the English in 1813, and restored to our flag in 1815; and if its dungeons could recall what they once knew, we might learn many a sad and romantic story connected with deeds of heroism and suffering in the olden time. And then come, in their turn, as we travel eastward, the goody towns of Oswego, Sackett's Harbor and Cape Vincent, all noted for their special attractions. The railway which passes along the northern shore of Ontario makes us acquainted with the cities of Hamilton, Toronto and Kingston.

The first has an exceedingly fine location, and is a business rival of its older neighbor, Toronto.

The second, founded by French soldiers in 1683, was formerly called York, and as the commercial and intellectual metropolis of Upper Canada commands universal respect. After the fatigues of travel I know not a better place than this goody city in which can be spent a more peaceful and restful Sabbath. Indeed, I was glad to learn that its inhabitants appreciated their blessing in this respect. And in having such a preacher among them as the Rev. William S. Ramsford, the curate of St. James' Cathedral, there is no wonder. These things, in this connection, one of the sentiments that I heard him utter in the pulpit was to this effect: That he believed there were more Christian people in Western Canada than in any part of the world he had visited, "but," he continued, "can it be said with truth that they are all that they should be in politics and trade?" There are several handsome public buildings in Toronto. The drives in its immediate vicinity are not especially interesting, but by going twenty, thirty or forty miles the sportsman will find beautiful lakes, where the fishing and wild fowl shooting are most enjoyable, especially at Lake Couchiching. With regard to Kingston, formerly called Catarqui by the Indians and by the French Frontenac, it is not only a place of some commercial importance, but ranks next to Quebec in the strength of its fortifications. And it is from this place chiefly that the tourist begins the passage, by steamboat, through the Lake of the Thousand Islands and down the rapids of the St. Lawrence to Montreal. As to the scenery along the north shore of Ontario it is tame and uninteresting.

That portion of the great river which now comes under our notice has a width of twelve miles, and extends from Kingston a distance of about fifty miles. The total number of islands here collected is said to be 1,300, ranging in their area from a few feet to many acres, the largest of them bearing the name of Wolfe Island. They are of every imaginable size, and are generally divided between the two nationalities; some of them low rocky ledges with woods, while others are skirted with rocky ledges and bluffs, and ornamented with fantastic vines; and

where they have not been despoiled and desecrated by the hand of man are universally beautiful. As the steamer pursues her intricate course between them the traveler wonders how she can ever escape the impending dangers, and when he passes into what seems a beautiful lake, he experiences a sense of relief. To describe these islands minutely must always be as difficult or impossible as to depict those of Lake George or the Thimble Islands of Long Island Sound, but while their charms are linked with the sea or a mountain land, those of the St. Lawrence seem to be the very children of the sky. In the level and far-reaching horizon which completely surrounds them, there is something marvellously impressive, and I have fancied that after nature had finished her work in this particular region, she deemed it well to draw aside and put out of sight all the high mountains, and remove far hence the roar of the waves on the shore of the ocean. Here, during the summer nights, no sounds fall upon the ear save the soft music of the flowing waters, and the weird voices of the owl and the loon. With the approach of dawn, birds without number, the kingfisher and bluebird, the blackbird and robin and flicker, the coot and the duck, come forth from their hiding places to resume the duties of their happy lives, and at the sunset hour the islands, as you look upon them, appear like gems encircled in halos of crimson light, and thus, alas! I think, they are, and subsequently melting away; the simple hearted Indians, with their canoes and canoes, have been superseded by the selfish and savage white men with their villas and yachts and other modern abominations.

It was among the multitudinous islands of this river that the poet Thomas Moore conceived the idea of his charming Canadian Boat Song, although the actual scene of the poem was at the mouth of the Ottawa, and with the details of the flowing particulars. As he was passing down the river in a canoe, and a fellow-traveler, his boatman entertained him with a song, a portion of which he jotted down upon the fly-leaf of a book he was then reading. Many years afterward, while visiting a friend in Dublin, he was informed that a young lady was then in the city who possessed the original of his Boat Song, and he was greatly surprised. He remembered that the book in question had long before passed out of his hands, but he was never able to find his traveling companion had spirited it away, and subsequently gave it to a friend in Dublin. The poet asked to see the volume, and it was shown him by the fortunate owner, who had received it as a gift from her father, who had received it from his friend, the poet's traveling companion. When his eyes fell on the well-remembered lines, as the story goes, he gazed upon them so long and earnestly that the lady said: "O, Mr. Moore, I hope you do not wish to take them from me; they are so precious!" "No, indeed," he replied, "I do not, but if you know of any thrilling remembrances of a happy past the contemplation of this page provokes, you would not wonder at my feeling. Since I wrote these lines I have been going so fast down the rapids of life that I owe you much for enabling me to live, though but for a few minutes, in the past, and I shall long remember this pleasant meeting." The poet then authenticated the lines, explained how and where they were written, that they were adapted to an air which the Canadian boatman had sung, and that the music was as much his own as were the words and the plaintive imagery.

But there is another name connected with these islands which no American can mention without a thrill of pleasure and of pride—that of George W. Bethune. He was a genuine angel, after the type of dear old Isaac Walton, and was wont to visit the Thousand Islands for his and his wife's fishing. On one occasion he asked his boatman where he was in the habit of going to church, and the man told him "Nowhere," as there was no church in that region. On the very next Sunday he took steps to inaugurate a Sunday-school, and by his sagacity he induced a non-professing but very worthy lady to take charge of the school; but, during that vacation, he died much by his own preaching and teaching to help the cause in which he had enlisted. His next step was to secure a missionary for that new field, who was supported there at three years at the expense of the doctor and his friends. Through his influence there were no less than ten other schools established among the islands, and after they had been supplied with books an enthusiastic old gentleman wrote to a friend that if Dr. Bethune could hear the children singing out of their new books he would think that angels had come from heaven. The final result was that a beautiful little church was erected at Alexandria Bay, which the founder was wont to call his "Pet child of the Thousand Islands," and in which, after his death, was erected a beautiful tablet to his memory. And what a blessed memory!

These islands have also been the scene of thrilling romance. From their great number and the many channels among them, they afforded an admirable retreat for the insurgents in the last Canadian insurrection, as well as for the American sympathizers with them, who, under the question mark name of patriots, sought only to embarrass the British Government. In 1838, a band of men, headed by one Johnson, took refuge among these islands, setting all authorities at defiance; and provided with boats of surprising lightness they committed the most audacious outrages both up and down the river, and baffled all pursuit. The story is told of one of them that, when he was obliged, from close pursuit, to separate from his band, his daughter, with a devotedness and courage that was admirable, remained on the island and herself with the necessities of life in these solitary ruins, and took him in her canoe from one island to another under cover of the night.

To enjoy Lake Ontario and the Thousand Islands in their perfection, the tourist should have one or two companions, be well supplied with books and fishing-tackle, and remain among them for a month or more. Of course, when pressed for time, the steamboat trip must suffice; but in that case the pleasure is somewhat counterbalanced by the annoyances. In the first place the boats are generally crowded, and the variety of people a little bit too promiscuous, and the Yankee-Canadian fashion of "including meals" in the passage ticket, makes any kind of comfort impossible. Even your stateroom is made common property, and you may have a cut-throat for your sleeping companion; and unless you are willing to play the part of a Cincinnati quadruped you cannot get anything to eat, and, in any event, nothing that you can enjoy.

beautiful, lustrous skins, with a very dark stripe on the back. It is also remarkable that their liver is not of the ordinary dark color, but on the contrary of a light buff.

Both specimens of which I send photographs are curiosities in their way, for, as a general rule, when two deer engage in a fight they rush at each other face to face, and their heads remain in this position in case their horns become entangled. This is nearly always the case, but here is an instance where two bucks were found side by side, like a team of horses, firmly held together by their horns and still alive. The other couple were found with the back of their heads together. One of the deer was already dead when found and the other was speedily dispatched by a bullet, which saved him from a more miserable death by hunger.

A third photograph which I likewise inclose for your use might be of interest to sportsmen and to those desiring to appear in your columns in the shape of a wood cut. The deer was shot in the neighborhood of Austin and the horns are in my collection, which can boast of many other curious specimens. The left beam has twenty-eight and the right beam twenty-four, in all fifty-two antlers. Such a deer is certainly something unprecedented, and, in Texas at least, not to be found again.

San Antonio, Texas, May 10th.

E. DOSCH.

**A FINE DEER'S HEAD.**—Our correspondent, R. S. J., of Menominee, Wis., tells us of a remarkable pair of deer antlers now in his possession. He says:—

"I have in my possession a fine buck's head with large antlers; the left has five points, the right is nearly the same, only a large prong separates near the head on which are six points, some pointing and reaching nearly as far as the nose, while others run out nearly as far as the main horn."

### THE STING RAY.

CORPUS CHRISTI, TEXAS, June 14th.

Editor Forest and Stream:—

Inclosed I hand you a product of our waters, which, although common enough here may be something of a curiosity with you. It is the sting or thorn taken from the tail of a sting ray, commonly called and spelled "sting-ee-ee." This fish is very plentiful in these waters in the spring, summer and fall of the year, disappearing in the winter.

The first cold weather which lasts long enough to put much of a chill on the water sends them to their hiding place, and we see them no more until the warm days of spring have made the water more congenial to them. They either lay in the sand, or hunt deep water during the cold weather.

Excluding the long whip-like tail, the sting ray measures about one-sixth more in width than in length. The one from which the inclosed sting was taken measured about two feet in length exclusive of the tail, and nearly two feet six inches across the back. The tail was nearly if not quite three feet in length.

The sting was about six inches from the body, and lay flat on the tail. It is of a most fancy, capable of being raised in an upright position for aggressive or defensive purposes, but can only do harm by the fish working its tail from side to side, in which case any object in the way is liable to get pierced. This sting in its original condition is covered with slime which is very poisonous, and a ray one wounded by one of them is in great danger from lockjaw. There are several instances known here of death resulting from the sting of the shark, and there are many cases where the sufferer has been confined to his bed for months. This fish gives birth to from two to eight at a time. It is covered with a thick, strong, smooth skin, outside of which is a coating of tough slime. It is dark brown above, and white beneath. The two eyes are on top, well sunk in the head and well protected from injury. The mouth is underneath and about three or four inches back from the end of the nose. The gills are slits in the side, similar with that of the shark, and are located on each side of the mouth, only further back. The cavity for the entrails extends the full length and is almost as well protected as that of a soft turtle.

In fact, this fish looks more like a soft shell turtle, without feet and with a riding whip attached for a tail, than it does like a fish. It is a bold and free biter, and is powerful, giving to the angler fine sport.

It is very cunning when hooked, for as soon as it is that and finds itself liable to be vanquished it lays itself flat on the bottom, and the stranger fancies his fish is gone and he has captured a snag instead. Nothing will move the sting ray after he locates himself except a long pole or a very strong line. The mouth is very tough, and a hook has always to be cut out. The flesh is very fine eating, and it is said before the introduction of steam the ray was the only sea fish that was eaten fresh in Paris, as it will live long and keep well out of water, if placed in wet moss. There is a prejudice with many against eating rays on account of their hideous appearance.

They grow to great size, half a ton or more; when of this size, the name changes and they are called devil fish. I have seen these large fellows on a still morning jump out of the water twenty feet and come down flat, making a noise like a young cannon. These large ones are never captured in this vicinity, as they can break any tackle they choose to use.

The largest one I ever captured was about 100 pounds weight, and was between four and five feet across the back. The thorn on the tail measured just nine inches in length. It is not uncommon for them to have two and sometimes three thorns on the tail. They feed on small fish, crabs and shrimp.

BEXAR.

**WINTER STORE OF THE GRAY SQUIRREL.**—Long Prairie, Minn., June 4th.—Editor Forest and Stream:—In a recent issue of FOREST AND STREAM "Sharp Eyes" states his belief that the gray squirrel does not lay up a store of food for winter. I am inclined to believe the gray squirrel is not such a fool as this would seem to make him, and will give my reasons for such belief. My father moved into the State of Indiana forty years ago and settled in the timber, and was brought up among gray squirrels, and the same might almost be said of the writer. Many a time have I watched the gray squirrel ascend a hickory tree, and taking a nut in his mouth carry it to some hiding place and return again for an-

other; but I never followed one up to see where the hiding place for his store was situated, whether in the ground or in some hollow tree. My father has seen them keep this up for hours, and so have I. In winter I have seen places where they have dug into the ground in perhaps a dozen places around one tree, and the fact that these trees were not all fruit-bearing trees leads to the belief that the squirrel had buried something there and knew just where to dig for it. Indeed, the most of the trees around which I have seen these holes were hollow elms, or soft maples, and many times far removed from any nut-bearing trees of any kind. My father and I felled a huge ash one winter in which two gray squirrels had made their homes, and I found perhaps four or five dozen of good hickory nuts in the hollow, and it looks very much as if they were placed there by these squirrels. With all these observations before me, you can count me in as one who believes the gray squirrel lays up his store of food for winter.

A. W. S.

**FOOD OF THE GREAT BLUE HERON.**—This season I killed a large blue heron which had two moccasin snakes in him, one of which was quite large, over two feet long, and fully an inch through; the other, a third smaller. I am of the opinion that all of our large herons eat young snakes, and that this is one reason of the remarkable scarcity of snakes in Florida; another is, that the alligators devour every snake they can catch.

I have known the blue heron to swallow a grown mullet. This last season I killed a heron, and, while carrying him, I noticed that he was unusually heavy, and when I had got home and skinned him, I noticed that he was full from throat to stern and proceeded to examine him. I found a fish, which was some four inches longer than the body of the bird, and fully half as long.

How this bird captured the fish and raised him to swallow, I cannot conceive. But, since the foregoing experience, I came suddenly on to a heron on the beach that was busily engaged with a catfish some nine inches long. I could have believed that he might have swallowed the cat, but for the great and formidable fins. He left the fish without ceremony, but I pulled on him and took his skin. Since that time I found a fish in the throat of one, so I am satisfied that they eat both mullet and catfish. The pelican will also take in a full-grown mullet with ease. The cormorant will eat more fish than a person, and it is astonishing what large fish they swallow.

Tampa Bay, Fla., July 20th.

WM. P. NEILD.

**A WHITE KING BIRD.**—The following cutting is taken from the Norwich (Conn.) Bulletin of July 19th:—

An interesting *Icterus natus* was discovered on Laurel Hill last week. A king bird, or "tyrant fly-catcher," which, instead of being brown, like its kind, was pure white, except its wings and tail, which were of a creamy hue, stunned itself by some accident and fell in front of Judge Park's residence. It was picked up and placed in a cage, but after three or four days it died, owing, doubtless, to the fact that these birds are insectivorous, and its captors, not knowing its predilections, furnished it with other food. An ornithologist and taxidermist having been requested to stuff the bird for preservation on Saturday, readily identified its species by its head and other characteristics. It is a handsome but singular specimen.

**A NOVEL RAT CATCHER.**—Cool Spring, N. C., July 37th.—At my kennels to-day I killed a water snake, in which I found a full-grown barn rat. The snake measured twenty-two inches in length; head, quarter of an inch across, and three-quarters of an inch long. The rat was in perfect condition, fat, healthy and strong looking. It had just been swallowed, I judge, as it was in perfect shape, coat, preservation, etc. No wounds were discovered on either rodent or serpent. A rat is "game" to the death. Query: How could so small a snake catch and swallow so large a rat, and not show signs of a conflict? Again, with so small a "jaw" (and necessarily weak, to hold the rodent) could the snake have killed it in any other way than by coiling around it, thereby rendering the rat powerless? What say our naturalists?

E. S. WANNAMAKER.

May not the snake have drowned his prey?

**DEEP SEA DREDGING.**—The United States survey steamer, Blake, came into Newport last Saturday, after a two months' trip on the Atlantic coast, where she has been engaged in deep sea researches, under direction of Prof. A. Agassiz. The explorations were made between Cape Hatteras and George's Banks. Five lines of soundings were run at right angles to the coast between these points, and a great quantity of zoological material obtained. With the exception of the groups to be worked up at Cambridge by Prof. Agassiz himself, assisted by Col. Lyman, the collection is to be turned over to the same zoologists who have worked up the specimens obtained in former years by the United States Fish Commission on the eastern coast of North America, the crustaceans going to Prof. S. J. Smith; the invertebrates to Prof. E. A. Verrill, and the fishes to Prof. G. Brown Goode and Dr. J. H. Bean.

**A CANNIBALISTIC SNAKE.**—Mr. C. R. Shaw recently killed, at Sayville, L. I., a black snake which was thirty-nine inches long and about as large as a man's thumb. It appeared somewhat thicker than it should have been, and was more sluggish in its movements than black snakes ordinarily are. On shaking the reptile by the tail, a striped snake, which measured nineteen inches in length, came from its mouth. The smaller snake had been swallowed head first, and was still alive. Neither snake was in a condition to hiss. We do not remember ever to have observed a case quite similar to the one above mentioned, though it is not an uncommon thing to find snakes with partially devoured and still living frogs protruding from their mouths.

**ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR THE WEEK ENDING JULY 24th, 1880.**—Two Arabian sheeps (Unis arles), presented by Capt. Gorrings, S. S. Dessango; one red fox (*Vulpes fulvus*), presented by Mr. Lawson Valentine, Mountville, N. Y.; one slug (*Limax flaccus*), presented by Samuel H. Francis, Newport, R. I.; one magpie (*Pica media*), presented by Mr. Morris Looney; one golden-naped Amazon (*Chrysotis ayacahualta*), presented by Mrs. D. Leatham; two Angora goats (*Capra hircus*), received in exchange; one marmoset monkey (*Cercopithecus mona*); four mandrills (*Cynocephalus mormon*); one red brocket (*Caracus rufus*) one Salé's Amazon (*Chrysotis saléi*)—all purchases.

**A BIG CALIFORNIA SALMON FROM GENEVA LAKE.**—By favor of Prof. Baird we are permitted to publish the following telegram:—

GENEVA LAKE, Wis., July 29th.  
PROF. SPENCER F. BAIRD.—A California salmon weighing twelve pounds and three-fourths was taken with a hook from Geneva Lake this morning. N. K. FAIRBANK.

This is an exceedingly large salmon to have been grown in fresh water, for it is not at all probable that the fish ever left the deep, cool waters of this lake to follow the small streams which finally lead into the Illinois River, and so down the Mississippi to the ocean—a glance at the map of Wisconsin and Illinois will show this to be almost impossible. You will find Geneva Lake in Walworth County, Wis., and even if it had been possible for the fish to go down and return it would only add greater interest to its history. This lake is a favorite summer resort, and has been stocked with many kinds of fishes by Mr. Fairbank at his own expense.

We hope for more information as to the sex and development of ovaries, if any, in this fish, for a question yet unsolved is whether the California salmon will develop spawn in fresh water or not. It is known that males ripen, but we do not think a case is on record where ripe eggs have been found in this fish when confined in fresh water.

**WORK OF THE CONNECTICUT FISH COMMISSION.**—Dr. W. M. Hudson, of Hartford, one of the Fish Commissioners, gives the following particulars concerning the recent operations of the Commission. During the spring 58,000 young Penobscot salmon were placed in the tributaries of Farmington River. Of land-locked salmon eggs 91,000 were hatched and distributed. The demand for these young salmon to stock ponds and streams was very great, as it had become known that salmon weighing from two and a half to four pounds each have been taken in Hog Pond in Lyme, in Snipe Pond in Rockville, in long pond in Winchester, and in Twin Lakes in Salisbury, and in many others the young fish are known to be growing and thriving finely.

The 110,000 brook trout hatched were widely distributed and the supply was by no means equal to the demand. Arrangements have been made to secure 400,000 young fry next spring. Dr. Hudson says that Connecticut has some of the finest trout brooks in the world, and with proper care and attention on the part of farmers, and a disposition on the part of anglers to save only those of six inches in length or over, our depleted streams may soon be restocked, so that trout shall be as plenty and large as thirty years since.

A test has been made this spring of the practicability of hatching shad in the Connecticut waters. Heretofore all the hatching has been done on the natural grounds at Holyoke Dam, but the committee on fisheries of the last Legislature expressed a desire that all the work for the shad be confined to this State. The commission employed Jas. Rankin—former fish commissioner—and R. B. Chalker, to test the matter in a sufficient number of spawning shad could be procured. The attempts were made at Wethersfield, Brookway's reach on the Connecticut, and in the waters of Long Island Sound near the mouth of the river. The experiments were made under adverse circumstances—a long, protracted drouth, low river and high temperature of the water. With the exception of a few thousand young shad hatched at Wethersfield the operation was a failure. The shad taken were found to be immature, and any attempt to preserve them until ripe in fresh water resulted in their speedy death. It was found, however, that shad taken in salt water in the ponds could be preserved alive and healthy in salt water pens for three or four weeks, and that the females eventually ripen thoroughly. The sharks made sad havoc with this pen, and it was found that the male shad invariably escaped through the holes made by them, so that having three or four ripe females no male could be obtained to test the experiment whether the eggs taken and impregnated under the circumstances would be hatched in salt water. The fishermen are very sanguine that this can be done, but Dr. Hudson cannot agree with them, as too many actual observations prove that the eggs need fresh water for their development and the successful propagation of young fish. The fishermen claim that these pens can easily be protected against shark by an outside netting a few feet from the pen. It may be a practical question whether the eggs of a shad ripened in salt water in consequence of a forcible drouth there, can be extruded into fresh water, brought for the purpose, impregnated, and then taken up the river to hatch in the fresh water, and then develop healthy young fish.

**A RECORD OF HATCHING BROOK BROOK TROUT.**—Council Bluffs, Iowa, June 1st.—You herewith a record of some brook trout hatched during the present season for my individual use, thinking it may be of some interest to your numerous readers. It is as follows: Jan. 29th, 1880, I received of W. L. Gilbert, of Plymouth, Mass., 5,000 brook trout spawn, which arrived here in splendid condition, there being a loss of only sixty eggs while in

fied, for no sooner was he up than down he went at full length upon the gunwale, with one leg in the river and the other wildly gesticulating in the air. How he ever recovered his balance I failed to understand, but recovered he did, and once more essayed to reach the rapidly vibrating stick; but the fates were not through with him yet, and before he was fairly under way he heard the starboard and brought up short. He had heard a crash, and saw three fishermen in the next boat, and rather expected to see him disappear through the bottom of the boat; but he soon righted up, and, apparently more eager for the fray, he made a grand effort, and succeeded in reaching the goal and grabbing the line, and with many knowing nods and satisfied flops of the huge straw hat he landed his fish amid the tumultuous applause of the happy three, who at once, in honor of the event, opened some more beer; indeed, they had been doing this all the time, and I had come to the conclusion that it was a mortal fear of the bottom of the boat, but that swampy little fear of theirs was a taste of water; and to avert the dire calamity they were getting rid of the stuff as fast as possible. Scarcely were the bottles at a proper elevation when one of the trio dropped his, and with a solemn oath asseverated that he had "got him." I saw by the swaying of the rod that it was a heavy fish; and expected to see him break away, but I soon found out that no novice held the rod, and after a well-fought contest he was safely brought to net. With pride in his heart and a joyful light in his eyes—for this was his first prize—the victor, with the defaming "Aloos" on his lips, and his companion ringing in his ears, he entangled his captive from the noble fish he carefully placed his hands under him, and tenderly, promptly raised him up for my inspection. This was a fatal mistake, for no sooner did this crafty *Aloos* again behold his native element than he doubled himself up and with a mighty effort tore himself from the fond embrace, and with a derisive wave of his caudal appendage

age, that must have been peculiarly aggravating to the feelings of our hero, he disappeared beneath the cold, dark waves. At this instant—now mark the strategic cunning of this most subtle fish—when I was utterly enervated, and entirely unprepared for the conflict, a huge five-pound monster seized my wrist, and, with a terrific speed, bore down the rapid current. Bravely I rallied my forces to the rescue, but ere my nervous hands had found their cunning and checked his headlong rush, he had forced from me full fifty feet of line. As soon as he felt the killing strain he leaped high in air to reconnoiter the battlefield, and when he discovered who was in command, and caught a glimpse of the vengeful fire in my eye, he became demoralized, and commenced a series of wild rushes and turning leaps that nearly broke my heart, but all in vain were his frantic struggles, for, as I have said before, I was a desperate man that day, and although fearful odds were against me, "with an energy born of despair" I fought the battle to the bitter end, and at the end of forty-five minutes of agonizing pleasure, mingled with cruel doubts and fears, during which I would have given half my kingdom for my dainty tip, and the other half for the landing net which I had left at home. I saw the silvery side turn up, and irresistibly drew him within reach, and thrusting my finger into his wide open mouth safely landed the gallant fish, and with unpeakable happiness in my heart bowed in acknowledgment to the vociferous cheers that greeted my success.

The fish having now learned to their cost that, notwithstanding my crippled condition, I was more than a match for the best of them, wisely abandoned the contest and let me alone, but ever and anon the music of the humming reel and the pleased ejaculations from the adjoining boats proclaimed abundant sport, and kept me pleasantly occupied till nearly dark. I counted no less than twenty-seven noble fish taken by my neighbors, not including many more that were under size, while many of the handliners lost quite a number of apparently heavy fish. The most taking fly is the scarlet ibis, although almost any of the common trout flies, particularly the different shades of brown and orange, have been successful.

The season opens as soon as the fish arrive, which is about the last of May, and closes Aug. 1st. The present season has not been as successful as usual, owing to low water, yet many fine fish have been captured, some of them turning the scales at upwards of six pounds. I shall try them again in a few days, if I find that tip, and see if there is any sport to be had in "casting," and will report success. SHADOW.

Another correspondent writes from Hartford, Conn., July 24th:—

In your issue of June 24th you published a few notes of mine on shad fishing. I have been trying it again, and this time with much more satisfactory results. I managed to land four in a couple of hours, and should have had more except for a broken hook. I took them with a very light trout rig, and right royal sport it was. My first one took me twenty minutes to land, and the others from ten to fifteen. While not quite so vigorous at the outset they last longer than the black bass; otherwise they reminded me much of that fish in their wild rushes and their way of throwing themselves out of the water. I hope some of your readers will pay a visit to Holyoke next spring, and be sure they will like it, if they have the good luck to haul in a few of the beautiful blue and silvery fellows. They have all the good points of a true game fish. They take a fly, fight hard, require considerable skill to handle, and are game to the last, besides being very handsome. As to their table value I need say nothing. I found a red ibis and a coachman the only flies they would touch. M. D.

**FISH IN MARKET.**—The first whitefish (*Coregonus*) of the season made their appearance in Fulton market this week. They came from Erie, Pa. The week was also notable for the first appearance of salmon trout, from Buffalo, N. Y. Spanish mackerel made their appearance on the New Jersey coast last Sunday, about one month later than usual; this is well supplied. Bluefish is scarce; the market is well supplied. The Massachusetts coast, about Cape Cod. Sheephead are not plenty, a few being taken off Barnegat. The following are the quotations: Salt water fish—Bass, 35 cents per pound; bluefish, 8; salmon, 40; mackerel, large, 18, small, 10; weakfish, 10; Spanish mackerel, 25; green turtle, 12; halibut, 15; haddock, 6; kingfish, 25; codfish, 8; blackfish, 12; flounders, 10; porgies, 10; sea-bass, 18; pompano, 75; eels, 10; lobsters, 8; sheephead, 25; soft clams, 40 to 75 cents per 100; soft crabs, \$1 to \$1.50 per 100. Fresh water fish—Whitefish, 12; salmon trout, 18.

**BLACK BASS NOTES FROM "AQUADALE."**—I rarely read a FOREST AND STREAM without finding something interesting to note. The first "point" in last week's issue which I note is the controversy about Southern trout, "Black Bass." Is not "St. Clair" a "Black Bass"? The assertion that "there never was a black bass to any degree that empties into the Atlantic, south of Maryland, and there never will be?" I have in my black bass pond some fine specimens, which I myself brought from the Shenandoah and the Potomac, and I also had some fine specimens on exhibition at the Centennial, which I brought from the Shenandoah. All authorities pronounced them black bass. I have been stocking lakes, ponds and streams with them, both in New England and the Middle States, supposing them the true black bass, or at least the Southern black bass. A friend of mine, who is an expert angler, has been spending more than a year past in Florida, and writes that he has had fine sport catching what they there call trout, but which are identical with my bass.

Speaking of my bass pond reminds me of an incident which occurred a few evenings ago. There are in this pond a pair of California quail, and a pair of quail. They appear to be about sixteen inches in length, perhaps some of them are longer. It was about dusk of the evening in question that a party of ladies and gentlemen were watching the swallows taking their evening bath. There were barn swallows, bank swallows and swifts, commonly called chimney swallows. One of the latter glided swiftly along the surface of the water, and had barely left it, when a large salmon sprang after it, com-

ing entirely out of the water, but by the time the fish was out of the water the swift was fully three feet away.

I am frequently in receipt of inquiries as to the preparation of lakes and ponds for brook trout. The last mail brought me such an inquiry from one of the prominent daily papers of your city. I wish here to repeat what I have for years past maintained, viz: that brook trout will not thrive in lakes or ponds. They only thrive well in water, which is undergoing constant aeration. They will live in pure, cool water, like ponds, ditches, etc., but will not thrive without a constant supply of artificial food. Time, labor and money spent in preparing ponds, etc., for brook trout or for stocking such prepared waters with them, will be nearly a dead loss. Parties having suitable sites for such prepared waters should turn their attention to the black bass or the food carp.

I have been interested in the various articles concerning "sights" of hunting riles. Those of your readers who used to know me during and previous to the war can judge whether I am an "authority." For several years I did most of the gun-repairing for many miles around the place where I then resided. I experimented extensively with rifle sights, and had many rifles brought to me to re-sight. My best success was with a high, level base sight, usually made of soft iron, colored a dead blue, and containing a narrow and shallow notch. My best front sights were of ivory, thin and high, and shaped like an inclined plane, the back end nearly vertical.

Noticing in a late issue of the FOREST AND STREAM some queries in regard to fly-fishing for shad, I will say that a few weeks ago I saw several fishermen having line sport just below the celebrated Holyoke Dam, on the Connecticut River. They were all fishing with light colored flies, and were taking shad running from two to three pounds and upward. MILTON P. PIERCE.

**AQUADALE PONDS, WENONAH, N. J.**

The black bass question may now be considered as settled, so far as their distribution in the South is concerned. The very able letter from Dr. Henshall, in our last issue, presented the facts on which all ichthyologists agree, so that even our friend "St. Clair" must see that the bass of the South and those of the North are identical, and that there are but two species. "St. Clair" has evidently been misled by common names, as he mentions the "black bass of the North" as *Centropomus atrarius*, which is a sea fish, which never comes into fresh water. This fish has many local names, Gill giving black sea bass, sea bass (New York); black perch (Mass.); black bass, black fish (New Jersey); bluefish (Newport); black herry, hanna-hills (New York, DeKay); black will (Eastern shore of Virginia).

Dr. Henshall will soon publish a book on the black basses, a group which this able ichthyologist has been studying for some time.

**THE BASS QUESTION SETTLED.**—Putnam, July 18th.—The correspondence of St. Clair, "Black Bass vs. Trout," is rather laughable. He says he will stand or fall on evidence, etc., pertaining to black bass being found in Southern streams. Now he will surely have to tumble over this time. In Western Florida there is a stream called Mud River, why it should be called that name I cannot conceive—for it is beautifully clear, about three miles long, and starts from a large, round, deep spring, which, as is estimated, voids 100,000 cubic feet per minute. The water is clear and cold, and pleasant tasted; the river averages 50 yards wide and is swift, and from ten to twenty feet deep, emptying into the mouth of the Wachu-wacha River, near Bay Port. The river abounds in bass of two kinds, a kind of lead colored bass often called black bass, and the real black bass. Now I have caught the black bass in Central New York, and New England, for the past thirty years, and am very familiar with the fish, and think I cannot be mistaken; am sure beyond a doubt in my own mind, as experience is one of the best of schoolmasters. Ascending this "Mud River," so called, at about half way from its mouth on the south side is a swift stream twenty feet wide; ascending this some 200 yards, you come to a large kind of pond of some ten acres of rocky and sandy bottom. Here the true real, gummy black bass abound. One morning I caught about thirty there, of from one to three pounds weight, the same beautifully proportioned, exactly like those I caught in Central New York. Mr. St. Clair says the "vexed question shall be forever set at rest." A colored preacher in Florida said "forever was a mighty long word, reaching half way up the hill of eternity." That there never will be a black bass in any Southern streams emptying into the Atlantic, is strong language for our able correspondent to use, and I think our good friend is mistaken, for many times while ascending the Ocala-wacha River, in Florida, I have in trolling from the little steamer caught the real black bass, and I doubt not that many Northern sportsmen have seen or caught them while ascending that stream. G. F. W.

See our remarks on the article by Milton P. Pierce. There are but few men who are capable of deciding on species—certainly those having no knowledge of systematic ichthyology are not—the fisherman and angler only knowing their fishes by their superficial appearance, color and shape. Few of them can tell how their fins are situated or how they are composed, character and situation of teeth, or the many other important points which are of real value. The scientist often doubts his diagnosis, while the amateur never does.

**THE LING IN MONTANA.**—Upper Maria River, M. T., July 3d.—Editor Forest and Stream.—Yesterday an Indian boy brought me a fish which he killed with his bow and arrow. And as I never saw or heard of anything like it, I will describe it, and perhaps one of your readers will be able to tell us something about it. Length 10 inches, one fin on each side just back of gills; just back of throat-latch two long, feeler-like fins; 5 inches from nose on back one small fin; 7 inches from nose on back and belly a fin commences and runs clear to tail; tail shape of a flat spoon; general color, a dirty white and black mottled, bright narrow green stripe on each side;

no scales. Kipp, the Indian trader, says he has seen these fish in the Missouri River which would weigh twenty-five pounds; but knows no name for them. The Blackfoot call them "Peekas-nah-neeks," which means snake-fish, and in truth they look like a cross between a bullhead, a snake and an eel.

The Piegans have been hunting about here for several months, consequently deer and antelope are scarce.

We are making preparations to move to the mouth of the Musselshell River, at out two hundred and fifty miles below Fort Benton, where Kipp will start a trading-post with the Bloods, Blackfeet, Piegans and half-breeds. Buffalo are plenty down there, also all other game to be found in Montana Territory, except Rocky Mountain goats and moose.

The fare from Chicago to Fort Benton is about \$60. I should be glad to see some Eastern sportsmen come up to our new post next August, and promise them a hearty reception, the best of hunting and lots of fresh, pure Montana air.

I notice a mention of old Liver-eating Johnson in one of your late issues. He is getting old, but is still "game," and can compare the species of suckers between the Musselshell and Judith rivers, hunting buffalo. I do not think he is dieting on Sioux Indian liver late years. APPECUNSA.

Your description agrees with the fish which bears the following names: "Eel-pout," in Ohio; "ling," in many parts; "losh," among Canadian fishermen, and other names. It is one of the family *Gadida*, the cod-fishes, and has been called the "codfish of the lakes." Its true name is *Lota maculosa*. Its livers are said to be a great delicacy.

**PROBABLY A SUCKER.**—Walton, Grand Traverse County, Mich.—Every spring and summer I have caught a few carp, the species of suckers between the Musselshell and Judith rivers, hunting buffalo. I do not think he is dieting on Sioux Indian liver late years. APPECUNSA.

Your fish is probably a male of some species of sucker in its breeding dress, but your description is too incomplete to base even a guess upon. Again and again we say, color counts for very little in determining fishes. Give us the color last of all.

**SALMO WILMOT.**—Montreal, Can., June.—Editor Forest and Stream.—Living and stuffed specimens of a salmon bearing the above name were exhibited at the Grand Dominion Exhibition held at Ottawa in September, 1879. I have searched through several works on American fishes, but cannot find a species named *Wilmot*. I am led to make this inquiry because I asked Mr. Wilmot, an assistant who named the salmon *Wilmot*. He informed me that Mr. Wilmot was the authority, he having named the fish in honor of himself! I am not aware that Mr. Wilmot, of Newcastle, Canada, is a specific writer on fishes, and even if he is, it is not good taste, or in accordance with the views of true promoters of natural science that the usual etiquette should be violated to satisfy any man's vanity. If Mr. Wilmot's salmon is a good species, should be described properly, and until this is done, the name is worthless. WM. COOPER.

There is no fish known to naturalists by this name, neither has there been any description of a new salmon from that region published lately. The salmon found in Lake Ontario and its tributaries are *Salmo salar*.

**MICHIGAN FISHING RESORTS.**—Cheboygan, Mich., July 21st.—Nearly every week some person is asking in your paper where they can spend the summer, and at the same time make some good fishing. If they will look at the map of Michigan they will see that our country is the extreme northern county of the lower Peninsula, and I think were they to pay this county a visit they would be perfectly satisfied, as the weather during the summer months is cool and bracing, and the fishing is second to none. We have good hotels in the town, and at the head of Mullet Lake is one of the largest and best hotels in the State. It was built during the past winter and spring, by the Smith Bros., at a cost of thirty-five thousand dollars. It contains one hundred and fifty rooms, and is furnished throughout in the very best style. It is managed by Wm. Spencer, who has had several years' experience in the hotel business in this county, and can post his guests about the best fishing grounds, and will spare no pains to make them comfortable and feel at home. There is a daily line of clinker boats for the use of guests. There is a daily line of steamers running from Petoskey, through Crooked, Burt and Mullet lakes, to Cheboygan. The coast around the straits to Mackinac. The boats meet at noon at the Mullet Lake House, when the passengers get dinner. Pigeon and Indian rivers empty into the lake about one mile apart, and the hotel is situated about midway between the two rivers, on what is called Pigeon River Bay. In Indian River and this bay there is good trolling for pickerel, bluegill, bass and muskellunge. Pigeon River is one of the best grayling streams in the State. The forest around the hotel is full of deer and bear, and Indian River is full of ducks of all kinds in the fall, so that the sportsman in the game season can spend his time very pleasantly without much exertion. T. A. P.

**THE CHEMUNG RIVER AND SODUS BAY.**—Elmira, N. Y., July 30th.—In response to the letter of inquiry of yesterday, relating to the sort of fishing to be had in this vicinity, I report as follows:—  
Our river—the Chemung—is well stocked with black bass four or five years ago. As a result of that planting, we have had fair fishing for the past two years. Bass are

taken in moderate numbers (upon "dobson," spoon and fly) from one to four pounds weight. Some fine catches have been reported within the past few days. Sufficient numbers to afford fair sport.

The best fishing ground near us is at Sodus Point, on a bay communicating with Lake Ontario. It is a five hours' ride from here on the Northern Central Railway to Stanley, thence on a branch road to Sodus Point. You leave Elmira at 12:20 P.M., and reach the fishing grounds by 5 P.M. Black bass and enormous pickerel abundant. An this day in receipt of a box of pickerel from there, caught by my son and a companion, containing twenty fish from two to four feet long. They were caught in one afternoon by trolling from one to four pounds, with a spoon. Accommodations ample and good, at a new hotel charging \$7 a week. A boat can be hired for \$3 a week. Boat, and boatman to row you, \$2.50 per day. This is the best point for fishing near us.

BOPINES.

**WEAKFISHING ON THE NEW JERSEY COAST.**—*Forke River, N. J., July 31st.*—The delightful time and good sport I had here last year induced me to come again, and I have been here for the last two weeks. The fishing has been and is very fine. For one week I fished, averaging fifty or seventy-five fish a day with the rod, chiefly weak fish and sea bass, the largest day being 113 fish to two rods, with an occasional bluefish, which makes you reel spin around, and weakfish run from one to four pounds, with a great many two and three pounders. Yesterday, though I thought of myself, I took a friend out who had just arrived. Our catch was 102. My friend got a small bag of snipe. I broke the lever of my breech-loader on the way down the bay and could not fire a shot. Provoking, wasn't it? Snipe are beginning to come, and we found several whiffs "trading," as the baymen call it, along the surf. They were surf-snipe, robins and do-lickers. There are a few scoters, yellow-legs, but they have not yet come in large numbers. I shot five dowitchers day before yesterday, which I saw from the piazza on the meadows opposite, in about twenty minutes. The charge for boats, unlike most seaside resorts, is very moderate.

D. W. L.

**TROUT IN THE FRENCH BROOK.**—A Washington correspondent writes me: "I have spent some weeks in Western North Carolina about Asheville, the warm springs on the French Brook and ascending the mountains Black Dome, Craggy, etc. The scenery is magnificent. Not quite so rugged in some way as the White Mountains, or Adirondacks, owing to the higher timber level, due to the latitude, but the mountains are higher and in such profusion—so many high peaks. As to the fish, I unfortunately made little inquiry, as I was too much occupied otherwise. I caught trout, though, in the small mountain streams. Most of the mountain streams, I think, have brook trout in them. The French Brook, a most beautiful stream, has probably bass. If no one answers your correspondent in the meantime, I can perhaps get him the information shortly."

**THE GREENBRIER RIVER.**—*Washington, D. C., July 30th.*—I have heard from my old place at Ronceveek, W. Va., that the Greenbrier River is affording good bass fishing this season. The Superintendent of our mill there wrote to me to send him such a rig as he had seen me use there, so that he might try the device fly upon the fish. The latter, he says, run from a foot to as big as you can manage to get hold of. I notice one of your correspondents asks about trout taking a fly in West Virginia in July. Of course they take a fly, but I have found that (having fished West Virginia streams every season from 1870 to last year) in the latter half of July and early part of August the fly-fishing is not as good as later. Late May and June, of course, are best, and then late August. The season expires Sept. 1st.

C. CLAY.

**THE BRANDYVINE.**—*West Chester, Pa., July 31st.*—Bass fishing has been discouraging here until since the recent heavy rains, but now that the waters are beginning to clear numerous instances of good catches are heard daily. Three and a half pounds appear to be the highest weight of any single fish so far as heard from, while the majority of the fish run considerably below this figure. Young toads, minnows, crabs and helgramites are the most taking baits, yet the bass, when hungry, seem willing to accept anything that is eatable. Have not heard of any being taken this season with the fly.

S.

**SALMON ON THE UPPER JACQUES CARTIER.**—I should like to ask some of your correspondents in Quebec, whether they have taken smolt in the upper reaches of the river, and if so, how they account for their presence there, as the river has never been stocked, and the salmon do not ascend above Sullivan's Falls. At least, I have never heard of salmon having been taken or even seen above this fall. For over ten years I have taken these smolt in the rapids, and have been much puzzled at finding them there. Can it be that during the heavy spring freshets some few salmon scattered in such a way as to get lost? It seems most incredible, as there is a drop ten feet high right at the head of it.

G. M. FAIRCHILD, JR.

**A BIG BLACK BASS FROM THE THOUSAND ISLANDS.**—I send you by express this morning a bass caught with hook and line, weighing six and a quarter pounds, which I think is the largest bass I have ever known taken here. The fishing is good; as many as one hundred were taken in a day with a single fly. The small fish that were here in June have entirely disappeared, hence the fishing has improved. Very truly yours,

S. D. JOHNSTON, Clayton, N. Y.

The bass weighed six pounds on arrival, and proved to be a big-mouth (*Micropterus palidus*), in fine condition. It had a cutish eight inches long in its stomach.

**OREGON.**—*Eugene City, July 22d.*—Fishing on the McKenzie River, twenty miles above here, is good, and nearly all of our anglers are camped on the grounds. Recently two men fishing from a snag caught ninety-five trout, weighing over five pounds, in a day, and it is nothing unusual for a sportsman who is well up to the business to land one hundred and fifty mountain trout

in a day's fishing. The prospect for good shooting this fall is flattering. Numerous coveys of young blue grouse have been seen, and in the marsh below here, young mallards are by hundreds. Pigeons seem to have deserted our county, as I have not heard of over a dozen being killed this spring. The young of the ruffed grouse are half grown, and are feeding on blackberries. I.G.S.

**BASS FISHING IN THE POTOMAC.**—*Leesburg, Va., July 30th.*—Before this muddiness in the Potomac, I took at the head of Harrison's Island, in the rapids, nine bass with the caledonian minnow and one bass with the fly, and next day seven with caledonian and one with the fly. I swung the minnow up and across the current, and spun it obliquely down with a fly rod. Had I had a stiffer rod I would have landed more.

T. W.

**A RARE FISH.**—Mr. E. G. Blackford recently had a specimen of an African pompano, *Trachymotus goresensis*, upon his slabs in Fulton Market, New York. It weighed sixteen pounds, and was served up on Coney Island.

## Game Bag and Gun.

GAME IN SEASON IN AUGUST.\*

Woodcock, *Philohela minor*. Red-backed snipe, or oxbird, *Tringa americana*. Great marbled godwit, or marling plover, *Aegialitis semipalmata*. Lin. *Limosa fedoa*. Wilson's phalarope, *Phalaropus lobatus*. Tattler, *Totanus melanoleucus*. Yellow-shanks, *Totanus flavipes*. Red-breasted snipe, dowitcher, *Macrorhamphus griseus*.

\*This enumeration is general, and is in conflict with many of the State laws.

"Bay birds" generally, including various species of plover, snipe, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limicola*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

## THE DITTMAR POWDER ACCIDENT.

NEW YORK, July 26th.

**Editor Forest and Stream.**—We transmit you herewith our Mr. Von Lengelke's report upon the Nash powder, and we adopt his suggestion to invite you, or any representative whom you may name, to accompany him to Springfield, or any other place agreed upon, where the most reliable instruments can be found, or to witness his practical tests proposed in his letter, to verify the report, and we will bear the whole expense of the trial.

July 25th.

**DITTMAR POWDER MANUFACTURING COMPANY.**—GENTLEMEN:—In compliance with my understanding of your desire, I left for Springfield on the 12th inst. I arrived there on the morning of the 13th.

I employed the day in testing the sample of powder which I received from the Forest and Stream sent to them by Mr. Nash, and of which they retained one-half.

I am glad to say that the powder has no excessive heat, and that the accident reported can not have been the fault of the powder.

My experiments were made with the greatest care, and the following results were obtained: I did not try to obtain even pressures, but experimented to find out whether this powder might probably give an exceptional high pressure under certain conditions of use, and I found, to my regret, but entirely failed to detect anything like it.

First trial.—The gauge showed a pressure of 25,500 pounds. Second trial.—The gauge showed a pressure of 25,500 pounds. I reversed the testing block, twice pressed, and the third showed 35,000 pounds.

I then shot the powder down as much as possible, and heaped the measure a little, and the fourth trial showed 35,000 pounds, the fifth trial, 35,000 pounds.

I then filled the gauge regularly, weighed the same, and also loaded another charge of the same weight, without regard to measure. The result was: sixth, 21,500 pounds; seventh, 27,000 pounds.

The average pressure of all these charges is about 28,000 pounds, which is considerably less than strong, black sporting powder, and also less than our standard, which is 22,000 to 35,000 pounds and breech-loading shot guns, and from 20,000 to 30,000 for rifles and muzzle-loaders.

As I have said, FOREST AND STREAM is in possession of the other half of the sample sent, and I think we should invite them, in order to convince themselves and the public of the truth of our assertion, to meet us either at Springfield, or any other place, where they may be carried upon to test the powder which they hold, in order that there may be no question of the accuracy of my tests, or I will, in their presence, shoot from the shoulder from No. 12 or No. 10 breech-loader they can select in town, weighing 80 pounds, the weight of Mr. Nash's gun.

On July 13th, I also tried some Curtis & Harvey's powder, No. 5. It registered 40,000 pounds.

I also tried the best sporting powders of the leading companies, and found that they showed on an average, about the same pressure as our standard. I think it unnecessary to name the special powders, as it might be deemed injurious. Nash's powder, you will remember, showed about 35,000 pounds, that is 15,000 pounds less than Curtis & Harvey's.

On July 16th I again experimented with the Nash powder, and again had the same results, namely, 15,000 pounds less pressure than Curtis & Harvey's, and have shot, 4 and 4 drachms out of my gun, hammered down, without the least unpleasant result. The gun used was a Claybrook, 7 ft. central fire, breech-loader.

Yours respectfully,

J. VON LENGELKE.

We wish to make a personal explanation to Mr. Nash.

We have never doubted the fact of an accident, nor put

licly questioned his description of it. It is true, as you, Mr. Editor, have said, that no two persons ever described an accident precisely alike, and we are willing to give all due latitude to anyone writing under the consequent excitement.

Mr. Nash was wrong to think that we were in a "terrible fever." We had no fear about any powder of our manufacture, but to know the real cause of the accident. We never doubted Mr. Nash's statement of the accident, and we think it unnecessary to discuss the question of explosive force or cumulative force as given out by different explosive bodies. We hold it to be simply apparent to every man who understands the difference between the two exhibitions of forces, that the explosive could not have torn the barrels apart, as we understand the case to have been in Mr. Nash's first letter. There must have been cumulative tearing force there, and that is the only doubt we have of the accuracy of Mr. Nash's description. We did not doubt the fact of the accident.

Mr. Von Lengelke's report is so clear and decided that every man may draw his own conclusions. Curtis & Harvey's powder, giving a force so much greater than

that given by the Nash powder, and the latter falling several thousand pounds below our standard powder, and below the best brands of American sporting powders, we can only ask, what caused the accident?

We adopt the suggestion of your editorial in your issue of the 15th inst., in which you say: "We think the present company are bound to warn the public, by expressing means in their power, against the powder manufactured by the old company or companies, since it is evident that this old powder is or may be dangerous." We positively declare that the Nash powder was not of our manufacture, was not sold by us, and was never in our possession. So far as that is concerned, we are interested parties, except inasmuch as it bears the name of Dittmar powder, and we think that our tests have abundantly proved that even that was not dangerous, but fell below the powder which we put forward as our standard.

Mr. Nash's suggestion that the can of powder may have been tampered with is something which we have nothing to do. If it was, it was not our powder that was tampered with.

We shall, following your suggestion, advertise more fully to the world, that we have never sold, nor will we ever sell without due notice to the public, any powder whatever, either named, who named, or without the proper directions for its use; and we hereby caution the public against buying any unsealed so-called Dittmar Powder. Yours respectfully,

DITTMAR POWDER MANUFACTURING COMPANY.

We would willingly avail ourselves of the invitation of the Dittmar Powder Manufacturing Company, did we attach any importance to the test proposed as bearing on the point at issue. They by no means show that the accident "cannot have been the fault of the powder," nor do they prove anything, in fact, on the vital question of the safety or non-safety of Dittmar powder. Further than this we must reserve our comments on this letter to another time, and until we have completed our own experiments with the powder.

**SATURDAY NIGHT AT THE HEAD OF THE NECK.**—*Accomac Co., Va., July 16th.*—*Editor Forest and Stream.*—I came over to the Neck at 10 o'clock, and at our spot last Saturday night. After the boys had spun their yarns, in good order, some dropping quail in crossing a four-foot path, resting their arms on fence rails, killing with their guns "kicking up behind and before," bagging coons, opossums, etc., etc., Uncle Mike Jones put in an appearance by stating that his father had often related to him the prowess of his grandfather in the use of a gun, which he had imported from Holland, known as "the old powder piece," and, amongst other things, described his wholesale destruction of blackbirds on one occasion, when he swung her around an oak stack, and killed all the way around, the charge terminating in taking off the skirts of his long-tailed blue, whereupon, being an ardent admirer of old "tangle-leg," he proposed a drink.

John Bush, whose inclinations had turned, for several years, toward the "black-neck" fraternity, having been a great listener, put in a word, which he said in no way was meant as disputing the flexibility, under curved pressure, of the gun of Mike's progenitor, stated that he, on one occasion, had made a shot somewhat alarming to tell, yet, as there still walked two living witnesses, he would relate that the occasion did not arise by putting his piece in a circular attitude, but that he held it straight from the shoulder, and left dead on the sand 350 assorted birds, curlew, snipe, etc., and in candor believed that as many more fluttered off, wounded, on the water. Uncle Mike spoke up and asked: "If but one barrel?" "Only one." "What size shot?" "Fours." "Two ounce charge?" "About." "Will some gentleman be so good as to count if there are 700 pellets of fours in two ounces." Now, you see that things began to look rather "cornered" for John, and as the old "tangle-foot" was working up to the usual standard, it was plain that something was being done for the double purpose of the purpose of the matter, and to drive the two heroes of the event to an alliance, and nothing short of the "Western Farmer" could accomplish that end, so Cousin Burton stated that on one occasion a Western farmer had done wonders without good results, and he would be glad to have their attention to hear it. Silence having been reached, this old con hunter went on to say that this farmer had constructed a double barrel for the purpose of shooting two pigeons, and after altering them to his place in great numbers concluded he had better secure some profits for his outlay. With a double charge in his old fly he lashed it to two posts and lay in wait. When all things were ready, and pigeons had come in such numbers as to lead him to anticipate the need of a wagon to carry off the dead, he gave a grunt to start the birds on the wing, and pulled the cord, when lo! not one bird was left prostrated on the field, having pulled too late by one and three-quarter inches.

"Well," says Mike, "nothing very remarkable about that."

"But I was going to say that he swept up nine and a half bushels of legs and feet."

"Oh! Come, John, come, s'pose we have just one nip and go."

"I don't want any," said Bush; "that pigeon affair is all that I can carry."

T. G. E.

**THE GUN IN ENGLAND.**—Mr. Richard Grant White has been discussing English social life, in a series of articles in the *Atlantic*, and has this to say about English shooting:—

Next to the horse in England is the gun. Accustomed as we are to see Englishmen who have crossed the Atlantic to visit America, and whose idea of that tour of observation seems to be to go 2,000 miles to the Western plains to shoot, we yet have no adequate appreciation of the importance which shooting, as one of the occupations of life, has in the minds of tens of thousands of Englishmen. Hunting and shooting in England are not mere recreations, forms of casual pleasure, to be enjoyed now and then, leisure and weather serving. In the hunting season hunting men are not content, as I found on talking with some of them, to go out with the hounds

## The Kennel.

### TREATMENT IN CASES OF POISONING.

OUR attention has recently been called to a large number of cases of dog-poisoning; but we are pleased to state that the majority of them have been caused by accident and not the result of design. Believing, therefore, that a brief reference to some of the more common and popularly known poisons which our dogs are most likely to suffer, and their antidotes, may be of use to our readers, we quote as follows from Mr. Dalziel's excellent little book on "The Diseases of Dogs":—

Perhaps none of our domestic animals are so liable to suffer from the effects of poisonous substances as the dog: his restless and inquisitive nature, and that inveterate habit of routing into every accessible hole and corner, lays him open to it, while the sporting dog, on duty in places where unsportsmanlike practices prevail, is exposed to special danger. Dog-poisoning is either the result of design—where some malicious or malicious and cowardly person is the perpetrator—or it is the result of the ignorance of persons administering to the animal drugs of the nature and action of which they are ignorant; or from accident, which, properly interpreted, in most cases means culpable negligence on the part of those having to use poisonous substances for the destruction of vermin or other purposes.

Against the malicious poisoner it is difficult to provide; being rarely foreseeable, we cannot be forearmed, and against accidental poisoning much can be done by using reasonable care when it is necessary to use poison. The following will cover the great majority of cases: Arsenic, corrosive sublimate, phosphorus, strychnine, cantharides, carbolic acid, and what of late has caused serious trouble, Paris green. As a general rule, for distinguishing between the evidence of poisoning and the symptoms of disease, the suddenness of the attack must weigh largely; and by tracing where the dog has been, and what he has or is likely to have picked up, a pretty accurate conclusion may be arrived at.

The first step to be taken in most cases is to freely empty the stomach by means of emetics, as tartar emetic, sulphate of zinc, ipecacuanha wine, or, if none of these afterwards giving the antidotes indicated, if procurable, but, under any circumstances, give demulcents, such as boiled flour and milk, starch, gruel, milk and eggs beaten up, olive oil, etc., in considerable quantities. A dose of castor oil may also be given, and, if the dog suffer much pain, a dose of opium or laudanum every three hours. Where great depression and weakness follow, stimulants (as ether, wine, whiskey, brandy, &c.) should be given in small quantities at frequent intervals.

**ARSENIC.**—Symptoms: Great heat and pain in the stomach and bowels, sometimes accompanied with swelling, the belly being very tender to the touch; great thirst; frequent vomiting and retching; more or less discharges of frothy saliva; frequent evacuations of fluid, dark colored matter often marked with blood. The animal soon loses muscular power, to a great extent, showing an inability to move; the tongue, lips, etc., become red and swollen, and the breathing more and more labored and painful. Antidotes: Ferrugine, or hydrated sesquioxide of iron, twelve parts of which combine with one of arsenic, forming an insoluble compound; also light magnesia, which will remove one-twenty-fifth its weight of arsenic from its solution in water.

**STRYCHNINE.**—Symptoms: Severe, acute pain, making the dog utter sharp cries; frequent twitchings and jerkings of the head and limbs; the fore and hind legs are drawn toward each other, and the back is arched; the fits of cramp and twitching are intermittent, but are really brought on by a touch or even sudden noise; foaming at the mouth is also a frequent symptom. Antidotes: An emetic, which should immediately be given, and afterwards butter, lard or other fat in considerable quantities.

**PHOSPHORUS.**—Antidote: Calomel magnesia, with diluents and demulcents given in quantity.

**CANTHARIDES.**—Frequently given by ignorant men for purposes, which are defeated, which produces dangerous results causing inflammation of the urinary organs. Symptoms: Violent thirst; copious discharge of bloody mucus from the stomach, mixed with which may be seen the shiny green particles of the flies. There is great pain in the loins, swelling and inflammation of the genital organs, pain in the bowels, and bloody stools and urine. Antidotes: An emetic should at once be given, and the dog should afterwards be drenched with demulcents (such as oil), and a dose of opium given every three or four hours.

**CORROSIVE SUBLIMATE** is used for a variety of purposes about farms. It is also used for destroying vermin. Symptoms: Violent vomiting and purging of stringy and offensive matter; the belly distended and painful to the touch; the urine suppressed; cramp and twitches in the limbs, and frequently paralysis ensues. Antidotes: Tartar emetic, as an emetic; white of egg, followed immediately by infusion of galls; milk or gluten of wheat.

Of the medicinal value of the albumen of eggs is by far the best; the white of one egg is sufficient to neutralize or render insoluble four grains of solid bichloride of mercury.

**CARBOLIC ACID.**—This produces baneful effects even by absorption through the pores of the skin, when too freely used. It causes great prostration, with swelling of the whole frame. Symptoms: Extraordinary depression of the vital powers; there is general shivering and almost constant trembling of the limbs, and a pained motion of the head; bleeding at the nose is a frequent symptom, and the discharges from the bowels are also often stained with blood. The countenance of the sufferer is expressive of a most helpless and painful state.

**PARIS GREEN.**—The arsenite of copper; extensively used for destroying the vegetable bug. Symptoms and antidotes: Same as those of arsenic poisoning. Antidotes: Corrosive sublimate, phosphorus and strychnine each enter into the composition of paste and powder largely

used for the destruction of vermin, and it is when so used, being placed on bread and butter, bits of meat, etc., that they are most likely to be picked up by the dog.

**DEATHS BY PARIS GREEN.**—West Bayston, Mass., July 20th.—Mr. Charles P. Smith's (Waltham, Mass.) orange and white setter Ned died on July 4th, and also Mr. Jerome Marble's (Worcester, Mass.) black and tan setter Nelson. Grouse-St. Kilda, died on July 10th, from the effects of Paris green. Both dogs were poisoned at same time by running through a potato field where Paris green had been sprinkled on the vines to destroy the Colorado beetle. Next to the Nelson, a beautiful white hair dog of his, and the very picture of Grouse, Mr. Smith's Ned was a year old and a very promising field dog. J. P. B.

**HORSEHAIR FOR "DISTERPHER."**—In our issue of June 14th we published a communication recommending horsehair as a sure cure for "disterper," our editorial comment at the time being that horsehair cut fine would no doubt create local irritation and rid dogs, to some extent, of worms, but how it would cure "disterper" we utterly failed to see. This, has caught the eye of our friend Mr. Dalziel, who, in his usual happy way, alludes to it in an English contemporary as follows:—

"An American sage has discovered that horsehair is a cure for distemper in dogs. The hair must be taken from the tail of the horse, cut very fine, and a heaped-up teaspoonful given to the dog three times a day in his food until he is cured—the italics are mine."

"Distemper is a term used for want of a better, and is in itself an admission of our ignorance of the disease or diseases it is applied to. I say diseases; for with extended experience of distemper cases my conviction grows that under that name maladies distinct in character and in their symptoms are included. I am much disposed to think that faith in vaccination as a preventive of distemper is to be accepted as justified by results, if, as appears to me probable, dog-pox (which is similar to small-pox in man) is one of the diseases very often classed under the general term distemper. I by no means wish to dogmatize. I admit this to be presumptive only, and I offer the hypothesis to thoughtful and observant breeders with the suggestion that they might greatly benefit themselves and others by carefully noting the symptoms and the course of their own kennels, giving them in sequence of time, with the treatment adopted, and submitting them for comparison. The kennel columns of all papers devoted to such subjects would be better filled with clear observation of symptoms, etc., of many cases, or an occasional digest of these, with inferences to be drawn from them, than such bald statements of cures with this, that, or the other, which are so common at the present time. The opening of this letter are generally as absurd to the intelligent as they are misleading to the uninformed."

"Horsehair has long held a place, if not in the canine *materia medica* of the colleges, at least in that of kennel men. The hair from mane or tail is from its thickness most suitable; for if very fine it would have no effect, and if very strong, like pigs' bristles, or the label-wire of badger pens, it would irritate the skin. Indeed, there is always more or less danger of it at least causing more intestinal irritation than is sought or needed for the expulsion of worms, for that is the purpose for which it is given. On that account I do not recommend it; but for those who wish to try it, the following will prove a suitable dose for a dog of fifty pounds or so: Cut the hair in lengths of about the 3rd of an inch, and give with a dredge made into one or two balls, with a little luscious meat and lean meat well pounded together."

"Cut horsehair belongs to the list of mechanical vermifuges, others being cowhage, iron filings, granulated tin, and finely powdered glass. Youatt strongly recommends the latter; and against the popular belief in the danger attending its administration, he says: 'Not a particle of it penetrates through the mucous lining of the bowels, while it destroys worms in the small intestine.'"

"The dose for a pointer, greyhound, or dog of similar size, is a small teaspoonful, with about ten grains of ginger, mixed with suet or hard butter."

"Before leaving the subject of worm medicines, let me point out how often disappointment follows from the use of inferior drugs, or such as from age or other cause have lost their efficacy. Arec nut is the most useful of all vermifuges we have, but if the nut is round, it cannot be relied on. Last summer I had to pass along one of the principal thoroughfares in the city of London several times a week, and, month after month, I saw exposed in a window a large heap of areca nuts, many—if not most of them—worm eaten. These were utterly useless as a vermifuge; yet it is generally these that are ground up and sold as areca nut powder. Let the dog owner beware; and if he wishes to use areca nut for worms, let him buy the whole nuts, select those that he sees are not worm eaten, and that weigh the heaviest. It will be a sufficiently fine powder to rub these down on a nutmeg grater, although a further rub down in a mortar is to be preferred, especially if intended for puppies."

**DEW CLAWS IN ST. BERNARDS.**—*La Belle Sauvage Yard, Ludgate Hill, E. C., London, Eng., July 19th.*—Editor *Forest and Stream*:—I have just read Mr. Dalziel's letter to the *Lice Stock Journal* in your columns, and as my name appears in it I should like to beg leave to state how much I disagree with him on the subject of dew claws in St. Bernards. It is all very well for our good friend to talk airily about accidental monstrosities, and to quote letters from the author of the *Descent of Man*, but I only consider it a rise to draw us away from the main point at issue. I have no hesitation in saying that 99 out of 100 St. Bernard breeders regard and use dew claws as a great evil, and that they can best be removed when they get a good dog without them that they profess to be indifferent on the matter. People might just as well say that the trace on the back of a pug, the lines up a black and tan terrier's feet, the shortness in face of a bulldog, or the beautiful features of a setter were matters of no consequence, and I darest Mr. Dalziel, or anybody else, would back them up. I fail to see why, because dew claws in other dogs similarly affected should be given prizes; and Tell, good dog as he was in his day, even if he had dew claws, could hardly win now against our modern champions. One thing I know is, that it will be very much against my inclina-

tion if a St. Bernard without dew claws or a white-colored dog ever wins under yours fraternally. VERO SHAW.

**"CARBOLIZED PAPER FOR KENNELS.**—Stanley, Morris County, N. J., July 19th.—Editor *Forest and Stream*:—Permit me to call the attention of your many readers, who own dogs, to the best and simplest appliance for relieving both dogs and their kennels from fleas, Carbolized Paper. U. S. A. discovered that carbolic acid (which is naturally a volatile body and very caustic when coming in contact with the skin) would unite readily with bitumen; also that cloth or paper saturated in this compound was not caustic, and the virtues of the carbolic acid would be perpetuated for several years. "Water Proofed Carbolic Paper" is now being manufactured, and is known to most of the dealers in sportsmen's goods in New York. It costs but ten cents per yard and is clean and healthful. Kennels lined with this paper will always be free from fleas. This paper also affords absolute protection from moths.

GEO. SHEPARD PAGE.  
The use of this paper would not be injurious, unless the odor from it is too strong, and the kennel small.

**WITHDRAWAL OF FAUST.**—St. Louis Kennel Club, St. Louis, July 31st.—Editor *Forest and Stream*:—Please state in your paper that the St. Louis Kennel Club has withdrawn "Faust" from the public stud.

CHAS. H. TURNER, Secretary.

### KENNEL NOTES.

**NAMES CLAIMED.**—*Ronia*.—Mr. C. M. Ogden, of Washington, D. C., claims the name of *Ronia* for Gordon setter bitch out of Mr. C. H. Raymond's imported June, by Dr. H. F. Allen's field-trial winner *Glen*. *Glen*.—Mr. F. M. McKoon, of Franklin, N. Y., claims the name of *Glen* for a brown and white hare beagle bitch puppy, bred by Mr. N. Elmore, of Granby, Conn., out of his Victor and Lucy. Mr. McKoon obtained the bitch in exchange for a fine cocker bitch puppy. *Sue*.—Mr. N. Elmore, of Granby, Conn., claims the name of *Sue* for his blue-mottled foxhound bitch, presented to him by Mr. McKoon, of Franklin, N. Y. *Sam Weller*.—William Stanley, of Englewood, N. J., claims the name of *Sam Weller* for his black and tan puppy, out of champion Belle, by Toledo Kennel Club's champion Grouse.

**SALES.**—*Victor-Venus*, whelp—Mr. N. Elmore, of Granby, Conn., has sold to Mr. Thos. Byrth, of McIntyre, Pa., a fine English hare beagle puppy, by Victor out of Venus. Mr. Elmore writes that the sale was made through his advertisement in our last issue.

**WHEELPS.**—*Nellie*.—Mr. Chas. F. Mann's (Worcester, Mass.) black and tan setter bitch *Nellie*, formerly Mr. F. A. Tait's, of Dedham, Mass., whelped July 23rd twelve puppies, seven dogs and five bitches, by Mr. F. A. Tait's Jerry.

**PRESENTATION.**—*Elmira*. N. Y., July 30th.—I have been presented by Mr. N. Elmore, Granby, Conn., with a fine beagle puppy by Victor out of Lucy. Please acknowledge through your kennel notes and oblige. F. H. WALKER.

### COL. BODINE AT HOME.

THE *Inman* steamer City of Chester arrived in port on Sunday evening last, and after a night spent at Quarantine anchored at Col. Bodine and Messrs. Clark, Rathbone and Fisher's wharf. Many of the men had new rifles and the ammunition had to be tested and tried to get its best effect. There were no flags on the range to show the direction of the wind, for the Irish Lige Association had but just taken possession of the spot. On the Friday before the Tuesday on which the match was shot, I selected my six men out of the nine, and on that Saturday we had a regular shoot with the men squadded as for a match. The Irishmen had been very confident of winning, and the feeling over there was that we were to be whipped. They judged merely by the scores which we were making. When we rolled up that Saturday score the opinion changed. I never had any doubts of the result. On the day of the match my men worked magnificently. Mr. Donaldson, the Secretary of the National Rifle Association here, kindly went down to the butts to see that the marking was all right. On one target were Clark, Scott and Fisher shooting in order, with Laird as spotter at the target, while on the other target Rathbone, Farrow and Brown were the shooters, while I sat at the glass and watched the shots.

We did not shoot our match as it is usually done, each man following his leader at his own leisure. In place of that we shot in sections. The plan was to send in our shots as quickly as possible; that is, each three men would load and then as fast as one shot, the next would drop down and deliver his fire, taking, of course, ample time to aim. We fired each particular shot as though it was the deciding shot of the match, and I never saw finer discipline. We had no unaccountable misses, and none of the men kicked over the traces. Clark and Rathbone were good leaders, and there are no two better riders for judgment in the world. The light was good, but the wind was fluctuating from 5 to 10 o'clock on the dial, what we would call at Creednaur "a bad rear fish-tail." The wind gauges were changed between every shot, and often would be moved from a point or two for a left wind to a point or more for a right wind. It was a wind that needed no end of watching, and we were all keenly keeping track of it.

In my official report I think I will give lithographed copies of Clay's record book, made on the range, so that it will enable riflemen to understand precisely the difficult conditions under which the match was shot.

"We received the best of treatment during the match, but toward the end of the match there was a rush of smoke across the

their addresses to this paper.

## THE LAWS OF CRICKET IN THE PAST AND PRESENT.

WE take pleasure in presenting to our readers an illustration showing how the game of cricket was played a century ago. This quaint picture is taken from a little paper-bound book of the Laws of Cricket, brought to this country in 1775 by Benjamin Franklin, now in the possession of the Young America Cricket Club, of Philadelphia. Through the kindness of Mr. Daniel S. Newhall, we are enabled to reproduce the fac-simile, as the original appears in the frontispiece. Unfortunately the history of this valuable little book is not as clear as we would wish. It was presented to the Young America C. C., June 4th, 1887, by Miss Mary D. Fox, of Philadelphia, who gave, through a third party, something of its history, but not definite enough for publication. That Franklin was an admirer of outdoor sports there can be no question, for in several letters of his written while in London, the originals of which are now in the possession of the editor of this column, he mentions having been a look-on, while a series of matches of cricket were being played, but whether he himself added the accomplishments of bowling "grubbers" and "taking a few," to that of kite-flying he omits to state. It may not be generally known that two of the sayings of Poor Richard, most often quoted, were forced from the lips of the philosopher upon witnessing the two days' match, namely: "Never leave that till to-morrow which you can do to-day," and "Dost thou love life, then do not squander time, for that is the stuff life is made of."

To enable those of our readers who are interested in the records of cricket to make a comparison between the laws of the game of a hundred years ago, and those supposed to govern the rulings of to-day, we reproduce below the contents of the little book. This will show with what obstinacy the Marylebone Club

have held to the traditions of the past, and how, from year to year, rules have been added to this mass of incomprehensible patchwork. No beginner, outside of a lunatic asylum, would take a copy of the laws of cricket, as revised by the Marylebone C. C., in 1870, as a guide to play the game. As we have said before, excepting the accounts of the "Adventures of Alice in Wonderland" and the "Hunting of the Snark," the equal of the Marylebone laws for descriptive clearness have never been published. "Fancy a party of beginners," says a writer on this subject, "who had never seen the game played, attempting to learn the laws without other enlightenment. For example, they would never run 'byes' or 'leg-byes,' for the former are not mentioned in the laws, and the only provision regarding the latter" (viz., in Rule XIII—if the ball shall first touch any part of the striker's dress or person, except his hands, the umpire shall call 'leg-bye') "does not suggest running as an essential." The fact is, that the Marylebone Club should put the laws of the game in such a shape that the lovers of cricket can introduce them intelligently in a strange land. They are too primitive, mysterious and incomplete at present. Not a week passes but we are petitioned by some far-away club to send them a set of rules for playing the game, that "they can not make clear to some of the members that the umpire has not anything to do with the decisions, and that some of the laws seem to bear a double interpretation; and although a few may be determined easily off-hand by the latest erudite of umpires, there are others which puzzle the most astute."

## THE LAWS OF CRICKET.

## The Ball.

Must weigh not less than five ounces and a half, nor more than five ounces and three quarters.

It cannot be changed during the game, but with the consent of both parties.

## The Bat.

Must not exceed four inches and one-quarter in the widest part.

## The Stumps.

Must be twenty-two inches; the ball six inches long.\*

## The Bowling Crease.

Must be parallel with the stumps, three feet in length, with a return crease.

## The Popping Crease.

Must be three feet ten inches from the wickets, and the wickets must be opposite to each other at the distance of twenty-two yards.

\* By a subsequent appointment, it is settled for to use three stumps instead of two to each wicket, the ball the same length as above.

## The Party which Goes from Home

shall have the choice of the innings and the pitching of the wickets, which shall be pitched within thirty yards of a center fixed by the adversaries.

When the parties meet at a third place, the bowlers shall toss up for the pitching of the first wicket, and the choice of going in.

## The Bowler.

Must deliver the ball with one foot behind the bowling crease, and within the return crease; and shall bowl four balls before he change wickets, which he shall do but once in the same innings.

He may order the player at his wicket to stand on which side of it he pleases.

## The Striker Is Out.

If the ball is bowled off, or the stump bowled out of the ground. Or, if the ball, from a stroke over or under his bat or upon his hands (but not wrists), is held before it touches the ground, though it be hugged to the body of the catcher.

Or, if in striking both his feet are over the popping-crease, and his wicket is put down, except his bat is grounded within it.

Or, if he runs out of his ground to hinder a catch.

Or, if in running a notch the wicket is struck down by a throw, or with the ball in hand, before his foot, hand or bat is grounded over the popping-crease, but if the ball is off, a stump must be struck out of the ground by the ball.

Or, if the striker touches or takes up the ball before it has been still, unless at the request of the opposite party.

Or, if the striker puts his leg before the wicket with a design to stop the ball, and actually prevents the ball from hitting his wicket by it.

If the players have crossed each other, he that runs for the wicket that is put down is out; if they are not crossed, he that has left the wicket that is put down is out.

When the ball has been in the bowler's or wicket-keeper's hands the strikers need not keep within their ground till the umpire has called play; but if the player goes out of his ground with an intent to run before the ball is delivered, the bowler may put him out.

When the ball is struck up in the running ground between the wickets it is lawful for the strikers to hinder its being caught, but they must not neither strike at nor touch the ball with their hands.

If the ball is struck up the striker may guard his wicket either with his bat or his body.

In single wicket matches, if the striker moves out of the ground to strike at the ball he shall be allowed no notch for such stroke.

## The Wicket Keeper.

Shall stand at a reasonable distance behind the wicket, and shall not move till the ball is out of the bowler's hand, and shall not by any noise incommode the striker, and if his hands, knees, foot or head be over or before the wicket, though the ball hit it, it shall not be out.

## The Umpire.

Shall allow two minutes for each man to come in, and fifteen minutes between each innings; when the umpire shall call play, the party refusing to play shall lose the match.

They are the sole judges of fair and unfair play, and all disputes shall be determined by them.

When a striker is hurt they are to allow another to come in, and the person hurt shall have his hands in any part of that innings. They are not to order a player out unless appealed to by the adversaries.

But if the bowler's foot is not behind the bowling-crease, and within the return crease, when he delivers the ball, the umpire, unasked, must call no ball.

If the strikers run a short notch, the umpire must call no notch.

## Notches.

If the notches of one player are laid against another, the bet depends on both innings, unless otherwise specified.

If one party beats the other in one innings, the notches in the first innings shall determine the bet.

But if the other party goes in a second time, then the bet must be determined by the numbers on the score.

LONGWOOD vs. FALL RIVER.—Played at Boston July 19th, and resulted in the victory of the former by 75 runs on first innings score:—

HAUGHTON vs. MOERAN.—Return match. Played at Staten Island July 31st, and resulted in favor of the home team by 31 runs. This was the first appearance of Mr. Edward Kessler, fresh from the cricket fields of Lancashire, Eng. This new member, who has recently arrived from Manchester, at once showed that he was not only a great acquisition to the club, but to the cricketing fraternity of New York. Six bowlers of the Hoboken team alternated before Mr. Moeran unscathed him. During his stay he gave an exhibition of brilliant all-round cricket that is seldom shown by the local players in this vicinity. In his score of 31 he made 4 stupendous smites over the boundary fence into the bay. His leg-hitting was certain and clean, and his cutting finished and well placed. Mr. J. J. Eyre assisted with 21, and Mr. H. Waller, Jr., a chip of the old block, with 10, not out; the innings closing for the unusually large total of 132. For the St. Georges Mr. Hosford and Mr. Moeran, by safe play, contributed 23 and 21 respectively, and Mr. Herriek 10, the side being disposed of for 91. Although 5 of the Islanders handled the ball, the dissolution of the St. Georges' eleven was due to Mr. Haughton's high and home deliveries, 6 wickets being credited to him for the expense of 20 runs. With 81 runs behind, the St. Georges were obliged to follow, and when time was called, at 6:30 o'clock, 3 wickets had fallen for 27 runs. The following is the score:—

THE AUSTRALIAN TEAM.—Mr. James Lillywhite writes us from Tunbridge Wells, July 24th, as follows: "With regard to the Australian team, now in England, I cannot give you any positive information at present. Mr. Alexander, their manager, will write you on the subject. By what I hear, they have not yet settled by which route they will go home, via India or America. They will be playing in this country till September, or perhaps a little later."

AN OUTSPOKEN OPINION.—*Macon, Ga., July 17th.*—I enjoy your paper very much. I find it greatly improved since I began taking it a second time. The general excellence of all the articles is so much more elevated. In its editorial department it does my heart good to hear the way in which you express your opinion on the subject of selections of international rifle teams, steam catamarans, etc. No "straddling the fence." G. F. P.

LION CULTURE.—The number of lions in Algeria is fast diminishing, and it is expected that the animal will soon be exterminated from the colony. As there is an increasing demand for public exhibitions at fairs and zoological gardens, an establishment has been formed at Bona, by a private individual, for lion-breeding.

It affords us great pleasure to publish the matured thoughts of men by their qualifications fully able to deal intelligently with the question they discuss, whether they agree with us or not. Mr. Colin Archer's letter will be read with attention by all on this side of the Atlantic, as his name is as well known on this continent as it is abroad for his valuable contributions to modern naval science. Incidentally we may also point to such communications as evidence of the universal circulation of **FOREST AND STREAM**—the esteem the journal is held in by the best authorities of the day. Our correspondent residing at such a distance

we will not take advantage of the fact and enter upon an argument *à la outcrie*, but indicate the line of thought by which we arrive at our conclusions.

Two things by way of premise, however. We cannot blame Mr. Archer for taking us at our word and identifying "power" with "stability." We used the word "power" as it is generally understood among yachtsmen here, as synonymous with "momentum," though in technical parlance there is no connection between the two, "power" among naval architects meaning "stability," something altogether different from "momentum." Like Mr. Archer, we have very far from questioning "stability" as a basis of measurement. It is so clearly the outcome of model, and therefore something that should not be taxed, that we have always set our foot upon anything like measurement by sail area, by area of water line, or the Thames rule, all of which are indices of a vessel's stability. We believe Mr. Kemp once published a table of sail areas showing how nearly the Thames rule measures stability, before the abnormal tendency among the modern cutters to decrease their stability, and consequently their measurement, in proportion to size, by deducting from beam and adding more rapidly to untaxed size and momentum than to stability by increase of length. We believe with Mr. Archer that the modern cutter, though possessing undeniably good qualities in the most important directions, is not the best type of vessel for the money invested, except when sailing under the rule of measurement which has favored their production so strongly, and that under a more equitable rule more moderate forms would come to the fore, especially where speed is expected. In the three examples given and in the following phrase Mr. Archer strikes the key note of the weakness of measurement by three dimensions pure and simple: "The influence of length, breadth and depth in enabling a vessel to get over the ground is very different not only in degree, but in kind, and any formula in which the three dimensions have the same function necessarily offers a direct encouragement to extend that dimension which is of most value for increasing the potentiality of speed." This is incontrovertible and this danger we had foreseen all along. To obviate it we desired to have the three dimensions, not as a means to make it virtually the Thames rule minus the bad features. We proposed the adoption of "standard depths" for measurement purposes, such depths to depend upon a consideration of the other two chief dimensions. Such a step would at once remove the tendency to build shallow vessels on one hand, and on the other would deprive the designer of any incentive to extravagantly narrow craft, as the Y. R. A. or Thames rule now does by making what we may fairly call the "rule of thumb" dependent upon only one of the remaining two, thereby checking on one and stretching the other. But knowing the difficulty of moving great bodies, especially when disorganized, as the American yachting public still is, we deemed it advisable for the time to drop pressing the point for fear of wrecking the whole scheme at the outset by complications which the general public is never fond of. On the principle that half a loaf is better than none at all, we hoped that after the three dimension rule had once become generally adopted, it would have the influence to induce the final step of substituting standard depth and avoid the construction of types which offer no inducement to other phases of the sport than racing. *Ce n'est que le premier pas qui compte.*

However, these are side issues. We will attempt to lay our course of reasoning in the matter before the reader in concise form.

We take it for granted at the outset that races are sailed as a test of model, and that the object of granting time is to allow a fair test between yachts differing in some initial advantage due to natural causes, and which are not the result of artifice or form. Eliminating extraneous, irrelevant disturbances, let us consider a series of races between two yachts, A and B, in all their variations. A and B are supposed to be built on exactly the same lines, but A the larger of the two. In a fair race A will outstrip B. The difference between them at the finish represents the value of the difference in size between A and B, and is the amount which A should allow B in order to bring about an equitable test of their models. Being exactly alike, they should at the end of our "theoretical race" be placed even at the finish, and this the time allowed B should exactly accomplish. The distance which A has outstripped B is not due to the difference of length in her favor, for beam and depth have been increased in the same ratio and the canvas was the same. In other words, while the resistance may have been exactly the same ratio, and *there it is not for some virtue entirely independent of linear dimensions, per se*, the yacht A would clearly sail no faster than her smaller sister B. Why, then, has A beaten her?

This is the answer. Upon the assumption that A is twice as long, twice as wide and twice as deep as B, she will experience four times the resistance of B, but her size, displacement, and therefore momentum, will be eight times that of B. It is in this *factor increase in size and momentum in proportion to resistance*, that we have the reason of A's outstripping B, and in this only. Hence a theoretically correct table of time allowance should be constructed upon the value found in practice to attach to various differences of momentum. The fact of A's length being greater than that of B is purely incidental, and to it alone none of the excess of speed over B is to be ascribed. Building time tables upon length is confounding cause and effect.

Further, that length is a deceptive criterion, will appear from the following: Instead of A being built on the lines of B, assume her to be shorter, but yet of greater size—a very likely assumption. A length measurement would saddle B with a penalty, whereas from the foregoing it appears that the natural advantages flowing from greater size are in possession of A, and the latter is the subject for just tax. Let them sail a race as a test of model. A will win, and B will be the loser. The amount by which she has won is certainly not an exhibit of the superiority of her shape, pure and simple, for she has been aided to a certain degree by the momentum due to her excess of size over B. To justly weigh the worth of their models, then, an allowance must be made by A to B. This amount, subtracted from the total distance A has outstripped B, will represent the superiority of the model A.

Should nothing remain after the subtraction has been performed, it indicates that the speed of A and B is exactly alike. If "less than nothing" remains: in other words, if the subtraction cannot be performed, it proves that after eliminating the natural advantage of superior size, and bringing the two down to one level in that respect, A is not only not faster than B, but slower by just the amount by which the subtraction cannot be performed, or what in algebra would be known as a minus quantity.

In each of the previous cases, allowances on length would have brought about exactly the wrong conclusion, and would have handed the prize to the wrong vessel, that is to the slower model, or at least modified the verdict so much as to rob it of its value to naval architects. This is exactly what we see in America every day, where inferior models win prizes time and again over

long to time allowance on length working just the wrong way, making a vessel of moderate form pay to one of greater tonnage but of less length, yet inferior in all other desirable attributes of a good vessel.

One thing more. We may have used the term *size* and *momentum* as interchangeable. Above Mr. Archer points out the difference between the two, where he instances the rubber ball and bullet. We have, in advocating a "three dimension rule," taken no notice of this difference, because a given size of vessel will enable the designer to settle upon a given displacement to produce a certain speed. Hence, if a vessel is given a certain displacement it is prepared to abide by it, it is an element of design intentionally executed upon the problem as a whole. Size is the original standard from which he works and which places within his grasp a certain possible speed. What he manages to produce from that size is model, and must sail on its own merits, varying displacements included.

In order to meet the chief objection against bulk measurement made by those who in their haste condemn the seeming incongruity of taxing it where perhaps actually retarding speed by faulty location, we offer the following for consideration. Bulk is taxed for its *quantity* in the rule, and not at all for its *position*. The objection urged does not hold good therefore. Its position always remains optional with the builder. If he puts it where it may actually be hurtful to speed, it is a matter of model, and if the boat is beaten she is beaten owing to her poor model, which is no reason at all why in equity the builder should be exempt from paying for the greater momentum he has had of over the whole course, and which, as explained above, is at all times the necessary accompaniment of an excess of bulk, irrespective altogether of its location in the model. To make this still plainer, let us apply it to an example. If A is larger and of poorer model than B, the latter may outstrip A. To obtain a truthful estimate of the worth of their models for speed, it is certainly clear that we must in equity eliminate the excess of momentum which A possesses, due to her excess of bulk. Only when this has been done, when A has been freed of such natural advantage, will the models have been tested on an equal basis, and the actual superiority in shape of B laid bare. To effect this in practice, an allowance of time deducted from practical observation must be given by A to B. The sum total of this allowance, added to the recorded victory of B, will represent the true gauge of B's superiority of shape or model, which was the aim of the race in the first place. This is the rock that most split on, but we trust that after a thorough digestion of the foregoing it will be clear why a vessel should pay for excess of bulk, no matter what her form, and why such payment is in no way excessive, but simply the attainable momentum, the only natural advantage which is inherent to and varies with size, independent entirely of what form it may be put into.

A bulk measurement is the only one devised which is correct in theory, and which leaves the modeller absolutely unfettered in choice of such shapes as will be most conducive to the aims he has in view. When it is deemed desirable to so frame the rule as to encourage a particular kind of line and model, and to impose limitations as required, with less departure from equity and logic than any other, and with no liability to produce what is not wanted or what was not expected.

Tax size and you reach the bottom, beyond which no one can obtain any natural inherent advantage not accounted and paid for at the start in the shape of time allowance.

In practice you may then modify the rule to the extent necessary to produce the most servicable type of yacht.

**OCEAN PASSAGES.**—From our excellent French contemporary, *Le Yacht*, we clip the following concerning the ocean passages made by American yachts:

1891, America, schooner, 170 tons, New York to Havre, 21 days.  
1892, Sylvia, schooner, 105 tons, New York to Havre, 16 days 22 hours.  
1893, Charter Oak, schooner, 23 tons, New York to Liverpool, 16 days.  
1894, Christopher Columbus, schooner, 45 tons, New York to Cowes, 45 days.  
1895, Gipsy, schooner, 135 tons, New York to Queenstown, 19 days.  
1896, Alice, schooner, 27 tons, Boston to Cowes, 19 days.  
1897, Henrietta, schooner, 203 tons, Sandy Hook to Cowes, 13 days 21 hours 55 minutes.  
1898, Fleetwing, schooner, 200 tons, Sandy Hook to Cowes, 14 days 4 hours 10 minutes.  
1899, Vesuvius, schooner, 201 tons, Sandy Hook to Cowes, 14 days 6 hours 50 minutes.  
1898, Sappho, schooner, 274 tons, New York to Cowes, 11 days.  
1899, Sappho, schooner, 261 tons, New York to Queenstown, 12 days 9 hours 36 minutes.  
1898, Dauntless, schooner, 203 tons, New York to Cowes, 13 days 17 hours 6 minutes.  
1899, Meteor, schooner, 230 tons, New York to Cowes.  
1871, Eucharistess, schooner, 233 tons, New York to Gibraltar.  
1872, Sappho, schooner, 274 tons, New York to Cowes, 18 days.  
1872, Dauntless, schooner, 203 tons, New York to Cowes, 23 days.  
1872, Eucharistess, schooner, 233 tons, New York to Cowes, 22 days.  
1873, Faustine, schooner, 95 tons, New York to Cowes, 18 days.  
1874, Viking, schooner, 137 tons, New York to Cowes, 30 days.  
1875, Sappho, schooner, 274 tons, New York to Cowes, 24 days.  
Sappho made the fastest run in 12 days 9 hours and 36 minutes.  
The Charter Oak, Columbus and Gipsy were sold abroad, and the Meteor was lost off Tripoli.

**LANCASHIRE WITCH.**—From the San Francisco *Call*: "The English steam yacht *Lancashire Witch*, Sir Thomas Hesketh, owner, returned from her northern trip on July 10th. The *Witch* sailed from Cowes, Jarnes, and in a short time arrived at the Mersey, last, and left on the 16th of April, proceeding to Victoria and Nanaimo, remaining in the latter place a day to coal. From Nanaimo she sailed and sailed to the north of the island, where she landed on Alaska, where a week was spent, and then went North to Cook's Inlet, where she prevented further progress for a fortnight. The time was spent in the ice. The *Witch* was then ordered to visit, trout fishing being the principal amusement. Mr. Francis started out on a bear hunting expedition, with provisions for one day, and was lost in the ice. He was found by the *Witch* on the 10th, and was finally obliged to subsist on seaweed, which he enthusiastically declares is anything but a palatable dish. Chignik Island, and a large brown bear were shot. Sir Thomas Hesketh, Mr. Francis and Mr. Sadler penetrated well into the interior, and upon the return the *Witch* was headed for Unga, and a few days later to the small islands, where fearful weather was encountered. At Port Muller, Bristol Bay, the party enjoyed some excellent sport catching bears, walrus and a quantity of salmon, halibut and codfish. The seal fisheries at St. Paul were then visited. The relief ship *Thomas Corwin* had left St. Paul on June 6th, a few days prior to the *Witch's* departure. The *Witch* was the last point visited, from which port the yacht steamed to San Francisco in the excellent time of 11 days, having to contend against head and weather. The *Witch* will in a few days proceed to Monterey and other southern ports, and then return to San Francisco, where she will be refitted preparatory to her cruise to the South Seas and back."

—Sharks are unusually plenty in New York Bay this season, many of them even running up into Newark Bay. One measuring nine feet was recently caught at the foot of Bement avenue, West Brighton.

—Spearing sturgeon is one of the sports of San Francisco Bay. A harpoon line is used, and the San Francisco *Bulletin* describes the sport as exciting.

## Answers to Correspondents.

No notice taken of Anonymous Communications.

For HUNTER, New Bedford, Mass.—Send us your name and we will be happy to publish your letter.

HALL, Syracuse, N. Y.—You will find the "Dull Fro" song in the college song book, *Carmine Collegiana*, we think.

T. W., Randolph, Mass.—For passage to Florida on sailing vessels write to Warren (or) 22 South Street, N. Y. They run a regular line of schooners to Jacksonville.

C. B., New Hampton, N. Y.—The open season for woodcock in New York began Aug. 1st, with the exception of Oueda and Herkimer counties, where the season does not open until Sept. 1st.

MASS, R. A.—Will the person sending us a letter from Boston dated July 27th and signed "Mass, R. A." kindly send his proper name, as the article is of too serious a nature to publish anonymously?

M. W., Hoboken, N. J.—Is there any law prohibiting rail shooting in the State of New York, and especially on Long Island? I can find none mentioned. Ans. No mention of the birds is made in the law. No sora shooting to be had on Long Island.

F. B. H., Elmira, N. Y.—For government and railroad lands in Iowa and Minnesota, write to Chas. E. Simmons, Sup't. Land Dept. Chicago and Northwestern Railway, 415 Broadway, N. Y., and to the Commissioners of Immigration of the respective States.

PLUVIER, Boston, Mass.—How would you load a medium choke 10-gauge gun, giving size of shot, for fall plover, at sixty yards? How for coot? Ans. It is impossible to answer such a question as yours. Give the weight of gun. For plover use 8 shot; for coots, 3 or 4.

W. S. S., Pottsville, Pa.—Your setter is out of condition. A mild course of sulphur, followed by 2grs. of quinine three times a day for a week, may do good. Write result. We make no charge for treatment of dogs through this column, and are pleased when we can be of service to our friends.

A. M. R., Clearfield, Pa.—1. To what point of the compass is it best to face a target for afternoon shooting? 2. What substance is used as Creadmore for painting the targets and marking off the bullet marks? 3. Have the sun behind the backs of the shooters. 2. Whiting for white; lamb-black for black. Water or stale beer to mix.

J. H. E., Northumberland, Pa.—My setter bitch has been sick. Her bladder must be affected, as the water drops from her. Her nose keeps hot and her tongue is unnatural color. Please advise me what to do for her. Ans. Open her bowels freely with castor oil and give her ten drops of tincture of iron in a little water three times a day.

E. G., Albany, N. Y.—Nothing as yet has been definitely arranged about sending an American cricketing team to England next year. But the matter is being seriously considered by the best exponents of the game, and we sincerely trust the venture will be carried out while the Newalls and men of their class are in their prime.

W. S. H., Lewisburg, Pa.—Can you tell me what to bait with to catch fall fish, and how to fish for them? Also, how to "skitter" with frog, minnow or pork bait? What is the latter? Ans. For "fall fish" bait with worm or piece of fish, use float and fish at middle depth; throw carefully at all times. To skitter well, the line should be but a trifle longer than the rod, the bait is cast and by movement of the rod sideways it is made to skip or "skitter" like a fish trying to escape on the surface. A pork bait is simply a piece of salt pork.

W. A. K., Fort Hamilton, N. Y.—My red Irish setter puppy, seven months, has a continuous jerking and twitching of the muscles and joints. Her hind quarters are so weak from this that they frequently give way under her. She is otherwise well, lively and has a good appetite. The nervous, jerking movements followed what I supposed to be a severe attack of distemper. Ans. The chorea of distemper is very difficult to cure. The best remedy seems to be the two best remedies. Two grains of the former and one-eighth to one-quarter of a grain of the latter three times a day.

W. Unionville, Conn.—Will you inform me where to find information regarding the carp, what waters they thrive in, and where the young fish can be procured? Ans. The reports of the United States Fish Commission give the most complete information on the carp. They thrive in warm ponds, fresh ponds, etc., where there are few other good fish. They are voracious to a great extent. You can get young ones from Prof. S. F. Baird, United States Fish Commissioner, Washington, D. C. It would be best to make application to him through your member of Congress.

P. C., Rhinebeck, N. Y.—I have a foxhound, which I found on my arrival home the other day to be very badly off. The trouble seems to be confined to the head, which, as far as appearances go, looks all sound, no swelling or eruption of any kind, but there is a discharge from one nostril, which is quite offensive. He also seems to have some difficulty in breathing, and his appetite is gone. Can you tell me what to do? Ans. The dog has, very probably, what used to be called head distemper, and which is of the epizootic form of the disease. Let him inhale the smoke of burning tar, and give him five grains of quinine night and morning for four or five days. Open his bowels with castor oil and keep him quiet; diet light and nutritious.

W. H. N., Newark—In a rifle match with rules of N. R. Association to govern, A and B compete for prizes at \$60, \$40, and \$100 yards. A is using a Remington, B and C using loading rifles. On going to 100 yard stage, A had a "miss-draw" by reason of neglecting to put any powder in his shell, exploding cap only. B followed next, and after firing, found he had neglected to put a bullet in his gun. A and B each claim another shot, while C claims each should be scored a miss. A also claims B is not entitled to another shot on ground that the gun "went off." Which is right? Ans. C is right. A and B both are entirely wrong. A rifle going off at firing point counts as a shot; if it goes off not at firing-point, the careless fellow should be barred from the ground.

W. H. W., Philadelphia—I have a setter dog, four years old, who has always been troubled with a wheezing or asthmatic cough. Of late it has become aggravated considerably. How he starts to run, he coughs, he coughs, and he coughs. If he is lying in his collar will produce the barking or wheezing. He lives in the house, but gets a run of four to six miles every day; is in good condition for work at all times; is fed from the table, and receives many a little luxury. Will you please suggest a remedy? Ans. Remove the luxuries and give a very plain diet for a time. Medicine is not likely to do any good unless it be a mild purge. The condition you describe often follows an attack of distemper.

G. F. H. Hartford.—I have a setter bitch puppy ten months old, suffering from paralysis of her hind legs, caused by distemper. She is unable to stand at all on account of the paralysis. No running from the eyes or nose; in fact, the distemper has troubled her but little at any time, and I had supposed she had recovered from the disease entirely, when this trouble appeared. It did not come on from exposure or over feeding, as oat meal and milk has been her principal diet. Considering her condition she has considerable strength and very good appetite. Have been giving quinine and strychnine, and occasional use of battery. The paralysis has been lasting about two weeks with a tendency of increasing. Can anything be done? Ans. Substitute one-quarter to one-eighth of nuxvomica extract for strychnine, and you are doing all that can be done to advantage in such cases.

F. P. D., Jr., Maryland.—Can you inform me if dogs are subject to gravel? I lost a fine English setter several weeks ago; he was only sick two or three days. After death, the examination showed that he had two large stones in his bladder, and both it and his kidneys had mortified and suppurated. I do not understand how he could have been so afflicted. I have owned him three years, and he has not been sick a day. Are dogs subject to this, and is there any cure? 2. Please inform me of the most reliable party from whom to purchase a good, young setter. Ans. 1. Dogs are subject to gravel or stone, just as man is, and from similar causes. The annoyance can be played, but the chance of a radical cure is very slight. You have neglected to state the size of the stones; let us hear from you on this point. 2. We cannot recommend any special dog man. We call your attention to our kennel advertisements.

Mons.—Turpentine is a good vermifuge, but apt to inflame the kidneys. To prevent this an emulsion should be formed by mixing it with yolk of egg and olive oil; the dose for a medium sized dog is a teaspoonful. Venice turpentine is a milder remedy. It may be given in doses of a drachm, made into pills with flour or with arena nut powder freshly grated. The dose of nut is two grains to every pound weight of the dog, but no dog should be given more than two drachms. A strong and mature dog should be kept without food for twenty-four hours before giving a vermifuge. Give a tablespoonful of olive oil the evening before giving the vermifuge; and the worm medicine should always be followed by a purgative a few hours later. In the case of tapeworm the remedy or remedies selected must be persevered with until the head of the worm is expelled, and in all cases the worms and all discharged faeces should be either burned or mixed with some powerful disinfectant and deeply buried, to prevent propagation of the parasites by their ova.

PUBLISHERS' DEPARTMENT.

A SUGGESTION TO SUMMER TOURISTS.—A change of climate is at all times more or less dangerous. There are elements in a new atmosphere which are injurious, especially when the system is exhausted by care and overwork, and which should be guarded against. After careful observation we have come to the conclusion that Warner's Safe Kidney and Liver Cure is the best preventive for atmospheric evils, and that it will restore health and vigor sooner than any remedy which has ever been discovered.

All orders for my patent rough glass balls hereafter should be addressed to J. Palmer O'Neil & Co., Pittsburg, Pa.

A. H. BOGARDUS.  
Bogardus Balls.—All orders received by us for the Bogardus patent rough ball will receive prompt attention. Hereafter these balls will be packed in barrels containing 250 balls, and will be packed as securely as possible to prevent breakage in transportation. The quality of the ball will be greatly improved. Send for prices and sample ball.  
J. PALMER O'NEIL & CO.,  
Pittsburg, Pa.

FINE GUNS.—For sale, second-hand W. & C. Scott & Son's breech loader; 12 bore, 30 inch, 81 pounds weight, top action, double bolt, extension rib, half pistol grip, horn heel-plate, patent fore-end, large head strikers; cost now \$175; good as new. I have in stock a fine assortment of the celebrated W. & C. Scott & Son's breech-loaders, from the "Premier Quality" (both with and without hammers) down to their lowest grade; 10 and 20 bores of each grade on hand. Also of the world renowned makers, "Westley Richards" hammerless, 12, 16 and 20 bores.  
CHARLES L. RITZMANN,  
945 Broadway, New York.

To "GUNS."—The advertiser who made use of this pseudonym in these columns some months since is notified that there are a number of letters awaiting him at this office.

THE HIGHEST SCORE.—A Southern correspondent inquires for highest team score, at birds, eight men to the team, ten birds each. We are unable just at this moment to give this information. Can any of our readers give it?

—A number of Newton, N. J., sportsmen have a clubhouse on Hanburg Mountain, at the Sand Pond.

—In the article "Haunts and Habits of Bears," July 21st, for "Hamilton, Maine," read Houlton, Maine.

A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 AND 40 PARK ROW (Times Building), NEW YORK.

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address.

**Hotels and Routes for Sportsmen**

## TO SPORTSMEN:

Respectfully invite attention to the  
**SUPERIOR FACILITIES**  
afforded by their lines for reaching most of the THROUTING PARKS and RACE COURSES in the Middle States, these lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the snappy, well-tracked enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF  
**Pennsylvania Railroad Company**  
also reach the best localities for  
**GUNNING AND FISHING**  
in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, HENOWA, BEDFORD, CHESSON, RALEIGH, MINNEQUA, and other well-known centers for  
Trout Fishing, Wing Shooting, and Still Hunting.  
Also, to  
TUCKERTON, BEACH HAVEN, CAPE MAY, SOUAM, and points on the NEW JERSEY COAST renowned for SAIT WATER SPORT AFTER FISH AND FISHING.

L. P. FARMER, Gen'l Pass. Agent.  
FRANK THOMSON, Gen'l Manager. feb-17

**Boston and Maine RAILROAD.**  
Boston and Portland.  
**Spring Fishing**  
at the  
**RANGELEY'S and MOOSEHEAD LAKE.**

**Excursion Tickets**  
Will be placed on sale as soon as the ice is out. Close connections made at Portland with Grand Central Route Central Ranges for the Fishing Grounds in Maine and Northern New England.  
Tickets may be obtained at Boston City Office, 280 WASHINGTON STREET, and at the Station. Information by mail, if desired.  
JAS. T. FURBER, D. J. BLANDERS,  
Gen. Supt. Gen. Ticket Agent.

**"THE FISHING LINE."**  
TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinac, Grand Rapids and Cincinnati Short Line  
Trout, Grayling, and Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND LAKES OF  
**NORTHERN MICHIGAN.**  
The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.  
BROOK TROUT abound in the streams, and the AMERICAN GRAYLING is found only in those waters.  
The FISHING season begins May 1st and ends Sept. 1st.  
The GRAYLING season opens June 1st and ends Nov. 1st.  
BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelike of the territory.  
The sportsman can readily send trophies of his skill to his friends or to the market. Also for packing fish can be had at many points.  
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with  
Hay Fever and Asthma Affections.  
The hotel accommodations are good, far surpassing the average in countries new enough to us to be called "backwoods."  
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.  
Dogs, Guns and Fishing Tackle Carried Free of charge.  
It is our aim to make sportsmen feel "at home" on this route. For a Tourist's Guide an attractive illustrated book of 80 pages, containing full information as to "route maps of the Fishing Grounds and Lake Cards, address, A. D. LEET, Gen. Pass. Agent, Grand Rapids, Mich.

**McKellar House, McKellar Falls.** For good deer and duck and partridge shooting and fishing, and all kinds of game, go to the above named hotel, where they are prepared to accommodate a number of sports. Dogs, boats and rangers kept constantly on hand. Address W. F. THOMSON, McKellar Falls P. O., Ont.

**Chesapeake & Ohio R.R.**  
The Route of the Sportsman and Angler to the Best Hunting and Fishing Grounds of Virginia and West Virginia.  
Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc. Guns, fishing tackle, and one dog for each sportsman carried free.  
The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts.  
The Only Route via White Sulphur Springs.  
Railroad connections at Cincinnati, with the West, Northwest and Southwest; at Gordonsville with the North and Northeast; and at Richmond and Charlottesville with the South. All modern improvements in equipment.  
CONWAY R. HOWARD,  
Gen. Passenger and Ticket Agent,  
Richmond, Va.

**Old Dominion Line.**  
THE STEAMERS of this Line reach a some of the finest waterfowl and upland shooting scenes in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday, Lewes, Del., Monday, Wednesday and Friday, at 4 P.M. For information given at office, 157 Greenwich St., N.Y. sept-2-17.

**To Hunting and Fishing Parties.**

**The Pullman Car Company**  
IS PREPARED TO CHARTER THE new cars "Day Crockett" and "Isaac Walton," which are fitted up with dining room and kitchen, sleeping apartments, lavatories, etc., also provided with racks and closets for guns and fishing tackle, and kennels for dogs.  
Diagrams, prices and other desired information furnished on application to Gen'l Supt. P. C. Co., Chicago. june 20.

**THE SPORTSMAN'S LIBRARY.**  
THE great pressure on our advertising space obliges us to withdraw the list of books which we have on sale to make room for other matter.

## Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, known as the "Old Judge" Cigarettes, and Smoking Tobacco invented and patented a process, March 5th, 1875, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODDOR and the injurious effects of the Oil of Crocoate are completely neutralized or destroyed, and the paper made suitable to prevent its breaking and falling apart, so that they may be smoked in the mouth, without the risk of ingesting the tobacco in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will not once be recognized by all smokers, and its truth demonstrated by the fact that "OLD JUDGE" Cigarettes they smoke, sold by all leading dealers.

Try them and you will use no others.

**J. Stevens & Co.'s Celebrated Arms.**

PINK QUARTER, ANELIA C. H., VA., Jan. 23d.

Messrs. J. Stevens & Co.

GENTLEMEN.—I was ignorant of the fact until I received your letter that the gun I got from you was "choked," and having been reading Greener's "Book on Choke Bore," I concluded to use your gun and put my others away. I am happy to inform you I have made some capital shooting with it, especially at long shots, and I find it kills the birds much cleaner than the gun I had been using. To give you an instance: Yesterday I saw from my window two squirrels on the ground, about a foot apart. I put in a paper cartridge loaded with three and a quarter drachms of powder and one ounce No. 4 shot, and killed them both. One was dead before I got to it, and the other crawled about three yards and died. I measured the distance with a tape and found it forty-nine yards one foot. This, I think, is a good test of the shooting powers of the gun, as I consider a squirrel takes more killing than any game we have here. I shall be much obliged if you will inform me whether the gun is a "full" or "moderate choke."

Yours truly,

**PHILIP H. GOSSET.**

1880.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

*The most Popular Powder in Use.*  
DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

## DUPONT'S DIAMOND GRAIN.

Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

## DUPONT'S EAGLE DUCKING.

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

## DUPONT'S EAGLE RIFLE.

A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FFG and PFG. The FG for Long Range Rifle Shooting, the FFG and PFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammot Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or PFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

## Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

## Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

## Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

## Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 35, and 60 lbs. and cans of 5 lbs. FFG is also packed in 1 and 4 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.  
GOVERNMENT CANNON AND MUSKET POWDER: also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

# FOREST AND STREAM.

NEW YORK, THURSDAY, AUGUST 12, 1880.

ADVERTISEMENTS.—Advertisers are respectfully requested, in all cases where it is possible, to send in their advertisements by Saturday of each week before the issue in which they wish them to appear. We cannot receive new advertisements, nor make changes in those already standing, later than Tuesday morning.

WILD RICE.—We are in receipt of numerous inquiries for wild rice. At present none is in the market; it is too early. When the harvest is gathered, those who are collecting it will give due notice in the FOREST AND STREAM. We shall then repeat full instructions for its sowing.

PALACE CARS FOR SPORTSMEN.—The cars "Davy Crockett" and "Izaak Walton" are fitted up expressly for the convenience of sportsmen. As there will probably be a great demand, this autumn, for these comfortable moving hotels, we recommend our friends to apply early to the Pullman Palace Car Company, in order to secure their accommodations without fail.

—Those who read *Porter's Spirit* long before the FOREST AND STREAM was published will recognize in "Rough Notes from the Woods," published to-day, the same pleasant chat that "Nessumuk" used to contribute to that journal. We have further notes on hand, and shall publish them shortly.

—The leader of the crew making the reprisal, related by "Avalahoose," is now a fish warden—evidently the right man in the right place. The moral of that tale, by the way, is not wholly for poachers; it may well be applied by organized or non-organized game protective societies. If a net catches fish when fish should not be caught one remedy is to burn the net.

## THE MICHIGAN SPORTSMEN'S ASSOCIATION.

THIS is one of the best organizations of sportsmen in America. It is what all such associations should be, a protector of fish and game; and its deliberations are of the most interesting character, comprising essays upon all subjects which come within the scope of the organization and which are followed by discussions. We are in receipt of their third annual report of the fifth annual session of the association, which was held at Bay City, Feb. 3d to 5th, 1880, a neat pamphlet of one hundred pages, to which is appended a synopsis of Michigan game, fish and allied laws. Instead of being a mere pigeon shooting club, it devotes its time to considering the habits of fish and game, the laws for their protection during such times as an increased knowledge of their habits requires, and even the introduction and acclimatization of such species as may seem suitable to the climate of the State. At the last meeting President Holmes, in his address, while of the opinion that the migratory quail, *Coturnix vulgaris*, was hardly suitable for their State on account of its habits, which might impel it to leave for a warmer clime as soon as the young were fit to travel, strongly recommended the introduction of the "gray partridge" of Asia and Africa, *Pedice cineria*, as an addition to the game birds.

A paper by Mr. Fred Mather was read, appealing to the association to save the grayling from extermination, and citing cases where the spawn of this fish had been artificially taken and the young reared in this country, notwithstanding there was an impression abroad that this had never been done. Mr. Geo. H. Jerome also wrote a brief note on the same subject, and Mr. McLean advocated the right of the settler to kill game to supply his wants, to which most of the members gave assent. Mr. Frank Clark gave his experience in bringing East and breeding the rainbow trout, *Salmo iridea*, with which he had been very successful.

The Committee on Nomenclature made a report which was followed by that of Mr. E. H. Gillman, chairman of the Committee on Sporting Dogs, in which he treated dog culture, management and field trials, in a very able manner, and to which we had occasion to allude in a former article. Mr. J. G. Portman, Superintendent of Michigan Fisheries, read a paper on fish culture in the State, in which he spoke of the attempt to introduce shad into the lakes, the land-locked salmon, the eel, the trout, the whitefish and the carp. The eel had been planted to the extent of about 700,000 in the years 1877-8. At the Pokagon hatchery Mr. Portman has hybrids of *Salmo fontinalis* and *S. namaygush* which are fertile.

Following the report of the Committee on Laws for the Protection of Game, Mr. C. W. Higby read a paper upon the subject, in which he advocated reducing the market value of game by preventing its shipment out of the State, or shortening the time in which it was allowed to be killed; also to pass a law punishing persons who killed deer for the skins and left the carcasses to rot. The question of shortening the open season for deer by making it from Oct. 15th to Dec. 1st, instead of, as at present, from Sept. 15th to Dec. 15th, was by general consent, allowed to lie over until another year. Mr. D. H. Fitzhugh, Jr., then offered a resolution of regret at the death of Prof. James W. Milner, of the United States Fish Commission, and an obituary paper was read on the death of Dr. Thomas A. Brewer. Senator Palmer referred to the custom of shooting pigeons from a trap, and hoped that the association would discountenance it, whereupon Mr. Colburn showed that the association had never recognized the question of trap-shooting as a legitimate one for discussion in its deliberations; that the association had more important business in hand than the agitation of a question which would only serve to bring discord into the convention and cripple its effectiveness for good, the opinions held by the members upon this subject differing widely; and closed by quoting from Mr. Mather's paper his sterling compliment to the association, in which he pronounced it one of only three clubs in the United States whose meetings are for the

protection of game instead of pigeon slaughter and shooting for prizes.

The good that it is possible for the Michigan Sportsmen's association to do is almost unlimited, and we are glad to see that its work is meeting with appreciation, an evidence of which is the increased demand for its published reports, which in 1878 was only 1,000 copies; in 1879, 1,500, while the present year witnesses an edition of 2,000 copies distributed gratuitously to Michigan sportsmen and to all others who are thoughtful enough to inclose a stamp. This is doing excellent missionary work and is well worthy of consideration by all bodies of sportsmen who desire to elevate not only their sport but themselves from the mere routine of slaughter, shooting and fishing for count and for brag, to the highest level of sportsmanship which propagates and protects the game for the sake of healthful recreation in forest and by stream, and which never allows sport to degenerate into slaughter nor approach extermination.

## SIXTEENTH CENTURY DOG LORE.

THE "four good dysportes and honest gamys that is to wyte, of huntynge: hawkyng: fysshynge: and foulunge," must have held a high place in England in the Fifteenth and Sixteenth centuries, for some of the first laborious and clumsy efforts in printing were devoted to rehearsing their merits and to instructions for their pursuit. English books of sport are almost as old as the English printing-press. The first press established in England was that of Westminster in 1477, after which came, two years later, that of Oxford, and the third at St. Albans in 1480. We do not know even the name of the first printer of St. Albans; we only know that he was a schoolmaster, for Wynken De Worde, who reissued one of his books, tells us that the original was printed by "one sometyne scolemayster of Saynt Albon," and we could wish that more than these meager details had been left to us of one to whom, even at this late day, sportsmen of antiquarian tastes owe so much pleasure. For among the eight books—six of them devoted to education—printed during the six or seven years after 1480, and before the worthy man relinquished his new labor for the old work of tutoring, was "The Boke of Hunting and Hawking, and of Cote Armour," or what is better known as the "Boke of St. Albans." This rare old work was printed in red and black, and its crude type filled twenty-eight pages, upon the last of which was the colophon: "Translatyt and compylt togedyr at Seynt albons the yere from thincarnacion of oure lordes Jhu Crist. M.CCCCxxxvi."

This old work has taken its place among the rarest of literary and antiquarian treasures. It has been estimated that probably not more than fifty copies of the original edition were printed, and of these, now after a lapse of four centuries, those which have survived the destructive agencies of fire, damp, the worm and neglect, are extremely rare, and all but one of them almost inaccessible. Imperfect copies are in the Bodleian, Oxford, and the University Library at Cambridge, and a fourth, having been sold for old paper at a penny a pound, afterwards lingering on a kitchen shelf for many years, and passing neglected and unknown through a great many low vicissitudes, finally came into literary hands, and is now exhibited in a glass case in the King's Library of the British Museum. We are glad to learn from the *Antiquarian* that a fac-simile reprint of the "Boke" is now being prepared for publication, which will afford the curious reader an opportunity of studying over the quaint illustrations and the old-time spelling and dialect of the specimen of Fifteenth Century literature.

A part of the book, the charming "Treatise of Fysshynge with an Angle," attributed to Dame Juliana Berners, was reprinted in London in 1827, and in 1875 an American reprint of this edition was edited, with appreciative care, by that well-known and genial angler, Geo. W. Van Sicele, of the New York Bar, and is doubtless now to be found on the library shelves of many readers of the FOREST AND STREAM.

It was half a century or more later that Roger Ascham published his "Toxophilus," a book to archers which the "Fysshynge" is to anglers. It is somewhat curious at this day to read of the worthy "reader to Queen Elizabeth and her secretary for the Latin tongue" as distinguished for his classical attainments and much given to play and cock-fighting. Latin professorship chairs and cockpits is an association altogether too bizarre for the tastes of the present, but it was not so then, and of the two books which Ascham wrote, the "Scholarca" and the "Toxophilus; or, Schole of Shooting," the latter won for him the most distinction, and to it he appears to have owed his church preferment, for he says: "I once wrote a little booke of Shewtynge, which King Henry, her (Queen Elizabeth's) noble father did so well like and allow, that he gave me a living for it."

Less known than either of these two books, but none the less quaint and charming to the deliver in ancient sporting lore, is the treatise "On Englishe Dogges," by John Caius, published in 1570, and the first book on dogs ever printed in the English language. Conrad Gesner, the preface to the well disposed reader tells us, "a man, while he lived, of uncomparable knowledge, and manifold experience, being never satisfied with the sweete sappe of vnderstanding," requested John Caius, "a profound clarke and rauous denouer of learning," to write a short treatise of such dogs "as were engendered within the borders of England." To the accomplishment of this task, we are assured, Caius spared no study, withdrew himself from no labor, repined at no pains, forsook no travails, refused no endeavor, pretermitted no opportunity or circumstance; and his friend adds: "The sundry sortes of Englishe dogges he discovereth so evidently, their natures he ripeth vp so apparently, their manners he openeth so manifestly, their qualities he declaroth so skillfully, their proportions he painteth out so perfectly, their colours he describeth so artificially, and knytteth all these in such shortnesse and breuity, that the mouth of th' adversary must needs confesse and giue sentence that commendation ought to bee his rewarde, and praise his deserved pension." This is high praise, and if to our modern ears it sounds bombastic, we must remember that it was written in an age when such hyperbole was much in vogue, and we may well heed the apologetic remarks of the translator: "As for such as shall snarr and snatch at the Englishe abrydgement and teare the Translatour, being absent, with the teeth of spitefull enuy, I conclude in breuity there eloquence is but currishe, if I serue in their meat with wrong sawce, ascribe it not to vskiffulness in coquery, but to ignorance in their diet."

A copy of this old work is preserved in the British Museum; this Mr. Hugh Dalziel carefully copied, and an edition has been recently published in England, preserving the exact original line for line, and error for error. Looking through its pages we have found so much pleasure in the homely diction, the antique instruction and the charming simplicity of the text, that we have thought it well worthy of a place in our columns, whereby, it may be, we shall help to erect for the author "the monument of immortality" which his translator three hundred years ago bespoke for him.

#### ANGLERS AND ANGLING.

"FORTUNE," says Machiavella, "likes an ardent wooer and turns the cold shoulder to one who delays." "All is fair in love and war." In angling all is not fair, but activity, early rising, stealthy approaches and delicate casts come under the head of legitimate means of capture. The fish admire determined efforts, and reward them as fortune rewards the ardent wooer, yet let there be no unseemly haste, bustle or anxiety about your movement, but be very quiet and apparently unconcerned, for by those tokens you manifest the instincts of the gentleman, and better, the gentle angler himself.

The most successful anglers are the men who are frequently called slow-coaches, but their slow and careful movements are not incompatible with Machiavella's fortune hunters; the quick, nervous, impetuous men who act before thinking, rarely make good anglers. Their lines are too frequently caught in branches overhead, or their hooks fasten to some submerged snags, accidents which will happen to any one, but the slow-coach has the advantage in his method of extricating himself from the situation. One may perhaps indulge in a variety of sulphurous ejaculations which frighten the fish, while a few ill-timed twitches fasten his tackle more securely, and the natural consequence follows—he loses his hooks as well as his head. Slow-coach, when he gets into trouble, calmly surveys the situation, goes to work the right way, and in a few seconds has conquered the predicament and resumed his fishing, while the other fellow has waded ashore to repair the damage he has sustained.

A queer compound is the angler—a bundle of contradictions! He is the antipodes of himself. He delights in the protection of God's creatures. He is a cruel deceiver, using the finest and most delicate implements in the carefulest manner, unrelenting in the attainment of his object; but he is also kind-hearted, quiet, patient, gentle, with a cheerful word and a helping hand wherever it is deserved and needed. He handles the fish with womanly

tenderness, but their struggles awaken no sympathy. See how skillfully he manages his tackle; not a kink in line or leader, but perfect harmony from reel to stretcher fly; the tip of the rod never for an instant losing the feel of the line, which doubles and turns so gracefully, describing all the curves of beauty and never interfering with itself. How lightly, with perhaps the faintest splash, with "a sound so fine that nothing lies twixt it and silence," does he place his feathery counterfeits on the water, the leader smooth and straight as a newly made candle.

Placing the flies gently and noiselessly as fall the snow flakes, may indicate the acme of fly casting, but if they land like a drop of water, with the softest splash, they will not frighten the fish, and you will catch as many as the angler who preaches snow flakes and thistle-down. One can be more careless while fishing American waters—though carelessness in an angler is always inexcusable—than if he were angling in most of the trout streams of Great Britain. Our trout have not all as yet learned that curiosity sometimes leads to certain death, and it is this ability to capture them so comparatively easy that in many cases makes the American angler the inferior of his English and Irish brethren in all the minutiae attendant upon the gentle art. Had we been schooled as carefully as our transatlantic friends, we would not have sometimes to wonder at our ill-luck. Indifference to minutiae will counteract many admirable qualities, for the trout is himself an admirable sportsman in certain waters and seasons, and at times attains the highest pinnacle of sagacity.

Our best rod makers turn out work equal, if not superior, in every respect to that of any foreign makers. Our flies are perfect in strength and beauty, and the variety is infinite. Every winged insect, from the creation of the world to the millennium, and perhaps earlier and later, is imitated close enough to deceive even the originals.

Year by year our anglers are improving their methods and implements, as the trout are growing wiser and wiser, until now it requires, on the more frequented streams, the utmost skill and delicacy to capture so wary a general, one so well versed in all the expedients that experience and natural cunning bring to him in his search for the morning and evening meal. There he is a sentient being, cunning as lago and thoroughly up to the "tricks that are vain."

MILLARD.

#### BAY SNIPE SHOOTING.

##### II.—LOCALITIES.

"Seek't thou the plashy brink  
Of weedy lake, or marge of river wide,  
Or where the rocking billows rise and sink  
On the clafed ocean side?"

WHO can tell of the habits of our wild fowl and aquatic birds as well as the men who, day in and day out, in cold and heat, and in all kinds of weather, follow shooting for a livelihood? Unfortunately for the public, these men cannot, for the most part, spare the time to dot down their experience. Indeed, but few of them can write, and what if recorded would be of real value to the shooting world, is lost. The educated sportsman is rarely of assistance in this matter, for he, as a general thing, leaves everything to his bayman, and with a profound ignorance as to the habits of the birds, learns little and remembers but little, after a week's shooting, save the number and quality of the fowl brought to bag during his holiday. If he has had good shooting, he is generally liberal to the caterer to his sport; but for the life of him he cannot tell why the stools were set to windward, or why he had better or worse shooting than the guns in the other "rigs." Our experience has taught us that too often the purely scientific man knows even less, and that many works on ornithology abound in absurd inaccuracies, which lead to "confusion worse confounded." True, the scientists tell us the measurements and weight, and the coloring and shading of each bird, but often these descriptions are of the faded plumage of the dead specimen, and not of the live fowl. When colored plates are introduced into their works, they are often so unlike the bird they are intended to represent that if it were not for the name underneath it would be impossible to identify them. In fact, we have seen several which resemble Egyptian hieroglyphics more than birds that have been seen to fly. It is from works of this kind that almost all our sporting book writers draw for their material, and not from real experience; hence errors and traditions are handed down to us, and continued ignorance is the result.

From the Bay of Fundy in the North, to the Florida Reefs in the South, there are miles of the Atlantic coast shielded by long sand bars and shoals, which, at every ebbing tide, abound with every variety of aquatic food. At one time or another throughout the year each locality is visited for a short or long period by the bay snipe. Leaving the South early in the spring, they seem drawn by some magnetic influence toward the North, passing this vicinity in May, the date being regulated according to an early or late season. Once in their home in the far North, they speedily set about nesting and the rearing of their young. This is soon accomplished, and then their

return flight begins, the old birds preceding, followed by the young several weeks later. But it is a mistaken idea to suppose that all the varieties of bay snipe seek the North to pursue their matrimonial inclinations. Several kinds, and especially the willet and some of the plover, breed to the south of New York. It is during the summer flight that the bay snipe run the gamut of the thousand stands that dot the coast from Maine to Eastern Virginia. We shall not attempt to specify each locality, particularly those that are remote, but simply mention the places that are easy of access and well known to the sportsmen of this vicinity.

Beginning at the north, we follow to the south the line of coast of those States on the Atlantic seaboard, mentioning the names of the counties of each in their geographical order, and the places where more or less shooting can be had at this season. Of course, the shooting begins first at the North, but the rapidity with which the birds make their flight causes the first guns to be echoed along the coast, even to the far South, in quick succession.

##### LIST OF PLACES WHERE BAY SNIPE ARE SHOT

MAINE—*Washington County*.—The Island of Grand Menan. The island and bars along the entire coast of Hancock, Waldo, Knox, Lincoln, Sagadahock, Cumberland and York counties.

NEW HAMPSHIRE—*Rockingham County*.—Rye Beach and Hampton.

MASSACHUSETTS—*Essex County*.—Plum Island, Ipswich, Cape Ann, Gloucester, Beverly, Marblehead, Salem and Lynn. *Norfolk County*.—Randolph and Cohasset. *Plymouth County*.—Marshfield, Duxbury, Clark's Island, Plymouth and Manomet Point. *Barnstable County*.—Sandwich, Chatham, Quesnet, Wood's Hole, and at almost all the towns along the coast, on Cape Cod and Buzzard's bays, and the ocean side. *Bristol County*.—South Dartmouth and Quansett.

RHODE ISLAND—*Newport County*.—At all the islands, *Washington County*.—Point Judith, Block Island, Bristol, Peacedale and Watch Hill.

LOUISIANA—*St. Charles County*.—Fisher's Island, Plum Island, Ram Island Shoals, Orient Point, Montank Point, Bridgehampton, Southampton, Shinnecock Bay, Moriches and Great South Bay, and, indeed, all along the south shore.

STATEN ISLAND—*Richmond County*.—Great Salt Kills.

NEW JERSEY—*Monmouth County*.—Manisquan Inlet. *Ocean County*.—Squan Beach, Barnegat Bay and Long Beach. *Burlington County*.—Tuckerton. *Atlantic County*.—Brigantine Beach, Absecon and Somers Point. *Cape May County*.—Peck's Beach, Townsend Inlet and Leaming Beach.

DELAWARE—*Sussex County*.—Lewes, Rehoboth Bay, Indian River and Long Neck.

MARYLAND—*Worcester County*.—Hammock Point, Berlin and Sinepuxet Beach.

VIRGINIA—*Accomac County*.—Chincoteague Island, Wallop's Beach, Gargathy Inlet, Assawman Island, Matomkin, Cedar Island, Burton's Bay, Front Channel, Little Matchpongo Inlet, Revel's Island and Matulikin. *Northampton County*.—Hog Island, Sand Shoal, Great Matchpongo Inlet, Cobb's Island and Smith's Island.

#### THE ANTHRACITE.

AS far as we have been able to learn, the Messrs. Herreshoff have not yet received any response to their last letter for Major Geo. Deane, Secretary of the Perkins Engine Company, for the first communication of the Secretary can hardly be regarded in a serious light in view of the outspoken blunder therein made. As it has now been clearly pointed out to the agents of the Perkins boiler that the grounds upon which they declined the very fair and reasonable challenge of the Leila are not tenable, but conflict with the simplest truths of engineering science, it becomes all the more their duty to explain to the satisfaction of the public one of two things: either why the Anthracite dared not meet the coil boilers in a test of economy, or else, upon what grounds the remarkable statements of Major Deane are to be justified. It would be snap judgment to assume that no satisfactory explanation will be forthcoming, and consequently we prefer waiting another week to hear from the proper source. We are inclined to think that, in his first answer, Major Deane was acting upon the advice tendered by incompetent and unworthy counsel, and that he was induced to frame his answer in a hurry, whereas, upon second thought, he would not care to indorse statements which he now knows must have raised a smile among the profession. It is hardly to be supposed that a gentleman, representing such large interests as the Perkins Engine Company, should not be acquainted with the commonest of problems an engineer has to meet; nor does it seem likely that one who has shown such wonderful astuteness in obtaining a vast amount of free advertising for an old resurrected apparatus, fully known these last ten years to the profession in America, should really be in total darkness concerning the line of business he represents. For these reasons, we prefer believing that, a stranger in a strange land, the helpful in

fluence of sundry scheming worthies was really at the bottom of the questionable engineering talent now wrongly credited to Major Deane. All the more reason why an explanation should be forthcoming, unless the Perkins boiler can afford to shoulder the charge of being put forward by persons not competent to judge of its merits.

Should the Perkins Engine Company contemplate establishing a branch of their business in America, they will probably thank us for conning them clear of certain individuals of unsavory reputation, who, unfortunately, appear to have "rung in" with the company's gallant Secretary to the extent of placing the latter's ability in a wrong light before the public. Connection of any sort with confidence men can do the company no good, and the sooner they get a clear conception of the lay of the land, the better.

#### FISHERY EXHIBITIONS.

THE success which attended the great exhibition at Berlin has set the fashion, and fishery exhibitions are, no doubt, destined to become more or less popular. Germany has had another one, at Wurtzburg, which was not international in its character, although we learn that Messrs. S. Alcock & Co., of Redditch, England, makers of hooks and fishing tackle generally, received a diploma, a gold medal and a "prize of honor" for their exhibit. This firm also received a gold medal at the Berlin Exhibition.

It is now proposed to hold a similar fishery fair in England, this fall, under the management of the Norfolk and Suffolk Fish Acclimatization Society, and Norwich has been selected as the place for it. This one is to be somewhat international in its character, we infer, from the fact that the Fischerei Verein of Germany have signified their intention to "assist," whatever that may mean, but it is certainly too soon after the splendid exhibition in Germany to hold an "international" one; surely a breathing spell of a few years is necessary before the United States would entertain the idea of being officially represented, if it ever does again. The United States Fish Commission not only has much other work to attend to, but there are many other reasons why there are objections to a display by our government, besides the expense, the main one being the damage done to the collection belonging to the National Museum, which will soon be set in position in the new building, many articles in it being impossible to duplicate. Of course such exhibitions are open to private exhibitors, but somehow very few of them had enterprise enough to take advantage of it as the English manufacturers did at Berlin, where almost the entire display in the English department was made by individuals. We imagine that it will be a long time before such a fishery exhibition as the one recently held in Germany will be attempted, for the reason that we do not know of any fishery organization in the world which has the enterprise to conceive and the courage to attempt what was done by the Deutsche Fischerei Verein. The Norwich Exhibition has also the promise of support from Messrs. Buckland and Walpole, Inspectors of Fisheries of Great Britain.

THE TEAM CAPTAIN AND THE CUSTOM HOUSE.—Col. Bodine's lot just now is not a particularly happy one. He made an error in getting his personal effects past the scrutiny of the customs officers, and now every exchange from the country over has its little fling at the leader of the American riflemen in Ireland. It is really to be regretted after such a brilliant run of luck and skill on the field of Dollymount that the record should be smirched by a misunderstanding with such an object as a tide-waiter of the New York Custom House. But such was the fact, and rolls of silk and packages of kid gloves in the Colonel's gun case, without a corresponding notice of their presence on the passenger declaration of the late team captain, makes an annoying contradiction to be rectified. There was manifestly no intention at smuggling, as there was no attempt at concealment. When the team of 1875 came home the display of baggage was somewhat enormous, and particularly excessive as compared with the amount taken out. All of this miscellaneous collection of valuables were then passed by the customs officers without word or question, intending by the act to have a compliment shown the team. Relying on something of the sort again, the Colonel found, when too late, that he had miscalculated, hence the position of affairs to-day. It is unfortunate that any such an occurrence should have taken place, and it is only to meet in some measure the current misapprehension that we speak of it at all.

THE CANADIAN MATCH.—During the present week Creedmoor range has been occupied pretty constantly by the practicing of the Canadian team. The gentlemen who have crossed the border this time have come to win. They are taking time, and proceeding along with a system and care which augurs well for their success. They are woeing the goddess Fortune, as the really successful rifle shot always does, by assiduous court. The men do not lack familiarity each with the other, and

with rifles all of a make, and these, too, American rifles, it will look like a breath of bad luck for them to be beaten. The probabilities of the record are, of course, in favor of the American, or Amateur Rifle team; but the gentlemen of the Amateur Club will not regret a defeat at the hands of their kindly neighbors from across the lake. To-day the team visit Manhattan Beach for a formal dinner, and the match on Saturday will be carefully noted by our special rifle contributor, and the whys and wherefores of victory or defeat duly set forth.

TO COLLECT SEAWEED.—Few objects of natural history are more interesting than the seaweeds and algae of our coasts when properly preserved, and a stroll on almost any beach will reveal to the collector a number of beautiful forms, which are well worthy of the slight trouble involved in their collection and preservation.

Seaweeds are such beautiful objects when fresh, and are so unsightly when shriveled and dried up, that it seems desirable to give full directions to those who may be interested in this department of botany, but who are ignorant as to the best method to be employed to make these objects retain their colors. The present time, too, when so many of our readers are at the seaside, seems peculiarly fitting for the publication of such directions. We publish elsewhere very full directions for collecting algae, which we owe to the courtesy of Prof. Daniel C. Eaton, Professor of Botany in Yale College. Prof. Eaton is one of the first authorities in the country on seaweeds, and we desire to express here our appreciation of his kindness.

GREENE SMITH.

FEW men were better known to the sportsmen of America than was Greene Smith, a brief notice of whose death on the 23d ult. was given in our columns a fortnight ago. To-day we publish the accompanying portrait, which we have spared no pains to make faithful to the photograph from which it was engraved. Those who knew the original will at once recognize its fidelity.

Greene Smith was born in Peterboro, N. Y., in the year 1842, and was therefore at the time of his death just in the prime of life. He was a son of the late Gerrit Smith, and was given a superior education.

At an early age he manifested the taste for natural history pursuits, the gratification of which, in later years, was his chief employment and pleasure. In his younger days, too, he exhibited those qualities of character which made him so remarkably a friend of every one with whom he was associated. Greene Smith had a strong social disposition, and his affability drew friends about him at home and abroad. He enjoyed traveling, and spent much of his time away from home; but, as has been happily said of him, "he never got far enough away to find any enemy."

Although coming of a family somewhat prominent in public life, and naturally possessed of those qualifications which might have given him like prominence, his inclination led him elsewhere, and his life was passed mainly on the family estate, and without much that was noteworthy. He was at one time professor of ornithology in Cornell University, but his interests always centered closely in his wonderful collection of birds, to the perfection of which his time and enthusiasm were devoted.

Among the sportsmen of this State Greene Smith always held a prominent and a very pleasant position. He was the president of the National Sportsmen's Association, of Niagara Falls, in 1875, and in 1877 presided over the Convention of the New York State Sportsmen's Association for the Protection of Fish and Game.

For many months preceding his death it had been evident to his friends that recovery from his pulmonary complaint was impossible, and for several weeks he had been perceptibly failing.

These last weeks were spent in the "Ornithon," or bird-house, among the treasures he had been so long gathering together. Here, propped up in his sick bed and surrounded by all that love and wealth could supply for his comfort, he sought relief from pain by applying himself to a final cataloguing and arranging of his ornithological collection; and it was here that he passed away from earth.

The following description of the "Ornithon" was published in this journal (ROD AND GUN):—

After walking some two or three hundred yards down a gravel walk, we came to a large building in Gothic rustic style, the sides covered with hemlock bark. On the rustic door is the word "Ornithon" in ivy. The building is in the form of the letter T, the main part being one and a half stories high and 56x30 feet; the L is one story, and 25x40 feet on the ground. The entrance is in the center of the L portion of the building. In the center of this room, immediately in front of the door, is a large double desk, surmounted by statuettes, and containing writing materials, with inkstands and study appliances, all rich, and in modern taste. On the timbers over the desk are carved an immense pair of elk antlers, from which depend Sharps and Spencer rifles with game bags, riding whip, powder flasks, horns, rod, creel, and other sporting implements; also a riding whip which Mr. Smith said once belonged to a soldier in Stuart's cavalry. The sides of the room are hidden by immense glass cases, the one on the right containing specimens of skins, duck, teal, snipe and other game birds; also a large variety of song birds, herons, swans, etc., in a fine state of preservation. Behind this case is a gun-rack fitted with drawers, containing an immense stock of traps, traps, and shooting fixings. The case on the other side of the room is of the same size, and contains some of the finest mounted specimens we had seen. Among them were the English woodcock, European kingfisher, cuckoo, a whooping crane (of which there are very few specimens in this country), a pair of black swans from Australia, a roseate spoonbill, monster owls, hawks, pigeons and other birds, with sundry foxes and quadrupeds, many rare shells and curiosities of various kinds. Behind this case is a well-filled book-case containing a good collection of modern literature, in which are the best books and many rare works in sporting and natural history.

The entrance to the main building is about fifteen or twenty feet wide, and in the center stands a beautiful fountain of cool water, with a few speckled beauties sporting in the crystal flood. A grand wide stairway leads to the upper part of the main building, and on either side are large rustic rooms inclosed with wire screens. The room on the right had a rocky bed, with a stream of water flowing through, and was exclusively for song birds, and would accommodate upward of a hundred without crowding their movement. On the left, in the main room, is a miniature pond, with rock work arranged especially for ducks and other aquatic birds. Beyond this is a large wire room used as a kennel.

We turn to the right, and there find a loading table for guns and ammunition, and in a cosy nook, neatly arranged, are ground and plunge traps, and all the paraphernalia for trap shooting, according to the most improved plans of English and American rules. On the left side of this loft or large balcony we find the professional tools of scientific draughtsman and civil engineer, all laid out in order, meant for use, not show, but a rich man's, nevertheless, love for their use being shown by the perfection and finish of the tools.

In another case are the appliances for taxidermy. A second collection of books is found in this department in keeping with this subject; and here we found Wilson's Ornithology, 9 vols., of 1808; Charles Lucien Bonaparte's work of 1805, in 4 vols.; Audubon's complete works of 1850; also John Cassin's Appendix: The birds of North America, by Spencer F. Baird, John Cassin and George N. Lawrence, of 1860; Baird, Brewer and Ridgway's N. A. Birds, of 1874, and all works of the best authors complete, not forgetting flies of *American Sportsman* and *ROD AND GUN*.

The walls throughout the building are covered with engravings and specimens of the best line illustrations of birds and sporting scenes, together with trophies of the chase, specimens of horns and other matter. Among the specimens are the spikes of ibex, hartbeest bleesbok, eland, gnu, springbok of Africa, the gazelle and chamois of Switzerland, antelope and buffalo from the plains. Bird cages without number, containing song birds, hang from the timbers. Also a variety of trout and salmon rods, with flies attached, ready for a cast. Trailing arbutus, clematis, wisteria and other creepers cover the walls, draping all unoccupied spaces.

CELEBRATED SHOTS.—Dr. and Mrs. John Ruth, the celebrated California experts with rifle, shot gun and pistol, are now in this city, and it is to be hoped will before long give a joint exhibition of their skill with the arms that they so well know how to handle.

Dr. Ruth we find is well acquainted with our old friend Major Frank North, himself one of the best rifle and pistol shots that we have ever seen, whose name is so well known west of the Missouri River as Commander of the Invincible Battalion of Pawnee Scouts. Major North's letter, recommending the Doctor to the public as one of the finest shots in the world, is a document to be proud of.

Dr. Ruth has just received from William Burt & Sons, of Boston, one of Scott's hammerless guns, of latest model, and will use it in all his exhibitions and matches.

—The Virginia mountain trip, of which we have already made extended and commendatory notice, will begin Sept. 9th, and not, as it was at first proposed, Sept. 1st. We have reason to believe that those who join the expedition will find it a rarely enjoyable mode of pleasure travel.

## The Sportsman Tourist.

A MORAL TALE FOR POACHERS.

IT was in the days before there were any laws in our State for the protection of fish and game, or any State Association for the protection of Fish and Game, or a Sham Lake Plain ditto, ditto, ditto, with capital letters and capital dinners and—what else? Any one could shoot, trap, net and snare from one end of the year to the other without fear of man or act of legislature, and no fish, bird nor beast that swam, flew or ran wild, had any friends but the few sportsmen and anglers who preached and practiced and wore a law unto themselves. In those happy times there were two sportsmen named André and Joe, who, in the exercise of their rights as free and newly naturalized citizens of the United States, saw fit to hedge Wonakakutuk with a fyke, and so prevent, to their own great profit, the passage up stream of all fish that sought to go thither in quest of food or spawning grounds. No one up stream could get a fish. Anglers in the upper waters sat like Patience on a monument, only screaming and then smiling, at grief—and went down, with not a bite to brag of but those of mosquitos, wickedly cursing these honest fishermen, who had only taken what belonged to them—for were not all the fishes of our waters created especially for Canucks to catch and sell? But some were naughty enough to rebel against this heavenly decree, and took up the net of André and Joe, who then prepared to defend their rights. André loaded his Queen's arm with a deadly charge of BL, and swore a double-barreled oath in French and worse English ("dat if he ketch any Yankee round hees net, he'd atting it worse as a nes' of bumbly-bee!") and when he and his companion had set their net at twilight, they tied their scow to the head stake of the fyke and sat snooking and gibbering, alert for the foe.

But even the tongue of a Canuck will tire in time, and his powers of suction will not endure forever—yet he never dies; and when his appointed time has come, goes to Colchester Point and begins eternity—and the French of night grow thick, and André and Joe lapsed into silence and knocked the ashes from their pipes, and for a change of position stretched themselves on the thwarts of their craft. The bullfrogs belowed in monotonous concert, the whippoorwill's note steadily lashed the heavy air, and the rifles chuckled continuously under the broad bow of the scow: such sleep-sounds with such infrequent breaks of splashing fish or diving muskrat that the watchers soon became sleepers.

Then the spoilers came—Sed and Jack—in a light trapping skiff, paddling as silently as the ghostly canoes of Disinal Swamp. As they came alongside the scow, Sed, with his jack-knife, cut the thong that held her to the stake, and she with her unconscious crew went slowly drifting with the south wind toward the lake. André was a first-class snorer, and a belated fisherman who met them, took the craft for a tug making her way out of the creek, yet wondered greatly that she made so little headway and showed no light, and at last concluded that it was some new invention of Capt. Barnum and his cousin Hen, and that the illustrious inventors were making a trial trip by night preparatory to astonishing the world. An hour later she grounded among the willows of the bar, and her warlike crew, having had their nap out, awoke to find themselves they knew not where, till the growing day outlined the familiar horizon and silenced the marsh-bordered reaches of the Wonakakutuk, and they saw the trees of Garden Island looming darkly out of the misty bosom of the Bay of the Vessels and glimmering beyond the star of Split Rock light-house. Then, some say, the curses of the "Bostonals" flew so thick and hot that they blasted the largest tree on the bay into a pile of kindling as likely that, in the frenzy of his rage, André "played the fiddle" as a Yankee, and riddled its body with his BB's.

Hours before this their net had reluctantly sputtered into ashes on top of a blazing brush heap.

AWAHMOOSE.

### ROUGH NOTES FROM THE WOODS.

MOOSE RIVER, July 31st.

SHE'S all my fancy painted her, she's lovely, she is light. She waltzes on the waves by day, and rests with me at night. But I had nothing to do with her painting. The man who built her did that. And I commence with the canoe, because that is about the first thing you need on entering the Northern Wilderness. From the Forge House, foot of the Fulton Chain, on the west, to Paul Smith's Lower St. Regis Lake, on the east, is ninety-two miles. About five miles of this distance is covered by carries; the longest carry on this route is about one mile; the shortest, a few rods. If you hire a guide he will furnish a boat and carry it himself. His boat will weigh from sixty to one hundred pounds, and will carry two heavy men, with all the dunnage you need. He will "take care" of you, as they express it here, and will work faithfully day to forward your desires, whether you be artist, tourist, angler or hunter. His charges are \$2.50 a day, and found. The tired, overworked man of business, who gets away from the hot, dusty city for a few days or weeks, cannot do better than come to this land of lake, river and mountain, and hire a guide.

What the mule or mustang is to the plainsman, the boat or canoe is to guide, hunter or tourist, who proposes a sojourn in the Adirondacks. And this is why I propose to mention at some length this matter of canoeing and boating. Being a light weight and a good canoe man, having the summer before me, designing to haunt the nameless lakes and streams not down on the maps, and not caring to hire a guide, it stands to reason that my canoe should be of the lightest, and she is. Perhaps she is the lightest cedar-built canoe in the United States, or anywhere else. Her stems and keel are oak, her ribs red elm, her gunwales spruce, her six pairs of strips, and sixteenths of an inch thick, with copper fastenings from stem to stem, leave her weight, when sandpapered ready for the paint, fifteen pounds nine and a half ounces. The paint adds about two pounds. She is ten feet long, twenty-six inch beam, with eight inches rise at center, and, propelled by a light double paddle, with a one foot power in the middle, gets over the water like a scared loon. I propose to take her a rather extended trip be-

fore snow flies, if she does not drown me. I reckon her carrying capacity, in ordinary weather, at 150 pounds. If she proves reasonably safe on the larger lakes of the wilderness, she is an achievement in the boat-building line. She was built by J. H. Ruston, of Canton, N. Y., and is by several pounds the lightest canoe ever made by him. I will only add that she is too light and frail. I would recommend ten and a half feet in length, with thirty inch beam, and ribs two inches apart instead of three. Such a canoe would be stanch and safe for one, and need not weigh more than twenty-two pounds. She can easily be carried on the head, in an inverted position, first placing a blanket on old coat, and then head by way of cushion.

When I reached here, just one week ago, tired with twelve mile ride on the corner of a trunk, while I hugged that frail boat like a faithful lover, I only meant to stop until I could get my traps carried through to the Fulton Chain, which, in the case of the canoe, was not so easy. I was in no hurry—the hotel here is neat, well kept and prices very reasonable. While waiting for the man to turn up who wanted to carry the little craft on his head to the Forge House, it dawned on me that I was well enough here I was for a few days. Parties were constantly coming and going, and all stop at Moose River, which is the half-way house between Booneville and the lakes.

For interviewing guides and taking notes of the region to the eastward, there could be no better point than this; and I needed practice with the canoe before taking her over the larger lakes. Moreover, I came here for the superior quality of water, air and angling, with a little hunting thrown in at the proper season.

What if these things were at my hand, right here, and parties hurrying through post haste to the Brown Tract or the Raquette waters were running away from that they sought? Those coming out of the woods do not, as a rule, claim notable success with the trout. Many of them would catch salt pork oftenener than broiled trout were it not for the guides, and one of the latter told me that "trouting" was poor on and around Big Moose, while he thought Little Moose and Panther lakes not worth a visit. "I could catch all the trout I wanted right around here," he added.

So I overhauled my fishing gear and went in for brook trout, and, as I supposed, found all I wanted: found that I could, by angling just enough for recreation, catch more speckled trout by far than I need, while there is very pretty fly-fishing at the spring holes in the river. Many gentlemen who go far into the wilderness, at much expense of guides, etc., would be well content with just such fishing as I am enjoying at Moose River. Then there are, within an easy walk of the hotel, several small lakes where deer "water" nightly, and may be "flushed" for a few minutes of sport.

But this is not camping out—not genuine woods life. We seek the forest for adventure, and a free, open air, hunter's life, for a time at least. Well, it may be a little tame, but it is very pleasant and healthful, all the same. As for camping for the benefit of open air, bright fires and beds of browse, fresh picked from hemlock and balsam, we have that right here. Just under my eyes as I write, there is a fine spot for a forest camp. The ground is long by six wide. It is well timbered with spruce, balsam, hemlock, cedar, pine, birch and maple. It is one of the pleasant spots that nature makes and man neglects. The island lies high, with roaring, rushing rapids on the left, and a broad rock dam on the right, which at low water becomes a cool, clean promenade, 100 feet long by forty feet broad. Near the center of this rock is a natural depression, forming a basin into which the water slowly filters to the river. In this little dock I let the canoe rest at night: against the largest spruce on the island my light tent of oiled factory is erected, and there I rest o' nights—for a few days only, and then for broader waters and deeper woods; perhaps to go further and fare worse. NESSUK.

### LONG POINT.

"THE HAPPY HUNTING GROUND."

BY kind invitation of my good friend, Sheriff Woodruff, and with but a few minutes to catch the train, I hastily bundled what few things were necessary into a bag and started to my hotel at the Hotel Stead. On my arrival I met Mr. R. A. Lucas and Mr. J. J. McKenzie, both gentlemen from Hamilton, who with myself made a party of four for that "paradise of hunters," Long Point. We went to fish for green bass and enjoy the pleasant breezes and beautiful scenery at all times to be found upon the island.

We arrived at about 7 in the evening of the 21st of May, after a pleasant trip on the Lake Champlain and Port Dover. Approaching the dock we were greeted with handkerchief salutations from friends on shore, conducted among whom was that dear old veteran Christian sportsman, Dr. Edgerton Ryerson, whose hale and hearty figure at seventy-seven shows how careful living and abundant exercise, mentally and physically, do to keep age young.

This charming island is situated on the east end of Lake Erie, and contains an area of about 20,000 acres of land, a large portion of which is marsh, and which affords fine feeding and nesting ground for all the varieties of ducks which breed in this neighborhood, such as mallard, teal and woodcock. Fish of all descriptions abound. The woodland is largely supplied with deer, wild turkeys, partridges, woodcock and snipe. Endless numbers of muskrats, when seasons are propitious for breeding and catching, yield quite a revenue to the company, trapping as they do from 10,000 to 25,000 annually, which tends in some degree to lessen the expense of supporting the four or five gamekeepers. The time of these keepers is spent in watching and protecting the grounds from the inroads of poachers. The caretakers consist of William Leary, steward; Helmer, head gamekeeper, and Jackson, second gamekeeper, all of whom live upon the main island. Morris, Fitzmorris and "Mory," by way of distinction, are the three who take charge of the fifteen or sixteen cottages, which belong to individual members of the club, or are used by punters engaged during the shooting season. In addition to these is a club house, in which is the dining-room, a large apartment, finished in oiled chestnut and decorated with stuffed animals, maps and paintings, with an autograph register or tablet of celebrities who from time to time have been guests of

the club. These buildings are all constructed upon piles, forming a wharf, and distant about two and a half miles from the island proper, and upon a spot known as the "Carrying Place Creek." This is a most beautiful place for a summer resort, free at all times from dust, smoke and noise, with generally a refreshing breeze, and all things pleasant. Each cottage has its cooling corner sort of "corn crib"—in which each night the birds stop during the day are hung up, and a refrigerator contributes to the many creature comforts that are to be found here. There are a good many celebrities connected with this place, and some few whom I met who have shot in the marsh and hunted the upland game for from sixty to seventy years; among these Dr. Ryerson, Dr. Harrison, one of the oldest, has spent some months here with his good wife this spring in his jolly little hunting box, where in his quiet ease, he told me, much of his admirable book on Canada has been written. Then there are the Messrs. Woodruff, of St. Catharines, and others whose names at present do not suggest themselves. Yes, old Peter Price, nearly ninety years old, still trolls about, and his son, Bill Price, a twenty-eight old "geranium," and Bill Woodward, too; and last, but not least, comes the worthy Ayres, who has made the marsh "litter" over and over again with old Westly-Richards, and tells every time she goes off a tale of woe to anything that comes within his reach. There is a little history attached to all connected with this association.

Our fishing party, which consisted of Sheriff Woodruff, Mr. Lucas, Mr. McKenzie and myself, upon our arrival, were coupled off together in cottages, each with two bedrooms and a sitting-room, furnished with everything to conduce to the comfort and ease of the wearied hunter after a hard day's sport. Now, this party was essentially a pleasure-bent organization, seeking rest and relaxation from the toils and cares of business, from over-worked brains, etc. Our time was chiefly spent in hooking five-pound green bass. The fish were most abundant, and had the water been more clear we should no doubt have doubled the catch, which, I believe, would average one every three minutes, and, in fact, with two hooks, as many as sixty or seventy an hour were taken. Of course the more scientific disciples of "Isaac," with delicate tackle, such as friend Harris used, could not land as quickly as when "yanked out" with a stiff rod and a mud grub. The fish were most abundant, and abundant and many, and only exceeded in size by some caught by Mr. George Dawson and myself when on a visit to French River, on the Georgian Bay, in June, 1878. This, by the by, was one of the most pleasant trips I can recall. The bay abounds in the largest bass and pickerel on the continent of America.

On Sunday morning quite a number congregated in the dining-room for prayer, and I must here remark that, unlike similar places of resort, the Sabbath is most strictly observed, and Dr. Ryerson preached a most beautiful sermon. Among the congregation were Mr. Edward Harris, of London, and Mr. Charles Ryerson, professional gentlemen of eminence, and their wives, who came over to spend Sunday and the Queen's birthday. The hearty way in which the national anthem was sung left but little doubt as to the loyalty of the party present.

As all pleasures have their end, so had ours, and on Tuesday morning, after a round of handshaking and regrets at leaving, we turned our faces homeward, ere long, I trust, to meet with similar scenes of enjoyment.

No spring shooting is allowed at Long Point. Nesting birds have perfect quiet and find an undisturbed home during the summer season; consequently when the fall shooting commences birds are found in an abundance unequalled anywhere. By the laws of the club, no guns are fired between sunset and sunrise; the result is from 100 to 200 birds a day to each shooter, and I trust that ere long the Munroe Marsh, which is now being ruined by pot hunters at all seasons, will fall into the hands of gentlemen now negotiating for its purchase, and with whom Long Point birds will be able to share the same. I congratulate each other upon having brought the protection of game to a successful issue.

N. B.—I quite forgot to mention that last summer Dr. Ryerson, in his little skiff, rowed over to Port Ryerse, seventeen miles, preached two sermons and returned; and this spring, when goose shooting, was overtaken by darkness and compelled to remain all night in the marsh. Rolling himself in a blanket, he spent the night in the marsh, and when he returned the next morning was rewarded by capturing nine wild geese. St. Catharines, Ont. J. BEYANS GILES.

### A MIDSUMMER FOX CHASE.

GASTON, N. C.

HOWEVER unhumanlike it may seem for a practical huntsman of full forty seasons to be engaged in the sport during midsummer, I must nevertheless give you an account of a red fox chase I had July 23d, 1880.

For several days previous the weather had been cool and damp, much like such spells in early autumn, and it occurred to me a good opportunity to reconnoitre when the fall shooting commences a few weeks before was correct, that a den of red foxes had been found on the Mt. Misery plantation on the Roanoke River, five miles above me. The morning was very damp, cool and cloudy, with misty showers at intervals, but in other respects exactly suited for the purposes I had in view. The female red fox invariably prowls on such days, and I had information, striking a trail or confronting one, if the information was correct, as soon as I entered the Mt. Misery plantation.

After ordinary breakfast I mounted and moved up the Roanoke, keeping the Eaton Ferry road for several miles and turning south down a cartway to the hills overlooking the Roanoke, with some eight couple of hounds that I had liberally rushed to take off their fire, soon came upon a moving fox, and some fifteen rods from the place I had expected to find him. The pack broke off in full cry, and I stood and stared and then I was startled. I was at a loss to determine the character of the game. I could not venture to hark or encourage the hesitating pack, but keeping my silence and hastening to head the pack soon discovered, as in the darkening wood they passed me, that the game was large and a race was before me. The weather dark, red or gray fox, was not so certain. The run was directly up the Roanoke, over its hills for more than a mile; then due south through a large body of

woods (sacred to the memory of Pious "Jeems"), passing through its entire length and then rounding and returning south to the Mt. Misery plantation. As soon as I heard the backward move I halted to see fox and hounds and to mark positions. In a moment all were upon me. The muzzled dogs, with tongues hanging out and tails dropped, were in earnest and doing their work like trained fellows, but sorrowfully. The fox seemed perfectly fresh, and at a bound moved off, closely pursued by one of the hounds that had been left behind by the pack when it emerged from under the river hills, turning right back into the pursuing pack. Up to this point things looked discouraging to her, and were so, but a temporary break, followed by only a minute's confusion, proved a fortunate respite and gave her time to widen the distance between her and her pursuers. She made judicious use of it, and down the Roanoke she flew, keeping close under the hills and in paths that skirted the low grounds until reaching the Roanoke Mills, some three miles from the break. She here turned due north out from the river a mile and kept up until parallel with Eaton Ferry road, for a while.

A few hundred yards above the "scratch field"—a field sacred to the memory of Cols. Edmonds and Putney—she crossed the road, returning to the Roanoke. Here I headed the pack and had a fair opportunity to enjoy the sport and note positions of each dog. Plunder, a full brother of Brodnax's Ledrew, was in the lead, with little Mischief well contesting his position. The mush had gone, and the whole pack looked drawn for the race. And so they moved. As they passed me, with every individual dog in his place, I was enthused with the scene, put spurs to my horse and dashed through the woods with no feeling of the lagging about me. I had not gone over half a mile when I was abruptly thrown against a tree, backwards from my horse, momentarily stunned, with the blood flowing from my forehead and nose and unable at first to get up. There I remained until the sweet music of my hounds had faded away in the distance and I had sufficiently recovered to move my limbs to ascertain if any were broken. Finding all sound, I quickly got up and remounted my horse, who all the while stood quietly and sympathetically by, awaiting my pleasure, and cantered home, anticipating something serious after the excitement of the chase had passed off. The hunt was completely taken out of me, and it was no longer fun to see or hear the hounds. When I arrived at home I had my wounds carefully examined and cared for. There was a cut in the forehead, one on the nose, and the entire right side bruised. But I am again on my feet and ready when the season advances to try it again.

The result of the chase I cannot give. If there was no interruption of it, the fox soon was either put to earth or killed. It was impossible for him to stand up and escape under the press. Apart from this the pack soon returned home, and pretty much together. Logan was in the advance, and Logan "never surrenders."

How my collision against the tree occurred may be a matter of interest to all huntsmen. My horse is a thoroughbred one—very intelligent, easy and quiet in the class, and perfectly under control of the rein. So he may be pronounced a perfect "hunter," more especially when you add that he is a fine leaper and no blunderer. In riding through woods I usually look some distance in advance, marking the line of my motion. I did so on this occasion. But the woods being very open and free from shrubs, I did not use my customary discretion, and permitted my horse to have his own way up to within a few yards of the tree. I discerned if he went to his right the space between it and another was too small to allow safe passage, I consequently attempted to pull him to its left, and succeeded; but it brought the half of my body and face against the tree, and with a horrible crush of my whole frame. The feeling cannot be described. If I had been a heavy man the result might not have been so favorable. I weigh only 112 pounds in full dress, and the speed of my horse could not have added enough to my momentum to render such a condition fatal. At all events I am still myself.

### A CAPTIVE WOODCOCK.

A CAGED woodcock, now to be seen in this city, is attracting much attention. The bird, which is apparently a male, was captured July 28th by the proprietors of an auction store on Sixth Avenue, into which it had flown, and was afterwards transferred to the hands of Mr. J. Morris, of Jefferson Market, where it is now to be seen. Its present owner, who was formerly a dealer in game, and has a very clear idea of the requirements of a woodcock, has fitted up for his pet a very comfortable prison. This, which is an ordinary canary's breeding cage, is covered on the floor with dry moss, except at one end, where there is a box of mud three inches deep, ten wide and eight long. The bird is fed wholly on earth worms, of which he eats each day a great number. They are buried in the box of mud by Mr. Morris, who has great difficulty in keeping the bird away from that end of the cage until the food is covered up. When his master introduces his hand into the cage the bird manifests great excitement, and declines to give up his place on the mud, so that he has to be pushed away to the other end of his quarters. As soon as he is permitted he returns to the box of mud and commenced to bore with the utmost vigor.

Stalking over the damp earth with much deliberation, he introduces the extremity of the bill into the mud at an angle of about 80°, and by a series of slow pushes, buries it to the base. While doing this his left foot is advanced and his body slightly inclined downward. When his bill is fairly buried the woodcock stands perfectly still. He

looks as if he were listening, and many of those who have seen him believe that this is what he is doing, but we think that there is no doubt that he waits to feel if there is any movement in the mud. The point of the bill of woodcock, snipe and some other waders, are extremely sensitive, and they can no doubt detect any movement in the soft earth in which the bill is plunged. If the bird then feels no movement he withdraws his bill and repeats the same performance at a little distance. If a worm is felt, however, or the motion which indicates that one is near, he partly withdraws the bill, and changing its direction slightly, plunges it in again, and withdraws the luckless worm, which he then devours, apparently with great satisfaction. This proceeding is repeated until all the worms supplied have been extracted from the mud. He then with great deliberation cleanses his bill by means of his feet, ruffles up all his feathers and gives himself a shake or two, and then retiring to the dry moss at the other end of his cage, buries his long bill among his scapular feathers and prepares for a nap. Slowly his bright brown eyes close, and at last he drops off, to dream, no doubt, of the swamp where he was born, and where he passed his early days.

One of the most remarkable things about the bird was the rapid way in which he sucked in the longest worms. His upper and lower mandibles came together very rapidly, and almost before the worm was fairly drawn from his hole he disappeared down the woodcock's throat.

We understand that Mr. Morris is having a larger cage built for Dick, as he calls him, and we hope that in his more ample quarters the latter may live long and happily.

### DIRECTIONS FOR COLLECTING ALGÆ.

BY DANIEL C. EATON, PROFESSOR OF BOTANY IN YALE COLLEGE.

THE following notes are printed for the use of those persons in any part of the American Continent who are willing to help the cause of natural history by making collections of seaweeds and sea-mosses, but are yet uninitiated as to the modes of collecting and preparing their specimens.

#### WHERE, WHEN AND HOW TO COLLECT.

After a heavy gale blowing on the coast, almost any beach of sea, gulf, or bay, will be covered with algae, often in great quantities, coarse and fine, black, red and green, in entangled masses. Such heaps should be carefully examined as soon as possible after their formation, or else the more delicate kinds will be quickly destroyed by decay.

At extreme low water the sea will leave tide pools among rocks, or sometimes in the sand, and by wading in these pools many sorts may be obtained. The rock-pools with clear water and some shade from the rocks will generally yield the finest specimens. Old buoys, piles, wrecks, etc., afford good nesting places for seaweeds. In quiet weather a small dredge worked from a boat, in water from one to fifteen fathoms deep, will often bring up varieties not to be obtained in any other way. A strong fishing line with coarse hooks will bring them up from the bottom also. A seine left a day or two in the sea, as a pound-net for instance, will catch many algae which were floating in the water.

The collector ought always to have a light hand-net—a bag of mosquito netting stretched on a brass hoop of 8-10 inches diameter, and secured to a good six-foot staff, is very convenient—a light basket containing several quart or pint preserving jars, a few smaller wide-mouth jars, and perhaps a pair of brass forceps and pocket magnifier.

The coarser sorts may be put in the basket, and the finer ones in the jars, keeping the latter filled with clean water. It is better to keep specimens clean when first obtained, so that the collection taken home may be in good order. Very rare or delicate specimens should be put separately into the smaller bottles. Care should be taken to get the whole plant if not too large, and if it be very large, to cut out for preservation the root or "holdfast," and portions of the stem and other parts of the plant.

The most careful collector will note also the kind of place where the plant was obtained, whether on rocks, piles, floating, or growing on coarser varieties.

#### OF PRESERVING THE COARSER SORTS.

These should be shaken a little, loosened or spread out a little, but never washed in fresh water, and then dried in the air. The best way is to stretch a cord in some windy, and if convenient, shady place, and to hang the specimens on the cord. The flat-leaved forms, however, dry to best advantage if spread out on coarse paper and laid on a board. They should be protected from the dew at night, or brought under cover. In this way a day or more will dry almost any sea-weeds, and, as the salt remains in them, they will keep for years, and may be easily soaked out and mounted on paper at any time. This rough-dried collection should be packed in boxes, and if the specimens pack too closely, twigs may be placed among them; if not closely enough, a slight sprinkling will make them so pliable as to pack nicely. Such seaweeds, however unsightly they may be in this condition, may eventually be made into excellent specimens. Corallines and other stony algae may be wrapped up in paper, and will keep so indefinitely.

#### OF MOUNTING THE MORE DELICATE SORTS ON PAPER.

Dr. Harvey has so well described this process, that the following description of it is taken from one of his works on algae. "The collector should have at hand a couple of large flat white dishes, filled with [fresh] water, in one of which the specimens may be washed, pruned and freed from parasites, and similarly introduced into the other when sufficiently cleaned. When the specimen is floated in the second dish, a piece of white paper of proportionate size is to be introduced under it, the branches finely displayed with a pointed instrument, a porcupine's quill or a small forceps, and the superfluous parts removed. The paper, with the specimen so displayed upon it, is then to

be carefully withdrawn from the water, placed between two sheets of soft paper, and subjected to pressure like other plants. Thin calico (white muslin) rags are useful to lay immediately over the specimens, between them and the soaked paper, as the cloth is less likely to adhere to their surface than paper, and if it does adhere, is more readily removed without injury. After the first six hours, and again once every day till the specimens are fully dry, the wet paper must be changed, and then it will be found, in most cases, that the specimen has adhered to the white paper on which it was displayed. The smaller kinds will be sufficiently dry in forty-eight hours. A very little practice will make the process easy, and the trouble will be repaid by the beauty and interest of the collections which may soon be formed." To the above it may be added that the firmer red varieties will improve in color for several hours' steeping in fresh water, but many of the most delicate must be mounted from salt water only, else the color, and sometimes even the structure of the plant, will be destroyed. The best, as well as the cheapest kind of press is two good pine boards, about twelve by eighteen inches, and half a dozen bricks separately tied up in wrapping paper. Too great a pressure leaves a print of the cloth on the specimen, and renders it also more difficult to revive a fragment for microscopic examination.

For ladies' albums algae are often mounted on fine Bristol board or large wedding cards, and some very beautiful specimens are pressed between layers of white flannel—half cotton is best—without the use of either muslin rags or soaking paper.

A solution of one part crystallized carbolic acid, ten parts pure glycerine, and forty parts of water, will preserve algae a long time, and such specimens are even better for study with the microscope than the specimens on paper.

It remains only to add that the writer of these notes will receive with thanks any collection, large or small, from all parts of the world, and will endeavor to name all American specimens sent to him.

New Haven, Conn.

A RAT WITH A COLLAR.—Many of our readers will remember that some years ago we published an account of a deer with a bracelet, and gave a wood cut showing the manner in which the unlucky animal "had put his foot in it." The bracelet in this case was a hard ring of wood, the outer portion of a pine knot, and it appeared that the deer while small had stepped into it, and had never been able to free its foot from the incumbrance.

A somewhat similar incident is noticed by the Washington National Republican, as follows:—

Mr. J. Enthoffer, an employé of the United States Coast Survey, residing at No. 68 I street Northwest, has contributed a curiosity to the Smithsonian Institution, which, if it adds nothing to scientific knowledge, will be regarded with much interest by all persons interested in the habits, adventures, and misadventures of rats. Mrs. Enthoffer had been annoyed for some time by a persistent rat. She occasionally caught a glimpse of his rathship, and was surprised to see that he wore what appeared to be a yellow collar. This fact gave rise to much speculation in the family as to how the rat came into possession of the collar. The mystery was solved a few days ago, when the rat wearing the collar was caught in a trap. Unfortunately the rat was killed by a dog, but upon examining the body it was found that the collar was a ring of bone, fitting tightly about the animal's neck. The theory is that the rat when it was small had found a bone, and gnawing out the center, pushed his head through and was unable to extricate himself. As he grew larger the ring of bone tightened about his neck, and he wore it until death as a badge of his enterprise in the search for food.

A TAME RUFFED GROUSE.—Not long since we published an account of a ruffed grouse in Massachusetts, which was so tame that it would come at its master's call and eat from his hand. Subsequently we received brief accounts of other tame grouse, but most of them lacked definiteness, and were hence of little value. From the Dansville (N. Y.) Advertiser we take the following note, which is, if true, very interesting. We give the item in full:—

Charley Sedgwick tells us of a tame partridge which he has seen and handled, the like of which we have never before heard. While in Mt. Morris last week Mr. Sedgwick heard about this bird, and was only too glad to accept an invitation of Capt. McCarthy to visit it. It is found on Mr. Sweet's farm below Mt. Morris, about a mile, and lives alone in a brush pile near some farm buildings. To induce this bird to emerge from its hiding place, all that is necessary is to pound on the building, when it will cautiously come forth, and after a short time permit you to pick it up and handle it. You can toss it into the air and it will fly in a circle about you and finally alight at your feet. It seems that some workmen first discovered the bird while eating their dinners from its cover. When first seen it was not yet full-grown and apparently "alone in the world." The workmen by feeding it day after day gradually overcame its extreme shyness and brought it to its present state of tameness. It is attracting much attention.

TEMPERATURE OF FRESH WATER LAKES.—Some interesting results have recently been published in the Archives des Sciences by a bearing on the temperature of certain fresh water lakes.

From experiments conducted at Lake Lemán, it appears that the hundred meters nearest the surface absorb the heat very rapidly, but it penetrates the lower depths much more slowly. At a depth of 335 meters there was considerable variability in temperature, and it was evident that the point where variation ceases was far below this depth. The investigator considers that by January 15th, 1880, Lake Lemán had expended all the heat stored up in its waters during the previous summer.

ENLIGHTENED LIBERALITY.—THE sum of 50,000 francs has been appropriated by the French Government to assist Mr. Pasteur in carrying out his investigation on the contagious diseases of animals.

### THE INTERNATIONAL FISHERY EXHIBITION IN BERLIN.

RUSSIA, ENGLAND AND AMERICA.\*

[From Vol. III., No. 27, of the "Deutsche Fischer-Zeitung," Stettin, June 15th, 1898.]

RUSSIA's exhibit in the Berlin Fishery Exposition of 1898 is by no means proportionate to the vast extent of her system of watercourses, to the products of her enormous rivers and her colossal lakes. These water-courses have rendered the steppes habitable and have made them fertile by their moist atmosphere drawing immigrants to their shores. The wealth of fish called into existence a sort of primitive bartering trade extending far inland; the nomads became farmers and fishermen, and in the course of centuries large cities sprung up along the banks of the rivers, whose existence is in part at least based on fishing. The Volga, the Don, the Dnieper, the Obi, contain nearly all our well-known species of fish, but especially an enormous supply of sturgeon, which in spite of persecutions yield a rich fish harvest year after year. Of all this, and especially of the immense economical importance of the Russian fisheries, the exhibit gives a very faint idea, although it is interesting in itself. Caviar is, of course, represented by a large number of samples; there are dried fish, various articles made of fish skin, and fish bladders of different kinds of fish oil and a number of fish in spirits of wine. Pisciculture seems of late years to attract more attention, for we find in the exposition specimens of Coregoni, salmon and sterlet raised by the authorities and by private individuals. Mr. Constantine Muszynski, proprietor of the Metele estate in Poland, has sent a very interesting collection of fish, of which we shall give a description in a future number.

What has been said of Russia applies also to England. The English fisheries, especially the salt water fisheries, are very extensive, but the exhibit does not do them justice. What is there is very beautiful, elegant and practical, but relates almost exclusively to hook and line fishing. There are also on exhibition, nets, models of boats and very fine representations of fish in wood and plaster of Paris, but the main portion of the English exhibit is devoted to fly-fishing, etc. The handsome cases are filled with hooks, lines, etc., and the celebrated Redditch manufactures of S. Alcock & Co. and Bartlett & Sons are well represented. It is well known how passionately fond Englishmen are of salmon fishing. During summer large numbers of them may be found in Scotland, Ireland, Sweden and Norway, often living in very primitive huts and paying large sums for their fishing privileges, in order to give way to the fish which they have caught. This, in their opinion, is true sport; the fish in itself is no object; they only seek the excitement connected with fishing. The relief representations of salmonoids and their inner structure are very fine; and of special interest is a representation of two equally large pike, one of which has half swallowed the other.

The American exhibit is very extensive and varied; broad and comprehensive views have evidently guided its arrangement; nothing has been left to the whim and caprice of individuals, and the result is therefore a very complete and admirably arranged exhibit, which could not possibly be more instructive. The arrangement has been in the hands of the United States Commission of Fish and Fisheries, which has displayed great energy and knowledge of the subject. At the head of this commission is Prof. Spencer F. Baird, the most prominent scientific and practical ichthyologist in America. His picture hangs in the exhibit, which occupies a large portion of the first story.

The collection of American aquatic animals, stuffed, is very extensive, giving a good idea of the great variety of forms. At the end of the broad and beautiful marble staircase an enormous sea lion from Alaska shows his powerful teeth, while the surrounding scales only make him appear all the larger. This group is part of the very interesting and well-managed natural science establishment of Prof. Henry A. Ward, of Rochester, N. Y., which has been in existence for about twenty years, and which annually sends out important expeditions for obtaining rare animals, and presents specimens of every kind to schools, museums, etc. This collection contains many rare specimens, e. g., an enormous crampfish (*Gymnotus electricus*), measuring almost two meters, from the Orinoko, in Venezuela; they are in the tropical regions called "tremblers" (*tremulatores*), and are much dreaded by the natives. In the inside of these fish there is a whitish, jelly-like organ, by means of which they deal powerful blows, which are often fatal, resembling in this respect the *Torpedo marmorata* found in our waters, whose electric battery, however, is not so strong. The large collection exhibited by the United States Commission, embracing all the useful and hurtful aquatic animals of North America, is well arranged and exceedingly instructive. The American fishes are brought before us partly in stuffed specimens, partly in colored engravings and photographs, giving the natural size in each case, and partly in plaster of Paris casts which are true to nature.

Of the many different kinds of vessels, the Indian boats differ most from anything we have. One of them is made of birch bark and "manned" by a serious-looking Indian and his squaw; the other is entirely covered with buffalo and can easily be transported over land. Such boats are called "hull boats," or "coracles," and are now also made in England, are used much by anglers, and occasionally carried by them to the fishing place. Portable folding canvas boats are often used in the United States, and several specimens of such boats are exhibited. The very pretty one built by Osgood is arranged for two persons; it is fifteen foot long, goes four inches in the water, carries 80 pounds, and weighs only twenty pounds. The most elegant boat, which has been most admired, is a canoe for one man, which is so well built that one like it has made the voyage from the Gulf

of St. Lawrence to the Gulf of Mexico, a distance of 2,500 miles.

We also find here models of all those vessels which are used for fishing on the high seas and for transporting live fish. Amongst the rest there is a model of the United States steamer Fish Hawk, which is exclusively devoted to the service of the United States Fish Commission, and is furnished with all the necessary apparatus for hatching codfish and shad during the voyage. In this we also recognize the practical method of our transatlantic cousins, of whom it may be said in the best sense of the term, "that they know how to do it." To conceive a good idea and to carry it out, is with them one and the same thing, but what a long distance does often separate the two with us! To give an idea of the care which has been taken to make every portion of the exhibit as complete as possible, we will mention that twenty-four different kinds of knives are exhibited, all serving some special purpose in connection with the fisheries. From the intricate and complex use of the fish was found to be the most modern and ingenious contrivances, no intermediate stage is left unrepresented. We see whole walls covered with every imaginable variety of hooks and of artificial baits, mostly flies; there are about 400 kinds. In one word, everything we see combines solidity and elegance, is so well made and so advantageously exhibited, that even a perfect tyro in the noble art of fishing will soon understand the use to which each object is to be put. There is no gap in the representation of the vast field of the fisheries and of the history of pisciculture, and the impression which this exhibit makes on the visitor is therefore powerful and lasting. Time forbids to mention more details, although the rich exhibit of works on the subject might well deserve it, and we leave the exposition deeply impressed with the energetic, well-directed and successful activity of the United States Fish Commission.

✓ HATCHING THE LOPHIUS.—Last week our Gloucester correspondent gave an account of the hatching of the "American angler," or "goose fish" (*Lophius americanus*), by Mr. A. H. Clark, and we naturally wanted more particulars concerning the obtaining of the eggs, time of hatching, etc. He writes as follows:—

GLoucester, Mass., Aug. 4th.

The eggs were found floating near the surface in a string some thirty feet or more in length, and covered wide, held together by the glutinous or jelly-like substance before mentioned, and not attached to any weeds or drift stuff. A part of them were placed in the "Chester Hatching-box," which was moored alongside the wharf, on the 15th of July. On the 19th the eggs were separated, and the embryo could be seen in them. Three days later fish were found alive, with the umbilical bag attached, and on the 27th the young was found to be absorbed on some of the young fish. Judging from this, it would be five days from the time of hatching till the fish were fully formed. We know how worthless the "monkfish" is in a "practical point of view," but still, notwithstanding he is principally noted for nothing better than a natural aptitude for "taking in" all he can, with a rapaciousness that might stamp him as a Jew among fishes, it cannot be denied that he is an open counterpane, which is certainly a reasonable commendation, for, when he smiles, the upper part of his head is on an island, and it is an invitation to all little fishes to come in out of the wet.

J. W. C.

DEATH OF MR. W. A. LLOYD.—We regret to announce the death of Mr. W. A. Lloyd, an old and far more known in connection with English Aquaria. He died in England July 11th, at the age of 56 years. He planned most of the public aquaria in England and on the Continent, and was probably the best informed man upon the management of them in the world.

THE "FISH HAWK."—The United States fish-hatching steamer Fish Hawk arrived at Newport on the first of this month, and on the sixth made her first boat trip with all the members of the Fish Commission on board except Prof. Baird.

CODFISH IN FRESH WATER.—In a translation of Portuguese over de Danske Ferskvandsfiske, Ved Arthur Pedersen. Naturhistorisk Tidsskrift 3. R. 12. B. 1-2, H. 1579, by Dr. T. B. Sørensen, of Copenhagen, is found the following passage: The catalogue below quoted includes strictly fresh water fishes only, and such marine fishes as are frequently found in fresh water. I have, however, been somewhat perplexed by a couple of species, which are stated by C. E. Varming, a merchant of Kolding, to be caught now and then in Kolding rivulet, namely Torsk (*Gadus morhua*), which in September and October is caught in abundance, and Lungekar (*Spinochorda vulgaris*). Indeed, in the rivulet mentioned my countryman has even himself caught or seen caught the common kullmule (*Merluccius vulgaris*) and pigghaien (*Acanthias vulgaris*) which are not found elsewhere on the coast. The Torsk is said of late years to go quite up to the basin at Odense; in the rivulet, however, it ascends scarcely beyond Korup. Why not have the codfish in the great lakes?

✓ A NEW SPECIES OF MACKEREL.—Gloucester, Mass., Aug. 9th.—A peculiar fish, somewhat resembling a mackerel, and about twelve inches long, was found among some mackerel that were caught in a seine seven miles south-east from this harbor on July 30th. Mr. John Conley presented it to Mr. A. H. Clark, of the United States Fish Commission here. Old fishermen who saw it thought it a hybrid. The fish was forwarded to the headquarters of the Commission at Newport, where it was examined by Profs. Spencer F. Baird and G. Browne Goode. At first it was thought to be a species of *Awaiz*, a fish said by Prof. Baird to resemble the tunny in form, and also having a corset of scales around the pectoral fin as the tunny has. The *Awaiz* has been taken in large quantities on our coast, but they are worthless as food. A later and more thorough examination of the fish has been made by Prof. Goode, who now thinks it may be an entirely new species of the true mackerel family, heretofore unknown to science. The fish resembles the common mackerel (*Scomber scombrus*) in shape, being, possibly, a little thicker, is blue on the sides and back, and without the transverse markings peculiar to the mackerel.

J. W. C.

✓ ANOTHER NEW FISH ON THE ATLANTIC COAST.—Newport, R. I., Aug. 4th.—The United States Fish Commission has obtained numerous specimens of a fish, before entirely unknown in the Western Atlantic. This is the frigate mackerel, *Awaiz rochei*, twenty-eight barrels of which were taken in a mackerel seine, ten miles east of Block Island on the 3d of August by the schooner "American Eagle," Capt Joshua Chase, of Provincetown, Mass.

The frigate mackerel resembles in some particulars the common mackerel; in others the bonito, the genus *Awaiz* being intermediate in its character between the scomber, and the related genera *Planys* and *Oreogmus*. It has the two dorsal fins remote from each other as in scomber, and the general form of the body slender, like that of the mackerel. The body is, however, somewhat stouter, and instead of being covered with small scales of uniform size, has a corset of larger scales under and behind the pectoral fins. Instead of the two small keels on each side of the tail which are noticeable in the mackerel, it has the single more prominent keel of the bonito and the tunny. Its color is grayish-blue, something like that of the pollack, the belly being lighter than the back. Under the posterior part of the body, above the lateral line, are a few cloudings of maculations resembling those of the mackerel. The occurrence of a large school of this beautiful species in our waters is very noteworthy, for the fish now for the first time observed are very possibly the precursors of the spawning schools yet to follow. It is not many years since the bonito became an inhabitant of our waters, and the distribution and habits of the frigate mackerel are supposed to be very similar to those of the bonito and the little tunny, which also first came on the coast in 1871, and have since been found in considerable numbers.

The frigate mackerel has been observed in the West Indies and other parts of the tropical Atlantic as well as on the coast of Europe. In Great Britain it is called the plain bonito. It is not unusual in the Bermudas, where it is called the "frigate mackerel," a name not inappropriate for adoption in this country since its general appearance is more like that of the mackerel than the bonito, while in swiftness and strength it is more like the larger members of this family.

As a food fish, the frigate mackerel appears to be inferior to the bonito. G. BROWN GOODE.

In a late note Mr. Goode tells us that the auzis appear to be very plenty off Block Island, one vessel coming into Newport which had caught and thrown away four hundred barrels of them. Our Newport correspondent, "Occasional," sends us a specimen of the fish, which is so fat that we should think it valuable for oil, if not for the table. We should have tested its merits as a food fish, had the letter describing it come earlier.

TROUTING IN NORTHERN MICHIGAN.—Jackson, Mich., July 28th.—I have pleasure in sending a memorandum of a recent experience away up in Northern Michigan.

A party of four left Jackson June 15th; ticket to Traverse City and return, fare \$9.50; arrive at Traverse City 5 A.M., 16th; a thriving little city at the foot of Traverse Bay, had a elegant breakfast at Park Hotel—lako trout, etc., etc. At 8 o'clock left for the head of the steamer City of Grand Haven and Rapids and made landings at Old Mission, Elk Rapids and Torch Lake, where we arrived at 2 o'clock; steambot fare, \$1. Went directly to the Lewis House, a large, pleasant hotel; rooms for about fifty people, with all the accompaniments for hunting and fishing, boats, etc.; charges, \$10 per week. A couple of our party went out after a 3 o'clock dinner and brought in seventy pigeons; remained here one night and the next morning took a team for Cedar River in Belair Township, the county seat of Antrim County; distance by wagon road, eighteen miles, and by steamer across Torch Lake, twelve miles. The steamer was towing rafts and not to be depended upon that day, so we took the team around, arriving upon the Cedar River about 5 P.M.; cost of team, \$4. Established our camp up the Cedar about half a mile from its junction with the intermediate river which runs into Grass Lake, half a mile below the junction, and having speedily pitched our tent, prepared our bunk of cedar boughs and lighted our camp fire, our first meal was soon ready and disposed of; our pipes of peace smoked, and we turned in for a snooze after a few short yawns. Just at peep o' day our men, whom we had previously engaged for cook and camp keeper, reported for duty, he being a woodsman and living in the neighborhood. We were very early, breakfasting away at 5 o'clock, and were very clear as to the legend of the early bird, two of us went down and two worked up stream. The Cedar is a splendid little river about eighty feet wide on an average, and four feet deep, with the usual deep holes and shallow rapids; timber is very thick all along, pine and cedar trees are windblown across and into the river from all directions, making it quite difficult to get along, but convenient to cross, as one can anywhere, on the logs. The water is very clear and ice cold, as a couple of our party can testify on our second day's experience, having got in, of course, in the very deepest place. Returned to camp, all hands as per agreement, about 3 o'clock, with 230 speckled trout and five grayling.

On the last day, but two of our party fished any; the other two went on a voyage of discovery among the inhabitants, for know you the great mound builders once inhabited hereabouts, and thus we remained in the neighborhood; but as this is more to deal with the present

\* "Russland, England, Amerika," translated by Herman Jacobson.

than the past I shall let the Doctor attend to that part and give his profound ideas of the 2,000 year ago subjects which we unearthed, in his communication to the literary....

On the 24th, early morning, we struck tent, packed our traps, paid off our man \$1 a day, hired a team for \$4, and at 6 p.m. were landed across the French Broad River in North Carolina, at Macdonald Station; took train at about 10 p.m.; arrived at Grand Rapids at 5 a.m., and at Jackson at 9:30 a.m., with a nice lot of trout packed in sawdust, which we got at a mill at Grass Lake, and which were as nice and hard as though just from the water, almost, and no loss of flesh or appetite after our six days among the brook trout of Cedar River.

We unanimously voted the trip a success, and that future years would find us, with rod and fly, trying for a bite.

H. SULLIVAN.

**TROUT IN NORTH CAROLINA.**—*Sharon Hill, Aug. 3d.*—In your paper of July 29th, your correspondent, "A. F. J.," inquires as to the trout in the French Broad River in North Carolina; and in continuation of the subject, you ask for information about the distribution of trout in that State. There are very few trout in North Carolina, in the streams that flow east into the Atlantic Ocean; but nearly all the streams that flow west, into the Tennessee River, contain them, often in great abundance. I have never seen them there in waters less than 3,000 feet above the sea. They are seldom found in large rivers, such as the French Broad, but they prefer the tributaries, and "push up" well toward their sources. They like to revel in the cool, shady waters, fresh from the earth, above the settlements where the trees and bushes are cut from the margins of the streams, and where fowl waters are carried from plowed fields in times of rain.

I will enumerate some of the streams in North Carolina where trout may be found, commencing in Watauga County and going southwest. When I mention a river, I mean its tributaries. Trout are found in the Watauga River, in the county of the same name; in the Mitchell River, they exist in North and South Toe Rivers; in Cape River, in Yancey County; in the headwaters of the French Broad, in Henderson and Transylvania counties; and in its tributaries, such as the Swannanoa and Ivy rivers, in Buncombe County; in the Big Pigeon River, in Haywood County; in Tuskegee River, in Jackson County; in the Little Tennessee River, in Macon County, especially in Sugarwater Creek, above the falls, where the good old Silas McDowell "planted" them many years ago, as he informed me, and where they may be caught among the clouds, nearly 4,000 feet above the sea, probably the highest habitat of the trout in the United States east of the Mississippi River. Probably the best fishing may be obtained in the Nantahale River, in Macon County, especially in Buck Creek, on "Chunkey Gap Mountain." This river is 2,600 feet above the sea, near Ales, Monday's house, on the main road from Asheville to the mountains of North Carolina. Ales, can accommodate anglers comfortably, and carries them a bear hunt, also, as he is a fearless hunter and keeps good dogs. His address is Ajunone, Macon County, N. C.

I could never ascertain whether trout are found in streams farther south than the Nantahale River.

They are not found in the Hiwassee, and there are contradictory reports about their existence in the headwaters of the Oconee River, in the mountains of Georgia. There is a railroad now from Salisbury to Asheville, and the mountains of North Carolina. When going to Mitchell or Yancey counties, one should leave the railroad at Marion, and go to Burnsville, or stop with Isaac English on the way. Tom Wilson is the "boss trout fisher" in Yancey County, and can entertain strangers. His address is "Big Tom Wilson," Burnsville, Yancey County, N. C.

Do not neglect to put in the "big," as he says he does not wish another, but smaller Tom Wilson to get his letters. Tom says he can catch trout at all times and seasons. I have seen him catch them at night, when he made a large fire near the stream "to light 'em up." He says the big fish bite best at night. The people among the mountains of North Carolina are very kind and hospitable. I will mention the names of some other persons there who will give information about fishing localities. At Asheville, Gen. Clingan and E. J. Aston. At Waynesville, Judge Guder studies practical ichthyology as well as law, and if not engaged on the Circuit, he will be glad to dispense his game trout and fly rod. At Franklin, in Macon County, Mr. Jackson Johnson. Rev. C. D. Smith will cheerfully give information to strangers. No one who visits Mitchell County should fail to go to the top of Roan Mountain, where Mr. L. B. Seale entertains travelers at his house among the clouds 6,370 feet above the sea, and where one may see a cheerful, blazing fire every morning and evening in summer. His address is Cloudland, Mitchell County, N. C.

JOSEPH WILCOX.

**STROUTS, PA., Aug. 4th.**—In answer to the inquiry of "A. F. J.," as to the trout in the French Broad River, I will say that I spent last autumn at Hendersonville and Brevard, late county seat of Transylvania County, and was repeatedly told there were no trout in the French Broad, that stream having only a few black bass and more "jack." But in the upper waters of Mills River and Davidson River, and other tributaries of the French Broad, trout may be caught, though they are not very plenty, as in the neighborhood in which I was told they were not. However it was possible. In most of the small streams that empty into the upper French Broad, trout may be found in limited numbers, but are only caught with the worm. No fly fishing on account of the laurel. I tried the fly in Mills River—a beautiful stream—but had no rise; the trout took worms, however, readily. This river can only be whipped by wading from ankle deep to waist, and I didn't care to get frozen for the privilege. I was with a party, two of whom were mountaineers and accustomed to wading in cold water. These two, on going on the morning of our trip to the headwaters of Mills River and Mt. Pisgah, one of the loftiest peaks in North Carolina, began to fish down the river early in the morning, and before they had gone a half mile were compelled to leave the water and thaw out, their hands being so numb they could not bait a hook. I did not want trout bad enough

for that. This was in late August. What the lower waters of the French Broad and tributaries afford I can't say, as I have never been there.

**THE LAKES IN SOUTHERN CANADA.**—*Canton, St. Lawrence County, N. Y., Aug. 2d.*—In your answers to correspondents, E. M., of New York, asks for directions to reach some retired lakes in the southern part of Canada, like Charleston Lake.

Your location of Charleston Lake is very accurate. You are also right about the chain of lakes north of it, but you fail to tell him how to reach them.

For the benefit of sportsmen, I will supply the required data; having been there from three different directions. I perhaps can give it as well as any. If a man has a boat of his own and wishes to take it with him, to reach there from New York City, or the central part of the State, his best plan will be to take cars to Camp Vincent, thence by steamer to Gananoqua, put his boat in Gananoqua River and row up it about ten miles, when he will reach the first lake consisting of a chain of seven as beautiful lakes as a man would wish to see. He will also find a number of ponds scattered around among the hedges and mountains, consisting of what the inhabitants call Lime Lake, Long Lake, South Lake, Higgly Lake, Kindrick Lake, and a number of others without names, with good fishing in all of them and excellent duck and fish in most of them. I had the pleasure of spending a few days there last October, and found the fishing all that one could desire in the shape of small fishing; have taken bass from Leadmine Lake that weighed eight pounds, and gamy enough to satisfy the desire of any sportsman.

If a man has no boat and wishes to go light, let him take cars to Ogdensburg, cross over to Prescott, take the Grand Trunk Railroad to Lenois Station, hire a team to take him to Henry Slack's, at Post Bay, and inquire for John Slack, who has in his possession one of Iushon's boats, and is an excellent guide, and will give you more fishing and fun in two weeks than a man can get at Saratoga in two months. These lakes and ponds are all within easy access of one another, and a good strong man can carry his boat from one to the other without any trouble, and by carrying his duffel four miles he can reach Charleston Lake, where he will find good salmon-trout fishing, and scenery which any lover of nature can not help but admire.

J. C.

Another correspondent writes from Toronto, Aug. 4th: One of your correspondents asks where he can have some good black bass fishing. Send him to Lake Joseph, north of Toronto. He must take worms for bait, as all land there is rock, and does not contain worms.

DEACON DILL.

**RECOVERED HOOKS.**—*Jamesville, Wis., July 28th.*—In your issue of July 15th I see an article about a recovered hook, in which the writer says that he caught a fine trout weighing one pound, with his missing hook in its stomach. On July 22d, inst., two of our fishermen went to Indian Fork dam, ten miles up the river from here, and one of them caught a fine pike that weighed four pounds, and when caught it had a set of triple hooks all about two inches in length in his mouth. He was hooked in both the upper and lower jaw, and one of the hooks was broken off at the bend of the third hook. He had a lively time with him, as it was in very swift water and with a light rod. How long these hooks had been in his mouth he did not know, but he said they were very rusty.

J. C. T.

**ANOTHER RECOVERED HOOK.**—*Franklin, Tenn., July 24th.*—Your paper of July 15th contains an account of a "recovered hook," after remaining in the mouth of a trout for nineteen days. A somewhat similar experience occurred to me in the month of May last, on the waters of Bedford Lake. In November, of last year, I was fishing near Carpenter's Landing, and after a strike lost my hook (a No. 8 barbless) by the breaking of my line, and in May of the present year, while fishing near the same place, my second hook was fishing a few yards from me, caught black bass with a barbless No. 8 hook fastened through the lower jaw. About a quarter of an inch of the point was lost, and in several places the rust had nearly destroyed the wire, so that in a short time the hook would have been released. The bass was in good condition, and did not seem to have suffered from the presence of the foreign body. As I was the only person on the lake using the barbless hook, I presume there can be no question raised as to its identity, and consequently as to the time it was carried by the fish.

Bedford Lake abounds in all the fish known to Western waters, and the number of logs, sunken stumps and characteristics of the bottom, make it impossible for those who fish for profit to exterminate them or ever seriously diminish their numbers.

D. B. C.

**BASS FISHING IN SULLIVAN COUNTY.**—*Narrowsburgh, Sullivan County, N. Y., Aug. 4th.*—To-day has been an eventful one in the history of this place, for the visiting as well as the native resident fisherman, A. Philadelphia, signified his intention, by telegram to the Messrs. C. H. & C. J. Murray, the proprietors of the principal hotel, to visit them, coming prepared to catch bass, as he had read a letter in your paper relative to the splendid bass fishing at this place. I will mention at this point that considerable surprise has been manifested at the circulation of your paper; visitors from different sections of the country have visited us to try our fishing grounds from the reading of the article referred to.

Mr. Middleton was attended by the famous Delaware River fisherman, Dr. Bedford, Esq., a thorough physical proportion, and of a genial disposition. The different points of fishing ground were patiently fished, the clipper bait being used successfully; to-night Mr. Middleton congratulates himself on being the possessor of forty-eight bass, few weighing less than two pounds. The Narrowsburghs also were fortunate in capturing bass; eight boats with two or three occupants in each made up the fleet. This day has been a remarkable fishy day. J. H. C. G. of the Central Common Place, who is stopping here, and he has been considered heretofore the champion fisherman, but to-day his flag is lowered, he having surrendered. The gentlemen of the *Graphic*, Messrs. Goodells, have been with us and were successful; their piscatorial outfit was magnificent and it has been the chief topic of conversation; also the graceful manner in which

they manipulated the rod and line, both gentlemen standing erect in the boat with fly rod in hand, stop reel, etc. Occasionally a fly as an experimenter would be cast to the game, then a grasshopper, next a pure gold spoon, trolling, last the ordinary slimy ground worm. The picture was fully up to the *Graphic's* best. Fifty pounds of bass were taken by them, which were packed in grass and ice and sent away. So anxious was your article signed "Willoughby," Come and see us, and see your friends. You will find it no hoax about our bass fishing.

BUSSELL.

**NORTHERN MICHIGAN.**—*Batavia, Ill., Aug. 3d.*—A party of Batavians just home from an excursion to Northern Michigan, and a stay of two weeks at Charlevoix; have not much to relate in way of adventure, though they have a great deal to say of their infatuation with that region, which is becoming every year more popular as a summer resort, and of the fishing, which they enjoyed exceedingly. On their way from Chicago up the lake, by steamer, two or three of them disembarked and tried their luck in Black Lake, about ten miles south of Grand Haven. This lake stretches from Holland, westward, to within a few rods of Lake Michigan. You can stand between the two and throw a stone in either. Their waters have been made to relate in way of artificial channel, the work of the government, so that a vessel might run in there in times of storm and be safe. About ten years ago a lighthouse was erected at this point. Here they found excellent bass fishing. Now and then a muskellonge is captured in this lake. This piece of good fortune, however, did not fall to our boys. Spending several days there they took the train North for Petoskey, on Little Traverse Bay, and thence by boat to Charlevoix, on Pine Lake, into which "The Boyne" empties, which is reckoned the best of all the many trout streams thereabout. They speak in glowing terms of the sport they had there trout. The trout averaged well; once in a while an unusually fine one would be taken. While they were there, Rev. Mr. Goodwin, of Chicago, took on a fly one that weighed two and a half pounds, the champion of the season, so far. Good for the cloth.

In course of time I trust that I shall have some personal experience in this delightful region to talk about.

HIX.

**SALMON ANGLING IN CALIFORNIA.**—The anglers of San Francisco have a new field open to them for salmon angling. The *Bulletin*, of that city, says:—

"For several years past the fishermen in Monterey Bay have taken a few salmon on their lines each summer, while trolling for herring and other surface fish. Within the past week, however, salmon have been so numerous that a great many have been taken with trolling lines, and the guests of the Hotel del Monte, at Monterey, have had rare sport in supplementing the professional fishermen. The fish taken have been in some instances of large size, and doubtless are a portion of the late summer run of salmon en route to the spawning grounds of the McCloud and other branches of the Sacramento River.

"From the telegram received, it is ascertained there were four boats out yesterday, the united catch being fifty salmon, the largest weighing twenty pounds.

"As salmon do not frequent the coast streams in summer, it follows that the discovery of an abundance of them off Monterey at this season of the year is proof that they go south instead of north of this port, as has heretofore been believed, between their spawning seasons. From A. C. Tubbs, who has returned to this city, it is ascertained that an examination of the stomachs of the salmon taken showed their food to be tomcod or frost fish, instead of smelts, sardines, anchovies and other surface small fish, as has hitherto been supposed.

"The discovery of salmon at Monterey opens a new fishing field to the people of this city, who will be able to indulge in the sport at less expense and discomfort than is the case with residents of Eastern cities, where the nearest salmon rivers are in Canada, and quite difficult of access."

**CRAPPIE AND CALIFORNIA SALMON.**—*St. Paul, Minn.*—I have been long wanting a paper that occupies the place that your journal does. There are many men who are by nature sportsmen, but who from lack of means and time cannot from experience become posted, and to this class your paper becomes invaluable; men who now and then have opportunity for a few days fishing and shooting and who do not like to go into the field entirely unprepared. I have never cast a fly before this season, and though I cannot claim any degree of excellence or grace, still have managed to get several strings of very handsome bass. Will some of your readers kindly give me information, as to what bait to use and how to fish for California land-locked salmon? There is a lake near my place in the central part of the State that was planted about five years ago, and the farmer living there has caught two or six white bait fishing for bass, quite good sized. I am going up there for a day or two this season, and like to try my luck. Will they bite on a fly? And will you also please give me information concerning the fish called in the Western States the "crappie." I have never seen them elsewhere; they are shaped like a sunfish, but different color, and excellent table fish, though not very gamy. I have never found any one who could tell me to which class they belong.

AMATEUR.

The California salmon should be left to breed. The "crappie," or "crappie," is *Pomoxys nigromaculatus*.

**HOW TO PACK A SALMON.**—The best way, says Mr. Buckland, the well-known English naturalist, to pack a salmon, is to send away the scales covered by a completely silver paper, giving him, as it were, a new skin. The silver paper will adhere by means of the natural slime. The fish should then be placed in a box and buried in clean sawdust. When the silver paper is washed off with a sponge it will be found that the beautiful tints of the fish are better preserved by this mode of packing than by any other. Salmon, as Mr. Buckland points out, are without doubt at their best when caught actually in the water, and are then they are they are they are they appear, and the fish become limp if placed in ice for a journey. Those, therefore, who wish to send away a fresh-caught salmon in its prime, should put the fish into water actually on the boil for five or ten minutes before packing it. Boiling water instantly consolidates the

albumen—i. e., the curd. The boiling process must of course be completed when the fish is to be eaten.

**SALMON IN MAINE TAKE THE FLY.**—It has been said that while salmon in most other waters take the fly at some seasons, those in Maine streams have persistently refused it. It would be very gratifying to know why they have declined it, and still more so to learn their reasons for reconsidering the question and resolving to accept it. In proof that they now take the manufactured insect, we publish the following dispatch which was received at Portland from Bangor one day last week: "J. F. Leavitt and H. L. Leonard, 'the red man,' have just returned from a trip and have brought with them the first salmon taken in a fly in Penobscot waters. This they took in Wassataquoik stream, which empties into the east branch of the Penobscot half a mile above the Hunt farm. They report that plenty more may be had in the same way."

**FISH IN MARKET.**—New York has been poorly supplied with fish during the last week. There are a few very large sheepshead coming in from the south coast of New Jersey, which will weigh from ten to thirteen pounds. Bluefish and weakfish are small, many of the former being under two pounds; kingfish very scarce. Fulton Market prices Aug. 10th, are: Salt water fish—striped bass, 25 cts. per pound; bluefish, 10; salmon, 45; mackerel, 18; weakfish, 10; Spanish mackerel, 40; halibut, 18; haddock, 6; codfish, 8; blackfish, 12; flounders, 10; pompano, 75; smoked salmon, 30, dry cod, 7; queen turtle, 15; lobsters, 10; soft crabs, 75 to 81.25 per dozen. Fresh water fish—whitefish, 12; lake trout, 15; frogs, 15; crawfish, 3.

**SALMON AND SEA-TROUT ANGLING IN CANADA.**—The sport has been very poor on most rivers this season. A gentleman, who spent some time on the Restigouche, Nepisiguit and Miramichi rivers reports the season backward and fish scarce. He spent sixteen days on the latter river, by invitation of the lessee, and took many sea trout (*Salmo fontinalis*), some of them over seven pounds in weight.

**A FISH THAT SWALLOWS BIGGER ONES.**—The Smithsonian Institution has received a very curious specimen of the fish kind, recently found on the fishing-banks of Gloucester, Mass., by Mr. A. Howard Clarke. It rejoices in the name of *Chasmodes uiger*, and its peculiar distinguishing feature is the fact that its capacity leads it to swallow fishes which are twice as large and weigh four times as much as itself.

**GRAYLING IN NEW BRUNSWICK.**—We are informed by Dr. A. Ferber, of New York City, who has just returned from the salmon streams of that region, that he saw veritable grayling taken from Loch Lomond, twelve miles up the St. Johns, where the guides told him that he would find two kinds of trout, red and white; the "white trout" was pronounced to be grayling (*Thymallus*) by the doctor, who is familiar with them.

**HOW DO YOU PUT A CRAWFISH ON A HOOK.**—A subscriber writes: Can you obtain from some of your readers, who are black bass anglers, information as to the proper method of placing a crawfish on the hook to be used for bait? We therefore insert this to draw out all the knowledge on this subject that our bass fishers have, in preference to giving our own practice.

**LEASE OF ROMANSKILL CREEK.**—We understand that Messrs. H. Fuller, of the Erie Railroad, and E. Cahill have leased the fishing in three-quarters of the Romanskill Creek, near Milford, Pike County, Pa., for five years. The lessees propose to put in 3,000 trout this fall.

**MENHADEN FISHERIES FAIL AGAIN.**—A Boothbay, Maine, correspondent of the Lewiston Journal says: "Fish are very plentiful along shore; most every one who can man a dory is after them. The menhaden fishery is again a dead failure; the steamers have all gone South and the factories closed up for the season."

**BLUE FISHING EXTRAORDINARY.**—Mr. Harry Fuller, of the Erie Railroad, during seven days' fishing at Great South Bay, near Bay Shore, L. I., caught with a rod and reel, no less than 671 bluefish.

**IOWA.**—Dubuque, Aug. 4th.—Black and white bass fishing is the best known for years, but will not last long, as the river is going down and the sloughs drying up.

—A "boom" in menhaden or mossbunker oil is reported from New Bedford. The Standard of that city says: "The sales will aggregate about 2,500 barrels, the greater part of which was at 46 cents, and the remainder upon terms not disclosed."

## NEW PUBLICATIONS.

**THE NUTTALL BULLETIN.**—The July number of the Bulletin contains a great amount of valuable information from the pens of a number of our best known ornithologists. A notice of Dr. Shufeldt's memoir on the "Osteology of *Spizella cucularia hypocrea*," by Dr. Coues, which opens the number, is illustrated by three beautiful lithographic plates. Mr. Ridgway contributes to this number three articles of importance, one on "*Zonotrichia leucophrys* and its Geographical Races," another on "*Macrorhamphus gipsoni* and *M. sceloporus*," and a third on "*Aurorhamphus gipsoni* and *M. sceloporus*." Mr. Ridgway continues his "List of Occurrences of North American Birds in Europe," and Mr. N. T. Lawrence contributes a paper on "*The Greater Loon-beak (Macrorhamphus scopaeus)*." There are three papers by Mr. Allen in the July Bulletin. "Destruction of Birds by Lighthouses" gives the results of inquiries by Mr. Deane among the lighthouse keepers of the coast, a class of men who have rare opportunities for observing the passage of birds during the migrations in spring and fall. Another important paper by the same writer treats of that much agitated question, the "Origin of the Inland Migration in Birds," and contains much that is new as applied to our birds. A "List of the Birds of Santa Lucia, West Indies," completes Mr. Allen's contributions to the Bulletin. "Recent Literature" notices a number of valuable contributions to North American and European ornithological literature, and "General Notes" contain a vast amount of news items which will interest every ornithologist.

## Game Bag and Gun.

—Address all communications to "Forest and Stream Publishing Company, New York."

### GAME IN SEASON IN AUGUST.

Woodcock, *Philohela minor*. Red-backed sandpiper, or ox-bird, *Tringa americana*. Black-bellied plover, ox-eye, *Squatarola heterotis*. Great marbled godwit, or marlin, *Limosa fedoa*. Long-billed curlew, *Numenius longirostris*. Willet, *Totanus semipalmatus*. Turnstone, or calico back, *Streptopelia interpres*. Tattler, *Totanus melanoleucus*. Red-breasted snipe, dowitcher, *Macrorhamphus gipsoni*. Yellow-chants, *Totanus flavipes*.

"This enumeration is general, and is in conflict with many of the State laws."

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limosa*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

### MIGRATORY QUAIL IN MAINE.

PORTLAND, Aug. 3d.

Editor Forest and Stream:—

Of 5,100 quail (*Coturnix communis*) imported to America this year, 2,600 came to Maine and arrived to my care in Portland June 9th. These birds were immediately forwarded to the various parts of the State, where they were liberated in lots varying from fifteen to seventy-five each. For the information of your readers in Maine I give a list of the cities and towns to which I forwarded birds.

St. Stephen, N. B. (adjointing Calais, Maine), Bangor, Winterport, Rockland, Wiscasset, Bath, Augusta, Richmond, Bowdoinham, Brunswick, Lewiston, Auburn, Norway, Bridgton, Saco, Kennelbunk and vicinity of Portland.

I made a public request that reports be sent to me of their nesting, etc., number of eggs or young observed, localities of nests, where last seen in autumn, and arrivals here next season from their Southern migration, and any other items of interest. I have received reports from various localities, and hope to receive more and fuller ones later in the season.

The birds were observed to commence nesting within two days after liberation, and many nests with eggs were reported before July 1st. Two weeks or more later the young were hatched in those nests that had been undisturbed. From ten to fifteen eggs is a usual number to a nest, and eighteen the highest number yet reported. Some nests, found early, containing only a portion of the number of eggs to be laid, were deserted after having been moved over and left exposed. Had such nests been covered by standing grass, or low bushes, probably the birds would not have deserted them. After the full quota of eggs are laid and the birds are setting, there is less danger of desertion. Indeed, these quail have been so devoted to their domestic duties as to permit the noisy moving machines to kill them on the nests, the knives decapitating them, or the wheels crushing them. The birds that deserted their exposed nests are laying a full number of eggs, having probably nested again, and may bring forth late broods. Although the moving machines have destroyed a few birds and nests, the worst enemy of the quail here is the domestic cat. I learn of very many quail having fallen a prey to cats.

If our farmers appreciated the injury they suffer by the loss of the many hundreds of insect-eating birds killed by cats every summer, they would take steps to prevent it. Although the spring and summer puss is hunting in the fields and along the hedges, not for mice, but for its more delicate and favorite food, the birds. And a single cat will kill scores of birds, old and young, in a season. Woodcock are not infrequently caught by cats, and our new game, the quail, are suffering great decimation, along with our smaller birds, from this cause.

The quail are very gentle, and not only nest within a few rods of houses and highways, but are observed feeding with the domestic chickens. The farmers take quite as much interest in these quail as do the sportsmen, and many have already learned to know the ventriiloquial notes, that can be heard so far away.

Now, while writing of the quail (*Coturnix communis*), I wish to protest against subjecting this bird to the application of local names and misnomers. We have enough of confusion in the names of our birds without unnecessarily adding to it. This new bird is a QUAIL. It is nothing else.

Sportsmen of the Northern States may call our native Virginia partridge, or colin (*Oryzopsis virginianus*), a "quail" if it pleases them better than a more appropriate name, but do not apply a misnomer when there is no occasion whatever for it.

Messina is the city from whence these quail were shipped, and the term is no more appropriate than would be New York, or Portland, as applied to quail. Do not use it. If the simple term "quail" is too short, call the bird a "migratory quail." Such a term is descriptive and apropos.

In conclusion, I would say that my predictions, so confidently made, have thus far been verified. The quail commenced breeding where liberated, immediately after their release, and have brought forth their young. Birds killed accidentally were found to be fat, therefore they have found sufficient food. I await with equal confidence to hear of their migration South in the autumn, and return next year. Beyond that my expectations give precedence to hope.

EVERETT SMITH.

Col. Wm. Rhodes, of Quebec, who is much interested in the success of the importation, has enlisted the aid of the local papers in securing for the birds immunity among the farmers. He writes the following to the Quebec Morning Chronicle, under date of Aug. 1st:—

The news I get of the migratory quail from the different parts of the country are very satisfactory; the birds are doing well, laying eggs, and in some cases the time to hear of their migration South in the autumn, and return next year. Beyond that my expectations give precedence to hope.

The inhabitants in the country take quite an interest in the farmer's quail. One respectable lady told me they sang more beautifully than the "rosginall," and when I questioned her as to their plumage, she said they were "blue," so I concluded she was, politically speaking, in a state of error. Our legislature, through the assistance of the Hon. Mr. Ross, M. P. E. for the County of Quebec, who got Mr. Watts, M. P. P., to draft the following amendment to the game laws, and which has now become law, has given this quail question important assistance, and for which they deserve our thanks: "Any person who shoots or kills any migratory quail in this Province before the 31st day of December, 1882, shall be liable to a fine of not more than five dollars, or an imprisonment of not more than fifteen days."

It is not, however, by legislation the migratory quail can be protected. Land owners have to understand these birds belong to the farm, like the robins belong to the garden and the swallows to the house; that they are a delicious bird to eat, and worth 50 cents a brace in the market, besides being an object of sport for the young man, and above all, that the quail will return to their native farm, when once they have been a quiet and retired life. The birds I have turned out on my land have not gone four acres from the spot they were let loose. The dry season is very much in favor of the young birds getting strong and growing rapidly. So far, the experiment is quite a success.

The Quebec game law has been amended to provide a close for the migratory quail to Dec. 31st, 1882.

**MIGRATORY QUAIL.**—The Rutland, Vt., *Herald and Globe* says that Judge Everts is in "receipt of unmistakable proof that the migratory quail have returned to Rutland. They have been heard in the surrounding woods for several days, and their peculiar note cannot be mistaken. The judge was the pioneer in the movement for the introduction of migratory quail into this country, and has reason to feel gratified at the success of his pet project. The return of the birds in numbers to the spot where they first got their freedom in this country is proof enough of the practical success of Judge Everts' theory. The judge has just published a notice in the Rutland *Globe*, saying that he would rather know of the success of his quail project than to leave a fortune at his death. He predicts that the migratory quail will eventually become the most numerous of all the game birds of America."

It is also reported that "several nests containing young Messina quail have been discovered in the Lewiston and Auburn (Maine) suburbs. The largest number of birds found in one nest thus far is fifteen, and the smallest number five. It was feared that many nests would be destroyed by the teeth of the moving machines during the haying season, but the hay-makers gladly responded to the request to look out for the nests in moving, and not a single case of loss from this cause has been reported in this country. One gentleman found that his cat had discovered a nest in his field and had killed two of the young birds, just hatched. He protected the nest with birds by putting a box with a small opening over the nest. The indications are promising for a large family of Messina quail in Maine next year."

**TORONTO GAME AND FISH PROTECTION.**—The Toronto *Globe* has this résumé of the game prospect in the vicinity of that city: "The patiently-awaited-for time of the sportsman has arrived, and the woodcock are now at his mercy. The fact of game being so scarce that hunters of the day are forced to penetrate the woods hundreds of miles in quest thereof, will attest to the fact that the game laws cannot be too rigidly enforced. Had the conservationists past observed the economy in that direction which we are forced to observe, our sportsmen could enjoy their 'outings' in the vicinity of their homes, returning always with abundantly filled bags. The wholesale destruction of our birds of passage has tended more to their extermination than the denuding of the forest. This destruction applies to fish also. Who does not remember when the pleasure boats of Ontario were adequate to the demand of all the residents upon its banks. This day is past owing to the destructive means used in catching them. Fishermen must now secure a license for their net privileges, while setting for fish in the spawning time in streamlets is strictly prohibited. Nor do the laws remain a dead letter on the statute book. Scarcely three months ago no less a personage than the President of the Long Point Game Association was fined heavily in Ontario for an infraction of the game laws by the County Inspector. If he shot four quail as alleged, each bird must have cost him \$11.50—\$46 being the amount of fine and costs. Inspector Kerr, too, has frequently given signal proofs of his vigilance, to the sorrow of many refractory fishermen. In the Twelve, the Fifteen, the Sixteen, and Twenty Mile Creeks, County of Lincoln, he made a raid on more than one occasion to advantage, securing in the shape of trophies the tackle hidden in the water for trapping the unfortunate 'finny tribe.' The Provincial Legislature is to be commended for extending protection to game and fish. The result will be satisfactory to the sportsman, though, like all enactments at their origin, the laws have yet to receive some alterations before they attain perfection."

**MR. SQUIRES ON DITTMAR POWDER.**—New York, Aug. 5th.—Editor Forest and Stream:—Allow me through your columns to thank the Dittmar Powder Manufacturing Company for the insertion, in their advertisement, of the fact that I am not an agent for the sale of their powder. The Dittmar Powder Company, with all the works at Bangor, N. B., are put in, I believe, all the apparatus which is now in operation, become afraid longer to continue the manufacture of this powder, and, about August, 1879, sold out the whole concern to what was called the Dittmar Powder Manufacturing Company, which company is now running the works. At the time of this sale, all my connection with the company ceased, as is very generally known to the customers. Allow me further to say, that the manufacture of this powder was not put in, I believe, under the direction of Mr. Carl Dittmar, and I believe no powder of this kind has ever been made in this country by any other man, and so the warnings against what is called old powder is a confession that Mr. Dittmar is afraid of his own compound, which he urged the people to buy last year. The changing of a name, and the putting a seal

sort is notable and excellent in his natural quality and appointed practice. Among these sundry sortes, there be some which are apt to hunt two diuers beasts, as the Foxe otherwile, and other whiles the Hare, but they hunt not with such towardnes and good lucke after them, as they doe that whereunto nature hath formed and framed them, notorely in external composition & making, but also inward faculties and conditions, for they swarte sometimes, and doo otherwise than they should.

#### Of the Dogge called Terrar, in Latine Terrarius.

Another sorte there is which hunteth the Foxe and the Badger or Greye only, whom we call Terrars, because they (after the manner and custome of ferrets in searching for Connyes) creep in the grounde, and by that meanes make afraide, nyppe, and byte the Foxe and the Badger in such sort, that eyther they tearu them in pieces with their teeth beyng in the bosome of the earth, or else hayle and pull them perforce out of their lurking angles, darke dongones, and close caues, or at the least theyough cozened feilds, driue them out of their hollow harbours, in so much that they are compelled to prepare speedly flight, and being desirous of the next (albeit not the safest) refuge, are otherwise taken and intrapped with snares and nettes layde ouer holes to the same purpose. But these be the least in that kynde called *Sagax*.

#### Of the Dogge called a Bloudhound in Latine *Sanguinarus*.

The greater sort which serue to hunt, hanging lippes of a large eye, and of no small length, doo not only chase the beast whiles it lieth (as the other doo of whom mention aboue is made) but beyng dead also by any manner of casualtie, make recourse to the place where it lyeth, hauing in this poynt an assured and infallible guyde, namely, the sent and sauour of the bloud sprinkled here and there vpon the ground. For whether the beast beyng wounded, doth notwithstanding enioye life, and escapeth the hand of the hunter, or whether he the said beest beyng slayne is conuayned cleynly out of the parcke (so that there be some signification of bloud shed) these Dogges with no lesse facilitie and easinesse, then audile and greedinesse, can disclose and bewray the same by smelling, applying to their pursuit, agillite and nimblenesse, without tediousnesse, for which consideration, of a singular specialtie, they are serued to be called *Sanguinari* bloudhounds. And albeit peradventure it may chauce, (& whether it chaunceth seldom or sometime I am ignorant) that a peece of flesh be subtly stolne and conningly conuayned away with such prouises and precautes as thereby all appaunce of bloud is eyther preuented, excluded, or concealed, yet these kinde of dogges by a certaine direction of an inward assured notyce and priuy marcke, pursue the deede doers, through long lanes, crooked recesses, and weery wayes, without wearying, and out of the limites of the parcke, whereon those desperate purloyners prepared their speedy passage. Yea, the natures of these Dogges is such, and so effectual in their foresight, that they can bewray, separate, and pycke them out from among an infinite multitude and an innumerable company, creepe they neuer so farre into the thickest thronge, they will finde him out notwithstanding he lyeth hidden in wyld woods, in close and ouergrown groues, and lurke in hollow holes apt to haue such and such viciuous guests. Moreover, although they should passe ouer the water, thinking thereby to auoide the pursute of the houndes, yet will not these dogges giue ouer their attempt, but presuming to swym through the streame, persuer in their pursute, and when they be arriued and gotten the further bancke, they hunt vp and downe, to and fro runne they, from place to place shifft they, vntill they haue attained to that plot of ground where they passed ouer. And thus as their pursute is so effectual in the water, so in the land, if perdie they cannot at y<sup>e</sup> first time smelling, finde out the way which the deede doers tooke to escape. So at length get they that by art, cunning, and diligent endeavour, which by fortune and lucke they can not otherwise ouercome. In so much that it seemeth worthily and wisely written by *Ælian*us in his first booke ouer and xxxiv. Chapter. *Toxothekichon chaidai chichel* to be as they were naturally instilled and powered into these kinde of dogges. For they say they will not pause or breath from their pursute, vntill such time as they be apprehended and taken that committed the facts. The owners of such houndes vse to keepe them in close and darke channells in the day time, and let them lose at liberty in the night season, to th' intent that they myght with more courage and boldnesse practise to follow the felon in the euening and solitarie houres of darkness, when they are by the varlots are principally purposed to plant their impudent pageants, and impudant pranks. These houndes (vpon whom this present portion of our treatise runneth) when they are to follow such fellows as we haue before rehearsed, vse not that liberty to range at wil, which they haue otherwise when they are in game (except vpon necessary occasion, whereon dependeth an urgent and effectual perswasion), when such purloyners make speedily way in flight, but beyng restrained and drawen backe from running at random with the leasse, the ende whereof the owner holding in his hand is led, guyded and directed with such swiftnesse and slownesse (whether he go on foote or whether he ryde on horsebacke), as he himselfe in harte would wishe for the more easie apprehension of these venturous varlots. In the borders of England and Scotland (the often and accustomed stealing of cattell so producing these kinde of Dogges are very much vsed and they are taught and trained up first of all to hunt cattell and swill of the smaller sort of the greater growth, and afterwards (that qualitie relinquished and lefte) they are learned to pursue such pestilent persons as plant their pleasure in such practises of purloyning as we haue already declared. Of this kinde there is one that taketh the water naturally, except it please you so to suppose of them which follow the Otter, which sometimes liue in the launde, and sometime swimme in the water. And yet nevertheless all these kinde of them boyling and boyling with the greedy desire of the pray which by swimming passeth through riuier and flood, plung amys the water, and passe the streame with their paws. But this propertie proceedeth from an earnest desire wherewith they be inflamed, rather from any inclination issuing from the ordinance and appointment of nature. And albeit some of this sort in English be called *Brule*, in Scotland *Burle*, and in the cause hereof in the shire sex and not in the general kinde, for we English men call bytches belong-

ing to the hunting kinde of Dogges, by the terme aboue mentioned. To be short it is proper to the nature of houndes, some to keepe silence in hunting vntill such tyme as there is game offered. Other some so soone as they smell out the place where the beast lurketh, to bewray it immediately by their importunate barking, notwithstanding it be farre of many furlongs cowyng close in his cabbyn. And these Dogges the younger they be, the more wantonly barketh they, and the more liberally yet oftentimes without necessity, so that in them, by reason of their young yeares and want of practise, small certaintie is to be reposed. For continuance of tyme, and experience in game, ministrith to these houndes not only cunning in running, but also (as in the rest) an assured foresight what is to be done, principally, being acquainted with their masters watchwordes, eyther in reuoking or imbodding them to serue the game.

#### Of the Dogge called the Gasehound, in Latine *Agasus*.

This kinde of Dogge which pursueth by the eye, preuayleth little, or neuer a whit, by any benefite of the nose that is by smelling, but excelleth in perspicuete and sharpnesse of sight altogether. For the verie sight being singularly able, in hunteth the Foxe and the Hare. Tays Dogges will choose and separate any beast from among a great flocke or herde, and such a one will it take by election as is not lancke, leane and hollow, but well spyled, smooth, full, fatte, and round, it folowes by the direction of the eyesight, which in deede is cleere constant, and not uncertaine, if a beast be wounded and gone astray this Dogge seeketh after it by the steadiness of his sight, which he chaunceth peradventure to returne and be mingled with the residue of the flocke, this Dogge syeth it out by the vertue of his eye, leauing the rest of the cattell vntouched, and after he hath set sure sight vpon it, he separateth it from among the company and hauing so done neuer ceaseth vntill he haue wearyed the Beast to death. Our country men call this dogge *Agasum*. A gasehound because the beames of his sight are so stedfastly set, and vnmouably fastened. These Dogges are more or lesse, and vsually occupied in the Northern partes of England more then in the Southern parts, and in fealdy landes rather then in bushy and woody places, horsemen vse them more then footemen to th' intent that they might proue their horses to a swift galloppe (wherewith they are more delighted then with the pray itselfe), and that they might accustom their horse to leape ouer hedges and ditches, without stoppe or stumbe, and to passe through hard and rugged wayes, without danger, and so escape with safeguard of life. And to the ende that the ryders themselves when necessitie so constrained, and the feare of further mischiefe enforced, myght saue themselves vndannified, and preuent each perillous tempest by preparing speedy flight, or else by swift pursute made vpon their enmyes, myght both ouertake them, encounter with them, and make a slaughter of them accordingly. But if it fortune so at any time that this Dogge take a wrong way, the master making some vsual signe and familiar token, he returneth forthwith, and taketh the right and ready trace, beginning his chase a fresh, & with a cleare voyce, and a swift foote followeth the game with as much courage and nimblenesse as he did at the first.

#### Of the Dogge called the Grehounde, in Latine *Leporarius*.

There is another kinde of Dogge which for his incredible swiftnesse is called *Leporarius* a Grehounde because the principal seruite of them dependeth and consisteth in starting and hunting the hare, which Dogges likewise are indued with no lesse strength then lightnes in maintenance of the game, in seruing the chase. In taking the Bucke, the Harte, the Leuwe, the Foxe, and other beasts of goodly kind, which are obtained for the game of hunters. But more or lesse, each one according to the measure and proportion of their desire, and as night and habilitie of their bodies will permit and suffer. For it is a spare and bare kinde of Dogge (of fleshe but not of bone) some are of a greater sorte, and some of a lesser, some are smooth skynned and some are curled, the bigger therefore are appoynted to hunt the bigger beasts, and the small sort to the smaller sort of game. The nature of these dogges I find to be wonderful by y<sup>e</sup> testimonial of historie. For, as John Froisart the Historiographer in his 4 lib. reported. A Grehound of King Richard, the second y<sup>e</sup> wore the Crowne and bare the Scepter of the Realme of England, neuer knowing any man, beside the Kings person, who *Henry Duke of Lancaster* came to the castle of *Flint* to take King *Richard*. The Dogge forsaking his former Lord & master came to King *Henry*, fawned vpon him with such resemblances of goodwill and concealed affection, as he fauoured King *Richard* before: he followed the Duke, and vterly left the King. So that by these manifest circumstances a man myght iudge this Dogge to haue bene lightened with the laupe of foreknowledge & understanding, touchyng his olde masters miseries to come, and vnhappinesse nye at hand, which King *Richard* himselfe evidently perceived, accounting this deede of his Dogge a Prophecy of his ouerthrowe.

#### Of the Dogge called the Leuner, or Lyemmer in Latine *Lorarius*.

Another sort of dogges be there, in smelling singular, and in swiftnesse incomparable. This is (as it were) a myddle kinde betwixt the Harier and the Grehounde, as well for his kinde, as for the frame of his body. And it is called in Latine *Lorarius*, a *Leuitate*, of lightnesse, and therefore may well be called a light hound, it is also called by this worde *Lorarius*, a *Loro* wherewith it is led. This Dogge for the excellency of his conditions, namely smelling and swift running, doth folowe the game with more eagernes, and taketh the pray with a iolly quicknes.

#### Of the Dogge called a Tumbler, in Latine *Vertagus*.

This sorte of Dogges, which compasseth all by craftes, fraudes, subtilties, and deceiptes, we English men call Tumblers, because in hunting they turne and tumble, winding their bodies about in circle wise, and then fiercely and violently venturing vpon the beast doth suddenly gripe it, at the very entrance of a mouth of their respective, or closets before they can recover meanes, to saue and succour themselves. This dogge vseth another craft and subtiltie, namely, when he runneth into a war-

ren, or setteth a course about a connyburrough, he hunteth not after them, he frays them not by barking, he makes no countenance or shadow of hatred against them, but dissembling friendship, and pretending fauour, passeth by with silence and quietnesse, marking and noting their holes diligently, wherin (I warrant you) he will not be ouershot nor deceaued. When he cometh to the place where Connyes be, of a certainte, he cowyeth downe close with his belly to the ground. Provided alwayes by his skill and polisie, that y<sup>e</sup> the winde be neuer with him but against him in such an enterprise. And that the Connyes spie him not where he lurketh. By which meanes he obtaineth the sent and sauour of the Connyes, carryed towards him with the wind & the ayre, either going to their holes, or coming out, eyther passing this way, or running that way, and so prouideth by his circumspection, that the scilly simple Conny is debarred quite from his hole (which is the haue of their hope and the harbour of their health) and fraudulently circumvented and taken, before they can get the advantage of their hole. Thus hauing caught his pray he carryeth it speedily to his Master, wayting his Dogges returne in some conuenient lurking corner. These Dogges are somewhat lesse than the houndes, and they be lacketh a leaneur, beside that they be somewhat pricke eared. A man that shall marcke the forme and fashion of their bodies, may well call them mungrell Grehoundes if they were somewhat bigger. But notwithstanding they counteruail not the Grehounde in greatnes, yet will he take in one dayes space as many Connyes as shall arise to as bigge a burtien, and as heavy a load as a horse can carry, for deceipt and guile is the instrument wherby he maketh this spoyle, which pernicious properties supply the places of more commendable qualities.

#### Of the Dogge called the theuise Dogge in Latine *Canis furus*.

He like to that whom we haue rehearsed, is the theuise Dogge, which at the mandate and bydding of his master steereth and leereeth abroade in the night, hunting Connyes by the ayre, which is leuened with his sauer and conueyed to the sense of smelling by the meanes of the winde blowing towards him. During all which space of his hunting he will not lurke, least he should be perceiued to his conuenient advantage. And thus watcheth and snatcheth up in course as many Connyes as his Master will suffer him, and beareth them to his Masters standing. The farmers of the country and uplandish dwellers, call this kinde of Dogge a nyght cur, because he hunteth in the darke. But let thus much seeme sufficient for Dogges which serue the game, and disport of hunting.

#### A Diall pertaining to the first Section.

Dogges seruing y <sup>e</sup> pastime of hunting by the nose.	are diuided into	Harlers Terrars Bloudhounds Gasehounds Grehoundes Leuners or Lyemmers Tumblers Stealers
		In Latine called <i>Verrarius</i> .

\* Of English Dogges, (the diuersities, the names, (the natures and the properties.) A Short Treatise written in latine (by Iohannes Caius of late memo (re, Doctor of Physike) in the Vniuersitie of Cambridge, in the year 1558. Printed at London by Iohannes Pliering Staring. Under the title, *Natura etiam in bruta non indiget vani*. Scene and allowed. (Printed at London) by Iohannes Johns, and are to be sold ouer against St. Sepulchre Church without Newgate 1559.

PRIDE OF THE BORDER.—It was with deep regret that we were obliged to notice, in a recent issue, the death of this most celebrated dog. Pride of the Border was bred in 1869 by Mr. E. Laverack, at Broughall Cottage, Whitchurch Shropshire, England. His dam was the pure Laverack Belle II, and his sire was his breeder's famous old Blue Dash. This dog, Dash II, was probably the most useful and valuable sire of English setters known in modern times. His most famous son was Pride of the Border, from whose loins are descended the best known and most admired English setters of the day, both in England and America.

Mr. Laverack offered Pride of the Border for sale in 1874, and he was promptly secured against a strong and widely spread competition, along with the far famed Fairy (Dash II. Moll II), through the efficient offices of Capt. John W. Taylor, at that time kennel and field editor of the FOREST AND STREAM, for the kennels of Mr. Charles H. Raymond at Fox Farm, Morris Plains, N. J. Pride was handled on American game by Col. E. M. Quimby, of Morristown, N. J., and being a dog of remarkably high intelligence, soon developed into a very fine quail dog. He was up-headed, never seeking a ground scent, but always working for his birds on the wind, with a long, swinging, panther-like gallop, and a nose of such delicacy and keenness as to save his legs many and many a rod of ground in quattering.

In England, Pride led behind him to perpetuate his line such splendid sons as Blue Prince, Bandit and others equally well known. Dying in America, his mantle—so to speak—in the stud falls upon sons also famed as sires. Thunder, St. Elmo, Roderick Dhu, Guy Manering, Brough, Pontiac, Promise, Ray and others will long live in canine history as claiming Pride of the Border for their sire. The grand setter, Dash III, is a grandson of Pride through Blue Prince, and in many features strongly reminds one of his grand sire.

Worn out in service, feeble with age, completely blind and deaf, gallant old Pride of the Border tottered but recently to his honored grave at Fox Farm, leaving a rich legacy of pure setter blood and high intelligence to his posterity. It will be long before his vacant place is filled.

TORONTO DOG SHOW.—Since the issue of the original prize list of this show, which was published in our issue of July 29d, it has been decided by the management to still further enlarge it. We therefore take pleasure in giving a full copy of the classes and prizes, as amended:—

Class 1—Setters (English), dogs—first, \$10; second, \$5. Class 2—Setters (English), bitches—first, \$10; second, \$5. Class 3—Setters (English), puppies—first, \$7; second, \$4. Class 4—Setters (Irish), dogs—first, \$10; second, \$5. Class 5—Setters (Irish), bitches—first, \$10; second, \$5. Class 6—Setters (Irish), puppies—first, \$7; second, \$4. Class 7—Setters (Black and tan), dogs—first, \$10; second, \$5. Class 8—Setters (black and tan), bitches—first, \$10; second, \$5. Class 9—Setters (black and tan), puppies—first, \$7; second, \$4. Class 10—Pointers, dogs—first, \$10; second, \$5. Class 11—Pointers, bitches—first, \$10; second, \$5. Class 12—Pointers, puppies—first, \$7; second, \$4. Class 13—Spaniels (Cocker), dogs—first, \$10; second, \$5. Class 14—Spaniels (Cocker), bitches—first, \$10; second, \$5. Class 15—Spaniels (Cocker), puppies—first, \$7; second, \$4. Class 16—Spaniels (Irish water)—first, \$10; second, \$5. Class 17—Spaniels (Irish water), bitches—first, \$10; second, \$5. Class 18—Spaniels (Irish water), puppies—first, \$7; second, \$4. Class 19—Spaniels (Sussex), dogs—first, \$10; second, \$5. Class 20—Spaniels (Sussex), bitches—first, \$10; second, \$5. Class 21—Spaniels (Sussex), puppies—first, \$7; second, \$4. Class 22—Beagles—first, \$10; second, \$5. Class 23—Greyhounds—first, \$10; second, \$5. Class 24—Greyhounds—bitches—first, \$10; second, \$5. Class 25—Mastiffs—first, \$10; second, \$5. Class 26—St. Bernards—first, \$10; second, \$5. Class 27—Newfoundlands—first, \$10; second, \$5. Class 28—Collies—first, \$7; second, \$4. Class 29—Bulldogs—first, \$7; second, \$4. Class 30—Bulldogs—bitches—first, \$7; second, \$4. Class 31—Boxers (dogs)—first, \$7; second, \$4. Class 32—Boxers (bitches)—first, \$7; second, \$4. Class 33—Sky, Bedlington and Dandie Dinmont terriers—first, \$7; second, \$4. Class 34—Rough-coated terriers other than Yorkshire—for best dog or bitch, \$7; for second best dog or bitch, \$4. Class 35—Black and tan terriers—for best dog or bitch, \$7; for second best dog or bitch, \$4. Class 36—Pugs—for best dog or bitch, \$7; for second best dog or bitch, \$4. Class 37—Toys (any breed, five pounds and under) for best dog or bitch, \$7; for second best dog or bitch, \$4. Class 38—Miscellaneous—for any breed not above specified, such as bloodhounds, dachshunds, deerhounds, Italian greyhounds, boarhounds or great Danes, Siberian or Ulm, poodles, Pomeranians or spitz, Japanese, Chinese crested, truffle, Maltese, other hounds, Dalmatians, etc.,—for best dog or bitch, \$7; for second best dog or bitch, \$5; for third best dog or bitch, \$3. Special prizes.—For best dog or bitch in classes 1 to 22 inclusive, silver medal, value, \$20. For best dog or bitch in classes 23 to 38 inclusive, silver medal, value \$20; for best colley dog or bitch, silver medal presented by F. W. Jarvis, Esq., Sheriff County of York. For best cocker spaniel dog or bitch, special prize, presented by C. A. Brough, Esq. Several additional special prizes will be at the disposal of judges, to be awarded by them in such cases as in their opinion should be deemed proper. The entries positively close on August 21st. Forms sent on application to H. J. Hill, Esq., or A. D. Stewart Esq., Toronto, Canada.

KENNEL NOTES.

NAMES CLAIMED.—Cash—Mr. F. Pitcher, of Claremont, N. H., claims the name of Cash for dog puppy by imported Snip out of imported Feather, whelped June 11th, 1890. Color liver and white ticked. Gen—Mr. F. Pitcher claims the name of Gen for dog puppy whelped June 11th, 1890, by Snip out of Feather. Color liver and white ticked. Ruby—Mr. F. Pitcher claims the name of Ruby for white puppy whelped June 11th, 1890, by Snip out of Feather. Color liver and white ticked. Pearl—Mr. F. Pitcher claims the name of Pearl for liver and white puppy whelped June 13th, 1890, by Snip out of Grace. Jack and Jill—Mr. Geo. H. Creed, of Jamaica, L. I., claims the names of Jack and Jill for his brace of black, white and tan puppies, whelped March, 1890, out of Mr. Chas. H. Raymond's imported June, by Dr. Aten's Glen. Snow Flake—Mr. Theodore Meyer, of Jersey City, claims the name of Snow Flake for his lemon and white pointer bitch puppy whelped March 18th, out of Mr. H. T. Greene's Girl (Teal-Maud), by Mr. F. F. Steed's Glenruak (Rush-Romp). Maude may—Mr. David Shuster, of Philadelphia, Pa., claims the name of Maude may for Gordon setter bitch puppy, whelped June 4th, out of W. H. Pierce's Maggie May, by Dr. S. Fleet Spicer's Romeo.

DEATHS.—Nellie—Mazy—Suspension Bridge, N. Y., Aug. 8th.—I had the misfortune to lose by fire on Sunday, the 1st inst., imported cocker spaniel bitch Nellie and Laverack setter bitch Mazy. Nellie was brought to this country May, 1876, by Mr. John Lane, of Decora, Iowa.—E. C. Lewis. Dido—Mr. C. L. Raymond's orange and white setter bitch Dido, by Duke out of May H. Dido was the dam of Champion Lark, and other good dogs, and her pedigree goes back over forty years. Flash—Mr. C. L. Raymond's imported orange and white setter bitch Flash, by Hierarchy's Fred out of Itida's Jess.

WHEELS.—Flirt—Mr. Albert Meredith's (Boston, Mass.) imported Irish setter bitch Flirt, whelped July 29th, 1890, twelve puppies, five dogs and seven bitches, by Mr. A. H. Moore's Berkeley. Flirt won second at Dublin, Ireland, 1890. Fannie—Mr. W. H. Pierce's (Cortlandt Kennel, Peckskill, N. Y.) Gordon setter bitch, Fannie (Champion Grouse out of Champion Hope), whelped July 31st, three puppies, two dogs and one bitch, all nicely marked black and tan, to Dr. H. F. Aitch's field trial winner, Glen. Josie—Mr. Pennell's cocker spaniel bitch Josie, whelped Aug. 1st, six puppies, two dogs and four bitches, by Hollis Wildair.

SALES.—Belle—Hornetville, N. Y., Aug. 10th.—I have just purchased of Mr. C. Waddell, Topoka, Kansas, his pure black and tan Burdette cocker spaniel bitch Belle. She arrived at my kennels July 29th, in fine condition. In making this purchase Mr. Waddell writes: "By adding Belle to your kennels you have one of the finest cocker bitches I ever saw, and the only pure Burdette cocker bitch out of Hubbell's Blanche by his Bean (both imported) in America. By breeding her to your Wildair the produce must be grand."

PRESENTED.—St. Elmo—Mada, whelp—Mr. Jefferson Cooper, of Haverhill, N. Y., has been presented by Dr. S. Fleet Spicer, of Brooklyn, N. Y., with a dog puppy, five months old, by St. Elmo out of Mada. The puppy is white, black and tan ticked.

BRED.—Queen Mab—Druid—Mr. Arnold Burges' (Hillsdale, Mich.) champion English setter bitch Queen Mab to Druid,

The Rifle.

—Address all communications to "Forest and Stream Publishing Company, New York."

RANGE AND GALLERY.

FRAUD IN SCORING.—The Wimbledon authorities are in trouble over the discovery that the records as signalled from the butts do not correspond with the scores made, and are still further concerned that this ugly fact should have found its way into the newspapers. The London Globe, in its issue of July 24th, speaks of the trouble:—

With regard to the Olympic, though the hands of the executive have been unnecessarily forced by what the council consider to have been a premature disclosure to the public, there is now no reason for withholding a statement of the facts. Sergeant Sage, Private Runtz and Private Humphrey have been acting in the matter with the best of objects and for the purpose of proving whether collusion between competitors and markers, which the council have considered impossible, was or was not practicable. The facts are these: Sergeant Sage, of the Tower Hamlets Rifle Volunteers, overheard a conversation amongst some of the markers which indicated that some private transaction was going on. On consulting friendly marksmen, it was decided that negotiations should be opened through Mr. Sage on the one side and the markers on the other. Mr. Sage, however, was not in order to put the question of collusion to a practical test. The usual precautions to prevent collusion were adopted by the executive, but Mr. Runtz and Mr. Humphrey, himself a member of the council, were allowed to fire at the target to which they were originally detailed. Mr. Runtz brings the first shot. The council had been informed beforehand that Private Runtz would win the Olympic Prize, and also that his score would be 46. Yesterday, when the competition took place, it was necessary to allow at least 7 feet for the wind, and a score of 46 out of 50 at 800 yards on such a day with the soldier would be a very good score. Nothing but bulleys and inners were recorded, and the score tallied up to the exact figure agreed upon, 46 points, the next best score being only 40, an average of inners, which was made by Mr. Humphrey, and no doubt registered genuinely. After the close of the firing an attempt was made to ascertain whether the shots fired had actually struck the target, but the paper covering the target had been used on the previous day, and the attempt failed.

SPRINGFIELD, Mass., Aug. 6th.—The Rod and Gun Club, of Springfield, have returned to their long-range ground at Long Meadow and have been putting the grounds in order. They meet once a week for practice, I believe, and do some very good shooting.

SOUTH GARDNER, Mass., Aug. 7th.—The following scores were made at Hackmatack Range by members of the Gardner Rifle Association; 200 yards; off hand; using the inch ring and Creedmoor target; two scores of 10 shots each per man:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
J. N. Dodge	91	46	83	46	176	92	
F. E. Nichols	89	47	89	45	175	92	
L. J. Walker	88	47	80	47	169	92	
J. E. Newton	77	46	68	43	145	89	
Wm. Austin	61	42	78	44	139	86	
H. K. Knowlton	70	41	62	43	132	83	
G. Reuben	67	42	61	43	131	85	
A. Coleman	50	40	65	41	115	81	
G. W. Canan	50	40	65	41	115	81	
C. Shumway	41	39	48	40	92	79	

BALTIMORE, Md., Aug. 7th.—The attendance at the Patapsco Range to-day was the smallest of the season, only 8 or 10 of the members being present. There was little or no occasion for using wind gauges, being nearly a dead calm. The best scores in the 200 yards subscription match are as follows:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
A. F. Dresel	4	4	5	5	4	4	5-14
L. Dietrich	4	4	5	5	4	4	5-14
A. Roeder	4	4	5	5	4	4	5-14
B. B. Lynch	3	4	4	5	4	4	4-13

Messrs. Lynch and Coulson were the only ones to face the targets at 60 yards, the former winning:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
Lynch	5	5	5	5	5	5	5-24
Coulson	5	5	5	5	5	5	5-24

At the regular weekly match July 31st the leading scores stood at 200 yards:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
Dr. Thomas Davy	4	5	5	5	4	4	4-13
A. F. Dresel	4	5	5	5	4	4	4-13
A. Roeder	4	5	5	5	4	4	4-13
L. Dietrich	5	4	4	4	4	4	4-11
Ed. W. H. Brown	4	5	5	5	4	4	4-11
J. B. S. Armstrong	4	5	5	5	4	4	4-11

The fourth competition for the rifle presented by Messrs. A. & A. G. Alford also took place, W. Scott winning it by coming to the fore for the third time. This closes the Alford match.

Mr. Scott, as stated, won the match, having, according to rules, won the rifle three times: he therefore takes the Remington rifle, which was the first prize offered by Messrs. Alford. His complete score was 21 out of a possible 34 four times. Mr. Coulson won the second prize—a silver medal, also presented by A. G. Alford, 20, making the highest score during the competition, having won but three times and made 219 out of a possible 225. Mr. Canfield took third prize—\$5 in gold presented by the club. His score was 217 out of a possible 225. The following is the complete score for July 31st:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
W. Scott	5	5	5	5	5	5	5-24
W. Chambers	4	5	5	5	5	5	5-24
V. Canfield, Jr.	4	5	5	5	5	5	5-24
H. B. Coulson	5	5	5	5	5	5	5-24
Col. Burgwyn	5	5	5	5	5	5	5-24
H. B. Lynch	4	5	5	5	5	5	5-24
A. G. Alford	4	4	3	3	4	4	5-16

ELIZABETH, N. J., Aug. 5th.—Sharps match for military rifles 200 yards:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
C. J. Falco	5	5	4	4	4	4	5-14
C. J. B. Collins	5	4	4	4	4	4	5-13
H. B. Kern	4	4	4	4	4	4	5-13
J. T. B. Denman	3	4	5	4	4	4	5-13
J. B. Ryd	4	3	4	4	5	4	4-11
Major A. J. Clark	4	4	3	4	4	4	5-13
Capt. Wm. H. De Hart	4	4	3	4	4	4	5-13
A. McInnes	9	3	4	3	4	4	4-13

Champion marksmen's badge match, Aug. 7th:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
Capt. L. R. Denman	4	4	4	4	5	5	5-23
Col. G. E. P. Howard	3	4	4	4	3	3	3-10
P. Bonnet	4	4	4	4	5	5	5-23
W. A. J. Clark	4	4	4	4	5	5	5-23
W. S. Richter	4	2	2	2	3	3	3-11

BOSTON, Mass., Aug. 7th.—The attendance of riflemen at the Walnut Hill range, Saturday, was good. The day was a fine one for shooting, the wind blowing very gently from the west, and the light gave but little trouble.

CREEDEMOOR TARGET MATCH.

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
A. B. Archer	5	5	4	4	5	4	5-17

SPRINGFIELD, Mass., Aug. 6th.—The Rod and Gun Club, of Springfield, opened a long-range match on their grounds to-day, bring off their second competition at 800 and 900 yards:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
D. Moses	5	5	5	5	5	5	5-14
L. H. Barrett	5	5	5	5	5	5	5-14
L. H. Mayolt	5	4	4	4	4	4	5-12

BOSTON, Mass.—The Magnolia Gallery.—The July match has closed. The shooting of Mr. Rogers was particularly brilliant. Messrs. Price and Vane also did good work. This gallery is now closed for repairs. New targets, of the latest pattern will be fitted. The management will offer valuable prizes, both to the military and all comers. The following are the prize winners, in the order named, with their best total scores, out of the possible 50, in the July match; conditions, five scores to win, or a total of 25:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
J. C. Rogers	49	49	49	50	50	50	247
C. Price	49	48	49	49	49	50	245
W. Woods	49	48	49	49	48	50	245
W. H. Henry	48	49	49	48	50	50	245
H. Davis	48	49	49	49	50	48	241
C. Smith	48	48	49	49	49	49	241

MEMPHIS, Mass., Aug. 6th.—The Raymond Sportsmen's Club had their regular weekly shoot at Bellevue Range to-day, it being the opening meeting of a new series, with prizes of \$10 for the best score of 50 balls during the month of August. There were over 50 entries in the matches, but attention was mostly given to a new match opened at this meeting—conditions, 50 balls, rotary trap, one prize (\$10) for best score during August, the balls to be consecutive, no party being allowed to withdraw on a partly-finished score. The result shows good work, one 47 out of 50 balls: F. H. Raymond, 47; C. A. Loud, 47; D. Kirkwood, 45; C. W. B. Withers, 45; L. E. Johnson, 44; C. Elsworth, 38; J. C. Smith, 37; J. F. Withers, 33; F. D. Brackett, 33; M. A. Morris, 31. There was also some excellent shooting at double balls, C. A. Loud breaking out of 10 balls, 39; J. C. Smith, 36; F. H. Raymond, 35; L. E. Johnson, 34; and J. F. Withers, 30. Mr. Charles did good work with the rifle, as also did Mr. Kirkwood, as the summary indicates:—

	R.	Cl.	R.	Cl.	R.	Cl.	Totals.
W. Charles	5	4	6	6	6	6	6-31
D. Kirkwood	5	4	6	6	6	6	6-31
C. Richards	5	4	6	6	6	6	6-31
F. H. Raymond	5	4	6	6	6	6	6-31
J. C. Smith	5	4	6	6	6	6	6-31

—The Lynn Central Club open their big glass-ball tournament on August 19th and 20th.

—Mr. H. T. Rockwell sailed for home Aug. 5th. Brown and Gerrish are on the continent, and Jackson is in Paris. Their arrival home will give them a hearty reception on their arduous trip.

THE CANADIAN RIFLEMEN.

ON Sunday morning last, by the early morning train over the Erie Road, the team of Canadian riflemen from the Victoria Rifle Club, Hamilton, Ontario, arrived at Jersey City. They were met at the Jersey City Ferry by R. H. Keene, the President of the Amateur Rifle Club, and Capt. L. C. Bruce, who escorted them to the Union Square Hotel and thence to Creedmoor, where they will remain until the match is shot. The team comprises Col. Gibson, Maj. Frothingill, Dr. McLaughlin, James Adam, Joseph Mason, F. Schwarz, Albert Paine and William Mitchell. They are a remarkably fine body of men. Col. Gibson and Dr. McLaughlin being members of the Provincial Parliament. Six of the riflemen are to shoot in the team, and the others are to act as a reserve. The selection was not to be made before Wednesday.

The American team in Saturday's match will comprise L. Weber, J. A. Allen, L. L. Hepburn, H. S. Jewell, J. H. Waters and another, though the team will be chosen later in the week. The Canadians have all abandoned the old-fashioned muzzle-loading gun, with which they shot the last match in this country, for American breech-loaders.

Mr. Adam, spokesman of his chances, said that he did not think that team stood much show of success against the team that would be pitted against them. "In 1875," said he, "we came here to give the American riflemen a lesson, and now we have come over to receive one." Mr. Adam is the gentleman who won the first gold medal ever shot for at Creedmoor at long distance ranges. The other members of the visiting team do not hesitate to acknowledge the present superior shooting of the American marksmen. Messrs. John Harvey, Joseph Simpson, the son of Senator Hope, F. Dolly and Alderman John Crear have accompanied the Canadian team from Toronto. John Harvey will captain the Canadian team, and Richard H. Keene the American team.

The visitors have come down to win, and will shoot each day taking only Thursday for a run to Coney Island for a dinner given by the Amateur Club. The match is the third of a series between the two clubs. The Canadians were beaten at Creedmoor, Sept. 25th, 1875. Then, after the Centennial match, in which Canada also participated, the Amateurs visited Toronto, and returned good for gold by giving their hosts a good defeat after a hearty reception. The present match is the sequence of the others, and a close tie is looked for.

On Monday, in accordance with previous arrangements, the Canadian team were before the butts early for their first practice. They could not have desired more favorable weather for shooting. It was not intended that the several members of the team would shoot full scores at each of the ranges, but rather that the men should commence the week's practice, which is to culminate in Saturday's match, by getting the approximate elevations at the several distances and working themselves into form. The practice was, therefore, of a desultory nature, but it proved to be quite satisfactory. Lieut.-Col. J. W. Gibson, of the Thirtieth battalion, who is the leading shooter of the team, made 33 out of a possible 34 at 800 yards, and 35 out of 35 at 900 yards. He also made 35 out of 35 at 800 yards, and 35 out of 35 at 900 yards. Mr. Albert Paine performed the creditable feat of putting up 73 out of 75 points at 1,000 yards. At the same range Mr. Frederick Schwarz made 67 points, Lieut. J. Adam 67 and Mr. Mitchell 66.

**THE HALFORED-HYDE MATCH ABROAD.**—A very good notion of the current English opinion on the recent scrub match between English and American eight at Wimbledon, may be formed from the clippings from London journals given in our rifle columns. The timely action of the National Rifle Association on this side the water, and its consistent assertions that the American squad could not be recognized as a representative body, and had no authority to assume any such character, had a good effect in inducing the British National Rifle Association to take a similar attitude toward it. We have failed to note that any special effort was made by the English papers to dwell on the merits of American rifles, and generally, in its only honest guise, as an advertising scheme, the match was a flat failure. There is no evil, it is said, entirely unmixed with good, and we will wait patiently for the kernel of consolation from the midst of this *olla podrida* of mismanagement. If it will only lead to the utter stamping out of that pest of rifle shooting, the professional—as illustrated in the person of the American team manager in the disgrace of July 24th—the match would have been a grand and dazzling success, and none will regret to see a Hyde tanned in its own pickle.

**ENGLISH VIEWS OF THE HYDE-HALFORD MATCH.**—The London exchanges of the 26th ult. bring the comments of the English press on the fiasco of the 24th at Wimbledon, and it can hardly be said that Hyde's advertising intentions were very fully realized on that side the ocean any more than on this side. Some of the papers comprehended the insignificant character of the match, while others persist in styling it an international affair. The *Echo* says: "On Saturday the great long-range match with any rifles between Sir H. Halford's British team and Mr. F. Hyde's American team was contested. The contending teams were not recognized as national representative teams, but simply as the teams of individuals. The best men, however, that the countries could produce combined, armed with the most highly finished and accurate weapons."

The *Pall Mall Gazette* devotes two lines to a report of the match, saying: "The international match between the British and American teams was shot earlier in the day, and was won by the British by 73 points."

The *Times*' report of the match says of it: "The great long-range match with any rifles between Sir H. Halford's British team and Mr. F. Hyde's American team was shot on Saturday. It has been specially announced that the contending teams are not recognized as national representative teams, but merely as teams of individuals. No such announcement, however, could deprive the match of its interesting character, it being shot by the best men that the respective countries can produce, armed with the most highly finished and accurate weapons that are made."

From an extended report in the *Daily Telegraph* the following is taken: "The most interesting event on Saturday was that between the British and the American teams at long distances, though it was not officially recognized either here or across the Atlantic, the men shooting simply as individuals. During the meeting our American cousins had shown themselves such adepts with the small-bore rifle that had there been any formal betting the odds would certainly have been in their favor, notwithstanding the defection for private reasons of two of their best shots. Their Houslow form when practicing for this match, and when they beat the top score for the Elcho Shield, did much to create this strong feeling of confidence, but as the sequel proved, their supporters had reckoned without their host. The weather, both as to light and wind, was unreservedly in favor of good shooting, and the British team—which, by the way, did not include a Scotchman—took full advantage of it. At the termination of the match Sir H. Halford, the captain of the British team—to whose excellent judgment in the selection of his men the victory is due—called for three cheers for the Americans, who, he mentioned, had never before been beaten. The demand was most heartily responded to; and Mr. Hyde, responding to the compliment, took credit for having taught the British how to beat the Americans, by inducing them to adopt the breech-loader in lieu of the old muzzle-loader. He expressed his regret at the absence of Dr. Clark and Mr. Farrow, whose desertion had contributed to their defeat."

The *Standard* comprehends the situation very clearly when it says: "But for the first time in its history the closing day witnessed a great rifle match between teams of eight men respectively, representing Great Britain and America. Although it was originally announced that this was to be considered as an international contest, the National Rifle Association of America declined to consider the gentlemen visiting England as a representative team, and it therefore simply resolved itself into a match between 'Eights' of America and the United Kingdom, selected by their elected captains, Gen. Hawley (7) and Col. Sir Henry Halford. The conditions were the same as for the Elcho Challenge Shield, viz. 15 shots each at 300, 400 and 1,000 yards. Through some misunderstanding among the American riflemen Mr. Rockwell was substituted in the team for Mr. Farrow, and, owing to a breakdown with his rifle, which had to be changed at 900 yards, this gentleman made a very low score."

The *News*, speaking of the contest, says: "Of the two competitions to which all the shooting was on Saturday confined, chief interest naturally centered in the international match. There was much curiosity to see whether the Americans would be able to rival the wonderful scores they had made at Houndsdown on Thursday, and great anxiety to insure accuracy of marking. To this end the Council had consented, on the requisition of the British team, to allow the presence of two strangers in the butts, charged with the duty of watching and verifying every shot on behalf of the Americans, whose captain had, however, declared that he considered such a precaution quite unnecessary. They commenced the match at 800 yards about 10:30, under perfectly favorable conditions of wind and light. At the very first round the British began to draw away, and were never afterwards caught, although the Americans struggled hard to reduce the lead. In justice to them it must be said that they were heavily handicapped by the defection of one of their team and the non-appearance of a famous marksman on whose presence they had relied. The reserves had to be called up, and though one of them shot very steadily, the other yielded to the strain of a position that might try the nerves of many a good man. The British, on the contrary, was probably the strongest team ever brought together in this country. Their shooting at the first range was simply superb. At the conclusion of the match Sir

Henry Halford asked his team to give three cheers for the Americans, over whom they had never expected to gain such a victory. In reply, Mr. Hyde, who acted as captain in Gen. Hawley's absence, said he claimed the victory for the Americans, inasmuch as they had taught Englishmen to discard the muzzle-loader and take to the breech-loader, and also not to depend on individual merit, but to strive altogether with one object in view. After a cordial interchange of cheering the teams separated."

### BUFFALO VS. HIGHLAND PARK.

HIGHLAND PARK, Ill., Aug. 2d.

Editor Forest and Stream:—

During the recent grand annual meeting, at Buffalo, arrangements were made by the Buffalo Toxophilites and the Highland Park Archers to shoot a series of four matches, on the following conditions, viz.: Each club to shoot a team of six, on its own ground, 30 arrows at 90 yards, the scores to be reported by mail.

On the day set for the first match, Highland Park succeeded in getting out only four of the team, and on the date appointed for the second, Buffalo was one man short. Though the shoots on the first two days cannot be called matches, we give the scores. It will be seen that the Highland Park Archers won on day each club presented its full team.

First match, July 20th:—

	1st 24.	2d 24.	3d 24.	4th 24.	Totals.
F. Sidway	17-71	21-82	22-82	21-103	84-319
E. L. Parker	15-90	20-90	19-80	17-79	71-339
W. N. Granger	17-85	18-80	16-75	15-70	66-310
H. S. Hill	15-80	16-75	14-65	13-60	58-270
E. B. Smith	14-70	15-65	13-60	12-55	54-250
Grand Total					439-1,559

Second match, July 21st:—

	1st 24.	2d 24.	3d 24.	4th 24.	Totals.
W. E. Swartwout	21-105	22-119	22-116	21-103	87-443
Dr. E. B. Weston	16-88	17-87	18-80	20-76	71-331
Mr. O. W. Kyle	20-74	12-64	20-79	20-80	72-297
H. C. Carver	16-54	15-69	16-64	18-81	65-251
Grand Total					295-1,261

Third match, July 22nd:—

	1st 24.	2d 24.	3d 24.	4th 24.	Totals.
C. G. Hammond	17-71	21-82	22-82	21-103	87-319

H. S. Hill	18-76	18-78	17-69	18-93	71-312
Grand Total					402-1,748

Seventh match, July 26th:—

	1st 24.	2d 24.	3d 24.	4th 24.	Totals.
C. G. Hammond	21-95	22-120	22-120	24-130	89-415
F. P. Hall	16-76	16-62	23-117	18-72	73-327
Dr. E. B. Weston	21-113	24-112	21-107	21-67	87-399
N. E. Swartwout	20-82	20-100	20-102	19-83	79-377
O. W. Kyle	14-58	18-78	19-101	18-76	69-313
Geo. C. Ball	13-49	16-69	21-101	6-28	56-247
Grand Total					469-2,295

Eighth match, July 27th:—

	1st 24.	2d 24.	3d 24.	4th 24.	Totals.
F. Sidway	24-130	23-120	22-122	22-100	91-492
W. N. Granger	21-107	23-120	18-79	23-115	85-401
E. L. Parker	18-84	25-85	19-65	23-121	85-355
H. S. Hill	17-85	18-80	20-84	18-92	73-357
Townsend Davis	11-51	12-58	13-59	9-47	45-217
Mr. Gester	13-45	11-55	13-59	10-42	47-181
Grand Total					422-2,037

From the foregoing scores, and the following incomplete analysis of them, it will be seen the shooting was very good for American archers:—

Average per man of all scores.	333.5
Average per man, Buffalo Toxophilites.	321.5
Average per man, Highland Park Archers.	342.5
No. scores over 400, by Buffalo Toxophilites.	3
No. scores over 400, by Highland Park Archers.	4

The following analysis is made from the two complete matches, as we have not a full score of the first, and a different number of gentlemen took part in them.

No. times 24 successive hits, by Buffalo.	1
No. times 24 successive hits, by Highland Park.	2
Highest score, by Mr. Sidway, of Buffalo.	91-492
2d highest score, by Hammond, Highland Park Archers.	89-415
Average for each 24 arrows.	84.9
No. scores with 24 arrows reaching 100, by H. P.	20
No. scores with 24 arrows reaching 100, by B. T.	9
No. scores with 24 arrows reaching 120, by H. P.	7
No. scores with 24 arrows reaching 120, by B. T.	5
No. scores with 24 arrows reaching 130, by H. P.	1
No. scores with 24 arrows reaching 135, by B. T.	2

GRANGER SMITH'S SCORE.—Chicago:—

	100 Yards.	80 Yards.	60 Yards.	Totals.
July 24th.	25-105	31-111	21-113	77-329
July 26th.	26-94	31-121	23-117	80-332
July 28th.	26-116	31-111	21-113	78-340
July 30th.	34-144	35-145	19-83	89-372
Grand Total				325-1,360
Average, 82 hits, 340 score.				

	American Rounds.				
	60 Yards.	50 Yards.	40 Yards.	Totals.	
July 17th.....	23-118	27-115	30-102	85-455	
July 23d.....	22-102	25-145	30-172	77-419	
July 24th.....	27-149	29-139	30-180	86-478	
July 28th.....	22-114	27-147	30-198	79-459	

Average, 82 hits, 450 score.

Darkness lessened my 60 yards score July 30th, otherwise I hoped to have scored my first 400 point York Round. July 29th, after finishing my York Round, I continued at 60 yards and made 47 consecutive hits at that distance. Have only shot about a dozen American Rounds in all, and pay very little attention to same.

**THE SPIRIT OF ARCHERY.**—Hatchcock, N. Y., July 30th.—I think Mr. Walworth hit the nail on the head in his article last week on "Innovations in Archery," and "Young-Man-A-Fraid," archery is wrong in comparing archery with rifle shooting. Archery does not compete with rifle shooting in the way of accuracy. Archery is a splendid exercise, and in its present shape requires long and patient practice before any results are obtained in the way of scores. The fact that it is so difficult lends a certain charm to it. If all sorts of improvements are to be added to the long bow in the way of patent sights, triggers, arrow holders, etc., why not take up the cross bow or the rifle at once? Even in rifle shooting there is a limit, and rests, hair triggers and telescope sights are prohibited.

W. HOLBERTSON.

**HAWTHORNE VS. ORITANI.**—Match at single York Round, between teams of 4 of the Hawthorne Archers, of Boston, Mass., and Oritani Archers, Hatchcock, N. Y.:

	100 Yards.	80 Yards.	60 Yards.	Totals.
O. de R. Moore.	54	91	101	247
Col. Frank Brandreth.	50	62	59	217
Dr. H. L. Green.	41	91	74	206
W. Holbertson.	41	41	37	119
Grand Total				792

## Cricket.

### FIXTURES.

Aug. 13th, at Paterson, N. J.—New York vs. Paterson.  
Aug. 14th, at Syracuse.—Dundee vs. Cana. A. C.  
Aug. 16th, at Chicago.—Mound City, St. Louis, vs. Chicago.  
Aug. 16th, at Newark, N. J.—Trenton vs. Newark.  
Aug. 20th and 21st, at Frankfort—Girard vs. Young America.  
Aug. 23rd, at Longwood.—Sutton Island vs. Longwood.

The New Fox Chase Cricket Club played an amalgamated eleven, composed of members of the Germantown, Belmont and Chestnut Hill, on July 31st, and were defeated by 55 runs.

—Landsdowne and Pennsylvania Hospital played on July 31st with scores 34 and 43 respectively.

The Germantown second defeated the Galbraith on July 31st by an innings and 67 runs. For the victors Brockie contributed top score of 67; Heed Morgan 15; H. Thurman 12 and B. Robinson, not out.

The Lawrence, Mass., eleven have played five matches this season, and have won three.

George Wright has received a very flattering offer to manage the Cincinnati baseball nine next year, but the prospects are that cricket will engage his attention during 1881.

ETON AND HARROW.—Played at Lord's, England, July 9th and 10th. Won by Harrow by 95 runs. Score:—

**"THE FISHING LINE."**  
TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinac, Grand Rapids and Cincinnati Short Line.  
FOR THE  
Trout, Grayling, and Black Bass Fisheries,  
AND THE  
FAMOUS SUMMER RESORTS AND LAKES  
OF  
**NORTHERN MICHIGAN.**

The waters of the  
**Grand Traverse Region**  
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.  
**BROOK TROUT** abound in the streams, and the famous **AMERICAN GRAYLING** is found only in those waters.  
The **TROUT** season begins May 1 and ends Sept. 1. The **GRAYLING** season opens June 1 and ends Nov. 1.  
**BLACK BASS, PIKE, PICKEREL and MUSCALONGE**, also abound in large numbers in the many lakes and lakelets of this territory.  
The sportsman can readily send trophies of his skill to his friends or "club" at home, since for packing fish can be had at many points.  
**FAVORITE FAMILY WITH YOU.** The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with  
**Hay Fever and Asthma Affections.**  
The hotel accommodations are good, far surpassing the average in countries away enough to afford the finest of fishing.  
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.  
Dogs, Gun and Fishing Tackle Carried Free upon all trains.  
It is our aim to take sportsmen "fed" at home "in this route." For Tourist's Guide (an attractive illustrated booklet, 64 pages, containing full information and accurate maps of the Fishing Grounds and Lake Carls, address, A. H. LEET, 1000 N. Dearborn St., Chicago, Ill.)  
**MCKELLAR HOUSE, McKellar Falls, Pa.** For good deer and duck and partridge shooting and fishing, and all kinds of game, go to the above named hotel, where they are prepared to accommodate any number of sportsmen. Dogs, boats and guides kept constantly on hand. Address W. F. THOMSON, McKellar Falls P. O., Ont.

**Hotels and Routes for Sportsmen**

**Old Judge Smoking Tobacco.**  
The Only Tobacco Ever Manufactured that does not Bite the Tongue.

**Something Important for Cigarette Smokers to Know.**

**THE MAJORITY OF SMOKERS** are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling **THE MOST DEADLY OF POISONS**, thrown off by all burning paper, namely: The Oil of Creosote. **CHARLES G. EMERY**, of the firm of **GOODWIN & CO.**, manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco, invented and patented a process, March 24, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared, that the unpleasant odor and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made salubrious proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention is recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

GUNPOWDER.  
DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.  
DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," FFG and FFGG. The FG for Long Range Rifle Shooting, the FFG and FFGG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powder.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by:

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 4 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

# FOREST AND STREAM.

NEW YORK, THURSDAY, AUGUST 19, 1880.

### THE TILESTON MEMORIAL FUND.

NEW YORK, Aug. 11h.

Editor Forest and Stream:—

I have to acknowledge the receipt to date of further subscriptions to the "Tileston Memorial Fund," as follows:—  
Previously acknowledged..... \$502 00  
C. P. McMurdo..... 50 00  
Louis H. Wright..... 20 00  
A. Salem Friend..... 10 00  
Geo. P. Osgood, \$5; S. D. Crafts, \$1, through G. C. Barker..... 0 01  
Geo. G. Barker..... 0 01  
H. C. Glover..... 5 00  
Total..... \$650 00

We have received from Mr. P. C. Ohi the promised oil painting of an English snipe, suitably framed, which is a fine work of art, and the same will be disposed of for the benefit of the fund at the next regular meeting (in September) of the Eastern Field Trials Club.

We have received and transmitted to Mr. Hall \$5 for the fund, from Mr. A. S. Smith, New York City.

DR. RUTH.—Dr. Ruth, the California rifle expert, will give an exhibition at the Brooklyn Driving Park, Parkville, L. I., next Saturday afternoon at 3 o'clock. His wife will be present, and will exhibit her skill with rifle and pistol. The shooting will be at glass balls, and if Dr. Ruth performs the feat he has had the credit of accomplishing on the Pacific Coast, the entertainment next Saturday day will be well worth witnessing.

—By a very curious coincidence we publish to-day "Bodines'" note on the mother woodcock, which shams lameness, and another account of the same trick of the duck, the latter written three hundred years ago. The chapters of the book "Of English Dogges" to-day contain much that is novel; but much of these old descriptions would answer very well for the present if put into modern English.

### THE NEW YORK FISH COMMISSION.

A MEETING of the New York Commission was held in the city last week, and the subject of the salt water fisheries came up for discussion. These have never received much attention, if any, from the Commission, although New York has in Long Island a fine stretch of coast, interspersed with magnificent bays, where not only are tons of fishes taken by professional fishermen to supply the great markets, but is a favorite resort for anglers, who take great quantities of bluefish, weakfish and others, which are partly consumed in the hotels, and the remainder find a market in New York, for the angler pays his boatman by the day, and usually gives him all the fish, and there are probably five hundred men in the towns about Great South Bay alone who live entirely during the summer season by taking parties of anglers out to fish, thus earning from four to five dollars per day, the usual price for a three to five ton catboat and man, while the fish caught will bring about as much more in many cases. There is no fresh water angling within the waters of the State to compare to it, and it is a question if the commercial fisheries of Long Island do not equal in value those of the rest of the State. Of course no correct estimate of such value can be made until the returns from the experts of the United States Fish Commission, who are collecting statistics in connection with the census of 1880, are all in.

At this last meeting Messrs. Roosevelt and Blackford were appointed a committee to investigate this subject, and report at the next one the propriety of establishing a station for observation on the habits of valuable sea fishes, and perhaps propagate them. The time has come when this should be done. Fish culture has broadened its field, and no longer confines itself to the salmonidae or to stocking inland lakes and ponds with bass and "bull-heads." The sea is the great feeder of mankind, and the possibility of its being made to produce more of certain favorite kinds is now being rapidly demonstrated, and the New York Fish Commission is awake to the fact, but, alas! just as they are about to move in this matter their appropriation is cut down and they are powerless.

If ever the State appropriated money for the future benefit of the people, it was in the small amount given for fish culture, whereby the people obtained cheap and wholesome food from sources which were otherwise unproductive, evidence of which can be obtained from many portions of the State.

The bluefish (*Pomatomus saltatrix*), seems to hold its own, but most of the other valuable food fishes have decreased in numbers within the past twenty years. Perhaps this is on account of increased fishing; if so, there has been also an increase of population demanding food, and the way to increase the fishes is not to stop or prevent fishing and wait in old fogy fashion, for them to increase themselves, but to hatch them by the million or the hundred of millions, and destroy the sharks and other enemies. If our net fishermen could be induced to kill sharks, sculpins, toad fishes, etc., instead of lifting the net and getting rid of them in the easiest manner, one good point would be gained and the fishermen and fish commissioners would work in harmony as soon as the former learn that their interests are identical.

A VALUED COADJUTOR.—It is satisfactory to notice that *Land and Water* very heartily supports the position taken by FOREST AND STREAM on the subject of summer woodcock shooting. The writer of the article alluded to, after quoting from our recent article on this topic, states that he has "seen young woodcock in more than one of the markets of the Eastern States in July not more than half fledged." The truth is, that the season for woodcock should not open much, if any, before Oct. 1st, and the sooner this fact is recognized by sportsmen of the better class, the sooner the reform which we all desire will come about.

—Mr. Jerome Marble starts from Worcester, Mass., Sept. 3d, in the sportsman's palace car, the City of Worcester, for a short trip in the Northwest.

### IT IS THE CAT.

FEW people, we imagine, realize how full of vicissitudes and perils is the life of our upland game birds. Take, for example, one of those quail hatched not a hundred rods from your doorstep and reared on your own farm, whose parents you heard whistling on the fence, or the old rocky knoll, every day through the spring and summer—have you ever thought how many enemies that little thing had to contend with, and how small was the chance that it would ever attain its full size, and spring from before the dogs in November a full fledged bird? From the time that it struggles out of the shell till the hour when, struck by the leaden hail, it turns over to the shot and is pocketed by the satisfied shooter, its life has been one of constant watchfulness, one long series of efforts to escape from constantly impending perils.

The egg from which it is to emerge has been deposited. The parent birds have not been destroyed by the deep drifts of the previous winter, nor have they fallen a prey to the small boy and the pot hunter, who, when the weather is favorable for such nefarious practices, track the innocent birds over the light snows, and shoot them when huddled. The nest is prepared and the eggs are laid. Now, other dangers threaten. If the mother is killed; if by heavy rain storms the nest is flooded; if the prowling skunk or the thievish crow discovers its location, the life of our young quail will be a short and not a particularly merry one; he will never see the daylight.

Let us suppose him happily hatched, however. He starts forth with his brothers and sisters on his journey through life. The chances are ten to one that before three weeks have passed he will have been picked up by a hawk, or carried off some evening, just at dusk, by a soft winged owl, or captured as he passes some old pile of stones, by a weasel, or casually gobbled up by a fox while passing through the swamp. If he escapes all these dangers, if the weather during his days of extreme juvenility is warm and dry, so that he gets a fair start and plenty of strength before cold, harsh rains come to chill his small body and make him an easy prey to disease; if the larvae of the partridge fly do not fasten on his poor little head and suck away his very life blood; if none of these things happen—and all or any of them are likely to come about—our quail has a reasonably fair chance of living for six or seven months, and finally being brought to bag in the approved and legitimate way. From a quail's point of view, however, his lot is not a happy one.

We have enumerated a few of the dangers to which some of our upland game birds are subjected, and which it is the sportsman's duty to diminish as far as in him lies. Bounties on hawks, owls, skunks and foxes, offered by gun clubs and game protective associations, would do much to lessen the number of these vermin, and, hence, to increase the birds in any district. Of all our hawks the common marsh harrier is one of the most persistent and successful destroyers of quail, and one of them will more than decimate a growing brood. All the animals mentioned, with the exception of the fox, may be readily destroyed either by the gun or trap, and a little well directed effort to this end would, we think, soon be repaid by the improvement in the shooting. But there is one enemy to bird life to which we have not yet alluded, although, in our opinion, it is no less destructive than all the others which we have mentioned. An enemy that hunts indifferently by night or day, in the deepest woods or in the orchard close to the house; a creature that does more to deplete the covey of quail, to destroy the woodcock, both old and young, and kills more insectivorous birds than all the hawks in a district; an animal that is the pet of the children and the favorite of the housewife, "What!" says some horrified reader, "you don't mean the—?" Yes we do. IT IS THE CAT.

A cat that lives in the house or in the stables and only makes occasional stolen visits to the woods and fields is bad enough, and destroys no small amount of bird life. We have seen such a cat—one that spent all its days ly-

ing under the stove, or in the warm sun, one that had such a virtuous and innocent countenance that you would have trusted it with untold pitchers of cream—we have seen such a cat, we say, start quietly out just at dusk, and return to the kitchen in less than ten minutes with a dying woodcock in its mouth. From the stomach of another similar feline Pecksniff we have taken the larger part of an adult quail.

But house cats that only hunt occasionally are saints and martyrs compared with the domestic cat run wild, or with the utterly irreclaimable descendants of these wild tame cats. Such animals have to depend solely on their own exertions for a living. With them hunting is a business as well as a pleasure. They are veritable pot hunters.

The English keeper well understands the injury done in the preserves by the domestic cat, and wages against it a war as bitter, and as uncompromising as that which he carries on against its short-tailed wild cousin, or against the stoat, or any of the hawks. A similar crusade should be inaugurated in this country by all who are interested in the preservation of our game birds.

The hunting grounds of the cat cover all the localities frequented by our feathered game. You may start them as well from the swamp where the cock are to be found, as from the hedges that border the rye stubble through which, at morning and evening, the quail wander. We have come upon them peacefully reposing in the alder runs that we were working out late in the season for ruffed grouse, and have surprised them on the borders of the snipe grounds, at their meal on a green-winged teal or a rail.

Nowhere can they be found in more abundance than in the Central Park. Any one who may ride at dusk along the west side drive or bridle path will see Thomas and Tabitha, with all their relations, starting out on the war path. The rabbits and the many birds in the Park furnish them with a fat subsistence. Let us hope that Mr. Bergh's proposed anti-cat ordinance may abate this nuisance before long.

There is one way, and, so far as we know, only one, of curing a hunting cat's infatuation for what some of our contemporaries call the "noble art of venerie," and we hope that, during the next season, all of our readers who may have the opportunity will give it a thorough trial. The rule is one which we invariably practice ourselves, and usually with the best results. It is this: when you see a cat while out shooting, approach it as closely as possible, aim your gun at the shoulders or back and pull both triggers.

It is time that the sportsmen of our country, and especially of the thickly settled East where cats do most abound, took some active steps to protect the birds from this enemy, the most destructive, after man, with which they have to contend. We are sure that, could the quail, the woodcock and the ruffed grouse speak, they would, if questioned as to the enemy of which they stand most in fear, reply in accents of horror and alarm:—

"It is, it is the cat!"

And the great army of insectivorous birds, the friends of the farmer, the sweet-voiced warblers that cheer us through the spring and summer by their songs, and beautify our homes by their brilliant plumage, would take up the sad refrain, and, in tones whose pathos and earnestness could not fail to arouse the sympathy of every kindly heart, unite in uttering the confirmatory, the condemnatory, the now classic words:—

"They're right; it is the cat."

**BREEDING QUAIL IN CONFINEMENT.**—The experiment, so often tried, of rearing quail in captivity has never been thoroughly successful. The very few instances on record where quail have been hatched and reared in the cage are only enough to show that it may possibly occur in exceptional cases. We have often had quail lay in confinement, but never set.

It is said that Mr. Henry Benbrook, a game dealer in Raritan, N. J., succeeded in rearing six quail last year which had furnished him up to July 31st with 108 eggs. Some of these were placed under a bantam hen, and six young were hatched, which are alive and doing well.

The history of Mr. Benbrook's experiment is as follows: Four years ago he captured two quail and kept them in confinement. The first year the female laid twenty-four eggs, but declined to incubate; the second year was unproductive, but the third the female laid twelve eggs, and after setting for some time died. The male then took her place and brought off six young, which, as has been said, lived and are laying this season. The further results of Mr. Benbrook's quail culture will be looked for with interest.

**NEBRASKA FIELD TRIALS.**—The Nebraska State Sportsmen's Association propose to hold a series of field trials at their next annual convention at Milford, Neb., Sept. 30th, Oct. 1st and 2d. We are glad to see these trials multiplying.

—Among our contributors this week "Nessmuk" finds, in the papoose, a subject for an altogether original study of Indian life, and "Bodines" continues his readable "Camp Notes."

## THE AMERICAN-CANADIAN MATCH.

THE American victory over the Canadian team at Creedmoor, last Saturday, was not an unexpected event to either of the two teams. The visitors hoped rather than anticipated a victory, and that they had really made intelligent preparation is evident in the averages of 296 reached by them. In the long series of international matches there has never been one with less preliminary pother. It was a quiet, simply conducted display of fine shooting, such as American rifles and American riflemen are capable of making every day. Of course all this excellence, which seems to be so easily accomplished, really means a vast deal of preparation. To take a glance at the flags which flutter about on the staffs, judge from their motion the force and direction of the wind which is affecting them, and then express that force in turns of the vernier sight and windage screws, seems to be a very easy performance; but the ability to do so was only won by the gentlemen at Creedmoor last Saturday by days and weeks of practice on the ground. Thousands of bullets were sent spinning down the range, the performance of each carefully noted, and then, from these data, the rules drawn, the conclusions reached, which enabled such good results on Saturday last.

The match was a novelty in being without a referee. Each team intended to do its best fairly and honestly, and expected the other to do the same, and with this spirit prevailing an officer of supervision was a mere superfluity.

The Canadians went home with that measure of satisfaction which comes of a good deed gallantly performed. They had missed success, but they had deserved it, and, were the conditions of the Elcho Shield contests such as to admit a Canadian team, that trophy would no doubt soon take a transatlantic trip. They go back to the Dominion with the right, well earned, of being considered worthy antagonists of the Creedmoor shooters, and richly deserve the courtesy of a return match on their own grounds next year with their foes of last Saturday. It certainly does begin to look as though the prestige of American victory, which has now been held for six years, was to be broken by a Canadian team. They have that pluck which carries them through one defeat on to the next charge, and almost equal our friends the Irish marksmen for the vigor and determination of their bids for championship over the Americans.

The scores are worth study. On the Canadian side it will be seen that the shooting is well bunched, and that but a half dozen points separate the highest and lowest scores. On the American side the work is more straggling, but still there is no extensive gap seen. The marksmen there are not placed as one would suppose from their previous practice, but the secret is told in the report of the match, which attributes the high position of Mr. Waters to his implicit reliance on the judgment of his coach. Of course that gentleman is capable of making a creditable showing in individual shooting, but there is a certain element of strength in the advice and counsel of a good coach, and this was added in this case, giving the first place in the match. The valuable coach sits at the scene of action, and becomes, as it were, the reservoir of the experience of each shot, and from this fund of information properly digested the next member of the squad may draw. If he fails to do so, it is to his loss, and in the team of the future, when even more than now victory may depend on a single shot and its result, the office of the coach will be magnified, and the value of an efficient assistant in that position be duly recognized.

**THE WHIMPLEDON MARKING SCANDAL.**—The developments at the late meeting of the British N. R. A., touching false marking, should be carefully connoyed by the managers of our Creedmoor meetings. It is the simplest thing in the world to secure a perfect system of checks in the signalling of shots, while, at the same time, the marking could be prompt as now, with the record as effective in all respects. The target of to-day is far from being sensible in theory or practice, and there is an opportunity for some clever inventor to bring into existence the target of the future, which shall tell each rifleman instantly on the delivery of his shot precisely where it has struck and its value in a system perhaps less arbitrary than the present, and more discriminating without becoming more clumsy. It is not an inviting commentary upon the standing of the troop of the British Army to see them stooping to the taking of bribes in the fashion hinted at, and the very safe inference that 1890 has not seen the opening of the deceitful system only makes the scandal the greater, as it seems to throw doubt upon the performances of former years. There is need of more exactness when records are making on the rifle field, and some of the clubs over the country are far from paying much attention to form and order in the making up of scores. So derelict are some that their reports of practice bear strong traces of the amendatory pencil at the shooting stand.

**DELAWARE GAME PROTECTION.**—The heads of 1,769 hawks were returned to the Somerset Commissioners, at a cost to the county of \$884.50.

## THE ANTHRACITE'S FAILURE.

THE most successful case of misrepresentation through the innocent instrumentality of the press which has ever come under our notice is that of the reputed economy in consumption of fuel of the Perkins system, or rather his adaptation of the pipe boiler and his special engine. It seems high time that the public were set right in this matter before they are wheeled into taking stock or investing in any "rights" for American territory.

Everybody reads *FOREST AND STREAM*. Major Deane, the secretary and agent of the Perkins Steam Engine Company, reads it, and the company itself anxiously looks for its arrival every week. After waiting patiently for an explanation from Major Deane relative to his astonishing want of familiarity with engineering as displayed in a letter of his to a reputable manufacturing concern recently, the Major cannot blame us for assuming him to be altogether a novice in such matters, and therefore incapable of explaining away the serious blunder which has gone on record against him. We did not insist upon an answer appearing in this journal, and would have been perfectly satisfied had he seen fit to address his communication to any other publication, barring, of course, sundry infinitesimal sheets which are not generally recognized as fit mediums through which to discuss such important questions as the economy of fuel consumption. But the Major has remained silent, and it will now be our turn to speak and to place before the public some very unpalatable facts concerning the very peculiar management of the Perkins monomania in America.

From the departure of the Anthracite from England up to date, her affairs have been conducted in a manner at once ludicrous and wide of the truth, whether known or unknown to the persons in charge. Ludicrous, because the Perkins Engine Company seems to have regarded the American people and their engineers as so many Zulus, capable of being readily reduced to the desired state of gullibility by the romancing of persons entirely unfit to speak intelligently upon the subject of her mission, leaving the source of information in no better hands than those of a hired fireman and a garrulous old Scotch engine driver. Wide of the truth, because Major Deane has exhibited photographs of yachts and ferryboats as examples of vessels using the Perkins arrangement, when every engineer in America is aware of the fact that both engines and boilers of those vessels have long ago been discarded and consigned to the scrap heap and spherical boilers with the usual type of compounds substituted. And further, wide of the truth because Major Deane has gravely expressed his confidence in some trials recently made at the Brooklyn Navy Yard, "because thorough experiments had been carried out on her in England with the result claimed of one horse power per hour per pound of coal burnt." And yet the results of the English trial have only been figured up a few weeks since, the accounts of the trial spread broadcast over here being purely assumptions, which the report to hand does not bear out, which it in fact directly disproves.

The vainglorious assertion about "creating a revolution in engineering" is clap-trap pure and simple, for, as we will show, the boiler and engine of the Anthracite turn out to be not a whit more economical than the practice noted aboard any first-class ocean steamer when tried under equally favorable conditions. We do not wish to convey the idea that Major Deane wilfully circulated what he did not believe himself; there is no reason whatever to question his perfect good faith, but we hold that he has fallen a victim to the windy tales of those about him. The fact remains that these stories were allowed to pass into print, and that the press has become the innocent means of disseminating misleading news through the failure of the Perkins Company or its agents to contradict what some of them must know to be false and an imposition. The whole thing smacks strongly of an advertising dodge, and shows that it is still an easy matter to gull the lay press, providing the romancing be brazen enough to partake of the sensational. In view of the facts herein contained, many esteemed but too gushing contemporaries will have some trouble in "craw-fishing out o' de hole," and "crow" ought to be their prevailing foul until the visit of the Anthracite shall have been forgotten, and her hideous outline faded from public memory.

The Perkins Company made a grave mistake in sending out persons in its interests who are not engineers, and those persons made another grave mistake in seeking counsel and championship at the hands of ignorant individuals whose names are born on prison books, in place of directing themselves to sources more reputable and more capable. The Perkins boiler will never be adopted in America; it will not even be introduced; it is not worth it. As for the Perkins engine, we cannot bring ourselves to speak of it in serious language.

Concerning the recent trial at the Brooklyn Navy Yard, the wordy versions of success are empty of facts, and have no other foundation than a reporter's imaginative brain. Nothing has yet been determined, only

a number of indicator cards have been taken. That a pressure of 300 to 500 pounds steam could be carried in the Anthracite boiler, or in any other pipe boiler built for such pressures, is not a point at issue at all, is nothing new and not worth recording. The trials in England have been shamefully falsified to affect the public here, and we protest against any similar tactics being countenanced on this side of the Atlantic through the inability of the non-professional press to deal with matters which are beyond it.

In order that we may not be accused of prejudice, we prefer to give the investigation of an English journal, the standing of which is as well known to us in America as it is to the fraternity in Europe. We quote from the *London Engineer*, July 30th, which bears us out with data and facts in all we have said concerning the Perkins hobby. It also gives color to the prevailing impression that the Anthracite shirked a test with the steamer *Leila* for causes much more rational than the foolish and untenable reason assigned by the company's agent in his unfortunate answer. The *Engineer* has it as follows:—

We have been favored with a copy of his report, which, for some inexplicable reason, is very incomplete; in fact, any assistant engineer could have produced one as satisfactory. It will be borne in mind that for a great many years Mr. Perkins has earnestly advocated the use of very high pressure steam engines for all purposes, and that he has stated and argued that in this way, and in this way only, can any great economy of fuel be obtained. It has been urged, on the other hand, that Mr. Perkins never had a proper test of one of his engines made; or that if such a test had been carried out that the result had not been published; that the engine was complex, and unsuited for use at sea; and that sound theory, read in the light of the best practice, was dead against Mr. Perkins. We may add to this that all Mr. Perkins' ventures at sea have been singularly unfortunate. The engines of the yacht *Wanderer*, which were intended for all purposes, and which were the Perkins system, broke down, caused much trouble, and were finally condemned and removed. The engines of the *Loftus Perkins*, to which we referred above, have, it is said, gone to the scrap heap after a few months' service, during which, it is currently reported in Sunderland, that more time was spent in the making of repairs than in the running of trips. Almost the only comment made by Mr. Bramwell is to the effect that the engines ran for ten hours without requiring the use of a hammer or a spanner, which Mr. Bramwell seems to consider a remarkable performance; but whether remarkable only for the Perkins engine or for any engine we cannot say. Sea-going engineers will hardly look on it as an exceptional feat. Mr. Bramwell made no attempt to determine the evaporative efficiency of the boiler. He contented himself with taking 123 diagrams, and weighing the coal; 15 cwt. were burned in all. The engines gave out from 730 A.M. to 630 P.M., eleven hours and ten minutes, a gross average indicated horse power of 89.55, but from 630 to 723, when the engines stopped of themselves, because the fire had burned itself out, the power was gradually diminishing. The average full power revolutions were 130.75 per minute. The average consumption of fuel per horse power per hour was 1.7 pounds, including that used in getting up steam. "From that time," writes Mr. Bramwell, "when the first shovelful of the fourth sack of coal was put on the fire, namely, at 755 A.M., to the time when the first shovelful of the fifth sack of coals was put on the fire, namely, at 4.15 P.M., i. e., eight hours fifty-five minutes, the engines exerted an average of 80.9 horse power. This gives the consumption per horse power per hour at 1.7 pounds, assuming the fire was uniform at the commencement and end of these times."...

In the first place, the power developed was sufficiently great to make the experiment a satisfactory test of the Perkins system. The cylinders were jacketed, and there were no leaks, and the boiler was so efficiently clothed that a thermometer laid on the lagging and covered with cotton wool only rose to 158 degs. Fahr. It is improbable, therefore, that any better result could be got from a larger engine. Next it is to be observed that the fuel used during the trial was "Nesmo's" navigation lamp-picked lumps, which is probably the best coal in the world. The lumps were carried out with it at Keyham yard in 1863 showed that it evaporated, when burnt properly, at the rate of 11.05 pounds of water from 212 degs., while the best Newcastle coal in the same boiler evaporated but 9.31 pounds. It is a curious fact that Mr. Bramwell, in his report, nowhere states the temperature of the feed-water. We may assume, however, that it was the same as that of the condenser. The vacuum was 27 inches. The height of the barometer is not stated. Taking it at a little under 30 inches, we have 115 degs. as the temperature of the feed-water. We have no reason to doubt each pound of coal burned represented 11 pounds of steam. This being so, the engine consumed 157 pounds, or say, in round numbers, 19 pounds of steam per horse-power per hour. Now, it may be regarded as clearly proved that ordinary compound engines working on north country coal require but 1.9 pounds to 2 pounds of coal per horse per hour. Making allowance for the difference of the qualities of the boilers and of the coal, we may say that this represents 19 pounds to 29 pounds of steam per horse per hour; or to all intents and purposes the engines of an ordinary Atlantic cargo steamer, indicating from 30 to 60 horse power, are as economical as the Perkins engine. We are dealing here as with facts. We are making no assumptions. The consumption of steam in the engines of the Anthracite was more likely to have been greater than we have stated than less. Indeed, we believe that Mr. Perkins claims that his boiler can evaporate with the best Welsh coal, and feed-water at 120 degs., nearly 12 pounds of water per pound of coal. This would make the consumption of steam 20 pounds per horse per hour.... Comparing the performance of the engines of the Anthracite with those of ordinary compound engines by good makers, we find that nothing has been gained by the adoption of a high boiler pressure. We say boiler pressure, for, curiously enough, Mr. Perkins does not really work with steam of enormous tension, however much he may boast of it. Thus, while the boiler pressure in the case of the Anthracite was 300 pounds on the square inch, the pressure in the first cylinder did not exceed 180 pounds, or just one-half that in the boiler. We are entirely at a loss to explain what object is gained by carrying 300 pounds in the boiler and working at 180 pounds. Nor does Mr. Bramwell throw the least light on the subject. Indeed, there are many points of much interest left totally untouched in this curiously incomplete report. Thus, we should have liked to know how much steam was condensed in the coiled pipes which act as jackets to the cylinders. Again, we are told nothing about the temperature of the sea or that of the feed-water; and, as we

have said, no attempt was made to measure the feed-water. We reproduce copies of three of the diagrams—that is to say, as it will be seen that while the first two diagrams are good and satisfactory, the last two are very much the reverse. The diagrams are all alike, right through the series, and we have no doubt that the jump at the beginning and the wave line are due to condensed steam. The engines, during the trial, expanded steam thirty-two times, and under any possible conditions, unless the steam is very highly super-heated indeed, that ratio of expansion must be attended with enormous condensation. The piecing of the two first diagrams is fairly good, but that of either of the other diagrams with the second is very bad....

We, and many others with us, would like to be told why the cylinder pressure was but one-half the boiler pressure. One hundred and sixty pounds is by no means unknown in locomotive practice, and if very high pressures are good, why does not Mr. Perkins use them? It may be of course that he considers an expansion of thirty-two to one enough, and that if he sent 300 pounds of steam into his engines he would have to expand it too much. Conceding the force of the argument, the question remains, Why does he carry 300 pounds in his boiler? If it conduces to economy, the fact ought to be generally known. It will be a new fact to most engineers.

We should say so. When Mr. Perkins was content with two cylinders, he obtained one horse power from 1.6 pounds. When he added a third cylinder, "to do away with a gland," the best his arrangement could do with the best of coal was 1.7 pounds, which is not calculated to inspire faith in the claim of the Perkins Engine Company to teach the world anything new. The reader will probably conclude with us, that the advantages claimed for the Perkins system are a myth, and that trying to place it on the American market at this late day seems little less than grotesque. We subjoin the diagrams referred to:—

Steam, 35 lbs.; chamber, 5 lbs.; vacuum, 24 in.; revolutions, 128 per minute. For the high pressure cylinder, the average = 123.75 lbs.; for the intermediate cylinder, the average = 15.72 lbs. For the high pressure cylinder we have 3,666 revolutions  $\times 123.75 = 453,825.00$  foot lbs. For the intermediate cylinder we have 3,858.15 revolutions  $\times 238.05 \times 15.8 = 14,840,760$  foot lbs. The first diagram is from the top of the high pressure initial cylinder, the second from the bottom of the second cylinder. The remaining two are from the top and bottom of the third cylinder, as follows:—

Average for low pressure cylinder, bottom = 10.47 lbs., and for the top = 8.153 lbs. We have, therefore, for the bottom 3,866 revolutions  $\times 103.46 \times 10.47 = 39,373,660$  foot lbs., and for the top 3,866  $\times 516.885 \times 8.15 = 16,099,913$  foot lbs. Total foot lbs. = 79,231,500. All the diagrams are calculated with the planimeter. The last pair were, however, very unsatisfactory and difficult to deal with, the waved curve line being apparently due to the presence of water in the cylinder.

## The Sportsman Tourist.

ROUGH NOTES FROM THE WOODS.

Second Paper.

BY NESMICK.

FOUR miles from Moose River, on the "Brown Tract road," there is a trail turning to the right, and a white shingle is marked "Jones' Camp." Follow the trail two miles, and it forks. The left fork is marked again "Jones' Camp." The right fork has a plain shingle, marked with blue pencil, as follows: "Wm. Bero, Chief St. Regis Indians." This trail leads to the "Injun Camp," as it is called here. I had met Chief William at the Moose River House; had been told that he could give me more genuine knowledge of the wilderness than any man within fifty miles. I laid myself out to cultivate Chief William, invited him to my room, showed him rifle, hatchet, fishing duffle, hooks, spears, lines and knives. When I showed him an ivory-handled Spanish knife that was really fine, though of little use to me, I saw his black eye gleam; he fell in love with that knife on sight. I am well used to the American aborigine. When William had done admiring that knife I made him a present of it. That won him. I am sorry to say I supplemented the gift with a glass of firewater. A cordial invitation to visit the Indian camp followed, with an offer to carry my canoe and all the traps I desired to take.

William Bero, chief of the St. Regis tribe, heads a gang of twenty young braves, whose tomahawk is the axe of the backwoodsman, whose scalping knife is the spud of the barkpeeler. Luckily, in going in, I met William on the trail, who with a companion, was going into the tannery on business.

He went no further. He had promised if I came out to his camp that he would "take care of me," and he did it.

Relegating his business to his partner on the spot, he took a blanket roll and rode away from me. He even insisted on carrying my nine-ounce rod. From the moment I met him on the trail he took possession of me, so to speak, and I followed his lead implicitly.

What a grand woodsman the fellow is! I wanted to go to the Indian camp the first thing. Not a bit of it. He knew of a spring hole that he wanted me to fish, and I surrendered. He led me by trails and across swamps, until I lost all notion of compass points, and at last brought me out on the banks of the Moose, at the mouth of a cold trout stream, and then he explained that trout had been taken there the present season weighing over three pounds. I dare say he was right. But as they had been taken, of course they were not there.

I whipped the water in my best style for half an hour without a rise, while Chief William, with tamarack pole, coarse cotton line and large bass hook, baited with a chunk of shiner, stood on a log below me and hauled out trout after trout in the most business-like and unartistic manner.

At last an unfortunate took my center fly—a queen—and, as I was towing him around, another victim immolated himself on the tail fly—a Rameyn. It was well. With what trout Chief Bill had snaked out we had enough, but it is hard to make any man here believe that you come to the woods for any other purpose than to catch the ultimate trout and shoot the last possible deer. I succeeded in drawing Bill off, and we started for the "Indian camp." He said it was "a mile and a half." I think it was. It took an hour and a half of rapid marching to reach it. The camp was simply two bark-roofed log shanties, standing among and underneath large spruce and hemlock trees.

One of the whirlwinds so common in these woods would make a bad tangle of that camp.

The inmates of the shanty consisted of the fifteen choppers and peelers, with Bill's family of seven—Mrs. Bill, a portly, comely squaw; the daughter, a pretty-featured, plump young squaw, with a voice like a silver bell, and four young Indians, the smallest being the inevitable pappoose, on his ornately carved and painted board.

That pappoose is and always has been to me a Sybilline mystery. I first made his acquaintance many years ago among the Nesmicks of Massachusetts. He was on his board, swathed, strapped and swaddled from chin to toes, immovable save that his head and neck were left free to wiggle. I next saw him among the Senecas of New York State. Then in Michigan; in Wisconsin; on the upper waters of the Mississippi; and now I meet him again in the North Woods. The same mysterious inscrutable eyes; the same placid, patient, silent baby, varying in nothing save the board, which in Wisconsin was simply a piece of bark. In this case the board is a neat bit of handicraft. When Bill assures me that the carving was "done with a jackknife" I can hardly believe him. And when he says that the bright vermilion, blue and yellow has not been retouched in thirty-five years, I don't believe him at all. The painting is as bright as though it was put on the present season. Comment me to the pappoose board. We judge men, actions and things by ultimate results.

After a royal supper of trout, cooked in a manner worthy of Delmonico's, I watched Bill's young barkpeelers as they got red around a rousing fire which they had the good sense to build under a huge hemlock. There was not a pair of round shoulders or a protruding shoulder-blade in the camp. Straight, strong, stalwart fellows, one and all. And every man of them spent the first year of his life on a pappoose board.

It has been said a thousand times that Indians will not work, or only in a fitful, desultory way that amounts to nothing; and this is true of the plains Indians; so of the Cree and Chippewa, with other nomadic tribes; but not of the St. Regis or Mohawk, and only in part of the Senecas and Oneidas.

As an instance of what Indian muscle can do, let me state that the day before I reached the St. Regis camp ten of Bill's barkpeelers felled and peeled 133 large hemlocks, yielding over thirty cords of bark. In most white camps a cord of bark per day is accounted fair work.

I think the pappoose is glad when darkness settles down on the forest and they let up on him. He throws his arms and legs about for all the world like a white baby, and crows like mad; then of a sudden his head goes over; he is asleep. I, too, turn in, but not to sleep. Three of the young Indians, including the sweet-voiced maiden, gather around the fire and sing in a low minor key, and with soft, pleasant voices, the Indian songs of their tribe. And at last I drop into slumber, and waken five minutes after, as it seems to me. But it is daylight, and Mrs. Bill has the breakfast nearly ready. I have slept the sleep of the just man, and am fresh for the day.

The maiden has got that inscrutable pappoose out, and is strapping him to his board for the day. When they get him fixed they will pull out from under the roots of a huge hemlock the inevitable jug of tar oil, and anoint every visible part of his tawny pelt. The tar oil, well applied, will last some two hours, when it begins to fall, and venomous insects begin to wire in on you.

That pappoose understands it. So long as 'tar oil lasts he spends his time peering with deep, curious eyes into the gloomy depths of the forest, or when the wind rises, watching the swaying tree tops. But at the first decided mosquito or punkie bite he gives tongue in a straight, sassy yell without any up or down, and Mrs. Bill, coming to his relief, takes him between her knees, anoints him from neck to crown, takes him by the basket handle of his board, as one might a peck of potatoes, and stands him up against a hemlock, a log, or the shady side of the shanty. He resumes his eternal occupation of gazing at the mysteries of the forest, and is placidly content.

An Indian baby is not expensive in the way of playthings.

William gives me no rest. It is his undying conviction that I came to the woods for the sole purpose of shooting deer and catching trout, and I have got to do it. He hurries me off to Nelson Lake, one of the unmaped waters of the wilderness. There are three spring holes there, in which trout of two pounds have been taken the present season. It is also a good lake for "floating," as they call it here. A short time since a party went on the lake to float, and succeeded, by noisy paddling, in scaring six deer out of the lake in one evening, but got no shot. I find Nelson Lake a pretty sheet of water, fringed

with the fragrant pond lily that is almost universal here. Bill lays me up to the first spring hole without noise or wake, and I cast my flies across the clear, cold water in vain. Chubs and shiners rush madly on the hooks, but trout will not rise. Bill takes a shapeless piece of chub, puts it on that hook of his, and presently drags out a pound trout. "To say I am enjoying this is milky. I am swearing mad." He explains that there is a late in July and early in August when trout "lay deep" and will not rise to fly. "If we had wums," says Bill, "I catch 'em." That is just my idea, and it happens that I have the "wums." Brought them with me, knowing they were not to be had in the forest. While he is paddling to the next spring hole I take off my leader and replace it with a large hook and strong snell, bait it heavily, and make a cast as the boat glides slowly toward the reach. It is taken on the first cast, and I bring a half-pound fish into the boat with small ceremony. Bill catches, as usual, a larger one, and then I stubbornly refuse to make another cast. He does not understand it at all, but paddles to the landing and I walk up to camp, scrape acquaintance with his daughter, who is educated, intelligent and a school teacher among the St. Regis, speaking and writing English fluently. She showed me specimens of chirography, and was pleased when I praised her handwriting, which was really fine. Then I took the poppasse by his basket handle and carried him off into the woods. I stood him up against a spruce and made him a speech in mixed Chippewa, Portuguese and English. I explained to him the brutal manner in which his ancestors had roasted and scalped my forefathers and forefathers. I brandished a big knife about his baby head, sang a snatch of Chippewa war song and gave the war whoop. A white baby would have gone into convulsions. He looked at me calmly with those dark, fathomless eyes, and when I gave a final whoop, broke into a placid smile that covered his face all over like a burst of sunlight.

An Indian baby doesn't scare much.

After a dinner of trout—again—Bill left me in peace, while he went to look after a buck job somewhere among the hills, and I took my blanket, hunted out a dry, cozy nook, rolled myself up and was having a grand snooze when I was awakened by some one calling my name. It was ye Chief Bill, and I knew he meant business. He is bound that I shall have sport, if it kills me. We are to fish that spring hole again, which I don't care for, and then watch a deer lick, which I do care for. He straps on that everlasting pack-bag, gets out his shooting gear, and leads me to a spot where a short, fat, curly fellow, the same spot I fished the night before. I am sorry to see that Bill's shooting-iron is a veritable old musket of the Continental pattern, from which two of the three bands have been abstracted to lighten the piece. He excuses himself for carrying such a clumsy concern by saying that it is the best barrel to throw buckshot that he can find, and he likes a buckshot gun for floating or lick-watching. When I see him load it with about forty grains of powder and eleven small buckshot I lose faith in him, rather. At the spring hole it was the same old story. The chief caught two fine trout: I landed one. I refused to throw another fly, and began to pack up, to Bill's disgust and surprise. I explain we have plenty of fish for the trout supper which he has planned, and by the time that is over it will be time to climb up to the blind for lick-watching. He acquiesces, silently stuffs his traps and native traps, and then back-bag and glides up the trail at a pace that keeps my short legs at a half trot. As we pass up the trail Bill points out a bark-roofed camp on the side hill, where we are to put in for the night. I suggest that it may not be easy to find our way in the dark. "Got lantern," he says, and we glide on. Fifteen minutes of sharp walking and we turn to the right, cross a low ridge and come out on one of the lovely fairy-like spots that one may find in these woods. It was simply a moss-covered level bank on the margin of a trout stream, about twenty rods long and half as wide. But what a beautiful dry carpet it was, and the timber, all spruce and tamarack, just far enough apart for shade and elegance, with no undergrowth or tangle. All this was lost on the Indian, who only said curtly: "You make fire. I go over by lick; get some grub there." He disappears, and I proceed to make the fire, selecting a tall spruce with two projecting roots that answer as fire dogs. I soon have the tea-water on and before it comes to a boil Chief William is back. He has a lantern and ample supplies. Diving into the depths of that ever-to-be-remembered basket he brings out bread, pork, tea, sugar, butter, salt, pepper, tin drinking cups, and lastly a large round shortcake. Shall I ever forget that supper? I still hold the opinion that the trout of this region are the sweetest and best flavored I have ever caught. Also, that the mostly of the dark orange colored sort that I like are regarded the flesh. They may be no better than the white fished; naturalists pronounce them all the same. But I vastly prefer the rich red color. Supper over, tinware, pack-bag and camp duffle were hurried under an immense slab of bark, and the chief led off for the lick with the silent, elastic tread of a panther.

P. S.—I have said little about the venomous flies that render the sportsmen and naturalists during the summer months. This is probably the country to which Mr. Tenyson refers when he sings of a land "Where each man walks with his head in a cloud of poisonous flies." They are nothing to me. I walk among them through these grand forest aisles safely as in a nursery. This paper is too long already. If it finds favor I will in my next give a simple recipe by which any one can flank punkies, mosquitoes and even black flies.

Foot of Stillwater, Jones' Camp, (Have lost the date.)

## CAMP NOTES.

BY BODINES.

I PROMISED to tell you how we live in camp. Let me commence by describing our grounds, and the preparations we have made for resting in the woods.

We are on a narrow point of land that is completely shaded by the widely reaching branches of two immense beech trees and an equally stately elm. At the extreme point are two tall pines, leaning to the right and left, affording us a view of a long and quiet pond that nestles at the foot of a high and densely wooded mountain. On both sides of our grounds, so near that they can be touched with a fishing rod, are running mountain streams, clear and sparkling. To our right a deep pool—where the trout delight to splash when the sun has disappeared behind the western mountain—its shore ornamented with many mosses and ferns, and a few water lilies, is growing ferns and blooming rhododendrons. Above them all, a mountain range, whose voices are now and then heard in praise of the beautiful camp below. To our left, the stream, then a clump of willows and beyond a meadow, which is lost in the dense forest and surrounding mountains, shutting us in so that but little sky is seen, and where the sun has but slender opportunity to oppress us with his mid-day beams.

At the extreme point of the camping grounds, where the two streams meet, a long pond below, and between the two leaning pines, is constructed our fireplace, made by erecting a stone wall four feet long and eighteen inches high, with shorter walls at each end intersecting it at right angles. The stones are covered with sods and clay, and over the top is laid two parallel iron bars upon which rest the coffee-pot, boiling-kettle and frying-pan. This arrangement is a great economizer of wood, and, when a good bed of coals lie under the bars, affords a cooking stove that permits one to present an elaborate bill of fare. Here we broil steak and lamb chops, fry fish, boil potatoes, bake flap-jacks—and what sport it is to flip them over!—stew canned vegetables; in short, perform any of the culinary feats that we are in the habit of seeing in our kitchens at home. In our "dutch oven" are baked biscuit, Johnny-cake, fish, beef and beans, in a manner, too, quite enjoyable and surprising to those who have never seen it. One is one bettering that good, wholesome food, and plenty of it, is not inseparable from a camping-out expedition. We see no reason why we should not live as well, here in the woods, as at home, so we keep our larder well stocked with meats and other comforts obtained from the city twice a week. In the bank next to the mountain we have excavated a place large enough to receive a box four by six feet and six feet high. It is covered with sods, and has a door upon its reversed side next to the fireplace. This is filled with ice, procured from the farm house close by, and here we keep our meats, butter and other perishable commodities. Next in order comes the dining-room, consisting of a canopy under which stands a table of ample dimensions, rustic in design and build. Four benches are arranged at a convenient distance about it, their several legs firmly planted in the ground. Over the table a shelf is suspended from the ridge-pole upon which is kept pepper, salt, sugar, butter, spoons and other conveniences of frequent use. Under the table, on the ground, is our potato and onion bin, and just above, a shelf where dishes are placed when not in use. These dishes are of novel construction, were devised in this camp and have been such a great comfort to us that a description of them seems warranted. They are made of tin, or crockery, and are used in the camp. All who have camped out know that food becomes cold very quickly when served in the open air and upon tin dishes. It is not pleasant to sit down to a broiled chop, for instance, to find a rim of cold mutton tallow around the margin of your plate, the chop itself frosted with the same unsavory grease and your potato cold by the time it is buttered and ready for your palate. To overcome this very serious objection to an outdoor meal we have devised a new plate made of two ordinary round tin plates soldered together by a narrow rim that unites their edges, leaving a half inch cavity between. In the rim, at opposite points, are two half inch holes, with a collar, in which corks are fitted. At meal time these corks are removed and boiling water poured into one of the openings while the air escapes at the opposite one. The corks are then put in place, when, for an hour or longer, you have plates to hold your food in, and, when you place your food as hot as when removed from the fire, until the meal is finished. Three larger dishes, with covers, are constructed in the same manner, from which meat and vegetables are served. The plates being too hot for butter, smooth, round stones are used for individual butter dishes. Clam or muscle shells have answered the same purpose admirably. Under the edge of the canopy, so as to be shielded from rain, are arranged two large camp chests, in which our provisions and utensils were transported hither. They now serve as cupboards. One of the chests contains large, square tin cans (fancy cracker cans), in which are kept flour, corn meal, rice, coffee, tea, dried fruit, sugar, etc.; in the other is stowed away the bread, crackers, dried beef, pickles, baking-powder, candles and the like.

Back of the dining-room, and further up the slope, under an elm tree, is pitched a wall tent, which serves as a kind of store-room for our trunks and extra clothing; and, back of that, the large tent, 16x20, and 9 feet to the ridge pole, upon one side of which bunks are built and covered with ticks filled with straw. Over these ticks cotton-filled quilts are spread, and over them sheets and blankets, affording a bed that would be quite desirable in more pretentious quarters. The remaining portion of the floor is covered with a new-made hay with baskets lying about inviting a fellow, when so inclined, to a lounge upon the fragrant floor. The sides of the tent have pockets in which pipes, tobacco, magazines, papers, needles, thread, buttons, and sundry articles of that character are lodged. In the center of the tent stands a table, made of a barrel with a cheese-box lid for a top. Upon this we devote epistles to our friends at home and to FOREST AND STREAM. To the left, and at the foot of a musical, pipe-shaped canoe, is a seat, under the canopy, which is our reading table and a hammock. In front of this is George's tent, where he rests when not engaged in the cooking department. Around and among the tents have we build many flower beds, in which

are growing and blooming the various wild flowers indigenous to these woods. The paths are flanked by ferns; mounds covered with mosses and delicate vines, surround the trunks of the trees; the floors of the dining-hall and kitchen are swept clean, and all our surroundings in the nearest possible trim; and this is our mountain home, where every year we spend the month of June.

In former camp notes, I wrote what we did when it rained. Let me now give you a sample of a bright and clear day.

This morning we were awakened at 5 o'clock by the singing of the birds, and the bright light of day shining through our tent walls. The music outside, the clear, balmy air, and the prospects of an unclouded sunrise, were irresistible. A fellow could not lie abed if he would; so, as if by general consent, all the campers were found assembled by the shore of the creek, performing their ablutions and looking seaward, all faces lighting up for the application of the clear, cool water, and the prospect of a perfect day.

George had already built his fire, the tea-kettle was sending a cloud of vapor from its mouth, while the lid over the potato-boiler was dancing at a lively rate. The table was set, the trout sitting in the big pan, and George vigorously stirring a quantity of butter to pass the water and convert it into flap-jacks. As we were chatting about the table (to which we had been summoned by George, who had converted the empty fish pan into a gong by beating it with an iron spoon), the sun made his appearance over a notch in the eastern mountain—right on time—indicating 6 o'clock. What a delightful breakfast we had there in the cool morning air, listening to the warblings of the birds, and watching the sunbeams dancing on the rippling water and upon the trembling leaves of the trees, while squirrels and chipmunks climbed out upon the overhanging limbs looking inquisitively under our canopy to see what we were up to. Butterflies, bumblebees, and insects of various colors and forms were flying about helter-skelter, without any special object in view, save to enjoy the glorious morning. A boy, on horseback, rode along the mountain road over a head driving cows to pasture, singing merrily to the while to an accompaniment of the loving animals that made the mountains ring with their deep, bass voices. Every note from man, animal, bird, insect or machine, seemed to ring out with a clearer tone, intensified by the still, cool air. Indeed, all our senses are quickened, for we can see further, hear better, smell keener, and taste more satisfactorily than during the rainy days just passed.

Breakfast finished, we smoke. Then, some of the party paddle on the ponds; others go in search of birds and flowers; the boys make ovens in the sand across the creek, and those inclined go fishing.

I being one of the "inclined," took down my rod from its rack against the beech, buttoned a landing net on my back, shouldered my creel and walked leisurely upstream to where I pricked a fine fish the day before. I must cross the creek, and, not wishing to get wet before I reached the fishing ground, I stepped to pass the sunken log, and, as I stepped, the log, that reached from bank to bank. This tree was wet from the spray that arose from a boulder, against which the current splashed beneath, and was quite too round in form to permit of an easy or secure foothold. Reaching the center of this rustic bridge by means of two rheumatic feet and sundry and multitudinous balancings of arms and legs, a confounded kinslayer, who was under my nose, and, with a rattling, rattling, startled me, at which I lost my center of gravity and fishing-rod at the same moment. In trying to regain the first, while the second floated swiftly down the rapid and took lodgment in some willows, you might have witnessed, had you been there, some difficult feats in grotesque posturing. One moment I had decided to go in on the upper side of the log, but instantly changed my mind, and center of gravity for a lower one, when, when my arms flew about like those of a windmill, I hesitated and wondered until no living mortal could have decided for me. Another slip, a unique bend of the back, a thrust of the hips backward and shoulders forward, fashioning a capital letter Z, changed the situation of affairs again, making it extremely doubtful to myself as well as a keen and much amused spectator on shore, whether I should attempt to wade, or swim, or sink, or drown. I hesitated, and wondered until a decision was reached, when I took an intermediate course, and sat down with most consummate skill and great alacrity with a leg upon both sides of the log. At that very moment a total eclipse of the sun occurred, and stars—shooting stars—glittered and sparkled all about me. This celestial phenomena lasted until I gently slid from my resting place into the babbling brook and cooled my confused brain in its crystal waters.

Gathering myself and rod from the stream, I sauntered on quite regardless of the dew-covered grass, but all the better prepared to admire the sparkling gems that greeted my eyes everywhere over the bright green meadow. Right in my path, from a tuft of weeds, flew a ground sparrow, who chatted to me as he hopped along before, to lead me from his cosy nest (which I stopped a moment to admire) and his three blue eggs that I had laid. I stopped, and he stopped. The sparrow was a merry and intelligent little chap, who seemed rather pleased than otherwise that I should have made this call at his beautiful little home. Different was the action of the old hen partridge that I surprised a few minutes later, while attending her young brood along the mountain road. How she fluttered almost under my feet, giving me more illustrations of the terrible sufferings and holdings of a maimed than you would have imagined it possible for any creature to invent. One leg was badly crippled, as though from a compound, comminuted fracture; both wings paralyzed and dragging upon the ground, utterly useless; blind in one eye; deaf in both ears; feathers all stuck in the wrong way; she seemed a wretchedly dilapidated creature indeed. But try to lay hands on her, and it is wonderful how she manages to keep her feet and wings in the air, and how she manages to limpings for reach. Follow her in the woods, and you will find her suddenly recover from her suddenly recover from all her ailments and fly into the deep covert with a chuckle of satisfaction at having led you so successfully from her family of little ones, which a moment before you heard peeping so sweetly among the bushes, and you conclude it is really worth the trouble to follow her, thus, if only to hear her note of delight upon leaving you.

(To be continued.)

ABIRONDACIS.—Springfield, Mass., Aug. 11th.—Several of the Beaver River Club are going to the North Woods soon, and I will report when they come back. I received a kind invitation from Chas. Fenton, Esq., of Watson, Lewis County, Number Four, to come up and stay with him, but am obliged to refuse. He says he has now seventy-seven boarders, which with his servants and family make about one hundred at his house, and he has refused scores of applications for want of room. Twenty-five slept in his barn last night, and want of room at his house, which is now a very popular the North Woods, as game and fish must become scarce. In fact, I see a great change since my first trip into that region. F. B.

## BITERS BIT.

IT happened to us one day some years ago to find swimming in a small fresh water pond a carp duck or broadbill (*Fuligula marila*), which was unable to fly, although apparently sound in all its members, and which we succeeded finally in capturing in a landing net. It was observed during the pursuit that the bird was apparently unable to close its bill, and as soon as it was taken in hand the cause of this became evident. In the back of the mouth was the shell of a large mussel, partly opened, the hinge being toward the bird's body. The valves were still united, and their planes were at right angles to those of the bill. Between the united valves the posterior upper surface of the thick fleshy tongue was wedged in so that it was impossible for the bird to expel the shell from its mouth. The mussel was a large one, so large that there was no possibility of the duck's swallowing it. It was evident that the duck had attempted to swallow the mussel while it was open, and that after it had been taken into the mouth, hinge first, the latter had partially closed, grasping the tongue, and thus sealing both its fate and that of its captor. The mussel had been dead some time, for it had altogether disappeared from the shell, and the poor bird was woefully emaciated and died the night of its capture. This incident, rather unusual and interesting as it is by itself, becomes more so when compared with a number of similar occurrences which have from time to time been placed on record.

Most of us have heard the story of the raccoon which went oystering at low water, and in trying to pull one of the bivalves out of its shell got caught by the foot and was drowned by the rising tide; and there is a legend about a darkey who was captured in the same manner, though his adventure did not have any serious termination. In the columns of *Land and Water* there have at different times within the past few years been published some instances of the capture and death of birds and fish by their supposed prey, which will, we think, be of interest to our readers in this connection. One of these relates to the capture of a small fish called a shanny, by a mussel, and is told in the following language:—

A correspondent, Mr. Stephen Clogg, lately kindly forwarded us a box containing a shanny and mussel, which he describes as having been taken in the harbor at Loos, Cornwall, in exactly the position represented in the accompanying illustration. The shanny and mussel, our correspondent writes, were taken by a fisherman who was gathering mussels for bait at Loos. Mussels are found in great numbers at the bottom of the harbor there, and the fisherman uses a long-handled, four-pronged fork for catching them. A boat is moored over the spot on which the mussels are to be found, and the fish is employed to bring them from below into the boat. In the case in question our correspondent assures us the shanny and mussel was brought up as shown in our illustration. The fish was alive when taken, and its head firmly fixed in the mussel. This certainly may be considered a curious capture, and from the evidence it may be fairly assumed that the shanny seeing a tempting mussel with its mouth open was induced to pop his head in—an operation which Master Mussel doubtless resented by immediately closing its valves, retaining the fish in its deadly grasp. A case in point of fish being taken in this way is mentioned by Couch, in which Lacépède records an instance where, as he (Lacépède) supposes, a shanny had made an attempt to feed on an oyster that lay with its valves open, in consequence of which it became shut up a prisoner by the closing of the shell. In this case, however, the shanny was more fortunate than the one taken the other day, for it is stated that in this condition of confinement the fish had continued so long that the oyster had been dredged and carried to a considerable distance. Upon opening it, the captive was again set free alive, and without injury. Shanny are very retentive of life, and would be found nice additions to salt water aquaria.

Another case bearing more directly on the one which came under our own observation, was spoken of by Mr. Buckland some years previously. In this instance a rail was caught by an oyster and drowned. Mr. Buckland says:—

Some time since, when examining the famous oyster bed at Helston, near Falmouth, Mr. Fred Hill, of Helston, was kind enough to accompany me and my friend, Mr. Howard Fox, of Falmouth, in our expedition. Mr. Hill mentioned to me at the time that he had a curious specimen of a bird that had been caught by an oyster. The bird and oyster had been mounted in a case by Mr. Vingar, of Penzance. The history is, that a woman who sells oysters, went one morning to the Helford River and found the bird—a common rail—quite dead, with its beak bed quite firmly by the oyster, which was still alive.

The bird's all probability was wandering among the foreshore looking for his dinner, and Mr. Oyster—possibly left longer by the tide than usual—was opening his shells waiting the incoming water. The hungry rail, seeing something that looked like a white and dainty bit of food, pecked at the body of the oyster, and probably pricked him sharply with his beak. The oyster then snapped his shells together as quick as a rat trap, and the poor bird instantly became a prisoner, to die (or possibly get drowned as the tide rose) in his prison.

Mr. Buckland's paper seems to get more than its share of such instances, for in a recent number we hear the story

of the choking of a grebe by a fish called a miller's thumb, which is provided with sharp spines on each gill cover, somewhat as are our own catfish. These spines caught in the throat of the bird and rendered the swallowing or disgorging of the fish impossible. We have never, by the way, been able to understand just how it is that birds and fishes can prey upon the catfish. Their rigid spines, one would think, might protect them from any enemy, and yet we constantly find catfish in the stomachs of fish, and not infrequently in those of birds. It is but a short time since a Florida correspondent sent us an account of a large catfish attacked by a heron, and mentioned finding the spine of one of these fish in the throat of another. We have found small cats in the stomach of a loon, and they are no doubt devoured by other birds. It may possibly be that after death the spines relax and lie flat by the side, but we do not remember to have seen anything that would bear out this conjecture. Of course as soon as the live fish is grasped he sets all his spines and holds them so stiff that they may be broken before they will yield to direct pressure, though they yield readily enough if the side just back of the pectoral fin be properly manipulated. The case of the grebe choked by the fish is described by Mr. Buckland as follows:—

By the kindness of Lord Radnor, Longford Castle, Salisbury, I have received a grebe (*Podiceps minor*) choked by a fish. The fish is fixed so firmly in the bird's mouth that I find it will go neither backwards nor forwards, so I can neither press it down the esophagus nor pull it out altogether. The fish in question is a miller's thumb. Mr. Grebe evidently was not aware that the miller's thumb was armed with two very sharp spikes on each side of the gill cover, and when the fish found himself in trouble he simply gave up by these spikes, and gave his so firmly in the bird's mouth that he died from suffocation. An exactly similar case occurred some few years since, which I described in the columns of *Land and Water* as follows:—

"Mr. Arthur Crichton has been good enough to present me with an interesting specimen of grebe (dabchick) which was found dead with a fish in its mouth. It was found by Mr. Clutterbuck, of Long Wittingham, near Abingdon, who writes as follows: 'The grebe was found in the River Isis, in an eddy, dead, both bird and fish. I saw a fellow grebe to-day, fishing in the overflow, which is more or less shallow. I do not know if the miller's thumb would leave the river for the overflow—most fish do. The river at the spot is deep. The bird was found at the mouth of a ditch in which the water would be shallow, and dry when the river is low.'

"The first thing I did was to make a cast of the specimen. Mr. Searle has painted it so life-like that it now looks like the bird itself. It is very difficult to cast a bird, but if the cast is successful, it is far better than any study by the most skillful taxidermist. On dissecting the throat of the bird I discovered that the little spine-like processes on the sides of the head of the fish—which was a miller's thumb (*Cottus gobio*)—had stuck tightly in the throat of the bird. The position of the fish was head foremost, the back to the lower beak; the hard casing of the head of the fish had pressed so tightly down on the windpipe that it was completely closed up. Had the fish been swallowed the reverse way, probably the bird would have escaped uninjured. I have had two or three specimens sent me of kingfishers destroyed by fish sticking in their throats. There is a case on record where a poor fisherman was killed by a father-lasher (*Cottus scorpio*), a sea-fish allied to the freshwater miller's thumb. The fisherman was annoyed at finding the father-lasher among his shrimps, and seizing him, put his head in his mouth, and attempted to bite it off. The fish, however, gave a struggle, slipped down his throat, and expanding his spines at the side of its head, managed to immovably fix itself in the larynx, thus killing the man by suffocation."

THAT RAT CATCHER.—Boston, Aug. 7th.—Editor *Forest and Stream*:—I don't think that rat was drowned. The snake must have swallowed it then and there, or it would have gone home to digest his meal. It is most likely that he surprised the rat and sprang on it unaware, and once with its teeth fast on the rat's head, he would suffocate it in no time, without its having the glint of a chance; besides, his prey was probably nearly paralyzed with fright. No matter how "game" it may be, there are but very few animals on two legs or four that are not panic struck at the sight of a snake.

As to not finding wounds, that is not singular. The snake's teeth are sharp as needles, and equally fine, and while arranged for the purpose of holding—a dozen rows or so across the roof of his mouth, and all pointing backward—are useless for chewing purposes, and their very fineness would prevent their leaving marks. The rat could not have lived long enough to struggle much any way, for a snake is one of the strongest things that live, and with its nose pointing inward and its head half swallowed from the outset, it must have smothered speedily.

If the snake is what I have been accustomed to term "water snake," it could not have crushed him. Constriction is only used with effect by tree snakes, while the striped snake and his cousin, the present incumbent—if indeed they are not the same—are never found there; although I did once capture a very large one, a very yellow locust, fifteen feet from the ground, but that was hardly a tree, as it was so thick that it was undulated from twig to twig, not coiled around.

In conclusion, I would say that I ought to know whereof I speak, having had, as a boy, a mania for snakes, having kept them by the tubful to watch their habits. At that time and afterward, I was accustomed to carry home every one I met to turn loose among my squash bugs. They are excellent buggers. But I take a very hearty and a quick eye to get a grip in the back of my neck without a bite.

JOHN PRESTON TRUE.

We are rather inclined to doubt the constricting powers of the water snake, and for that reason suggested the drowning of the rat.

## CARP APPRECIATED IN TEXAS.

THAT the carp are rapidly growing in favor in the Southern States is a well-known fact. The following letter shows what they think of them in Texas:—

KOSSE, LIMESTONE COUNTY, Texas, June 28th.  
Prof. Spencer F. Baird, United States Commissioner Fish and Fisheries:—

Dear Sir: The German carp, sent Sam Bell and me last fall, are doing as finely as any one could possibly ask. When they arrived there was very little water in our pond, so we put them in a well with about four feet of water in it, and connected the well with the tank by means of a small ditch, letting the tank water fill it up; the ditch was left open so that the water would not stagnate. We put five of them in the tank (or pond) and fed all of them on corn bread and vegetables that had seed, such as tomatoes, squashes, etc., all of which they ate. They seemed to like the squash best and preferred it baked. Several of them seemed to be sick when they reached us, and died soon afterward. The remainder are now about four inches wide and a foot long. Corn bread is their favorite diet, and by feeding them at the same place every day they become accustomed to look for it, and now all we have to do when we wish to look at them is to tie a piece of stale bread to a string and float it on the water, when they come up all around it and scramble for it as hogs do for corn. There are numerous parties in this neighborhood with good ponds who want to know whether they can get any this summer or fall. Please let me know at once, as fish in this section are scarce and high, and the carp seems to be the fish. Yours truly, VOLNEY METCALFE.

## SHAD IN THE COLUMBIA RIVER.

ASTORIA, Oregon, July 22d.

Prof. Spencer F. Baird, Washington, D. C.:—  
Dear Sir: Your letter of the 8th inst., asking for fuller information in regard to the presence of shad in the Columbia River, came duly to hand; and, in reply, I will say that the first fish of this kind was taken early in the fishing season of last year (1879), in a stationary fish-trap in Baker's Bay, a few miles—one or two—above Fort Canby, W. T. I did not see this fish, but it was shown by the owner of the trap, Capt. James Williams, Tanzy Point cannery, Oregon, to George Hune, a well-known salmon canner of the Columbia, who pronounced it a shad. A few days later Capt. Williams brought two more to Astoria and gave them to Hon. D. C. Ireland, editor of the *Daily Astorian*, who invited me into his office to see them. On the 14th of July I had thought the shad I had never seen a shad, but I had not thought of obtaining it sufficiently with the best description I was able to obtain. I took their measure and made the best description I could, and sent it to Col. Webber, Commissioner for New Hampshire, who wrote back that they certainly were not shad: basing his opinion upon the fact that they had six or eight small, round, dark spots along the lateral line, and a projection of the scales along the belly which I described as a "sickle edge." Col. Webber sent my letter to your office, and expressed the opinion that the fish in question was some unknown species of herring, and asked me to save and forward a specimen. Shortly after taking the two last mentioned, the traps were swept away, and no more were taken that year. This year Capt. Williams built a trap on the Oregon side, just above Fort Stevens, and about May 15th he brought me the first taken. Except that it was larger—fourteen inches to eleven—it was exactly like those taken last year. It had been cut in feeding, and was otherwise in poor condition, but he told me that his trap had been injured and he might not get more. I sealed the specimen in a tin case and was on the point of sending it to you when Prof. Jordan arrived here on his first visit. Thinking it amounted to the same thing, I gave the fish to him, and he, on inspection, pronounced it a shad. I called his attention to the spots and "sickle edge," and he said those points were characteristic of young shad and disappeared at maturity. I have found Prof. Jordan's knowledge of the *salmonidae* to be exceedingly accurate, and so I have full confidence in his assertions in regard to this fish. The fish-trap was repaired about the middle of June, and on the 17th Capt. Williams brought four specimens to Astoria. These were bought at a large price by Mr. A. J. Megler, of the Occidental hotel, who, knowing that I wished to obtain a specimen, brought the best one and presented it to me. It is now in Prof. Jordan's alcohol tank. Immediately after the capture of these four, the trap was again swept away, and will not be again rebuilt. It is Capt. Williams' opinion—in which I coincide—that there are hundreds and perhaps thousands of these fish in the river, they being too small to be caught in the gill nets, that being the only method of fishing practiced here: the small amount of seining being hardly worthy of mention.

Whether shad will become acclimated so far as to propagate here is, I think, extremely doubtful. I am informed that in June, when they spawn, it is necessary that the water should have a minimum temperature of 70°. I did not test the river water at that time, but the mountain streams were as follows: Young's River, June 6th, 53°; Klaskan, June 13th, 50°; Klaskan, June 27th, 58°; while the Columbia, to-day, in the ship's channel, is 65°. I think the attempt now being made to introduce carp into lakes on Clatsop Plains will fail for the same reason. In Eastern and Southern Oregon they may succeed.

In fishing I will say that I would like to know what food fishes other than the *salmonidae* will thrive in a country where the temperature of the water is as above. I suppose it is well known that our winters are mild.

Respectfully yours, C. J. SMITH.

AMERICA'S EXHIBIT AT BERLIN.—The following letter shows how our exhibit appeared to the representative

from France, who went there to study the fishery display of all nations:—

SOCIÉTÉ D'ACCLIMATATION, PARIS, July 22d.  
Dear Sir:—In the time of my last letter I was unwell, and I had not the leisure to tell you all that I wished. Permit me to write to you now to express to you all my admiration for the magnificent show of the United States Fish Commission at the Fisheries Exhibition, in Berlin. The American division was utterly the first among all other sections in this exhibition, and it was in perfect correlation with the magnitude of all things made by the great American people.

There was much instruction to gather for us in this display, and it was a great pleasure for me to see all those things, in company with the learned Prof. Brown Goode, and Mr. Mathier. The apparatus of the "Fish Hawk," above all, amazed me. How much we have to do, in France, to follow your countrymen in the work of fish culture!

I must acknowledge that in our country very few people understand, as it deserves, all the importance of fish culture. The Société D'Acclimation is nearly alone in the work, and as its resources are very small, the results every year are not extensive. However, we hope this year to create a laboratory with a little school of fish culture, in which we shall exhibit as far as possible all the apparatus and methods used in foreign countries, particularly the recent American improvements, and also living specimens of all species of exotic fishes worthy of special attention. I do not fail to make you acquainted with the execution of this scheme, and I trust you will be good enough on occasion to grant us the aid of your precious advice.

I have the honor to be, dear sir, yours most respectfully,  
RAYMOND WATTEY, Secretary.  
Monsieur le Prof. Spencer F. Baird.

## Sea and River Fishing.

### FISH IN SEASON IN AUGUST.

#### FRESH WATER.

Trout, *Salmo fontinalis*.  
Salmon, *Salmo salar*.  
Lake Trout, *Salmo namaycush*.  
Land-locked Salmon, *Salmo salar*.

Black Bass, *Micropterus salmoides*; *M. pallidus*.

#### SALT WATER.

Sea Bass, *Centropristis striata*.  
Sheepshead, *Archosargus probatocephalus*.  
Striped Bass, *Morone tenebrosa*.  
White Perch, *Morone americana*.  
Weakfish, *Cynoscion regalis*.

### MOVEMENTS OF SALMON.

IN our issue of July 22d we published a letter from Prof. Hind to Prof. Baird, entitled "Late Appearance of Canada Salmon," which contained a new idea on the use of the hook on the lower jaw of the adult male during the breeding season. This letter attracted much attention, and was widely copied. We print below Mr. Mowat's letter on the subject to the *Miraculous Advance*, in which he does not agree with Prof. Hind in all things, although he indorses his views upon the use of the hook, which the Professor says is for the purpose of rupturing the ovarian sac and allowing the eggs to flow into the ducts, an operation accomplished, as he says, by the male fish gripping the female behind the pectoral fins. Mr. Mowat says:—

Prof. Hind's letter on the unusual scarcity of salmon in all our North Atlantic rivers this year possesses very great interest, and I hope it may be the means of further elucidating the mystery. "The oldest fishermen," of whom we have a few good specimens, say usual, and is some comfort—that forty years ago, when salmon were in abundance, they experienced just as poor, if not worse years than this has been. Many men of skill and knowledge believe that from the marks, bruises and worn condition of very many of this season's fish they have actually been caught in the grip of the ice, or embayed by it and destroyed in some way in their migration here. Our weather here last fall was cold, and the ice usual, and the river produced a good show of both salmon and grise, as well as a very large show of smolt and parr. All the June and July fish, also, had gone before cold weather. The Professor says some salmon only visit the rivers for sanitary purposes, being biennial spawners, or only doing so once in two years. Before I can believe this theory I must have stronger proofs, for such salmon do not enter any of the Bay Chaleur rivers. All our June fish and they seldom arrive before the 1st—often June 10th (the 10th) have the ova half developed. The July and August fish are still further advanced, giving ova about Oct. 10th, finishing 20th, and going to sea in about ten days after, some of them immediately. During the seven years I have been engaged in pisciculture the time has been uniform, not varying more than two days, even though the salmon changed to come three weeks earlier. These fish do not winter here in the river, and when they do the first fish of the succeeding spring I cannot say, but I suppose they are. Our spring kelt are fish coming from sea late (or in middle) of November with the ova at the same stage as the June fish, and I should think requiring three months to mature; they go well up to headwaters at once, where, owing to the numerous spring brooks, the ice does not form to the same extent or solidly, often thawing out in February and March, and where they deposit. Following the ice down in the spring, these go to sea in June. On examination these kelt will be found quite different from the fall kelt, being well mended and bright, with the next year's ova quite well formed, the roe being from three to four inches in length.

Now, should those roving sanitary schools spoken of by the Professor enter this river, they must do so under the ice in April and depart before our next catch. I have known our estuary clear for three and four weeks, before a fish made its appearance. To show the rapidity with which they come I may state that I took

not long ago, a salmon at the Indian House, with a partially digested caplin in it. The caplin never leaves salt water, and the nearest point at which the salmon could get it is Huron Island, seventy-two miles from Indian House. That extreme cold may retard the growth of the ova, is possible, but to extinguish the instinct or desire to spawn after the ova is fully developed is impossible.

Owing to the very heavy and severe ice runs, both fall and spring, as well as the heavy spring freshets, which most of our Canadian salmon rivers are subjected to, just at the time when ova is newly laid, or when the young fish is bursting the shell, artificial propagation is much more a necessity than in more favored countries. This last spring particularly the river bed has been completely upset by spring ice destroying most, if not the whole of the naturally laid ova. Independent of this cause, I know, from actual examination, that three-fourths of the ova naturally laid are dead eggs. I attribute this fact principally to the rapidity of the water carrying away the milt before coming in contact with the egg; probably, also, to either a want or an excess of males. I have observed on a bar where fifteen or twenty fish were spawning a large male rushing round chasing smaller males and grise and paying little attention to the females spawning, and we now know that if the egg is a very short time in the water without contact with the milt it will not fructify.

I do not ignore the giving of all due care to the preservation of the river, so that a good stock may be always there for natural production, but when by artificial production 98 per cent. can be turned out, in our Canadian rivers at any rate, it is a most valuable assistance and one that we cannot afford to despise. That every river has its own fish is certain, and that every fish finds its own river, and knows it—and knows the portion of it where it passed its young days—I believe also. I saw a peculiarly marked fish, having three old spear wounds on one side, while boating in the fall of 1867. She was spawning on the bar at Larry's Gulch. The next fall, not five yards from the same place, myself and men again saw her. In the June of the following year, I found her in Mr. Haddow's ice house at the Indian House, taken in net. Her weight was thirty-three pounds. The three scars or cicatrices on one side were so marked that there was no possibility of mistaking the fish.

Salmon in some rivers may rush, and keep rushing for the headwaters as, for instance, in the Fraser River. I give our salmon credit for more sense; they know there is more danger in the small, contracted pools, or headwaters, than where the big pools and deep water exist, and since the thorough education was insured in the large pool at Metepedia more fish than thirty miles of the Kedgwick, and fish now spawn from tidewater to the source. I am certain there are some of the very first run of fish in the Metepedia pool to-day, and any expert can tell by the color and condition of the fish how long they have been in the fresh water.

I fully indorse the Professor's opinion respecting the use of the hook on the lower jaw of the male fish, having actually observed it in '73. The following year I told Mr. Charles Hallock of it, when I expected he would laugh at such a theory, but he didn't. Still, I can hardly go so far as the Professor, having kept the sexes separate for a week before being mature, and many of them have given ova freely on lifting them out of the water. But in many cases, when you feel the eggs completely separated from the fish, and the male is behind the female, the gills at the throat will at once bring the ova.

Now, Mr. Editor, far be it from me to dispute the authority of Prof. Hind, or to say he is wrong in any of his conclusions. I only tell you what I know from actual observation in the Restigouche River, and no other. Any light or information respecting the nature and habits of our most valuable fish should be disseminated, and I trust you will be a most valuable contributor on this subject. I am, sir, yours truly,  
J. MOWAT.

Restigouche Fish Hatchery, Dec. 21st, July 29th.

### FLY-FISHING FOR SHAD.

SPRINGFIELD, Mass., July 24th.

Editor Forest and Stream:—I intimated that I should soon revisit Holyoke, and essay the capture of some of the gaudy beauties in a scientific manner. I have now had the usual style practiced there of fishing with a long line—that is, if I could find my incomparable tip. Well, I found that tip—no doubt smile—for it was in the hollow cane all the time, stuck fast. Let us change the subject, for I know that in your crowded columns space is valuable, and therefore I will not occupy it with the comments that I offered upon the occasion, but will at once take you

On the breast of the beautiful river.  
Where glorious sport can be had;  
And set your quill to work as I ever,  
In a light with the gaudy shad.

The Professor accompanied me upon this occasion—not that he cared to fish, but his scientific sensibilities had been greatly shocked by my assertion of the fact that shad had not only regularly feed in fresh water, but afford first-class sport. This statement was so much at variance with his pre-conceived notions that he repudiated the idea at once, and laughed me to scorn for setting myself—more type—against all of our well known ichthyologists in a matter of fact; but as I stoutly maintained that I was right, he consented to go with me, stating that he could disprove my assertions, or at least explain their inconsistency. When we arrived, we found that my favorite position was occupied, and so cast anchor just below the old pier, where the two currents meet. As the Professor was a stranger to "the delights of the swaying line"—against all of our well known ichthyologists in a matter of fact; but as I stoutly maintained that I was right, he consented to go with me, stating that he could disprove my assertions, or at least explain their inconsistency. When we arrived, we found that my favorite position was occupied, and so cast anchor just below the old pier, where the two currents meet. **BASS RODS AND BASS NOMENCLATURE.**—*Leesburg, Va., July 30th.*—The Potomac and Goose Creek have been deplorably "unclear" for more than ten days, and even their tributaries near this place have been unfit to fish. I have, as a substitute for sport actual, read the columns of your paper diligently for sport ideal, especially Dr. Henshall's excellent papers on black bass and fly-fishing for them. I have some notions on the subject, possibly heterodox, which I wish to air. For instance, on the position of one's reel. I find it most convenient to cast with my reel underneath; but to play my (fish with the reel on top, where I may see the line as it goes out, and regulate the "go" thereof. As soon as I hook a heavy fish, I lay my rod in my left hand, the reel up, handle to my right, and right hand itself holding the butt, or working the handle of my reel as the occasion seemeth to demand. The only trouble I have, is from the twisting or warping of the rod. If, however, I play the fish with my reel underneath (as I cast), the rings are made quickly worn so as to fray the line. One can take a middle course, though cast and play your fish with reel and rings underneath, except when the fish runs toward you, and then transfer to the left hand, using the right in reeling in the line.

With regard to flies, I fancy those tied on about a No. 3 spout, or round bend of like size, with the wings reversed and separate. I know that trout flies when in the water have usually quick wings stuck together, waving wet. Get the separate-wing flies seem more attractive, and I believe are closer to the fish. Now comes what I fear is a heresy in rods. I like a three-piece rod with the butt piece longer than the mid-piece and the mid-piece longer than the tip, say four, three and a half and three feet respectively. I know some of the best anglers disagree with me here, for I once asked one of our best rod makers and most accomplished anglers about this matter, and he held up for the equal division of the whole length. Two pieces of equal size and length, as equally strained as possible, with line the rough rings would break where they were joined, i. e., in the middle. The point of greatest strain would be at the joint. One being heavier than the other would throw the point of greatest strain away from the joint on the heavier piece, i. e., towards the butt, and if the pieces were not only unequal in length, but different in size, the point of greatest strain would be farther from the joint and nearer the heavier end of the heavier piece, causing, I believe, the point of greatest strain to be even farther from the joint. The rod is strongest, I think, where the butt, of course, the rod is strongest. If this theory be true, a rod would be practically unbreakable by any fish ever hooked by the fly. If one uses such flies as mentioned above, they are most conveniently carried in a tin mustard plaster case easily slipped into the breast pocket of a fishing coat.

As to the nomenclature, it seems to me that *Micropterus* is singularly unfortunate, even with the explanation of the broken dorsal fin and the great Lakespeck to call it little-fish. Small-mouth seems really far from the mark. Small is a name for the species we have in the Potomac, as, except by comparison, no one would ever think as "small-mouth" when looking a specimen in the face (if a fish has any face). If you stand directly in front of a black bass (*Micropterus salmoides*) when his mouth gapeth for "ye little minnow," you can't see any fish at all; he is then, to your eye, all mouth. Oh, if a naturalist could light upon some method of nomenclature such that an ordinary man, with a little common sense could call a fish by the proper characteristic name, after examination, which would be put into Latin (as a common language for men of different tongues) would forever serve as a concise description of the scaly rascal. The different names ought to be answers to definite questions agreed upon by naturalists as proper to be asked by the observer upon first seeing the specimen.

I have dreamed that all this might be true some day. Now, to close all this fishy talk with a different kind of palaver, why do the modern archers trim the feathers of their arrows in a line not parallel to the wood of the shaft? The best Indian arrows I ever saw had the edges of their feathers parallel to the arrow.

T. W.

The name *Micropterus* (small-fin) is not so very inappropriate if the pectorals are considered, besides it is really not important that a name should be descriptive in these days when new discoveries render the descriptions useless. (See names like *fluviatilis*, *vulgaris*, etc.)

Concerning the mouth question, the size is only relative, and the mode of measurement is with the mouth shut, and to note how far back it is cleft. This is one of the principal marks by which the two species are separated. In the "big-mouth" (*M. paludis*) it extends to or beyond a vertical line dropped from the posterior part of the orbit, or cavity of the eye, while in the "small-mouth" it only extends to about the middle of the pupil.

**BLACK BASS AND ROCK BASS.**—*Milwood, N. C.,*—What you call at the North the rock bass, we call here the black perch. They grow to a pound weight, and are a fine table-fish with it. I like them better than minnow, and was raised on Dan River, the dividing line at this point between North Carolina and Virginia. I have caught many fine perch out of the Dan River, and also the red horse. The latter resembles a mullet or sucker, but they are a fine fish, weighing sometimes six pounds. The "goggle-eye" is the largest perch we catch. The "red-eye" is smaller, not as large as the black perch, and is of a different color. I may be mistaken as to the "red-eye," as I have not caught one for many years, and have a fainter recollection of them, as I was then a boy. I think they are what you call black bass; are lighter in color than the "goggle-eye," but never grow to a very large size and have a very red eye. The black perch are dark in color, hence their name. I have caught fifteen very fine "goggle-eye" in a short time with hook and line. I have seen silver perch caught with hook and line in the pond here weighing something over a pound. It was the prettiest fish I ever saw. It shone as bright as the brightest silver dandelion when landed. They are baited with minnow, same as the "goggle-eye," but are not as good a table-fish as the latter, nor the black perch. The latter was formerly caught in the pond in great quantities, and are native fishes, but are very scarce now. I think my pond, which is a very large one, covering several acres, will do for carp. It is a splendid

stream for fish, rock bottom, and abounds in springs. I think the pond is quite deep. Don't you think the salmon trout would do well in it? also the carp? If you think the salmon trout will do, I would like to try them also. Do you think my pond is too large for salmon trout, and are they much trouble to raise? They have been catching the red horse out of the Dan now for two or three weeks. They are caught in "dip-nets," baited with mush, made out of corn meal with cotton worked in to make it tough. They are also caught with "grab-hooks" baited with mush. The "grab-hooks" are a novelty to some of you that never saw them. They are put on lines with one small hook for bait, and below it three large hooks tied on the line in a circle; these are called grabs. When the fish sucks (they seldom ever swallow a bait) the mush on the small hooks, the line is jerked upward and the fish caught under the throat by the grabs. The red horse, as I've just said, are rarely ever caught by swallowing a bait, hence the invention of the grabs, which chins the fish, when they suck the dough on the bait hook. I give you these little items, thinking they may interest you. I'm a proficient at chinning. I have chinned many a pike, when the water was too clear for them to bite, and when they are very shy and wary and will not allow you scarcely to approach the bank where they sun themselves without darting off into deep water out of sight. It will not be long before they are catching the perch in the Dan. I will give you their species, color, etc., and write you.

R. S. B.

We have supposed the names rock bass, "goggle-eye" and "red-eye" to belong to one fish, the *Ambloplites rupestris*, but the common names of fishes are fearfully mixed. We incline to the opinion that your "black perch" is the black bass of the North. The name bass is used at the North for most of the fishes which are called perch at the South. If the water in your pond rises above 70° at any time, it is not suitable for trout; better try the carp. The salmon trout, or lake trout, do not thrive in small lakes or ponds. Unless your "pond" is over a square mile in extent, and from thirty to sixty feet deep, with a bottom temperature in summer of 60°, or lower, you can do nothing with lake trout.

**TEXAS TROUT.**—*Corpus Christi, Texas.*—In your issue of June 10th, I see an article by Dr. J. A. Henshall, of Cynthia, Ky., another by C. L. J. of Willis, Texas, and a short note from Hastings, of Austin, Texas, concerning Texas "black bass," or "trout."

There may be genuine trout in Texas, but if so they are very far from the limits of civilization, for I have fished Texas waters since 1849 and never saw a speckled trout other than what is called in the South "salt water trout," and in the North "weakfish."

As to the black bass, I have caught what are called black bass in the Western States, in nearly every stream in Western Texas, far aside from the "croppie" or "goggle-eye," the "wide-mouthed perch," and the "red-bellied perch" or "sunfish," they are the only game fish of any note in the fresh waters of this State, south or west of Austin.

All of these fish are taken from the same streams and at all seasons of the year, as they do not hibernate this far South. The croppie is at times a voracious biter, but is weak and slides out of the water as easily as a piece of tin. He is generally about as flat as a shingle, and affords but little sport to the angler. At other times, although they may be seen plentifully, they will not touch bait. I have given to him an alias, viz., "goggle eye," on the authority of persons better posted in fish nomenclature of the North and West than myself, although I confess I do not like it, as I always considered the "croppie" and the "goggle eye" as two distinct fish. The Doctor (Henshall) gives the "rock bass" as the "goggle eye," and says he is not found in Texas.

Hallcock's "Sportsman's Gazetteer" gives "rock bass," "croppie" and "goggle eye" as identical. I do not know which is right, but I do feel satisfied that we have any quantity of black bass proper in Texas, and they grow large, too, as I have taken more than one over five pounds in weight, and I saw one which weighed one over nine pounds. This fish is identical with the one known as black bass in the Western States, and, as C. L. J. says, it differs according to the difference of the waters in which it is found, etc. One taken from a clear spring stream, and another from a muddy lake placed side by side, would not even be called relations by marriage, so little would they resemble each other.

Now, what is the fish I have alluded to as the "wide-mouthed perch"? He is as deep as a sunfish of the same length, about twice as thick and has a mouth like a black bass. His color is that of a bass, and he is as game a fish in every way, and as fine eating. I have taken them in the Perdinale, seventy-five miles west of Austin, weighing upward of three pounds, although they rarely exceed two pounds in weight. He will eat anything any time, and readily takes a fly.

Dr. Henshall describes him in describing rock bass, except that he does not give him the requisite breadth, or, more properly, thickness.

This wide-mouthed perch is very dark, and our "croppie" is a light-colored, slim, watery fish, with a small mouth and a small amount of meat on his bones. I cannot think that Dr. Henshall means that the "croppie" is not caught in Texas, for I can show him specimens any day at San Antonio. So of the wide-mouthed perch. I have heard these sometimes called "war-mouthed perch."

Imagine a black bass just twice as deep as those in the North and you have a picture of the wide-mouthed perch of this State. I will state here, by way of excuse for C. S. W., that every thing is "cat," "perch," or "trout" in Texas with the average fisherman of inland waters. I have even seen "suckers" and "buffalo" called "trout," solely, I suppose, because they would not bear classification either as "cat" or "perch." BEXAR.

The "war-mouth" of the South is the "rock bass" of the North. Dr. Henshall is an authority upon these fishes.

**FROM THE RANGELEY LAKES.**—*Dirch Lodge, Moosehead Lake, N. B., Aug. 2d.*—The extremely dry weather during June and a part of July has caused

the powers that be to draw from these lakes to an unusual extent, in order to supply the needs of the factories at Lewiston. The water throughout the whole chain of lakes is lower than for several years. The repairs in progress at the Middle Dam also necessitate the drawing off of the water, and the whereabouts of the trout is a problem at present unsolved. Very warm weather, and low water have probably combined to cause the fish to seek the deepest parts of their feeding grounds. But as the number of fishermen is greater than heretofore, the haunts of the big trout will soon be discovered, and due report will be made to your readers. Wild rice from Rice Lake, in Canada, was sown in May, after being well soaked, but has not shown itself as yet. It was sown according to directions, in from four to six feet of water. Some, claiming to be well informed, say it does not sprout the first year. Can any reader of experience give information to this? The new route via narrow gauge railroad to Phillips is very popular, and Page's Elmwood Hotel at Phillips is a resting place, indeed to all who are en route to the lakes. The hotel is extremely nice in all its appointments, and deserves the large patronage it has received. The lake road from Andover has been considerably improved since last year. More anon.

LAWRENCE.

**FORKED RIVER.**—"Riverside House," N. J., Aug. 15th.—Fishing is capital here yet, the catch of weakfish ranging from 25 to 150 per boat per day, with three or four bluefish, as they are again beginning to bite. One man caught five large ones yesterday with a squid, by throwing into the surf from the shore. Striped bass are beginning to bite, and a few have been brought in for the last two days, and we anticipate bass fishing in earnest next week. Mr. Lawrence brought in the finest string of weakfish of the season, all over three pounds, and one of them weighed three and a half when dressed; so you see the rod has not been laid by, although the breech-loaders are hard at work. Our score to-day was: The Magpie, Messrs. Speers, Morrell and Fawcett, twenty-one weakfish; the Idle Hours, Mr. C. E. Corbin, sixty weakfish; the Belle, twenty-nine large ones.

A. B.

**LAND-LOCKED SALMON IN RANGELEY LAKES.**—*Camp Kennebago, Aug. 2d.*—I have known of fine land-locked salmon being taken in our lakes this season; the largest was taken about two weeks ago at the mouth of the river (near Upper Dam) by Mr. W. E. Sheldon, of Putnam, Conn. Weight, four pounds.

REED.

**LARGE FISHES.**—Last week Mr. Blackford had a fifteen pound sheepshead (*Ariachargus probatocephalus*) upon his stand in Fulton Market which was one of a lot of fifty which weighed from ten to thirteen pounds, caught near Barnegat, N. J. This is a very unusual size. This week he had a Spanish mackerel (*Scomber maculatus*), of seven pounds, which was caught off Orient, Long Island.

**RED SNAPPER IN RHODE ISLAND WATERS.**—A fine "red snapper" (*Lutjanus blackfordii*), was captured in a pound net on Rhode Island, on Tuesday, Aug. 10th, and sent to Fulton Market. This is the first recorded occurrence of this sub-tropical fish so far North.

**MACKEREL.**—Mackerel are exceedingly plenty all along the coast of Maine, as far east as Penobscot Bay, fishermen say they are most abundant they ever knew, but they are mostly small. Menhaden scarce, but still scarce. Off Harpswell the lake has been exceedingly abundant very close to the shore. The fishermen say the dogfish have driven in the bait (small fish), and the lake have followed.

## Game Bag and Gun!

—Address all communications to "Forest and Stream Publishing Company, New York."

### GAME IN SEASON IN AUGUST.

Woodcock, <i>Philohela minor</i> .	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Black-bellied plover, ox-eye, <i>Scolopax helvetica</i> .	Great marbled godwit, or marlin, <i>Limosa lapponica</i> .
Long-billed curlew, <i>Numenius longirostris</i> .	Willow, <i>Totanus semipalmatus</i> .
Willet, <i>Totanus semipalmatus</i> .	Blue-winged teal, <i>Querquedula americana</i> .
Willet, <i>Totanus semipalmatus</i> .	Blue-winged teal, <i>Querquedula americana</i> .
Red-breasted snipe, dowitcher, <i>Limosa lapponica</i> .	Blue-winged teal, <i>Querquedula americana</i> .
Red-breasted snipe, dowitcher, <i>Limosa lapponica</i> .	Blue-winged teal, <i>Querquedula americana</i> .

\*This enumeration is general, and is in conflict with many of the State laws.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf bird, phalarope, avocets, etc., coming under the group *Limosa*, or, shore birds. Many States permit prairie fowl (plumbeous grouse) shooting after Aug. 15th.

—Our Office Boy has just returned from Bill Lane's resort at Good Ground, I. I., with a fine bag of bay birds. He says Mrs. Lane's wholesome table was well supplied, as usual, and the kindness he received will not soon be forgotten. The flight of birds was unusually good, and he wants to go again next week.

**A SPORTING COBBLER.**—*South Abington, Mass., Aug. 5th.*—That Alvin Lucas was born somewhere in Plymouth County, Mass., I have no doubt, for as long ago as I can remember, he lived in the town of Kintola, not far from old Plymouth Rock. He followed shoe-making it was said for a living, but could generally be found in the woods with dog and gun. His little shop was the loafing place for all who lived near by, and many were the tough yarns that were here told. When at work his old gun always stood loaded near by, and was to the unhappy hawk or crow that dared to test its quality by appearing within range.

Among uncle Alvin's visitors was a fellow by the name of Ben Gray, who was forever playing some practical joke on the old man. Indeed, he had no scruples as to who became the victim of his jokes, but Alvin generally had to suffer.

It seems they had made-up a party to go to the shore after geese, and Alvin, Gus and four others were in the crowd. Of course Alvin took his old gun, and as it was at this time of the year kept loaded for geese, he did no

DANVILLE, N. Y., Aug. 6th.—Glass ball shoot on the grounds of the Danville Club. Robbins 9, Twist 8, G. P. Miller 8, C. Young 8, Forsyth 7, Malder withdrew, Jeffreys 7, Coryell 8, Hall 6, Crestfield 6, A. Baker 10, Hyde 6, John Faulkner 8, Green 9, Toles 4, A. Sweet 8, J. P. Williams 9, N. W. Miller 6, Gardner 7, Gessner 7, Andrews 8, C. Bill withdrew, Webster 9, Mills 7, Sweet 5, McFetters 9, C. Green 9, Griswold 10, Tennant 6, Stearns 8, Cozan 4, P. Conkila 4, O. C. Matison 7, Webster 8, Olney 8, Hyland 9, Warkley 7, Hess 10, J. E. Young 4, G. Fois 8, Selwingle withdrew. Ties of 10—Baker 5, Griswold 5, Hess 4. Baker and Griswold, of Putney Club, divided, Ties of 9—Robbins 5, Twist 1, G. P. Miller 1, Crestfield 1, Williams 2, Webster 1, Sackett 1, C. Green 2. Hyland 2, P. J. Robbins, of Danville Club, won second money. Ties of 8—Stearns and Olney divided third money. Ties of 7—C. Jeffreys, Danville, won fourth money.

Second shoot.—Forsyth 7, G. P. Miller 10, H. Twist 8, Hills 8, Tennant 8, Robbins 7, John Faulkner 8, Mills 7, Sweet 5, McFetters 5, Andrews 9, Matison 8, Coryell 10, A. Baker 10, E. P. Green 8, Sackett 8, Whitman 2, C. Green 9, Griswold 7, Crestfield withdrew, Hall 6, Whitehead 6, J. E. Webster 5, Webster 7, Stearns 8, Hyland 10, Toles 4, Jeffery 9, Markley 8, Gardner 8, Moore 9, C. A. Youngs 9, C. Bryant 4, Fois 8, Malder 5, J. P. Bryant 7, Olney 5, Gessner 9, H. Williams 10, Gleason 7, J. Young 5, J. Faulkner, Jr. 6, Hess 8, Eschrich 8. Ties of 10—Coryell and Baker, Putney Club, divided first. Ties of 9—Chas. Jeffreys, Danville Club, won second money. Ties of 8—J. N. Faulkner, Danville Club, won third money. Ties of 7—P. J. Robbins, Danville Club, won fourth money.

Third shoot.—Coryell 5, Baker 10, G. P. Miller 10, Williams 8, Hyland 8, C. A. Youngs 10, Sweet 8, C. Bill 9, Sackett 8, Andrews 9, Crestfield 7, John Faulkner 7, Griswold 9, C. Green 7, Robbins 8, Matison 8, Stearns 9, Jeffery 7, Toles 8, Webster 9, Outhout 8, Forsyth 10, Moore 10, Warkley 9, Hess 10, Twist 8, Whitehead 7, Whitman 7, Olney 9, N. A. Miller 10, Fois 9. Ties of 10—G. P. Miller, of Cornish Club, won first money. Ties of 9—Andrews, of Monroe County Club, and Stearns, of Rochester Gun Club, divided second money. Ties of 8—Hiram Twist, of Cornish Club, won third money after a hard race with Robbins and A. Sweet, of Danville. Ties of 7—J. A. Faulkner, of Danville Club, won fourth money.

Fourth shoot.—Sweepstakes, 24 entries, 5 balls each. G. P. Miller, Cornish, won first money. Hiram Twist, Cornish, won second money. Hyland and Warkley, Danville, divided third money.

The boys had a good day and good time generally. The Monroe County Rochester Gun Club, Seneca Gun Club, Cornish Club, Putney Gun Club, Steuben Club, Dowling Club, of Mt. Morris, Livingston Club, of Genesee, Homerville Club, Scottsby Club, Wayland Club, Danville and Seth Green Club, of Danville, were represented.

MINK ROLL AND GUN CLUB.—This club had their regular shoot on last Thursday, and was presented with a splendid gold medal by Judge John A. Dinkie, a member of the club. The conditions are that any member winning it three successive times shall become the owner. The score is as follows—at seven birds each:—

	Killed.		Killed.
Engelst...	7	Steer	4
Minger...	4	Windholz...	6
Vespa...	5	S. S. Butterworth...	5
The Aery Medal, which was also contested for by another shoot, was won by Mr. Windholz. The Judge, who refused to shoot in the contest for his own medal, took a hand in for the Aery Medal, and was a tie with Windholz, who, in shooting off, beat the Judge by one bird.			

VICKESBURG, N. J., Aug. 2d.—The Coaxen Glass Ball Club, of this place, held their monthly shoot here to-day. Card's trap, 18 yards:—			
W. S. Hilliard...	7	N. H. Penecock...	0
W. J. Jirick...	6	S. S. Butterworth...	6
P. S. Hilliard...	6	J. W. Haines...	6
Tie shot off at 6 balls:—			
S. S. Butterworth...	6	W. S. Hilliard...	4
Butterworth won badge.			

MUSKOGON, Mich., Aug. 7th.—The fourth annual match of the Muskogon Gun Shooting Club, of Ottawa County Shooting Club, was held at Muskogon, Aug. 4th; Mole's rotary trap, 18 yards rise:—

Sweet...	011101111111—13	White...	0011111111100—10
Freighton...	001110101010—10	Hayton...	111111111101—13

### FIXTURES.

Toronto, Canada, dog show, Sept. 8th, 9th and 10th. Entries close August 21st. H. J. Hill, Toronto, Ont., secretary.  
St. Louis Kennel Club, St. Louis, Mo., Oct. 5th, 6th, 7th and 8th. Chas. H. Turner, St. Louis, Mo., secretary.

Pennsylvania State Agricultural Society International Colley Trial, Philadelphia, Sept. 20th, 21st, 22d, 23d, 24th and 25th. D. W. Selzer and Elbridge McKenney, secretaries, P. S. A. Society, Harrisburg, Pa.

Nebraska State Sportsmen's Association Field Trials, Milford, Nebraska, Sept. 30th and Oct. 1st, and 2d. J. L. Harley, secretary, Lincoln, Neb.

Pennsylvania State Field Trials Associations Trials, Oct. —, J. H. Statton, secretary, Pittsburg.

Eastern Field Trials Club's Second Annual Trials, Robins Island, Peconic Bay, L. I., Nov. 20th. Joseph Pennel, New York, secretary.

National American Kennel Club's Second Annual Field Trials, third week in November. Chas. De Ronze, New York, secretary.

### OF ENGLISH DOGGES.\*

The (second) Section of this discourse.

Of gentle Dogges serving the hauke, and first of the Spannil, called in Latine Hispaniotes.

Such Dogges as serve for fowling, I thinke convenient and requisite to place in this seconde Section of this treatise. These also to be reckoned and accounted in the number of the dogges which come of a gentle kind, and of those which serve for fowling.

There be two sortes  
The first kinde game on the land.  
The other kinde game on the water.

Such as delight on the land, play their partes, eyther by swiftnesse of foote, or by often questing, to search out and to spying the byrde for further hope of aduantage, or else by some secretesigne and priuy token bewray the place where they fall.

The first kinde of The Hauke, such seru

The first kinde haue no peculiar names assigned vnto them, saue onely that they be denominated after the byrde which by naturall appointment he is allotted to take, for the which consideration.

Some be called For the Falcon Dogges, The Pheasant and such like.  
The Partridge

The common sort of people call them by one generall word, namely Spaniells. As though these kinde of Dogges came originally and first of all out of Spaine. The most part of their skynnes are white, and if they be marked with any spotted, they are commonly red, and somewhat great therewithall, the haeres not growing in such thickness but that the mixture of them maye easely be perceaued. Othersome of them be reddishe and blackishe, but of that sorte there be but a very few. There is also at this day among vs a newe kinde of dogge brought out of Fraunce (for we English men are maruailous greedy gaping gluttons after nouelties, and conuolutes of things that be seldom, rare, straunge, and hard to get.) And they be speckled all ouer with white and black, which mingled colours incline to a marble blew, which bewtifuly their skinnnes and affordeth a seemly show of comfynesse. These are called French Dogges as is aboue declared already.

The Dogge called the Setter, in Latine Index.

Another sort of Dogges he there, scrutable for fowling, making no noise either with foote or with tounge, whyles they followe the game. These attend diligently vpon their Masters and frame their conditions to such becke, motion, and gestures, as if they please him to exhibite and make, either going forward, drawing backward, inclining to the right hand, or yielding to ward the left, (In making mencion of fowles my meaning is of the Partridge and the Quaille) when he hath founde the byrde, he kepeth sure and fast silence, he stayeth his steppe and will proceede no further, and with a close, ouert, watching eye, layeth his belly to the ground, and so creepeth forward like a worme. When he approacheth neere to the place where the byrde is, he layeth him downe, and with a marcke of his pawes, he trayeth the place of the byrdes last abode, whereby it is supposed that this kinde of dogge is called Index, Setter, being in deede a name most consonant and agreeable to his quality. The place being knowne by the meanes of the dogge, the fowler immediatly openeth and spreadeth his net, intending to take them, which being done the dogge at the accustomed becke or vsuall signe of his Masters cryeth vp by and by, and draweth neerer to the fowle trayed by his presence they might be the authors of their own insuaring, and be ready entangled in the prepared net, which conning and artificiall indoeuour in a dogge (being a creature domestical or householde seruient brought vp at home with offalls of the trencher and fragments of victuals) is not much to be maruailed at, seeing that a Hare (being a wilde and skippishe beast) was scene in England to the astonishment of the beholders, in the presence of our Lord George, 1564 not onely dauncing in measure, but playing with his former feete vpon a taboret, and obseruing iust number of strokes (as a pactioner in that arte) besides that nipping & pinching a dogge with his teeth and clawes, & cruelly thumping him with y force of his feete. This is no trumpery tale, nor trifling toy (as I imagine) and therefore not vnworthy to be reported, for I reckon it a requiail of my trauaile, not to drowne in the seas of silence any speciall thing

wherein the providence and effectual working of nature is to be pondered.

Of the Dogge called the water Spaniell, or finder, in Latine Aquaticus seu inquisitor.

That kinde of dogge whose seruice is required in fowling vpon the water, partly through a naturall towardnesse, and partly by diligent teaching, is indued with that property. This sort is somewhat bigge, and of a measurable greatnesse, hauing long, rough, and curled haire, not obtayned by extraordinary trades, but given by natures appointment, yet neuertheless (friend General) I haue described and set him out in this manner, namely powde and noted from the shoulders to the hindmost legges, and to the end of his tayle, which I did for use and custome cause, that byeing as it were made somewhat bare and naked, by shearing of such superfluite of haire, they might attaine the more lightnesse, and swiftnesse, and belesse hindered in swymming, so troublesome and needlesse a burthen being shaken off. This kinde of dogge is properly called Aquaticus, a water spaniell because he frequenth and hath vsuall recourse to the water where all his game & exercise lyeth, namely, waterfowles, which are taken by the helpe & seruice of them, in their kind. And principally dukes and drakes, whereupon he is lykewise named a dogge for the ducke, because in that qualitie he is excellent. With these dogges also we fetch out of the water such fowle as be stouinge to death by any venomous worne, we vse them also to bring vs our bouites & arrows out of the water (missing our marcke) whereat we directed our leuell, which otherwise we should hardly recouer, and oftentimes the restore to vs our shaftes which they were lost, for which circumstance they are called Inquisitores, searchers, and finders. Although the ducke otherwhyles notably deceaueh both the dogge and the master, by dyuing vnder the water, and also by naturall subtilty, for if any man shall approache to the place where they build, breede, and syt, the hennes go out of their neastes, offering themselves voluntarily to the hais, as it were, of such as draw into their neastes. And a certaine weaknesse of their winges pretended, and infirmities of their feete assembled, they go so slowly and so leasurly, that the mans thinking it were no mastery to take them. By which deceitful trickes they doe as it were entyse and allure men to follow them, till they be drawne a long distance from their neastes, which being compassed by their proud conning, or conning providence they cut off all inconueniences which might growe of their returne, by using many careful and curious cautes, least they often hauing bewray y place where the young ducklings be hatched. Great therefore is their desire, & earnest is theyr study to take heed, not only to theyr broode but also to themselves. For when they haue an ynkling that they are espied they hide themselves vnder turfs or sedges, wherewith they couer and shrowde themselves so closely and so craftely, that (notwithstanding the place where they lurke be found and perfectly perceaued) theyr theyr harbour without harme, except the water spaniell by quicke smelling discouer theyr deceptes.

Of the Dogge called the Fisher, in Latine Canis Piscator.

The Dogge called the fisher, whereof Hector Bothus writeth, which seeketh for fishe by smelling among rocks & stones, assuredly I knowe none of that kinde in England, neither haue I receaued by reports that there is any suche, albeit I haue been diligent & busie in demanding the question as well of fishermen, as also of huntsmen in that behauiour, and they are careful and earnest to learne and vnderstand of them if any such were, except you holde opinion that the beauer or Otter is a fishe (as many haue beleued) & according to their beliefe affirmed, and as the birde Pupine, is thought to be a fishe and so accounted. But that kinde of dogge which followeth the fishe to apprehend and take it (if there be any of that disposition and property) whether they do this for the game of hunting, or for the heate of hunger, as other dogges do which rather then they will be famished for want of food, conet the carcasses of curion and putrified fleshe. When I am fully reuelled in this burthened of this doubt I wil sen you certifieate in writing. In the meane season I am not ignorant of that both Ailanus, and Elius call the Beauer Kanopotamion, a water dogge, or a dogge fishe, I know likewise thus much more, that the Beauer doth participate this property with the dogge, namely, that when fishes be scarce they leaue the water, and aunge vp and downe the lande, making an insatiable slaughter of young lambs, and all theyr paunches be replenished, and wile they haue fed themselves full of fleshe, then returne they to the water, from whence they came. But albeit so much be graunted that this Beauer is a dogge, yet it is to be noted that we reckon it not in the beadowe of English dogges as we haue done the rest. The Sea Calfe, in like manner, which our country me for breuite sake call a Seele, other more largely name a Sea Vele maketh it a spoyle of fishes betwene rocks and banks, but it is not accounted in the catalogue or nuber of our English dogges, or a sea Calfe. And thus call it by the name of a Sea dogge, or a sea Calfe. And we thus call for our dogges of the second sort called in Latine Apaturij, serving to take fowle either by land or water.

\* A Diall pertaining to the second Section.

Dogges serving (are di- Land spaniells (called in The fisher used by Setters latine is not of port of fow- into Water spani- els or finders. Canes Aquaticus) their num- ber but seueral.

### HOW SOME DOGS SCRATCH.

THE replies to our request for the enlightenment of a Wisconsin man, who thought that dogs could not scratch themselves while standing up, have been numerous and entirely satisfactory. So many letters have come to us on the subject that we have been compelled to epitomize them in order to find any room for them at all. Following is the evidence volunteered on this momentous question:—

Editor Forest and Stream.—I had a setter, dead, as Horace Walpole would say, this last winter, at the possible age of seventeen or eighteen

\* Of English Dogges, the diuersities, the names, the natures and the properties. A short Treatise written in Latine by Johannes Caius of ludo memo (rig. Dogge of Puisse) in the University of Cambridge. And is translated into Eng. by Abraham Fletch. m. 1624. Nature of the dogge in the first part of the second. Scene and all over. \* Printed at London by Richard Chiswell, and are to be sold ouer against S. Sepulchre Church without Newgate 1576.

### PUBLISHERS' DEPARTMENT.

AN UNUSUAL RECORD.—The life of Mr. H. H. Warner, of Rochester, N. Y., was saved by the Sea Kidney and Liver Cure, which now bears his name. What this wonderful remedy did for him it has done for thousands, and we believe, will continue to do for those afflicted with kidney, liver or urinary troubles of any kind. If any reader has any organic trouble, this remedy will prove "a friend in need."

—For a handsome and comfortable lounging or invalid chair, there is nothing better than the "Wilson Patent Adjustable." See advertisement.

—Purchasers would do well to notice the reduction in prices made by Wm. Read & Sons, of Boston.

WHERE THEY FOR THE FOREST AND STREAM?—Three handsome panther skins were found in the mail-bags received by the steamship Arran, from Venezuela, last week. They were not addressed to any person, and Postmaster James sent them to the Custom-house. A dead bat, which had evidently been alive when mailed, and a lively snapping-turtle, were also found in the domestic mail.

years. In reading the paragraph relating to this question to-night in the hearing of my family, we all recalled a frequent habit of our favorite (Gram) of scratching his neck and ear, while standing up, with his right hind foot. It was especially a common practice with him after a scrimmage, when his ear had been bitten sore, and was kept so often for days in the summer time by flies. I do not remember, however, to have observed in him or any other dog a similar attitude reproduced in the "cut" published in FOREST AND STREAM.

A much more curious and uncommon occurrence than this it was once my privilege to notice—that of a bald eagle scratching his head with inimitable nonchalance during his flight. Some months ago I was standing on the bank of the river, somewhat concealed by a hedge of cedars, when I observed a bald eagle approaching at a height of some sixty or seventy feet above the ground. As he passed me at the distance of about ten yards he reached upward with his right foot, and simultaneously bending his head backward and sideways, he brought the two into contact and continued to scratch his head during a very appreciable time, evidently with unaffected pleasure. Whether the act had more of a petical than a political significance, or whether it was simply anti-parasitic, did not distinctly appear. E. G. W.

#### Editor Forest and Stream:—

Happening in the store of a friend, a customer was standing at the counter, while the clerk was wrapping up a cake of dog soap, the wrapper of which bore a cut similar to the one that excited your query. Calling attention to the cut, I suggested that it was unnatural, and after considerable discussion and the raking up of memories pro and con, the verdict was that a dog could not scratch and stand up at the same time. Just as we had settled the matter to our satisfaction and were about to separate, a fine black setter—one of a pair belonging to a gentleman down the street—cantered gaily past where we were standing and stopped probably ten yards from us. He shook his head angrily and then lifted his right leg and gave his neck a vigorous scratch! The attitude was precisely as represented by the cut on the wrapper of the dog soap. Mutual significant glances were exchanged, but no comment. C. E. C.

#### Editor Forest and Stream:—

I may not be speaking out of turn or judged guilty of a presumptuous ventilation of knowledge if I arise to explain that I have seen, while dog scratching himself standing up, and I have seen a dog stand up and scratch himself.

When the advertisement first came to my notice I thought it represented the most grotesque and ill-proportioned cut I ever saw, but asked no questions. I own a fine English setter, and claim for him as much canine sagacity as is generally manifested by the majority of thoroughbred dogs, together with as large a crop of the *Pulex irritans*—notwithstanding much scratching—as Spratt's dog soap, and frequently beddings with "Steadman's flea powder"—as usually falls to the lot of one educated dog to care for. He is as glad as Tennyson's John when he is permitted to walk to the mail, and must be accredited with manifesting his delight full as clearly as the poet's Jack. This dog is often allowed to "fetch" the FOREST AND STREAM from the post office, and as soon as his master is comfortably seated he will mount the nearest chair or stool, and patiently wait for the wrapper to be removed. To-day, a chair being in close proximity, he peered over my shoulder while I was perusing No. 25, and searching the advertisements for a "big find," such as 13 vols. of FOREST AND STREAM for \$15, when Cathery's dog, with his tail docked short behind, met the wandering gaze of man and beast. And while hastily scanning the bill of fare for the purpose of selecting the first course, the rich repast before me, I read aloud, "Pray, my Cathery if he ever saw a dog scratch himself standing up?" The animal seemed to heed the prayer, for he at once took the floor and assumed about the same attitude as the picture delineates. The battle raged fiercely, and in the height of tumult he seemed to exhibit the same despairing look and some of the ungainly points of the newspaper quadruped. But the flea was still there.

On the premises is another of the canine family, a very fine shepherd. To-day my watchfulness was rewarded by seeing the two in consultation, and concluded they were discussing the petition of "J. A. T." but was unable to learn positively, for in their training they were taught not to mouth their game. They did, however, of one accord and at the same time, stand up and scratch themselves. Since then I have found them frequently practicing the pose and manner before me. I read the standing ad, advising doggies, they believe it high art and absolutely necessary for the completion of their education. To disabuse their minds and free their bodies from the pest, I have applied very many preparations recommended as efficacious and guaranteed to kill, but with such discouraging results that I am most ready to give up in despair. The sympathetic chord has again been struck by the contortions of Cathery's dog, and gives new birth to the notion that there is a balm for every ill. I feel that if I wish to be counted as a man merciful to his beast my clear duty is to give this much-advertised soap a fair trial. Should it prove to be "a bane to fleas"—"a boon to dogs"—I will let you know. MARK.

A correspondent writing from the United States Marine Barracks, Annapolis, Md., under date of July 24th, gives his testimony with official exactness: "This morning, while on my way from the Maryland Hotel, in this city, to the Marine Barracks, I noticed a large black dog of the Newfoundland species so relieving himself from fleas, without resorting to lying down. So impressed was I that I took out my watch, which was keeping correct time, and found it was exactly 8:30. The locality where I observed said dog was immediately in front of the newspaper store of Mr. Roger Rivers, on the northeast corner of State House circle and East street. I. B. of West Boylston, Mass., says: "A gentleman pointed to this piece and wished me to read it, at the same time asking, 'Does not a dog often scratch standing up?' A setter bitch which was with me at that moment bent to scratch her left ear standing, as if bound to put the answer 'yes.' G. R. M. writes from St. Joseph, Mo.: "If you watch a dog that has the mange you will find that he does scratch while standing up. I have been watching; to-day a poor brute that is in that

condition, and have had an ocular demonstration of the fact." A Hammoncton, N. J., observer has seen his dog do it repeatedly, and adds: "It is not to be an idle lazy dog, and an awful lazy man, that has to lie down and never he wants to scratch." From Glen's Falls, N. Y., comes this: "No longer ago than yesterday (and before I had read your article) I called the attention of a friend to the ingenious way a little dog had of scratching himself, and a way I had never before remarked in dogs, although turning one most of my life. The little animal, standing alternately on his test legs and one hind leg, balanced himself in such a manner as to use the hind leg and hind leg to scratch precisely the outer surface of his belly—first the right side, then shifting, scratching the left side, all the while standing rigidly upon his left." A Newark, N. J., friend offers to send a dog to "J. A. T." and so demonstrate the thing. A Le Roy, N. Y., man has a setter which he alleges performs the feat regularly in an hour and a half. A Beaufort, S. C., observer states that "a dog scratches himself always by standing up. He can only scratch his head when lying down, and he very much oftener scratches his head standing than he does lying down. No dog can scratch his belly, or about his forelegs, lying down; he scratches his back by rolling and dragging his back along the ground. 'J. A. T.'s criticism is a farce: 'Cathery's dog soap' notice is correct and artistic. All dogs scratch themselves standing up. Sometimes a dog, when lying down, will scratch his head or ear. If standing up he does not lie down to scratch his ear; if lying down he does not get up to do it." All very well, but F. R. G., Laconia, N. H., says: "Have been watching my dog scratch this morning, and notice he sits down every time, and on thinking the matter over, don't think I ever saw one scratch in any other position. One of the Pennsylvania Commissioners of Fisheries challenges 'J. A. T.' as follows: "By the way, if your friend, 'J. A. T.', of Beloit, Wis., wishes in good faith to come to the 'scratch,' my celebrated setter dog 'Doe' will accommodate him almost any time with a fair square 'stand up,' 'go-as-you-please' scratch. He does it with ease, with right or left hind foot, in true 'Cathery style,' and apparently with gratifying results. 'Canis Scratchibus' (rough Latin, by the way) sends us a picture of how his dog does it, and writes that 'almost every observing farmer's boy now owns a flea-harassed canine knows more about this than the Wisconsin editor.' "Capt. Clayton, Pleasant Plains, N. Y., avers: "I saw my dog Duke do it this Monday morning, July 26th, time 8:09; first on one side and then on the other." As we explained, our Wisconsin friend is an editor. The following, therefore, has additional weight, because its author is a Western editor, too: "Your friend out in Wisconsin need not go very far to become satisfied that dogs can scratch themselves while standing up. Chicago, proverbially in for everything, contains one such animal, and I am the happy possessor of him. My English mastiff, thirty-three inches high at the top of his shoulders, performs that feat with seeming delight several times every day. He has a habit of scratching himself on the right side of his chest, the dog's head while standing on three legs. I never thought this was such a remarkable performance before your friend expressed his doubt that it could ever be done." A Palo, Mich., correspondent has in his kennels a beagle hound, a black and tan foxhound, two setters and a pointer. "Yesterday, as I sat in the yard reading, a beagle came out on the front porch and proceeded to scratch his right ear, which he did in a standing position. After scratching his right ear he changed positions and scratched his left ear, still remaining standing. During the whole performance his position resembled very much the position of the dog in the cut in your advertising columns." "Cornell" has seen his water spaniel lift his left leg and scratch his side while standing up, and he wants the Wisconsin editor to come and see it, too. An Albert Lea, Minn., correspondent writes: "Why, Frank Albright scratches his ear standing up. I wish to risk a scratch on my nose and ear. Finally, from a Wauseon, Ohio, notary public comes this testimony: "It is officially asked, 'Does a dog scratch himself standing up?' A scientific scratcher always does. I have been observing for a week the manner of four gentlemanly, well-bred dogs while scratching, and three of them invariably exercise their toe nails while standing up. I would suggest that the question would be harder if I proposed to read follows: 'Did any dog scratch a dog scratch his left fore shoulder with his right hind leg while standing up?' That would settle the veracity of that picture in Cathery's ad." A J. M., of East Boston, Mass., would like to add a few words on the subject. "Last Monday afternoon, about 4 P.M., I was standing at the store door, and saw a dog stop and scratch himself, on the corner, in exactly the same position as in the cut in your paper of Cathery's dog soap, with the slight difference that he used his left hind leg to scratch with, while Cathery's manipulates the right."

It is now settled to the full satisfaction of our Wisconsin friend, we trust, that dogs do scratch themselves while standing up, and the discussion of the subject is permanently closed in these columns.

—N. Elmore, of Granby, Conn., writes that he has sold all the dog beagle pups and foxhound pups, which he advertised a few weeks ago.

SUCCESSFUL TREATMENT OF SNAKE BITES.—Dr. Upshauer, writing from Carrollton, Miss., July 31st, tells us how he has cured snake bites. "I have practiced eight years in the Yazoo swamps. I have attended many cases of snake bite, both of rattlesnakes and moccasins. My treatment has invariably been to cut down freely with a bistoury, dilating the orifices made by the two fangs. After permitting a reasonable amount of bleeding, I stuff into the wounds the dry salt of carbonate of ammonia. At the same time I give a tolerably strong solution of the same internally, say five to eight grains every fifteen minutes, until a cathartic has taken place (less, if sufficient). Upon dissolving, the ammonia is rapidly communicated to the blood, and through it to the tissues previously visited by the poison. The latter, as is the case with all animal poisons, being of an acid reaction, the powerful alkali, on overtaking it, instantly neutralizes it, destroying its specific properties. I rely upon this treatment always, and I have never had any truly serious cases. That alkali is an adjunct only, and I attach but little importance to it."

### THE IRISH-AMERICAN MATCH—1880.

NOW that the heat of conflict is over it may not be amiss to make some remarks in respect of the event of 1880 and the match at Dollymount, which is likely to find for many a day its proud position as the climax of team shooting on both sides; and here I must contradict emphatically the assertions made by some reporters that the Irish team was deficient either in its rifle or system. Such an assertion is absurd in the face of the score achieved. In one of these accounts, reproduced in your paper, it is said that after their unfortunate opening at 1,000 yards the Irish team showed their want of regular system, etc. The fact was so far otherwise; that, in spite of an accident which might have disgraced any team; namely, Milner's miss owing to a bad cartridge, the Irish in their subsequent shooting cleared off 7 points of the American lead, and were steadily overhauling them until the smoke episode, which cost them 4 points in Wm. Kirby's score. It is curious to remark that in 1875 and 1880 the Americans won the match at the middle range, and accidents excepted, the shooting at 800 and 1,000 yards was as nearly equal as possible.

As to Col. Dodine there is but one opinion here, and that is that he carried out the test justified to him in a masterly manner. He took in hand a team composed of heterogeneous elements, representing in some ways conflicting interests, and we, in this country, built some hopes upon these facts. We saw that they were not only practicing, but experimenting, and that some of their early experiments were at least risky; but too Captain quickly bided his time, and at almost the last moment dominated his team in a way which astonished those not in the secret. He put aside some whom we thought his very strongest men and replaced others whose names were more or less little right to such a distinction. Having the option of shooting with men, and every inducement to do so, he adopted the safer course and elected to put only six in the field. One of those afterward stated his opinion that if the selection had been made otherwise, or even the squadding of those men differently arranged, victory would have been more than doubtful. I am mistaken in the gratitude of the American people if they fail to convey to Col. Dodine their warm approval of the manner in which he accomplished the difficult task imposed upon him. What disaster may befall a team who, with respect to their rifles, are without the necessary authority confided in him, attempts to fill the character of captain of an American team, is well illustrated in the Halford-Hyde match at Wimbledon, the result of which will doubtless be to cause such regulations to be made for the future as will prevent the repetition of a proceeding fiasco and unsatisfactory in itself and tending to destroy the prestige of those genuine and authorized international contests, which, properly and deliberately conducted, are productive of excellent results.

As to reputations of individual riflemen, Dr. Scott has gained more renown by his individual shooting than any of those who visited us this year. Others have shot up to all that was expected of them, but in mastery of difficult winds and in firmness of exciting competitors, Dr. Scott has established for himself a brilliant reputation both at Dollymount and Wimbledon. If his consummate judgment was accompanied by a little more promptness, he would be perfect as a long-range shot. He is unfortunately painfully delicate at times, and those squaddied with him have no need of caution, for his success has been his undoing. The Spencer cup, second prize in the Abercorn (second) competition. At Wimbledon he achieved the unusual feat of capturing first prize in both stages of the Albert. Jackson was very successful in individual competitions, taking first prize in the Abercorn. Farrow won the Wimbledon cup and other prizes. Brown won the amateur cup at Wimbledon. Col. Clarke did not compete after the match at Dollymount, Mr. Rathbone shot but little.

A word in conclusion as to rifles. It is not quite true that I was wrong in my breech-loader since 1876. I certainly tried many desultory experiments, but until the acceptance by the National Rifle Association of America of my invitation, issued last winter, the Rigby breech-loader did not exist. I at once put my plans into shape, and set to work to make the rifles. Every gun that I had made up to that time, numbering eight in all, and those, for want of time, in an unfinished state, were in the hands of the team and reserves on the 25th of June. We had not at that date spare rifle, if we sought more, and had called on to shoot, but every one of them did their work well. It cannot be denied that I considered a really fair trial of my system, seeing that each of the Americans had their choice of more than one rifle, and had with him at least one with which he was perfectly familiar and had proved in all weathers. Yours respectfully, JOHN RIGBY.

Dublin, Ireland, Aug. 7th.

### THE AMERICAN-CANADIAN MATCH.

CHERRYPOND, Aug. 14th.—The match to-day between the Canadian small-bore marksmen of the Victoria Club and the picked team of the Amateur Club, of New York, was shot to-day and resulted in another victory for the Americans, and maintains unbroken the series of American team victories in all the international matches so far. The Canadian team remained at the widow Klein's hotel, near the range, Friday night, and rose early in the morning to prepare for the day's work. The American team, under the command of President R. H. Keene, its captain, went down to the range in the morning train. The members were all in good health and in excellent spirits. The range was white with daisy tops, which dazzled the eyes like snow in the morning sun. Long green lanes extended down the field from the several firing points to the targets, indicating the track of the mower, which had cleared the paths for the rifle bullets. The light was bad for shooting, however. The sun shone brilliantly for several minutes, and then a passing cloud shaded the field. President Keene and Lieut. Col. Gibson, captains of the American and Canadian teams respectively, assembled their teams at the 800 yards firing points at 10 o'clock. The captains tossed a coin for the choice of targets, and the Canadians won. They chose targets O and V. The Americans took the targets adjoining Stano VI, on the right of the Canadians. There was no referee and no watches sent to the butts. A. H. Cobb and Secretary Minor, of the Amateur Rifle Club, spotted the dots on targets O and V, respectively, on behalf of the Amateur Club. President Keene declared the match open at 10:17 o'clock. The American team was squadded as follows: L. R. Keene, J. E. V. Keene, J. E. V. Keene on targets S and V; Col. Clark, W. H. Spott, R. H. Rathbone, Col. H. S. Johnson, and L. H. Leburn on target VI; with L. Delevar, of Hudson, as spotter; Lieut. Col. Gibson, Joseph Marsh and Albert Palmer as

Newark.....	14	14	15	18	18	18	23	27	31	31-31

Umpires—Messrs. White and Norley. Time of game, 4 hours, 35 minutes.

In the second innings of the Applentons they were put out, for 74, leaving their total at 73, by Williams contributing 13 and Sall 12. This left the Newarks 40 to get to tie. They had scored 15 with the loss of 4 wickets, when the stumps were drawn and the score of the first inning was left to decide the match in favor of the Applentons.

ST. GEORGE AND MANHATTAN.—Played at Hoboken, Aug. 11th.  
Won by Manhattan on the score of the first innings:—

—One of the extraordinary events in cricket this season was the small score (sixteen) obtained by Surrey against Nottingham. Twice only has it been equalled—once at Lord's, when Surrey disposed of the Marylebone Club, in 1872, for 16 runs, and, in 1879, Nottingham met the Derbyshire eleven, and for 16.

COOPER'S POINT YACHT CLUB.

---

KRAMER CUP RACE.

---

*Editor Forest and Stream:—* COOPER'S POINT, Aug. 31.

The race was started from abreast of the club house, Cooper's Point, to sail around Chester Buoy and back, Aug. 2d. The following boats of the club had entered: Keenan, No. 1; Fitch, No. 2; Springer, No. 3; Mack, No. 4; Norcross, No. 5; Cahill, No. 6.

Phil Kramer, No. 7; Amé, No. 8; Lewis Kramer, No. 9; Schick, No. 10; Mayberry, No. 11; Humes, No. 12; Peeny, No. 13; Guang, No. 14; Hammell, No. 15, and Snow Flake, No. 16. On the day previous, and on the morning of the race, several yachts met with serious accidents, preventing them from showing up. The following, however, started at 11:10: Snow Flake, Guang, Lewis Kramer, Norcross, Humes, Mack, Springer and Mayberry. The boat broke, and the number on the peak of the sail. They got away well together. No leading. In a short time No. 9 went to the front, hard pressed by No. 16. Kaul's Point the former boat broke her boiler and lost her way.

Just here No. 5, who had previously broken her bodkin, carried away her headstay, and Nos. 3 and 4 opened their seams badly, while No. 11 capsize. In fact, No. 16 was the only boat that came out of the race.

from a mile out of the race on hurt. The wind was blowing heavy from the north and continued to freshen throughout the race. At the Block House buoy, 5 miles from the lead, although badly crippled, the "Champ" continued to lead, and was followed by the "31" and rounded Chester Buoy first, 9 miles from the lead, 3 miles from No. 16 third boat. The yachts had to stem tide all the way home, arriving at the stakeboat in the following order: Norcross at 5:55, Springer 8 minutes later, Seow Flake 7 minutes later. I would like to state here that the old "Champ" Cobill broke her bodkin, rudder, traveler, and parted both sister hooks of her wire rigging, and could not get ready in time for the race. It was the "big gal's" breeze, and she chafed angrily at her moorings all night.

day. She evidently wanted a dash at that cup. At the close of the race, the captain of the Humes, backed by the captains of the Gung and Snow, Flake, protested against giving the Springer second money (a purse of \$50), on account of her running late.

the Hup es, who bring the right of way, being at the time on the starboard tack. After a deal of *pro* and *con*, the judges—John Dove, W. H. Hiest and R. G. Wilkins—decided to waive the protests. The first prize, therefore, was presented to the Norcross, the cup and two-thirds the money; second prize to Sprinzer, one-third the money; third prize to Snow Flake, entrance fee returned. Thus ended a disastrous and very unsatisfactory race,

## KRAMER CUP RACE.

COOPER'S POINT, Aug. 3d.

*Editor Forest and Stream:*—  
I have just read an abstract of the club-house, Cooper's  
Notes, No. 31, about the abatement of the lake. The fol-  
lowing boats of the club had entered: Keenan, No. 1; Fitch, No.  
2; Norcross, No. 3; Mack, No. 4; Norcross, No. 5; Coblin, No. 6;  
Phil Kram, No. 7; Humes, No. 8; Humes, No. 9; Humes,  
No. 10; Mayberry, No. 11; Humes, No. 12; Feeny, No. 13; Gnan-  
g, No. 14; Hammett, No. 15; and Snow Flake, No. 16. On the day  
previously mentioned, the boats were sent down the lake  
with serious accidents, preventing them from showing up.  
The following, however, started at 11:10: Snow Flake, Gnan-  
g, Lewis, and Keenan. The boats were sent down the lake  
boats were a 14 inch black number on the peak of the sail. They  
got away well together, No. 16 leading. In a short time No. 6  
was seen to be in the lead, and was followed by No. 16, then  
former boat broke her bodkin and lost her mast, giving up the  
race. Just before No. 5, who had previously broken her bodkin,  
was seen to be in the lead, and was followed by No. 16, then  
badly, while No. 11 capsize. In fact, No. 11 was the only boat  
that came out of the race unhurt. The wind was blowing heavy  
and the boats were sent down the lake. The boats were sent  
At the Block House No. 5 took the lead, although the boats  
and rounded Chester Buoy first, 9 minutes ahead of No. 3, with  
Springer 8 minutes later, Snow Flake 7 minutes later. I would  
arriving at the stakeboat. In the following order, the boats  
Springer 8 minutes later, Snow Flake 7 minutes later. I would  
that the tide of the Channel. Could break her bodkin,  
rudder, traveler, and lost her mast, giving up the race. Just  
ging, and could not get ready in time for the race. It was  
gale breeze, and she chafed angrily at her moorings all  
pay the penalty. The boats were sent down the lake.  
the race, the captain of the Humes, backed by the captains of  
the Gnan-g and Snow Flake, protested against giving the Springer  
the right of way. In a race between the boats, the Springer  
the Humes, she having the right of way, being at the time on the  
Starboard tack. After a deal of pro and con, the judges—John  
the Springer, and the Humes, were sent down the lake for  
tests. The first prize, therefore, was presented to the Norcross,  
the cup and two-thirds the money; second prize to Springer, one  
turned. Thus ended a disastrous and very unsatisfactory race.

CRICKET IN THE OLDEN TIME.—In last week's issue we presented to our readers an illustration taken from a little book on the laws of the game, published over 100 years ago. We have since had a limited number of the cuts struck off on first-class paper, suitable for framing and hanging up in club-houses. These can be had upon application at this office, for the cost price, ten cents each. As the reproduction of the little book has created an interest in cricket in circles, we give below the title

## Miscellaneous.

## Experienced Sportsmen

Buy their Shooting Suits of G. W. Simmons & Son, (Oak Hall, Boston), who are the makers of the Prize medal "Boston Shooting Suit," which is the very best that is made; never tears, or rips—has its seams sewed with silk and linen—and its buttons so securely fastened they never come off. If any one wants the proper outfit let him send to **G. W. Simmons & Son, OAK HALL, 32 to 44 North Street, Boston.**

## Ostrich Farming.

**ACTIVE OR SILENT PARTNER** wanted, with \$10,000 to \$50,000, to join a young man in the above business in San Joaquin Valley, California. The party has had much experience on ostrich farms in South Africa; thoroughly understood the business in all its branches, such as mating, care of breeding and feather birds, rearing of chicks, and sorting feathers for the London and Paris markets. Large profits to be made from the investment; more money in it than sheep or cattle ranching. Any person answering this in relation to ostrich farming, please write to strictly temperate. Best of references given and required. Address, giving full name, etc., etc., J. D. Occidental Hotel, San Francisco, Cal. Jy. 23-11.

## The Kennel.

## SETTERS FOR SALE.

Out of my bitch Maud (Pencey-France), an orange and white ticked dog, by a very old native dog. He is thoroughly broken and is staunch, strong, handsome and has a fine nose; price \$75. Also a very handsome orange and white bitch, out of my Maud by Langer II; well yard broken and has been bred. Price \$50. Also two dogs out of Maud by Corwell's dog, from Hys's Belle and Oney's dog. Parties who desire very bright, quick and intelligent. Price \$15 each. The parents of these dogs are all well known as fine bred and fine working dogs of their kind being champions. Great care has been taken in breeding all of my dogs, and they are very easily broken. Address G. B. OSBORN, New Haven, Conn. Aug. 19-13

**FOR SALE**—A number of thoroughbred puppies, out of the following celebrated dogs: Puppies, three months old, out of Blue Belle, she by champion Pride of the Border, and Victory sire of pups. Warwick—she by champion Leicester and champion Petrel—three beautiful lemon and white pups out of Pet V. ex Brussels. For is by champion France, Jack and Brussels is by champion Leicester ex Dart's two weeks old. One brace, dog and bitch, of red Irish setters, large strong pups, four months old, out of Nora, she by champion York ex Thompson's Belle. One brace of handsome white pups, twelve, ten weeks old, out of Cybele ex Hood, who is by champion Carlitz ex True. Am taking orders for pointer pups, whelped on the 18th August, out of Cybele ex Hood, delivered at eight weeks of age. One beautiful black and white pointer-bitch pup, four months old. Prices are as follows: All pups four months old, \$30 each; and at eight weeks and under, \$15 each. These pups contain the finest blood in the country. If the distance is not far, will send any pup C. O. D., so the buyer can see what he is getting before paying for it. Guarantee them to be in good condition and health. Address C. Z. MILBY, Lancaster, Pa. Aug. 19-11

**\$15** will buy a pure Irish setter dog, 4½ months old, having one cross of Elcho and two of Punket. Address E. J. LEBBINS, Watertown, Conn. Aug. 19-11

**FOR SALE OR EXCHANGE**—For a B. L. gun, 9 lbs., 10 gauge, a brace of orange and white setter pups, 6 months old, yard broken, black points; full pedigree given. H. J. B., 234 East Front street, Trenton, N. J. Aug. 19-11

**RIFLE FOR DOG**—A Sharps mid-range rifle, good as new, with all improved sights. Will exchange for any good dog. Write to me, or if broken in all respects. Must be perfect field dog. Address W. H. BERNARD, Wilmington, N. C. Aug. 19-11

**FOR SALE OR EXCHANGE**—A young setter dog, nine months old, in robust health; sire and dam, both by champion Worcester, Mass.; dam purchased of W. H. Pierce, of Peekskill, N. Y. Will sell or exchange for an "Osgood Canvas Gun" in first-class condition, or any first-class rifle. W. H. WHEELER, Agent Wheeler Cotton Mills, Milbury, Mass. Aug. 19-11

**DOGS RID OF FLEAS AT ONCE** by using "A No. 1" Flea Powder. Sent in put-out box on receipt of 25 cents. Address: C. DYAMS & CHASE, New York, N. Y. Aug. 19-11

**FOR SALE CHEAP**—A handsome orange and white English setter bitch, three and a half years old; the dam of some fine field dogs and a beauty show dog. Will be sold best in thirty days. First-class set and pedigree. J. H. FELLE, Ellington, Conn. Aug. 19-11

**FOR SALE OR EXCHANGE**—One black and white English setter dog, three years old, broken on partridge, quail and woodcock; is staunch and fast; for a breech-loading shot gun. Address BOX 44, Grafton, Mass. Aug. 19-11

## The Kennel.

**CHAMPION RORY O'MORE PUPPIES.** For sale several large, handsome pure Irish setter puppies, whelped July 1st, 1880, sire champion Rory O'More (champion Titus ex champion Friend), dam, my red Irish bitch Gussie (Judge Pratt's Dan ex Imported Ruby). Gussie is a full sister to Arlington, first at Boston and St. Louis, 1879. She is thoroughly broken, and one of the best field dogs in practice. She is also a great beauty, said by good judges to be the largest and one of the handsomest Irish bitches in the country. The only place where V. H. O., at New York, 1880 (only time exhibited), when in very poor condition, having been hunted hard all winter in the south up to four weeks previous to the show. For blood, beauty and field quality no better can be found. For printed pedigrees, price, etc., address F. H. PECKSKILL, Peckskill, N. Y. Aug. 12-13

**FOR SALE**—Small pointer bitch Clara (But-topsey) (Phil-Fannie), three years old; weight, 45 pounds; broken on quail, snipe and woodcock; is sound and healthy. Price \$40. J. F. S. LADE, Franklin, N. Y. Aug. 12-13

## Imperial Kennel

Setters and Pointers thoroughly field and woodcock dogs. Young dogs handled with skill and judgment. Dogs have had access to salt water. N. B.—Setter and pointer puppies; also, broken dogs for sale; and pedigrees. Address H. G. GLOVER, Tompeter, N. J. Aug. 12-13

**FOR SALE**—Three handsome red Irish setter pups, eight weeks old, large, strong and healthy, out of the best and best bred red Irish dog, and one brace of handsome Llewellyn pups out of Belle, she by Pride of the Border x Kirby and Warwick, both parents being thoroughly broken and prize winners. Prices reasonable. For particulars and full pedigrees, apply to the owner, J. H. KENNEDY, 101 Orange street, Lancaster, Pa. June 17-11

**RORY O'MORE KENNEL.**—Champion R. O'More in the stud. The handsomest, as well as one of the best and best bred red Irish dogs in the United States. Winner of first prize at New York, 1877; champion at New York, 1878; champion at Hudson, 1879 and winner of the gold necktie at New York, 1880. For sale, thoroughbred pups. Address W. N. CALLENDEK, Albany, N. Y. June 21-11

## LACHINE KENNELS.

**I HAVE** moved my kennel of cockers to the vicinity of New York. Will have no pups before October. Cora, Fier, Maudie, all to be bred to Biju, this week, June 21st. GEO. D. MAUDINGALL, P. O. Drawer 432, New York. June 21-11

**E. B. GOLDSMITH,** Custom House and Forwarding Agent, 38 WALL STREET, NEW YORK.

**RECEIVES AND FORWARDS** Dogs, Foxes, etc., to any destination. Kennel Clubs, Sportsmen and gamekeepers who send dogs from Europe, should have their stock consigned to him. Information furnished in regard to the best methods of importing, shipping, etc. WINTER, Cairo, Thos. Cairo, Georgia. Oct. 2-11

**PINE LODGE KENNELS.**—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work on quail, snipe and game, and guarantee that the dog has all the natural instincts. References on application. Prices, \$50 and \$75, according to length of training, and I will discount to parties at long distances. A. WINTER, Cairo, Thos. Cairo, Georgia. Oct. 2-11

## The Kennel.

## Cathery's Dog Soap,

**FOR WASHING ALL KINDS OF DOGS.** Will destroy Fleas, cleanse the skin and hair from Scum and Smells, making the Coat fine and glossy, without rinsing cold or doing the least harm to the animal, and safely and effectively cure the Mange. PRICE, 50 CENTS. FOR SALE BY ALL DRUGGISTS. Wholesale Agents, **McKESSON & ROBBINS, NEW YORK.** Sample Cake sent on receipt of 50 cents. July 8-11

## FLEAS!

**USE DR. AL. WATTS' FLEA SOAP,** a safe and efficacious remedy and preventive for fleas and all eruptions of the skin produced by them. It cleanses the hair of all impurities, purges it of all disagreeable odor, and possesses the most powerful disinfecting properties. It is impossible for fleas to breed on it. Price, 25 cents per cake. For sale by all druggists. Wholesale Agent, 161 Lincoln street, Boston. Dr. Watts' Ointment is a valuable assortment in America of dogs of all breeds. All diseases of dogs skillfully treated. Medicines with full instructions. Price, 25 cents per bottle. The fact that Dr. Watts has for four consecutive years been appointed the post-off of Special Agents for the Boston to have charge of unlicensed dogs, is sufficient guarantee of reliability. All communications and orders will receive prompt attention. DR. AL. WATTS, 161 Lincoln street, Boston, Mass. Mar. 25-11

**A RARE CHANCE.**—For sale, English setters: Don, a splendid large orange white ticked dog, brother to Champion France, but superior every way. \$200. Maud, a beautiful bitch, orange white, black points, two first prizes, \$150. Dick, a very fine dog, orange white black points, two first prizes, full of bone, second prize; she with Dick, \$100; the best brace I ever shot over. Three orange white ticked dogs, two months old, very fine, full of bone, \$20 each; also puppies ten months old, Gordon and Laverack combined. Bob, black, white and black, \$100. Jim, black, white and black, \$100. A brace, black and white, well matched, \$25. A black white tan ticked, five months old, \$10. Puppies two months old, out of Russa II. by Don, orange white ticked, a brace for \$10 if taken by July 1st. They cannot be beaten for looks and natural field qualities. This is a chance you cannot afford to lose if you want fine stock for very little money. Address ASA L. SHERWOOD, Skaneateles, N. Y. June 21-11

**ST. BERNARDS FOR SALE.**—The undersigned, wishing to reduce his kennel, offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the European strains. To be sold for no fault. For prices, pedigrees, etc., address: **DR. ROY C. COLLINS, Lancaster, Mass., U. S. A.** Sept. 18-11

**IRISH RED SETTER PUPS.**—Capt. T. S. French of Ireland, offers for sale three splendid pups six months old the 11th of June, 1880. These pups took the first prize in Dublin, in 1880, and are considered to be the best of their kind. For price, pedigree, etc., apply to C. S. TRENCH, Clutta Depot, Va. July 12-11

**TRAIN YOUR OWN DOGS,** in the most artistic manner. For information send two three cent stamps to M. VON CULIN, Delaware City, Del. July 17-11

**QUEN & T.** by Colburn's Dash ex Mul-ture's Belle. The above dog, winner of first in brace stakes of the Eastern Field Trials; will be allowed to serve a few litters of approved form and blood. Stud fee \$35, and \$3 for groom. Address **H. F. ATEN, M.D., 34 Hanson place, Brooklyn, N. Y.** Aug. 12-11

## MANGE. SCORATHES.

**GLOVER'S IMPERIAL MANGE CURE** is warranted to cure all kinds and conditions of mange or skin diseases of any nature on dogs or cattle or horses, and is considered to be the best remedy usually at this time necessary. For SCALDS in HOUNDS it has no equal. H. GLOVER, Sole Proprietor, 140 West Madison St., Chicago. Agents: Conroy, Bissett & Malleson, 65 Fulton St., N. Y.; John P. Lovell & Sons, Dock Square, Boston; C. G. Gilman & Co., 112 Market St., Phila.; P. F. Taylor, 72 East Madison St., Chicago; Crookes, Hilder & Co., 604 North Fourth St., Phila. Price, 50 cents. Aug. 12-11

**A RARE CHANCE**—I WILL SELL a champion Queen Mab, now in whelp to my friend. She has won three championships, besides first and second prizes, and is greatly regarded by the best show champions in America. Broken to stop and drop to hand, quarter and retrieve from land and water, is perfectly healthy and the toughest dog I ever saw. Has been shot over four seasons. Price \$500. Apply to **ARNOLD BURGESS, Hulsdale, Mich.** Aug. 12-11

**FOR SALE**—A number of well broken pointers and setters. H. B. RICHMOND, Lakeville, Mass. Aug. 19-11

## The Kennel.

**FOR SALE.**—Branshew, imported red Irish Setter, imported by Dr. Watt, son of Clarence N. H. March, 1879; is four years old. J. S. Skidmore, of Nantwich, England, says she is a grand bitch in every respect; head not to be equalled; ears hang beautifully low; she is not only a bitch to work and win, but is the best brood bitch I ever saw. Price \$150; dirt cheap. Beautiful Irish dark red setter dog, black nose and eyes; eighteen months old; both sire and dam prize winners, was in breaker's hands six months; will make good one. Price \$25. Llewellyn setter, Champion, color, lemon and white; whelped April 1879; Sire, Champion (Gladstone); dam, Champion Clip, owned by L. H. Smith, of Canada; both sire and dam are prize winners not only on bench, but in the field. Bracketed large, strong dog and will make an extra good one; house-broken. Price \$35. Address **H. L. VON CULIN, Lancaster, Pa.** Aug. 12-11

## THE BLUE STAR KENNEL OR THE COCKER SPANIEL BREEDING KENNEL

**M. P. MCKOON, FRANKLIN, DEL. CO., N. Y.** I sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs have been beaten for ruffed grouse and woodcock shooting and retrieving. **RIVERSIDE HOUSE, Forked River, N. J.** situated directly on the water, in the immediate vicinity of the best gunning and fishing of Barnegat Bay. Fine weekending now. Terms, \$15.00 per day. Boats, with man, \$2 per day. Send for circulars to CHARLES A. SMITH, Forked River, N. J.

### Bromfield House, Boston.

EUROPEAN PLAN.  
MESSENGER, Proprietor.  
**Wild Fowl Shooting.**  
SPRINGVILLE HOUSE OR SPORTSMEN'S RESORT, SHINNECOCK BAY, L. I.  
BY A PRACTICAL GUNNER AND AN OLD bayman. Has always on hand the best of boots, batteries, etc., with the largest rig of trained wild geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by him to his guests and satisfaction guaranteed. Address Wm. N. LANE, Good Ground, L. I. Refer by permission to J. B. Shepherd, 60 Broadway, and Wm. Dutcher, 30 Broadway, N. Y.

### "THE FISHING LINE."

TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinaw, Grand Rapids and Cincinnati Short Line  
FOR THE  
FAMOUS SUMMER RESORTS AND LAKES  
OF  
**NORTHERN MICHIGAN.**  
The waters of the  
**Grand Traverse Region**  
and the Michigan North Woods are unsurpassed, for the abundance and great variety of fish contained.  
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.  
The TROUT season begins May 1 and ends Sept. 1.  
The GLAYLING Season opens June 1 and ends Nov. 1.  
BLACK BASS, PIKE, PICKEREL AND MUSKELGONGE are abundant in large numbers in the many lakes and lakes of this territory.  
The sportsman can readily send trophies of his skill to his friends or "club" at home. No packing fish can be had at many points.  
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with  
Hay Fever and Asthma Affections.  
The hotel accommodations are good, far surpassing the average in countries near enough to all the best fishing.  
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.  
Dogs, Guns and Fishing Tackle Carried Free of charge.  
It is a tourist to make sportsmen feel "at home" at this route. For Tourist's Guide (an attractive illustrated book of 80 pages, containing full information) and accurate maps of the Fishing Grounds and Lakes, send address to J. B. LEE, Gen'l. Pass. Agent, Grand Rapids, Mich.

### To Hunting and Fishing Parties.

**The Pullman Car Company**  
IS PREPARED TO CHARTER THE new cars "Davy Crockett" and "Isaac Walton," which are fitted up with dining room and kitchen, sleeping apartments, lavatories, etc., also provided with racks and closets for guns and fishing tackle, and kennels for dogs.  
Diagrams, rates and other desired information furnished on application to Gen'l. Supt. J. C. Co., Chicago.

### THE SPORTSMAN'S LIBRARY.

THE great pressure on our advertising space compels us to withdraw a list of books and what we have on sale to make room for other matter.  
Any book on yachting or field sports, as previously advertised in these columns, will be furnished on receipt of price. FOREST AND STREAM PUBLISHING CO. Jy29-17

### TRADE—"BEATS THE WORLD."—MARK.

# Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

TRADE MARK  
REGISTERED  
JULY 1877

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Cresote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 31st, 1875, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared, that the unpleasant ODOR and the injurious effects of the Oil of Cresote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to it. The great advantage of this process of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st  
NEW YORK.

### Excursion Tickets

Will be placed on sale as soon as the ice is out. These connections made at Portland with Grand Trunk and Maine Central Railways for all the Fishing Grounds in Maine and Northern New England.  
Tickets may be obtained at Boston City Office, 280 WASHINGTON STREET, and at the Station. Information by mail, if desired.  
JAS. T. FURBER, Gen. Supt. D. J. FLANDERS, Gen. Ticket Agent.

### Chesapeake & Ohio R. R.

The Route of the Sportsman and Angler to the Best Hunting and Fishing Grounds of Virginia and West Virginia.  
Comprising those of Central and Piedmont Virginia, Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.  
Guns, fishing tackle, and one dog for each sportsman carried free.  
The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts.  
The Only Route via White Sulphur Springs.  
Railroad connections at Cincinnati, with the West, Northwest and Southwest; at Gordonsville with the North and Northeast; and at Richmond with the South. All modern improvements in equipment.  
CONWAY R. HOWARD, Gen. Passenger and Ticket Agent, Richmond, Va.

### Hotels and Boutes for Sportsmen

DEALER IN

Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for

**J. Stevens & Co.'s Celebrated Arms.**

BANGOR, Sept. 5th, 1878.

Messrs. J. STEVENS & CO.:  
Gents.—We would like to tell you what we say one of your single 14-bore guns do. Last fall one of our customers shot at an 8-inch ring, 125 yards, and hit it twenty-five times out of thirty shots, getting twenty-five turkeys. We have no doubt but that you make the best shooting gun in the world, and think that to take one hundred of any one make, worth \$150 each, your guns would be sure to win. Yours truly,  
**RAMSDELL & NEAL.**

**JOHN H. MANN & CO., Syracuse, N. Y.**

**THE KINGFISHER.**

Everybody an Expert Fisherman by the use of this New Invention.

**THE ANGLER IS CERTAIN TO CATCH** every fish that bites. Its application is very simple; the line being attached to the ring at one end, and a spooled hook pendant from the other, the slightest nibble at the bait releases a spiral spring which gives the hook a strong upward jerk, securing the fish and rendering escape impossible. It is strongly constructed of brass, heavily nickel plated, and cannot get out of order. Its small size and appearance being exactly like any ordinary line swivel, render it suitable for any description of fishing; as, unlike the ordinary patent trap, it does not frighten the fish. Sample sent by mail, prepaid, 25 cents, currency or postage stamps. Trade supplied.

**R. SIMPSON, 132 Nassau st., N. Y.**

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.  
DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

**DUPONT'S DIAMOND GRAIN,**  
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

**DUPONT'S EAGLE DUCKING.**  
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

**DUPONT'S EAGLE RIFLE,**  
A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

**DUPONT'S RIFLE PG, "SEA SHOOTING,"**  
FFG and FFFG. The FG for Long Range Rifle Shooting, the FFG and FFFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for Export. Cartridge, Musket, Cannon, Mortar and Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by:  
**F. L. KNEELAND, 70 Wall Street, N. Y.**  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder."  
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 64 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. kegs and 64 and 128 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12, and 64 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.  
GOVERNMENT CANNON AND MUSKET POWDER also, SPECIAL GRADES FOR EXPORT.  
OF ANY REQUIRED GRAIN OR PROOF,  
MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

DITTMAR'S  
POWDER.

Champion Shot Gun and Rifle

## POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

All our cans have seals over the screw-cap, with C. Dittmar's signature, and none others are genuine.

Henry C. Squires, No. 1 Cortlandt street, New York, is not, and never has been an agent of this company.

## FOREST & STREAM.

NEW YORK, THURSDAY, AUGUST 26, 1880.

**FISHING AT THE RANGLELEY LAKES.**—We hear from the Rangleley Lakes excellent reports of the trout fishing, which is said to be exceptionally good this season. September is the month in which the largest trout are usually caught, and, though we do not altogether approve of taking the fish so late, as they are then preparing to spawn, there is usually a rush of fishermen to the lakes in the early fall. The Boston and Maine Railroad, in another column, publishes a schedule of fares which may be of use to some of our readers.

**A FAST YACHT.**—Mr. Jas. G. Bennett's new steam yacht Polynia has turned out an exceedingly fast vessel. She beat the famous little Leila, of Bristol, last Thursday in Narragansett Bay. As the Leila is easily good for nineteen miles, the Polynia must have been making twenty, and, as she was not crowded, twenty-one or twenty-two are within her capacity. This makes the Polynia at least an eighteen knot steamer, and probably the fastest steam yacht in America.

—The suggestion of a correspondent that the stations and baggage cars of the railroads entering New York be posted with the law prohibiting the carriage of snared game and game killed out of season, is simple, sensible and practicable. The plan, if adopted, will undoubtedly do very much to lessen the traffic in this plunder. Let it be tried. It will at least accomplish more than an after-dinner speech.

**THE AMERICAN ASSOCIATION MEETING.**—The twenty-ninth meeting of the American Association for the Advancement of Science commenced yesterday at Boston. This meeting, of which Mr. Lewis H. Morgan is President, promises to be very largely attended and very successful, and we shall hope to give some particulars of it in next week's issue of FOREST AND STREAM.

### HOW TO STUDY NATURE.

HUXLEY modestly calls his book\* an introduction to the study of zoology, but the reader who obtains a few crayfish, or crawfish, as we Americans prefer to call and spell it, and takes note of their outside appearance as described by the author, and afterward dissects them according to the very plain directions laid down, will find himself a zoologist by the time he lays the book down, and will then be qualified to take up a bird, beast or fish, and describe it, or at least understand it, its structure, movements and all that comes under the observation of a trained naturalist. O that such a book had been written years ago! What months and years of pottering it would have saved us! The common crayfish of our fresh waters is a most wonderful animal to those who study it first, but it is not a bit more wonderful than others, and its study will only prepare the student to go further; will tempt him, in fact, and he, or she, will find the desire to learn more grows and takes possession of one like an evil habit. This book, written by one of the greatest living zoologists, is a valuable contribution to our small list of really good primary zoological text books, and the story is most simply and charmingly told, being as free from all strange terms as it is possible to be and yet be explicit, although, as a matter of course, the reader must learn a few names of parts of whose existence he was before ignorant. He begins by telling us that many persons seem to believe that what is termed science is of a widely different nature from ordinary knowledge, and that the methods by which scientific truths are ascertained involve mental operations of a recondite and mysterious nature, comprehensible only by the initiated, and as distinct in their character as in their subject matter, from the processes by which we discriminate between fact and fancy in ordinary life, and that what is called science is only that common sense which sees things as they are, or, at any rate, without the distortions of prejudice, and reasons from them in accordance with the dictates of sound judgment.

After giving a description of the external parts, accompanied by a plate on which letters refer to the names of the parts, its movements, food, habits, method of capture, etc., he says: "Thus far our information respecting the crayfish is such as would be forced upon any one who dealt in crayfishes, or lived in a district in which they were used for food. It is common knowledge. Let us now try to push our acquaintance with what is to be learned about the animal a little further, so as to be able to give an account of its natural history," etc. And thus he leads the reader along into the mysteries of the structure, of its shell or exoskeleton, the attachment of its legs and swimmerets, its jaws, gills, circulation of blood and its digestive and generative organs, until finally there seems nothing more to be known concerning the individual.

It must be borne in mind that it is the common crayfish of Europe which he is describing, and that we have several species in different parts of our country which differ in shape of claws and other particulars which are really unimportant as the European animal is the type of the family, and although the common crayfish is the title, and its life history and structure the main part of the book, all the relatives of the animal, such as shrimps, lobsters and crabs, are considered, and their peculiarities treated of, so that one gets a good idea of all the crustacea at the same time, and getting it, so to speak, from the fountain head, he is sure that what he is learning is what is accepted as truth by scientists in all lands.

We have had so much stuff offered to the public as popular natural history, which was compiled by men who did not even know who was good authority and who was not, that we regard it as the sign of the beginning of a new era when men like Huxley begin to write books for the people instead of only for the learned. The publish-

ers (Appleton & Co.) have published many of the works of modern scientists, but we doubt if any volume of their "International Scientific Series," of which the present volume is the twenty-eighth, will do more toward awakening an interest in the study of the life by which we are surrounded, and a knowledge of which is really necessary in order to form an idea of man's place in nature, than the present one.

**THE FALL MEETING PROGRAMME.**—The very moderate and unpretentious list of competitions for the eighth Annual Fall Prize Meeting at Creedmoor has been issued and may be found in our rifle columns. There is plenty of variety in the competitions, however, and riflemen who shoot for the pleasure of the art may find plenty of chance for enjoyment in the few days of the meeting. Reduced into plain, hard figures, the prize list is a meager affair; very much so. There is nothing to tempt the grubbers for gain, who make the rifle a lever for their purposes of self-enrichment. There are simple badges whose value ranges far above their intrinsic worth in the eyes of their holders, because they represent an achievement, a victory won, and a struggle successfully gone through with.

With the true sportsman's idea in the minds of the contestants, it would be sufficient to prepare a programme of matches to secure a roll of entries. If it is necessary to bait the programme with a liberal prize worn, or to sugar-coat the shooting conditions as though the match were a nauseous affair only made endurable by an addenda of liberal prizes, then it were better that no match should take place. The National Rifle Association is not fulfilling it's object—the encouragement of rifle practice—if it is only to act as tub-monitor for a set of greedy cormorants who flock about to pick over the good things of the feed set before them. The programme for the September meeting will afford little satisfaction to these gentry. To lead in a match brings honor, but little profit, and this as it should be, if we are not to have the logical result of liberal prize lists as instanced in the recent Wimbledon false-marking scandal. The prospect already points to a good meeting. The meeting between the regulars and the militia will be more nearly on an equality than at any previous time. The men of the army have been working up, anxious to show the people generally that they, as professionals, are not ridiculously behind the amateurs of our State regiments. The meeting gives promise of good management under Col. Bodine, and, with a fine spell of weather, there is a prospect of a deal of good work in the several contests.

**FAIR DEALING FOR SPORTSMEN.**—The letter about Cobb's Island is a sufficient reply to our request that its author should tell us about the present accommodations there for sportsmen, and our Poughkeepsie correspondent is doubtless as much pleased as we are ourselves to have such an explicit account as that given by "Chasseur." Cobb's Island is not by any means the first place which has ruined its greedy managers and obliged them to come down to a reasonable scale of prices. We never knowingly recommend to our readers a place where extortion is the rule; but now that the landlords at Cobb's Island have reformed in this respect, we can indorse all that is said in praise of the spot to be had there. The columns of the FOREST AND STREAM are always open to praise of resorts which deserve good words, and to the exposure of other places where the sportsman is fleeced; and it always means to ascertain the true condition of affairs and do justice to all. We will thank our correspondents at all times to bear this policy in mind and to aid us in carrying it out.

—A Baltimore child clairvoyant has discovered the North Pole, which she describes as an island, full of tropical trees and flowers. There are also vast herds of monkeys, ostriches, swans, geese, ducks, quail, robins and humming birds. Rather an inviting field for a good dog and a breech-loader. Perhaps when the other game fields of the world are exhausted, the sportsman may be "first in" at the Pole.

\*The Crayfish, an Introduction to the Study of Zoology, by T. H. Huxley, F. R. S., with eighty-two illustrations. [New York: D. Appleton and Company, 1, 3 and 5 Bond street, 1880.]

## The Sportsman Tourist.

### CAMP NOTES.

BY BOBINES.

[Continued from page 46.]

WALKING along the mountain road, admiring the lovely wild flowers and the immense moss-covered rocks over which water is trickling to bathe and refresh the weary hiker, I forget that there are others about. I take a path worn smooth by the wanderings of grazing cattle, whose bells are heard tinkling not unharmoniously here and there, and following in its numerous windings down the mountain side, come suddenly upon the long, still pool where the trout I am in search of has his abiding place. There, under a large boulder in the middle of the pool, is his lair, from which position he rose, to miss my fly, the day before. He's a rouser, and a wary old fellow, smarting under the remembrance of sundry pricks from the fishermen in camp, and must be carefully approached. I start in at the foot of the pool and wade carefully toward the rock, never taking my feet from the water, to avoid a splash that would send wavelets up the pool to notify him of my coming. I am within a hundred feet of him, and commence to cast my line toward the spot, approaching gradually, and unreeling the line the while to give the longest cast of which I am capable. Presently the flies are seen flitting over the very point I would have them; and as they alight upon the water softly, gently, every nerve thrills with expectancy and excitement. There is a small ripple seen, then an involuntary strike, and a miserable little black-speckled chub is reeled toward me. He is contemptuously disgorged from the hook and thrown ashore, with directions to remain there for food to frisk. The one will "talk to himself" when thus alone upon the stream. Many interesting conversations have I held with birds and trout, and quite entertainingly have they replied to me. My flies are again in the air; the line is lengthening, and the next cast will send them to the very spot. There they light again, but no response towards my endeavor. I cast all about the rock, under the neighboring bushes, near the head of the pool, inquiring the while in my mind, "What is the matter? why he does not show himself. I talk to him, telling him what a beauty he is, and how provoking it is in him to thus secrete himself; but never a fin does he show. I finally conclude he has discovered me, and he being the particular fish I am after, with nothing else to do, I wade carefully ashore, sit down upon a mossy rock, with feet dangling in the water, lay down my rod, light my pipe, take out my note book, and jot down what I see, hoping that while thus engaged my victim may reveal himself in feeding on the natural flies that are bobbing over the water.

What countless living creatures one encounters when sitting thus quietly in the woods. Birds hop about in the branches overhead, twittering and chattering to one another while looking down upon you in a comically suspicious manner, almost asking you what you are up to, anyhow. Fly-catchers dart from the trees, and with uttering aim capture the moths and flies that are skipping about. Kingfishers dive for minnows and nowts close by your feet, throwing water in your face from their plume. Highholds regale their young with grubs that they bring momentarily from a neighboring meadow. Little speckled woodpeckers search for insects and larvae in the bark of the surrounding trees, giving wee grunts of satisfaction every time they impale upon their barbed tongues. Frogs of all sizes, with voices from that of a deep baritone to the shrill treble, give out their single, jerky notes as though fired from a pop gun. Butterflies take their tortuous flight through the dense thickets and over the tree tops without ever touching a branch—a feat that would seem impossible as you look upon their course. Gnats, punkies, mosquitos and flies alight upon your nose and hands, taxing your fortitude to the utmost in avoiding spatters, though that you may not frighten away the birds. The mosquito, like the rattlesnake, gives warning before he strikes, but the punkie is a contemptible copperhead, biting before declaring himself. Ants and brightly-colored beetles scamper across your paper, arresting your writing that you may scrutinize and admire them. An ant is a colporteur of no mean description. He can carry many times his own weight, but is a connoisseur over the bottom of the sea. He never turns aside for any obstacle in his way, never seems certain as to where he is going nor why. I have just been watching one back up a tree with a dead bug in his mandibles, which he has dragged from twenty feet away, changing his direction more than a thousand times. What he will do with the beetle when he hugs him down on the other side of the tree no mortal can foretell. There is a checker, almost within reach of my finger, as he pokes listlessly about over the bottom of the creek, sucking sand and mud into his long snout and immediately squirting it out again, causing a dirty cloud all about him, and then moving on, overturning sticks and rooting under stones, forever looking for something that he never finds, aptly reminds me of men seen upon our streets at home, lounging about the corners sucking filthy clay pipes and expectorating tobacco juice about their better betters, then moving on to get out of their own filth and to bespatter and nasty a new neighborhood. While observing the sucker a muskrat has quietly taken a seat on the very rock under which my trout is supposed to be, confounding him! There he sits, unconcernedly breakfasting on a bunch of clover which he has brought with him. Now he swims gracefully down the pond, climbs upon an old log, and washes his face with his black paw, then he will play and cavort within reach of my rod until I tire, when in a twinkling he will be gone, and, for the life of you, you cannot tell where. He has the power of becoming invisible in clear water not possessed by any other creature of my acquaintance. I note the wood robin (*Turdus melodus*) does not adhere to his accredited time for singing. He is thought to give forth his exquisite melody only early in the morning and late in the evening; but here I have heard him at noon, and at the dusk, and below me, at the water's edge, I hear a plaintive, pleading cry of some creature in distress. I must see what it is, even at the risk of disturbing the trout and driving away my inter-

esting friends. No one should fail to respond to such an appeal as that. Poor froggie! it's you, is it? And that ugly water snake has you by one hind leg. Cause enough for alarm and the wild war for a second. With a search for a stick the snake was vainly endeavoring to turn the frog so as to get his head in his mouth. The frog resisted desperately, kicking with his free leg and calling on me pitifully for help. It came with a whack over his snake's back that sent him writhing into the water and set froggie free, who made some marvelous leaps down the bank and disappeared under a stone in the pond without waiting to express his thanks for the rescue. While returning to the bank, I happened to appear at the margin of the pool, and, not seeing me, occupied himself in overturning stones with his great black paws. He seems to be searching for larvae and crabs, for momentarily he sits erect and conveys something to his mouth with both paws. Having examined the shore upon his side of the pond pretty thoroughly, he locks anxious to mine, scrutinizing the premises as though anxious to investigate that insect. To my surprise he enters the water and swims directly toward me. He is an ugly-looking chap, but quite a graceful swimmer. As he nears the shore I wade out to meet him, at which he does not exhibit the slightest concern. His quills all lay smoothly upon his back while he swims, and he seems to be unable to erect them when I poke him with a stick. Evidently I have him at a disadvantage. I thrust him under the water, and he turns over on his side twice from the pressure of the stick, and rises almost exhausted to the surface. He's the most helpless creature for so large and homely a one that I have yet formed an acquaintance with. I am tempted to grasp him by one of his hind feet, but am dissuaded by the close proximity of his bushy, bristling tail, and push him ashore, where he lies utterly used up and grunting as though in great distress. Soon he revives and shows a disposition to crawl into the bushes. I touch him with a stick, when instantly the quills upon his back become erect, every one standing in an opposite direction from his mate. Had the creature been dipped into a pot of glue, and a peck of quills emptied over him, a representation of his appearance would be complete. Try as I would, I could not touch his head, which he kept well under his body, and turned his tail toward me as I attempted to look him in the face. Touch him on the forehead, and he turns away, and in that direction in a manner that caused me to congratulate myself that the sick and not my hand received the blow. Having played with him to my satisfaction, and concluding he would never make a "bosom companion," I left him to scramble into the thicket while I once more regained my seat on the rock.

Scarcely had I noted my interview with the porcupine in my note-book when the very trout that I had been waiting for broke, almost under my nose. There he is now, with head and tail up, his side toward me, upon which every vermilion spot is plainly distinguishable. His tail moves slowly from side to side and his pectoral fins fan the water continually. Even his conical pupil can be seen, so close is he. What a beauty he is! He seems conscious that a foe is near, for his eye moves restlessly, and he makes several hesitating motions as though he would like to capture a natural fly that is fluttering just above his head. He starts to evade it suddenly, then returns to his position again, evidently with one eye on me and the other on the insect. I sit motionless, and cautiously and slowly reel up my line until only the leader hangs from the end of the rod. I wait, and when at last he darts at the insect that has been enticing him, making the water boil as he engulfs it and swiftly returns to his old position. I conclude my time for action has arrived, and tremblingly extend my rod and drop the end upon his nose, just over his head. His fins vibrate more rapidly, his tail moves more rously, giving a peculiar spiral motion to his body; he starts toward the bobbing fly, then turns back again; he comes again, this time with more determination in the movement, and I hold my breath and tremble in every muscle with a feeling that my body will fly to pieces if he keeps fooling with me much longer; he turns swiftly, just as I would, and I see his head, and he concludes he won't. I give a sigh of relief, mixed with disappointment and disappointment; every nerve in my body is quivering, and I feel as though I could leap into the creek and end the contest. The trout still moves about restlessly and watches the fly. He makes sundry feints at it, which sends my heart and lungs into my mouth, almost suffocating me. I swallow them as best I can, when he turns away and swims in a wailing despatch. A trembling, incautious movement of my arm, and the dropper-fly upon the water, and, before I can get it away, that confounded trout has it fastened in his jaw and is skeddaddling up the pond with it at a rate that makes the reel sing with its rapid revolutions. Before I can jump into the pool and prepare for the fight, he leaps from the water twice, shaking his head desperately, and creating such a splashing as to send the suckers darting by me in sufficient numbers to furnish me with a dinner. He is fast! I have him too, in his upper jaw, with no use of release, if tackle proves true and strong. No danger in my shaking your head in that manner, old fellow, you must come to creed this time. Steady, there! You shall not reach that stump—that will never do. Whoa, just missed it, by gracious! Well, you are a lively chap; want to get under that rock, hey? let us see about that; just pull in the spring of that rod, a while, and we will see who is the strongest! Ah, ha! that brings you to terms, doesn't it? Ready to capitulate? Very well, just let me slip this landing net under you. No! All right, try it again; but that brush heap you shall not reach unless you break my well-tried bamboo. Tired again after that splurge, are you? Well, we'll try the landing net once more; let me reel you in a little first; there, now you are within reach of my hand. What a beauty you are, and what a pity it is to break you from this charming pool! How your silver sides reflect the colors, and as I lead you into the sunlight how you change to gold and ruby and emerald—and bless me, every other color worth admiring. What a bright carmine your fringed gills are, and how your pink tips harmonize with your general "make up." A noble fight you have made, my dear fellow, and a very handsome fish you are. There, reel upon that stump, and I will give you a drink of water while you are under the willows yonder; for, from the manner in which he is just now splashing about, I conclude he can be made to keep you company. Then, what a handsome

brace you will be to exhibit to the campers as trophies of my morning's work.

What a picture is revealed to me as I wade out into the stream. To the left, a rock-bound shore overhung with mossy overhanging rocks and a water-beech. Through them are seen the rhododendrons, their pink and white clusters peeping out everywhere. In front, a miniature falls gracefully rippling and winding among and over moss-covered rocks. Beyond, a smooth sheet of water, under which every stone and pebble can be seen, and from the quiet surface of which the mountain and sky is clearly reflected. To the right, willows with their yellow foliage, over which spruce and hemlock with their darker shades of green, and the hemlock with their dark, completely covered with moss, and through which delicate ferns are growing; behind it, in swampy ground, a cluster of cardinal flowers (*Lobelia cardinalis*), almost a month in advance of its regular blooming time, and whose bright scarlet blossoms appear all the lovelier by reason of the becoming background of tall green timothy stalks that wave to and fro in the gentle breeze. Daisies, with their round, full faces so suggestive of good humor and jollity—abound everywhere. No glen is too dark for them, no meadow too light, no sandy plain too hot or dry, no swamp too wet or cold; the ever cheerful daisy looks up at you from meadow, hill and dale; among the first flowers to greet you in the spring, the last to bid you adieu in the fall. Bless the daisies! In the meadow I see tall purple plumes of the iron-weed (*Vernonia non-paracensis*) and wild sweet william (*Phlox maculata*), with sprinklings of yellow and gold from the buttercups and primroses (*Primula occidentalis*). The air is fragrant with the perfume of the now blossoming milkweed and musical with the warblings of the thrushes. Overhead, through the graceful branches of the trees, the clear blue sky, with white and fleecy clouds wafted hither and thither to suit the temper of the wind. What a scene! How I wish for an artist to take it down, and enjoy it and let me free to catch that trout!

Halloo, what sound is that? I hear it once again in an echo against the opposite mountain, to be repeated all along the valley, when I recognize a blast from George's horn. Hark! there it comes again, in three long blasts—a signal that dinner is waiting, and then two short notes to tell me that company has arrived. I cast hurriedly, and dashes and have a rise, at which I strike nervously, and carry away the upper lip of the fish, freed from the hook, darts into the pond and rises within easy view. He rubs his nose against a stone, opens and closes his mouth, winks and blinks and seems to be meditating upon the situation; or, perhaps, wondering what sort of an infernal fly could carry away a fellow's lip. Just then he got a glimpse of me, and darted up the pond like a rocket, and was gone. Concluding he had enough of me for that day, I reeled up my line, climbed to the mountain road and hurried into camp.

### RAIL SHOOTING ON THE DELAWARE.

CHESTER, a town of some commercial importance, situated on the Delaware River not far from Philadelphia, is now, and has been for years, the headquarters for sportsmen devoted to this kind of shooting, and there are many fond of the pursuit of upland birds—woodcock, grouse and quail—and again many to whom the (to me questionable) excitement of shooting ducks, offers more interest. There are many who for years and years in succession are to be found at the quail season at Chester, as eager for the sport as though it combined all the attractions of both.

The best time for shooting occurs during the high tides of the full September moon, for, other things being equal, the higher the tide the larger the bag.

Having obtained a "pusher" at Chester, you start about an hour before the tide begins to rise and cross the river to the flats, and are pushed by your boatman to the flats, and the reels as the tide allows you to go. With your dorky pusher at the stern with his long pole, you stand firmly braced in the bow. If you do not get excited, the chances are, if you are a tolerable shot, that you will kill almost all your birds; but, as for retrieving them, that depends on your boatman. Left to yourself, you would not catch half the birds that you would with a pusher.

You may think you mark the birds down, but the bunches of reed are so much alike that two to one you never see your bird again, although he may be not a foot away, clinging to some hidden weed with but the end of his little bill above water. But, with a good pusher, whose eyes are accustomed to discover the minutest difference in the color or size of a reed, you will probably lose but a few birds, except wounded ones, which you may as well give up at once. Apart from the natural repugnance of a true sportsman to kill and not retrieve, you will do better to leave them, for in the ten minutes you consume in searching you may shoot five or six birds. The time of shooting does not exceed three hours a day; but the immense quantity shot in that time would make one think that the birds would soon be exterminated. Not so, however, for although it is not unusual for a single boat to bring in a hundred or more birds and the flats during shooting hours are covered with boats, yet year after year the rail is found seemingly in numbers undiminished from the thousands of shots daily fired and great quantities of them killed.

The one great drawback to this kind of sport is the danger. This is great, and one careless shooter sometimes spoils the whole day's pleasure for many. As the birds are so much alike in nature and color, and the position of the shooters is but poorly defined by the poles of the pushers, as might be expected with so many shooting at once, many accidents have occurred. The low flight of the birds is another cause of danger, and a careless shot is often followed by a shout from another boat issuing from some poor fellow whose circles, even if he be lucky enough to escape without serious injury. There is scarcely a single pusher for an hour or more, but the negroes but can show the shot marks on his person; but, as they say, they soon get used to these little irritating occurrences. A trifling occurrence it was not, however, to one whom I saw lose his eye in this way.

Taking it all together, the danger run more than overbalances, in my mind, the pleasure of shooting on the flats.

However, as a means of relaxation, if one is willing to incur the danger, it will help to pass the time between seasons. The birds, when shot, are small and hardly worth

THE SCRIBE.

### PACKARD'S ZOOLOGY.

DR. PACKARD'S work is one of real value both to the student and the teacher of zoölogy. Within the past few years several so-called Manuals of Zoölogy have appeared, but, though some of them were not without a certain value, there was no one of them all which was not open to severe criticism. It is pleasant, therefore, to be able to speak of the present work as one of the very best of its kind that has yet come under our notice. It is not, of course, wholly free from mistakes; but such a book never can be perfect, and the few errors which are noticeable are, for the most part, of minor importance, and will no doubt be corrected in the subsequent editions, which will unquestionably be called for.

The work is admirably adapted for use as a text-book, and perhaps even more so for use in the laboratory, and—a fact which will especially recommend it to the beginner—is little burdened with those technical terms, which proved for so long a time a stumbling-block to one who attempts, without previous training or the assistance of more advanced workers, to gain a general knowledge of the structure of the principal types of animal life.

The treatment of the subject in hand is very good, the definitions and descriptions of structures clear though brief, and the language employed is such as can be comprehended by the general reader. This indeed constitutes, to our mind, one of the principal excellences of the book, for it is certainly an unusual state of things to find a work—especially one which treats of invertebrates—in which half a dozen consecutive lines will convey any intelligent impression to the mind of the non-scientific reader.

We are unable to give, at any length, the plan of the present work. The author commences with the simplest and most elementary forms, and proceeds from these through the higher groups, ending with the vertebrates, a method which seems to us much better than working down the scale from the higher groups to the lower.

The first eight chapters are devoted to defining the great groups of the animal kingdom; Chapter IX to the Comparative Anatomy of Organs; Chapter X to Development. The five succeeding chapters, which conclude the work, treat, somewhat briefly, the Geographical Distribution of Animals, the Geological Succession of Animals, the Origin of Species, Protective Resemblance, and Instinct and Reason in Animals. These, containing as they do summaries of many of the latest views on these most interesting topics, demand perusal by all who are fond of the study of nature. The volume is made still more useful to the student, or the reader who may desire further information with regard to any special group than can be given within the limits of a general work like the one under discussion, by a bibliography, in which the principal works necessary to the student of zoölogy are enumerated. There is also a glossary defining the more important technical terms employed.

The volume is well printed and very fully illustrated by wood-cuts, some of them original, but mostly taken from other works on zoölogy.

Taken as a whole the work is one which we can very cordially recommend, either to the student or the general reader, and it is indeed indispensable to any one who is interested in any form of animal life.

To the courtesy of the publishers, Messrs. Henry Holt & Co., we owe the opportunity of reproducing the accompanying wood-cuts of two American forms figured in the zoölogy. They will be interesting to our readers, not only in themselves, but also for comparison with certain extraordinary illustrations which recently appeared in the columns of a contemporary purporting to be reproductions of the figures of the Rocky Mountain sheep and the musk ox given in Dr. Packard's work.

### THE CAPTIVE WOODCOCK.

MR. MORRIS' tame woodcock, Dick, continues to excite great interest among sportsmen, and his owner's cosy little flower and bird store is daily visited by numbers of the fraternity, who take great delight in watching the bird. His new quarters are much more commodious than the old, and his owner has removed him to the greenhouse, where the noise of the street and the persistent attentions of the small boy, who always takes such delight in poking up the animals, no longer disturb him. The increased room and the quiet seem to have a beneficial effect upon Dick, and it appears that he is gaining in weight and generally improving in health.

OVIROS MOSCHATUS—Blainville.

It is very interesting to watch the bird feed, and to see him, after he has satisfied his hunger, plunge his bill several times into the sand, and then, walking to the water-dish, wash it by gently shaking his head. Dick is somewhat fastidious about his food, for some time ago Mr. Morris, having received a lot of the bright red worms found in stable yards, offered them to the bird, and though at first he seized them he declined to eat a single one. His master thinks that the worms tasted of the ammonia of the stable yard, and this idea is confirmed

more than his own weight of worms. This statement will excite the wonder of every one, but when we consider the total number of worms devoured by a bird in a year, or by a number of birds in any given time, we are at a loss whether to be more astounded at the voracity of the bird or the multitude of the worms which must exist to feed them.

Mr. Morris' letter is as follows:—

JEFFERSON MARKET, New York, Aug. 18th.  
In answer to your favor of the 10th inst., I beg to hand you the following particulars about my woodcock, Dick, who is doing well.

From noon Aug. 12th to noon Aug. 13th the bird ate five and a quarter ounces (Troy), or 200 worms. He wanted more at noon Aug. 13th. He weighs five ounces (Troy). The worms were given to him a couple of dozen at a time. I have fitted up a place for him with two breeding cages for canaries. In one is moss and a dish with clayey mud, in which I put the worms. I scatter worms in the moss, and he amuses himself, while not gorging himself with the worms in the mud, by hunting for worms in the moss. He does this for pastime, as he frequently fishes out a worm and allows it to crawl back into the moss without attempting to eat it. In the other cage are moss and a bed of bright, sharp, coarse sand, with a pan of water sunk in the moss. He appears to like to trot about in the sand, and bores into it, but when his bill becomes covered with sand he goes to the water and washes it. I have not seen him drink. His digestion appears to be perfect. I shall get some peaty mud to put his worms in, as I have an idea that the mud he bores in now contains sandy earth, which injures his bill, as this organ appears dull, as if worn by silica in the earth, and not polished, as seen in woodcock in a state of nature. Many sportsmen visit my store to see Dick. I am, very truly yours,

JOHN MORRIS.

At our request Mr. Morris has repeated his experiment with Dick, and the result shows that the recent changes of quarter has had a very beneficial effect. Mr. Morris says,

writing under date of Aug. 23d:—

I made the experiment, as you requested, and found that the woodcock consumed eight ounces of worms in twenty-four hours, and could have eaten more had I given them to him. The bird now weighs six ounces, having increased in weight one ounce since I obtained possession of him.

JOHN MORRIS.

FOOD OF SNAKES.—Frederick City, Md., Aug. 7th.—Editor Forest and Stream:—I noticed in FOREST AND STREAM that Mr. C. R. Shaw killed at Sayville, L. I., a black snake, and on shaking the reptile by the tail a striped snake nineteen inches long came from its mouth, and it was still alive. I write to state that this is of no uncommon occurrence. I have killed plenty of black snakes with striped, or what we call in Maryland garter snakes, in their stomachs, and I have afterwards held up black snakes, just after being killed, and have seen striped snakes come out of their mouth and fall on the ground and run as well as ever. On one occasion in the Singaree Hills, I killed a large black snake six feet long, up a tree. He had in his stomach one pine, or red squirrel, one striped snake three feet long, and nineteen eggs the size of pigeons' eggs. When I was in the act of skinning the black snake, the striped snake came out of his mouth and seemed to be as lively as ever.

FRANK SCHLEY.

NOTES ON SNAKES.—Burke County, Ga.—Editor Forest and Stream:—Being aware of the fact that all accounts of the wonderful pertains to snakes, regardless of the integrity of the writer, are taken *cum grano salis*, I will simply state what I saw yesterday. In walking on the road I discovered what looked like two snakes in very close proximity. Upon a closer examination I found a king snake swallowing a rattlesnake—the former three and a half feet in length, about, but apparently considerably smaller than the latter, which was the possessor of five rattles and a button. I knew that the "king," called "chicken snake," would eat chickens, frogs, etc., but never supposed they would attempt an undertaking so apparently impossible. It was slow work, and I looked on in vain so thoroughly disgusted that I shot them both, leaving them for the dirtiest scavenger—the buzzard not excepted—the hog, which in a short time devoured both with a relish no doubt. Whether this is anything uncommon I know not, but it astonished me, and will, no doubt, be a surprise to some of your readers.

D. P. D.

We regret extremely that our correspondent did not see the play out, and further, that he did not give us more particular details of the manner in which the king went to work to devour his prey. Will he not give us such particulars now?

OVIS MONTANA—Cuv.

by the fact that these same worms, after having been kept for a few days in fresh earth, were devoured with as much apparent relish as the common worms.

The voracity of the woodcock is proverbial, but opportunities for exact observations on this point rarely occur, and it seemed important in this case to take advantage of Dick's captivity to arrive at some definite results as to the amount of food devoured by him in one day. We therefore requested Mr. Morris to make certain observations; and in his very clear letter, given below, there is food for much reflection. It appears from these experiments that the woodcock, even in captivity and deprived of the exercise which a wild bird takes, devours daily

*Editor Forest and Stream.*—I notice that the snake is coming to the front, and perhaps the following true tale may be appropriate to the *snake* column: A few years since I was engaged in clearing a scrub-oak lot, and one day while I was resting I heard in the brush just in front of me a snapping of twigs; on looking to discover the cause, I found a black snake, some three feet in length, in the act of swallowing a striped snake; they were both twined around the twigs, the striped one holding on for dear life; but the black was too much for him, and had engorged more than one-half of his victim when I first found them. I watched them till I saw the tip of the striped snake's tail disappear down the black's mouth, when, with a quick stroke of my bush-scythe, I cut the reptile in two, when, to my surprise, out ran the striped snake, apparently unharmed, and made his escape.

WEBB.

*Pembina, D. T., Aug., 11th.*—*Editor Forest and Stream.*—In a recent issue of *FOREST AND STREAM*, a correspondent gives some items upon the capacity of the ophidian gullet, to which I will add my experience. When a boy of twelve, I once killed a largestriped snake. He bulged out so strangely, that I cut him open and found a huge toad nearly as broad as my hand, and still able to kick feebly. Whether or not the snake believed in jewels in the toad's head, he evidently considered the specs valuable for dietetic purposes, and from the shape of the reptile of sedentary habits, it might with propriety be called a "square meal." M. A. BROWN.

*Pleasant Plains, Aug. 13th.*—*Editor Forest and Stream.*—Noticing your article in paper of Aug. 5th, on the cannibalistic snake, I would say I killed one Tuesday, Aug. 10th, under similar circumstances. While out after woodcock I came upon a black snake over four feet long in the act of swallowing a large garter snake. He had him half way down, and evidently intended making a clean job of it. He lay motionless until I struck him with a stone, and then ejected the garter snake, which was nearly used up, the neck just back of the head being lacerated. The black snake then raised his head toward me in a threatening manner, making no effort to follow. I could detect no hissing. It would seem from this that snake will eat snake, and that the victim is seized by the head.

CAPT. CLAYTON.

An exchange contains the following item with regard to an enormous rattlesnake recently received at the Smithsonian Institution, which is interesting. It is as follows:—

The largest rattlesnake probably, that has ever been seen in Washington, arrived at the Smithsonian Institution on Saturday from Florida, forwarded by Mr. James Bell, who is in that State on special duty from the Interior Department. The snake belongs to the *Crotalus adamanteus*, or diamond rattle family. It is about eight feet long, will measure twelve inches around the body and has twelve rattles and a button on the end of its tail. It came in a close-woven canvas bag, and was at once dropped into a large square wooden box, with wire work sides and a sliding cover, prepared for the reception of venomous reptiles. Not having been fed for some time it is particularly ferocious, and its rattle is constant on the snake whenever any one approaches or there is any noise in the room where it is kept. This monster snake is to be killed in a day or two, for the purpose of taking a plaster cast of it. The manner of killing for this purpose is by putting the serpent in a close vessel and admitting a sponge saturated with chloroform. This preserves the form so that a life-like cast may be taken.

**ALBINOES, NO DOUBT.**—A correspondent from Wawayanda writes to us about some cream colored rats with pink eyes which are multiplying about his buildings, and asks if they are albinos. He describes them as abundant and more bold than common rats, and states that they do much damage, gnawing everything within reach. We think there is no doubt that they are albinos, for white rats and mice usually, or often, produce albinos.

**FOOD OF SQUIRRELS.**—*Wawayanda, Aug. 14th.*—*Editor Forest and Stream.*—Living in a locality where squirrels are quite numerous, I have noticed they do not subsist entirely on nuts and acorns, as a great many people suppose they do. A number of the little ground squirrels have taken up their abode in the ice house only a few steps away from the dwelling house, and almost any time these little fellows can be seen scampering around the yard. A short time since, in company with some friends, we were watching one of them playing around, when all of a sudden he jumped in the air and caught a large black beetle, and then quietly sat down on his haunches and pulled off the bug's head and eat it, and then finished the body with an evident relish. Again I noticed the same little animal picking blackberries off a bush and eating them, seemingly enjoying them very much. My brother, driving along the road one day, saw a squirrel descending a tree from a robin's nest with a large egg in its mouth, and scampered off in the woods with it.

WALKELL.

Red squirrels are great robbers of birds' nests.

*Pembina, D. T., Aug. 11th.*—*Editor Forest and Stream.*—In your last number I see a communication which I received from a friend in regard to the economical habits of the gray squirrel, and would like to add my confirmation. In the fall of 1876, while strolling through an orchard in Ohio, I saw a squirrel run into a pile of rails with a large nut in his mouth. Prompted by curiosity I overturned the pile and found no less than three pecks of butternuts snugly piled in a cavity. The store was tempting, but admiration for the industry of the little "varmint" prevailed over cupidity, and I replaced the rails and left it undisturbed.

M. A. BROWN.

**MOCKING BIRD IN CANADA.**—The *Strathroy* (Canada) Age, of July 1st, notices the appearance on the grounds of Mr. L. H. Smith, of that town, of a mocking bird. This species is not often found so far northward, and its occurrence in Canada is noteworthy.

## Fish Culture.

—Address all communications to "Forest and Stream Publishing Company, New York."

### NEW YORK FISH COMMISSION.

#### To the Public:—

The Governor of this State declined to give his sanction to the usual appropriation for the maintenance of artificial fish culture, the means whereby the public waters of the State have been stocked with the choicest game and food fish to an extent that has created plenty where before there was scarcity. This unlooked for action, the reason for which has not been communicated to the Commissioners of Fisheries, leaves a valuable public property in waters, buildings, hatching appliances and stock of fish without the means of available use or even of preservation. The stock fish, many thousand in number, requiring daily care and feeding and capable of producing annually 5,000,000 of fry, are the fruit of many years' careful selection and breeding, and if lost now can not be replaced without years of labor and many thousands of dollars expenditure. The State hatchery of Caledonia, acquired at a cost of \$15,000, is, in respect to its supply in quantity and quality of water, its equipment in the most approved appliances for breeding, its skilled and experienced operators, its supply of stock fish, and in the success which has attended all its operations, the most complete and valuable of its kind on the west side of the Atlantic Ocean. What has been done by the commission toward replenishing exhausted waters with the finest game and food fish is too well known to the public. The multiplication of shad in the Hudson River to the extent of many million each year, so that the cost to consumers has been largely reduced within the last ten years, alone justifies all the appropriations that have been made by the State for the promotion of artificial fish culture.

The commissioners cannot consistently with the duty committed to them by the Legislature permit this valuable property and the important interest involved in its use to go to decay and destruction by reason of the refusal of the Executive to sanction the appropriations necessary for its support. They therefore announce to the public that the operations of the State hatchery will, if need be, and as far as shall be necessary to save the State from loss, be continued under the personal responsibility of the members of the commission, after the close of the fiscal year and until the Legislature shall have an opportunity to review the action of the Governor, in the hope that the enlightened sense of the members of the Legislature will sustain them by making the necessary appropriations at the earliest possible stage of the session; or, failing to do this, will provide by law for such a disposition of the property as will save the sacrifice which may result from a failure to provide the requisite current support.

ROBERT B. ROOSEVELT, President,  
RICHARD U. SHERMAN,  
EUGENE G. BLACKFORD,  
Commissioners of Fisheries.

#### August 15th.

These are good words and bravely spoken. The commissioners stand in the gap and will not allow the results of the work which has been done in past years to go to waste. Many men would throw up the whole affair in disgust at the false economy which saves at the spigot and wastes at the bung, but the New York Commission is made of better stuff. They know that the people of the State are with them, and are aware that their work is for the general good, but it is well for the people at large to know that these men who give their time to this matter and occasionally receive abuse from short-sighted people, serve without the slightest pecuniary recompense, seeking their reward solely in the consciousness of having done good deeds, and in the knowledge that their work is appreciated by all who have paid the slightest attention to political economy. It is needless at this late day to enter into any explanation of the character of their work or its benefits.

The local press throughout the State is commenting on the loss that is entailed by the Governor's veto, and the great New York dailies also come out strong upon it. After speaking of the good work of the commission the *Herald* says:—

Unfortunately the State Executive, amid his manifold duties, has not had his attention directed to these facts, and in a spirit of economy, which would be highly laudable were it more intelligent, he has refused to sanction the annual appropriation for artificial fish culture. The natural effect of this veto would be the immediate ruin of a valuable and flourishing establishment which could not be replaced for years. From such a misfortune, however, the State will be temporarily saved by the public spirited and patriotic conduct of the commissioners.

Messrs. Roosevelt, Sherman and Blackford, in continuing the operations of the State hatchery upon their personal responsibility until the next Legislature can review the action of the Governor. There cannot, of course, be any doubt of the action of that body.

In this connection it may be proper to say that a private citizen has offered to give five hundred dollars for the use of the commission, if needed, and it is to be hoped that his example will be followed. Surely the money will be well invested for the future benefit of the people.

**A GOOD CROP OF SALMON EGGS PROMISED.**—*United States Fishery, Baird, Shasta County, Cal. Aug. 12th.*—We went into camp this year the last week in June, since which time we have all been quite busy with the usual work of making preparations for taking the salmon eggs. Our intentions are to take six million of eggs this year, a considerably smaller amount than has been procured last season. The water in the river is to be distributed in the East, and two million are for the State of California, leaving a margin of a million. Of those for this State, one million will be hatched here at the fishery, and the young salmon will be placed in the McCloud

River. The other million will be carried to Pit River, hatched there, and the young fish deposited in that river. Hitherto, high falls have prevented the salmon from ascending to the head waters of this stream for the purpose of spawning, but the last State Legislature appropriated three thousand dollars to remove this obstruction, and this will open three hundred miles of spawning ground which was previously useless. At present everything is in readiness for the spawning season. The bridge of racks is in place to prevent the salmon going up the river, the hatching houses, etc., are in order. This has been accomplished in a very thorough manner under the genial and efficient supervision of Mr. Livingston Stone, with the assistance of his practical and reliable foreman, Mr. J. A. Richardson.

There is an unusually large run of salmon this year, and it would be a very easy matter to take several million of eggs were it required. Several parties from San Francisco and other parts of the State have recruited themselves in this vicinity, with the pure waters and air of the McCloud and the sport of hunting and catching. They evidently enjoyed themselves, as they were reluctant to leave, and promised a like "outing" next year. The month of September will be a busy one for us, a large force of white men and Indians will be employed, and we have every reason to expect a prosperous season.

GEO. B. WILLIAMS, JR.

### SHAD HATCHING AND SHAD LAWS.

#### Editor Forest and Stream:—

I notice, in your issue of Aug. 5th, in the article upon the work of the Connecticut Fish Commission, an account of their failure in the attempt to hatch shad at the mouth of the Connecticut River. It would seem that the attempt was made by the desire of the committee on fisheries of the last Legislature, and against the better judgment of Dr. Hudson, one of the commissioners. It seems to me that a committee of men of sufficient judgment to be intrusted with the duties of legislators would not, in the management of their private business, attempt such an undertaking without informing themselves as to its feasibility. They would naturally seek the advice of fish culturists. Any intelligent fisherman would be sure to say that anadromous fishes would not probably ripen their spawn, and mature to an extent that would insure fertilization, while remaining in salt water. The intelligent and natural conclusion would be that the fish would not be in a condition for fertilization before reaching their natural spawning ground. Repeated experiments by intelligent and experienced fish culturists show that a large percentage of the fishes are unripe upon their arrival at their natural spawning grounds. The student of nature would argue that the fishes would actually reach their spawning grounds in time to select and prepare their beds before the arrival of the time for performing the final functions of nature.

The foregoing expresses my individual opinion as entertained for several years past. A few years ago, so intelligent a trio as the New Jersey State Fish Commission were supposed to be, made the attempt to hatch shad in the Delaware River at Pennsboro, N. J., a considerable distance from the mouth of the river, but more than a hundred miles below their natural spawning grounds. I at once predicted a total failure of the undertaking. For quietly expressing my opinion upon this and some other absurdities of the commission, I incurred their active hostility, but my predictions proved true nevertheless. Not a shad was hatched, but the State had to pay for the foolish experiment. My opinion upon this subject was quite substantially fortified while making some investigations at South Hadley Falls a few weeks ago. It is well known that one of the earliest successful attempts to hatch shad artificially was at that point. That quiet successful and best advertised fish culturist, Mr. Seth Green, was employed, I believe, by both national and State authority to make the experiment. After exhausting his fund of experience and other knowledge in connection with the experiment, Mr. Green made a failure in the attempt, and packed his boxes, intending to return home next day. In the meantime an old shad fisherman, well known at the falls, besought Mr. Green to let him make a trial. The boxes were unpacked and the fisherman placed them in a tributary of the river, composed of spring water, and the experiment was an immediate success. I believe Mr. Green received the credit. The locally accepted reasons for Mr. Green's failure and the fisherman's success were, that Mr. Green's experiment was made in the warm water of the river, which was very low at the time, while the fisherman's experiment was made in the cooler water of the tributary. With these reasons the matter rested. I have taken the liberty of raising the subject a little farther, and trust your readers will pardon any seeming egotism in my statement of conclusions. First, it is well known at the falls that no shad ever pass over the expensive fishway erected at Holyoke Dam. The result is that the shad are stopped long before reaching their natural spawning grounds, and are, consequently, not in a condition for certain fertilization upon their arrival at the falls. This fact would have operated against Mr. Green's attempt. The fisherman, making his attempt later, and consequently have found his spawners in a ripper condition, yet it is not probable that his attempt would have been a success had he tried it in the warm river water. His success must be attributed to the approximately natural conditions attendant upon the experiment, namely, the ripe condition of the spawners and the cooler condition of the water used, both assimilating the natural condition of things as they would have existed had the shad been permitted to reach their natural headwaters and tributaries of the river, their natural spawning grounds.

A deduction which may be drawn from these premises is, that the close-time laws regulating the setting of shad are erroneous. The prevailing laws fix a given time as a close time, which is uniform for the entire river, as, for instance, from midnight on Saturday till midnight the following Sunday. Now, it has been long known that shad occupy several days in reaching from the mouth to the spawning grounds of such rivers as the Connecticut, Hudson, the Delaware, etc. It must be obvious, then, that the present close-time laws permit the shad to pass the lower seines only to be taken in those a few miles above. If this inference is correct, then it follows that close-time should be arranged progressively. A series of

intelligent observations could be made at the commencement of the shad season, upon which could be based with practicable accuracy a scale of close time for different points on any given river. My own opinion is that no shad should be taken with seines until they make their appearance upon their spawning grounds; then let the work commence at the same time upon the whole length of the stream. Under the prevailing laws, the fisheries at or near the mouth of the rivers have several days advantage over the upper fisheries, which is certainly unjust.

If legislators and other officials would, in their official capacity, exercise the same degree of judgment that they do in the management of their private business, our laws would be more just and official duties more intelligently performed.

MILTON P. PIERCE.

*Aquatic Ponds, Wrentham, N. J.*  
I desire to congratulate the FOREST AND STREAM upon the accession of Mr. Fred Mather as editor of the Fish Department of the journal.

M. P. P.

#### FRIGATE MACKEREL AGAIN HEARD FROM.

NEWPORT, R. I., Aug. 12th.

Editor Forest and Stream:—

The past week has brought many new observations regarding the abundance of the frigate mackerel (*Axiis rochei*) recently referred to in FOREST AND STREAM as having for the first time appeared on our coast. These fish seem to have come in immense schools into the waters between Montauk Point and Georges Bank, and from Mr. Clark's statements it appears that they have been observed in small numbers by fishermen in previous years. Several vessels have come into Newport recently, reporting their presence in immense numbers in the vicinity of Block Island. It will interest the "ichthyophagists" to know that several persons in Newport have tested the fish, and pronounce it inferior to the bonito. Part of the flesh, that on the posterior part of the body is white, but behind the gills is black and rank, while the meat near the backbone is said to be of disagreeable, sour flavor.

It is hard to predict what its influence will be upon other fishes already occupying our waters. Its mouth is small and its teeth feeble, so that it is hardly likely to become a ravager, like the bonito and the bluefish. There is little probability, on the other hand, that its advent will be of any special importance from an economic point of view. It is not likely to be very abundant, and it would hardly pay at present to capture it solely for the purpose of using its flesh in the manufacture of fertilizers.

Mr. A. Howard Clarke, in charge of the fish commission station at Gloucester, has communicated to Prof. Baird some interesting facts regarding its abundance. From these statements it would also appear that the species has been observed occasionally in past years. He writes under date of Aug. 10th: "I have received this morning, from the schooner Fitz J. Babson, just arrived from Block Island, a fish answering to your description of the *Axiis*, having a corset of scales around the pectoral fin as in the tunny. The captain of the vessel, Joshua Riggs, reports that about a week ago he had a hundred barrels in the seine at one time, and saw over twenty schools of them. He saw them as far East as Sugar-Pig Light Ship. They are very easy to capture. Slip the menhaden, do not rush, and are not frightened at the seine. They go in immense numbers, he thinks, as many as one thousand barrels to a school. The day after the appearance of these fish the mackerel disappeared, but he does not know whether the mackerel were driven away by them or not. They feed on mackerel food. Mr. Daniel Hiltz, of the same vessel, says that he caught one of just the same kind in Feb., 1879, on a hook and line on the eastern part of the Middle bank in forty fathoms of water. He took it to Boston, where it was called a young bonito."

"Mr. John Henderson, of the schooner Sarah C. Wharf, says that two vessels caught such fish recently eastward of here. The schooner American Eagle, of Provincetown, took a number of barrels of them into Cape Cod, and sold them for a dollar a barrel. Another Cape Cod vessel—he does not know the name—took about fifty barrels of them and threw them away. All the mackerel seiners from Block Island report seeing quantities of this new fish within the past fortnight. The captain of the schooner Sarah C. Wharf says he first saw them a fortnight ago some fifteen miles off Block Island. The captain and several of the crew of the Ella M. Johnson, of Newburyport, just arrived from Block Island, state they saw abundance of the *Axiis*, but did not know why they were so numerous, came from you at Newport. They was until reports came from you of the ordinary red mackerel food. This crew differ with the crew of the schooner Fitz J. Babson with regard to the ease of capturing them—they think them rather difficult to take; say they flip like porgies, and do not rush like mackerel; they saw ten large schools of them on Saturday last when some fifteen miles south of Block Island."

I hope that any reader of FOREST AND STREAM who has seen this fish will mention it. Some may, perhaps, have an opportunity of studying its habits. The length of those I have seen ranges from twelve to sixteen inches, and their weight from three-quarters of a pound to a pound and a half or more. Those sent to New York market were part of the lot taken by the schooner American Eagle and brought into Newport, whence they were shipped by Mr. Thompson, a fish dealer of this place. It would require from eighty to one hundred of them to fill a barrel, so the estimate of Captain Riggs that there are a thousand barrels in one of the schools, shows how exceedingly abundant they must be. The name "frigate mackerel," used in Bermuda, would seem to be the best name for use in this country, since the fish resembles the mackerel more than they do the bonito or tunny.

G. BROWN'S GOODIE.

CAMP IN TENNESSEE.—Nashville, Tenn., Aug. 6th.—Messrs Newman and Gardener returned from a month's fishing in the upper Stone River. They report having had excellent sport, taking a great many bass and black perch. On a trot line they captured a monster catfish; he weighed forty-six pounds. It is specially noticeable that in all the streams in this State greater quantities, more varieties and finer fish have been taken of late than for many past. Col. Akers, our fish commissioner, received last year from Prof. Baird a quantity of German

carp. Mr. Frank Green obtained forty of these little strangers, to place in a pond on his farm near the city. He reports them having grown to five or six inches in length, and says that he has noticed an enormous number of small minnows in the pond lately. Can they be the product of the carps so recently placed there? At what age do they begin to spawn? Mr. Green says that there were a few mud-cat in the pond when the carps were put in it. Although they have not interfered with the carp. Could it be that the minnows referred to, were of that species. It would be a matter of interest to have an answer from the FOREST AND STREAM to these questions.

J. D. II.

There have been many reports of the spawning of carp which were distributed last year, and it is possible that yours may have done so. It is also possible that the young fish referred to are carp. It does not seem possible that they could be confused with "mud eels." Send specimens to Prof. S. F. Baird, Washington, D. C., and then you will get positive information.

GROWTH OF BLACK BASS IN CALIFORNIA.—The following letter seems to indicate that the black bass grow rapidly in their new home in the West:—

SAN FRANCISCO, Aug. 4th.

Mr. Seth Green:—

Your letter making inquiry concerning the black bass which we received from you in the spring of 1888, is before me.

They were placed in a small lake, containing about 100 acres, back of Oakland, and last week we went there for the first time with our rods to see if we could catch any of them, as we were uncertain as to what had become of them, and were anxious to learn the result of our experiment. To our surprise and delight no sooner had the cast been made, than one was hooked, and whenever we threw in anywhere around the lake we met with a similar response. About twenty were caught in a short time, measuring from eight to ten inches in length, no doubt of last year's spawning. Upon examination we saw a great many small ones, from three to four inches in length, in schools of several hundred. These schools of small black bass were to be seen all around the lake, and we are satisfied that the water of the lake is adapted to them. The lake will be well stocked in a year or two, and we will then have rare sport; until then no fishing will be allowed.

W. W. TRATLOR.

—We regret to say that through an error of our printer the electrolyte of Messrs. Abbey & Imbrie was substituted in Messrs. Conroy, Bisset and Malleson's advertisement, last week, for their own, thereby giving a wrong impression of the reel advertised. If those interested will refer to the advertisement this week they will find a correct representation of this famous black bass reel, which is an improvement on the Frankfort reel, and manufactured only by Messrs. Conroy, Bisset & Malleson, and not by Messrs. Abbey and Imbrie, as might be inferred by last week's advertisement.

SALMO WILMOT AGAIN.—Grand Falls, N. B., Aug. 10th.—Editor Forest and Stream:—I must certainly take exception to some remarks over the signature of "Win. Couper," which appeared in FOREST AND STREAM of 5th inst., and also to the editorial comments at foot. The Ontario salmon, exhibited last fall at Ottawa, are without doubt a distinct variety, and not the true *Salmo salar*, the ova and fry being of a lighter and more delicate color than those of the *salar*, as every one who has been engaged in the artificial reproduction of fish of these classes is aware. The distinctive title conferred on the Ontario salmon, and which is with such singular bad taste objected to by your correspondent, originated with the Acclimatization Society of France, at the time of their presentation to Mr. Wilmot of a gold medal in recognition of his services in interests of fish breeding. It has never yet been determined if these fish migrate to the sea, many reflecting persons being of opinion that they frequent salt springs within Lake Ontario. This point, however, it is hoped will be shortly cleared up, as it is expected that facilities for close observation of the habits of these fish will be afforded by the government.

Our remarks, which were appended to the letter of our correspondent, Mr. Couper, to which our other correspondent, B., objects, were simply these: "There is no fish known to naturalists by this name, neither has there been any description of a new salmon from that region published lately. The salmon found on Lake Ontario and its tributaries are *Salmo salar*." These we repeat, with the addition that our correspondent evidently thinks the color of eggs and fry sufficient to found a species upon! No names are accepted by zoologists without a description, and no such description has been made by any one competent to do it; or, if so, it has not been published in America. The land-locked salmon of Maine, the so-called *S. gloveri*, or *S. sebago*, is now declared by

our best authorities to be *S. salar*, as no structural differences can be observed. It is now in order for our correspondent to give us the name of the ichthyologist of the Société d'Acclimatation who christened this salmon, together with his reasons for creating a new species differing from the *salar*.

It then rests with the zoologists of America to accept or decline it, according as the reasons may seem valid or otherwise. At present it is safe to say that *S. wilmoti* is unknown to them, and until we receive the name from one of the prominent ichthyologists of America, we must decline to allow it to be a valid cognomen. We now hope that our correspondent, B., will see that we are upon solid ground, and that we are ready to accept the dictates of science, when we know that it is science which dictates.

THE ICHTHYOPHAGISTS.—The New York Times remarks upon the recent dinner of this society that it may be useful in introducing to our tables some valuable fishes which foolish prejudice has hitherto neglected. The skates, for instance, which live principally upon crustaceans and mollusks, the very food which gives to the shaddock and pompano their delicate flavor, and make the whitefish of the great lakes so delicious. Most European nations have long ago recognized the excellence of the skate.

This writer, however, is mistaken in supposing that the razor-shell clam was first eaten in the United States at that dinner. This species of clam has long been used by the people of the east coast of Florida, who value it highly, and there are quite a few books on the subject, just as the writer in the Times describes the capture on the coast of France. I have often eaten this clam at the Halifax River Inlet. Stewed with tomatoes it makes a most rich and savory dish. The razor-shell is called "Langeroni" by the Minorcans of St. Augustine. It has the tenderness and delicacy of the oyster, with a flavor all its own. It comes in season in May, when the oyster is going out. There are quite a few small clams, about an inch long, with a parti-colored shell, found abundantly on the beaches. A quart of these are stewed, shells and all, then the shells being strained off, there remains a rich and savory soup.

The present writer has tasted many species of fish, from shark to sculpin, and the only one that he has found to be wholly unattractive is the dogfish of the Western and Southern waters (*Adia caluda*, sometimes called "lawyer"). Nothing but starvation could induce a man to eat heartily of this soft, cottony, vile-flavored fish. Even the hogs reject it. It is only fit for the manure heap, except that from its belly can be cut a silvery strip which is very tough and suitable for pickered bait.

When the writer in the Times classes the muskellunge with the catfish and sucker, he certainly is misled. He has never tasted *Esox nobilior*,—indeed, next to the whitefish, the most excellent of the fishes of the Northwest. It is, however, rare, and the Great Northern pickerel is often sold for it. Of the three best fishes in the United States, two are peculiar to America—the whitefish of the great lakes (*Coregonus albus*), the pompano of the Florida coasts and the gulf (*Trachynotus carolinus*), and the sea-salmon of the Northwestern coast (*Salmo salar*). Of these three the sea-salmon is the richest and the fish the most delicate; for the same reason it bears transportation the best. The pompano combines the excellence of the two former, and may perhaps be considered the best fish on this continent.

But to enjoy any of these in full perfection they must be eaten on the shores of their native waters—even the salmon, which best bears transportation, gives one, when cooked and eaten in camp, just from the stream, a new idea of what a salmon may and should be. S. C. C.

BLACK BASS IN IOWA.—Manchester, Iowa, Aug. 7th.—The bass season opened June 1st, and the first catch of the fish has been made. The bass have been many, and the fishing has not been good or regular; but on some occasions the catches have been large. Four gentlemen with two boats on the Learest mill-dam, at the headwaters of the Maquoketa River, in this county, caught sixty black bass in three hours in the afternoon and a few hours in the morning. This string averaged about three pounds—one weighed over five pounds. They were all taken with a fly, and I would like to see some of the fancy bass fishers catch one with an eight ounce rod. They could not catch a two-pounder with such a rod. The instant they take the minnow they dart for the roots of an old stump, the only place the large ones are found, and in an instant they have wrapped your line three times around a root ten feet under water. The most expert fisherman I met did not let the cork go down more than a few inches until a quick jerk with a stiff pole stops him.

The six or eight mill-ponds of the Maquoketa in Delaine County are absolutely full of yearling and two-year-old bass. The enforcement of the closed season has caused this great success in breeding them. Shaw's fishway will soon be placed in the dams, and this will greatly aid us. We have two varieties of black bass—the same that we have in New York. One is black, the other is green.

It is black, line-fenced and almost always has about one-tenth of the end of his tail light color and transparent. We can see the fry by the millions now, three inches long, and they will jump for a minnow. The other variety is greenish in color, with beautiful black or brown spots almost like a trout, only the spots are larger. Two persons fishing with a trot line, one will catch them alternately one black and one green. There is no variety of how they became inhabitants of our waters. As yet there has been none caught as large as the black bass. Some say they were placed in the Wapsey Run from Olsego Lake, and came from the Mississippi River here.

We have some of the finest trout streams in the world, to which I have before called attention. We have millions of young fry.

There were taken so many quail in Iowa—the roads and fields are full of them. The prairie-chicken season opens on the 10th. They have not been so fine and plenty for years; but it is impossible to prevent some persons from

killing them now. Their hungry gullet outrides all their fine feelings, and although they claim to be gentlemen, they are pot-hunters. V.

**BASS FISHING IN KINDERHOOK LAKE.**—Mr. I. H. Abbey, of Abbey & Imbrie, went up to Kinderhook Lake, last Friday, after his old friends, the black bass. They gave him a most delightful reception, and more than forty insisted on going home with him to dinner. One old chap, who weighed four pounds and two ounces, found great difficulty in giving due expression to his feelings; being so completely overcome that he was unable to say a single word, but merely danced on his tail and jumped some two or three feet out of water more than a dozen times.

Mr. Abbey was most hospitably entertained by Robert Trimper, proprietor of the Lake House. There was only one thing which marred his pleasure, and that was a thing which the fish wardens ought to put a stop to at once. He discovered a number of set lines and was credibly informed that almost every night nets are dragged in the lake. This will soon put an end to good fishing in this beautiful and conveniently located angling resort. Those who know Abbey and his opinion of anyone who will use anything but a fly for taking a black bass, can understand his feelings on this subject.

**SALMON AND THEIR MIGRATION.**—*Montreal, Aug. 10th.* I have just returned from an extended trip through the maritime provinces, and can report good success trout fishing, but poor sport among the salmon. The latter have been so scarce that most of the fishermen on the By Chaleur took up their nets fully three weeks ago. The few salmon that they caught were marked and mutilated by porpoises, which, together with sharks, are swarming in numbers in all the bays along the north shore. Since Prof. Hind's letter appeared in your columns I have taken considerable pains to get the opinions of many of the north shore fishermen regarding some of the theories advanced by him, that salmon are biennial spawners and often enter the rivers for sanitary purposes, not for the purpose of spawning. Most of the fishermen regard these theories as mere suppositional ones, without any basis of proof to back them, while there are abundant proofs that some salmon ascend the rivers with remarkable uniformity to deposit their spawn. My own opinion is that the diseased fish, let loose from the ponds at the hatching establishment, very materially assist the porpoises and sharks in driving *Salmo salar* from their accustomed haunts. Let us hear from some of our intelligent and observing fish-commissioners on this subject. STANSTEAD.

**THE USE OF THE HOOK ON THE SALMON'S JAW.**—Prof. Hind's view of the purpose of the hook on the lower jaw of the male salmon, and his statement of the practical use to which it is put by the fish in aid of the operation of spawning, as expressed in *FOREST AND STREAM* July 22d, are certainly very interesting and very novel. I am at a loss, however, to know whether these views are presented as the results of actual observation, or as hypotheses. Hypotheses, I should say, judging from the manner in which the subject is introduced by Prof. Hind. He does not assert the presence of a "lymen" in the organs of the female salmon, but says: "I think you will find," etc. If, then, the whole description is hypothetical, it must await positive proof. If there exists any positive evidence in its favor naturalists will surely be under great obligations to Prof. Hind if he will give them, through *FOREST AND STREAM*, a detailed statement of the observations from which his conclusions have been drawn. CHAS. G. ATKINS.

Bucksport, Maine, Aug. 10th.

**SALMON MIGRATION ON THE PACIFIC COAST.**—The *Olympian* says: "The taking of salmon in the Sea of Monterey has banished two theories which had previously been put forward by the pisciculturists of this State. First, it proved that the Sacramento River salmon, when migrating to the sea, went south instead of north of the port, and this, in turn, may account for the ability of this variety of salmon to traverse the warm water of the lower Sacramento on their way to the spawning grounds. Second, an examination of the stomachs of these fish showed, in every instance, their food to be tomcods or frost fish (a bottom fish), instead of herrings, smelts, and clupeids and other small surface fish. That the salmon which frequent the tributaries of the Sacramento River to spawn during the summer season come from the sea south of this port is also corroborated by the testimony of Capt. Hobron, who has run schooners between San Francisco and Santa Cruz during the past eighteen years. Capt. Hobron states that he has frequently seen salmon at sea breaching into the air between this port and Santa Cruz, and has attempted to take them, but without success, not having suitable bait."

**CATFISH EAT SNAKES.**—*Savanna, Tenn., Aug. 9th.*—It is to be late for the snake story to enter in competition for the "big hook," but as it is true I will send it on. A few days ago a party of gentlemen were boat fishing on a stream a few miles from town. One of them was fishing in a canoe, and seeing a snake lying on a log in the middle of the stream killed it with a blow of his paddle, merely severing its head from the body. The snake fell into the water and sank out of sight. About an hour after one of the party hooked, and after a long and exhausting struggle landed a blue or channel catfish weighing fifteen pounds. On cleaning this fish the snake was found inside of it, and was recognized as the same snake from the fact of its head being nearly severed from its body. The snake was of the striped water snake variety and measured over thirty-one inches in length. WILL.

**MENHADEN PLENTY, BUT WEAK.**—*Tuckerton, N. J., July 19th.*—Prof. Spencer F. Baird, Washington, D. C. Dear Sir: I take the liberty to inform you of a singular fact in regard to the menhaden in this vicinity. The menhaden this season, up till within the past week, seem to have been plenty, covering the water for miles each way from this place, not in schools, but scattered all over, so that the fishermen could not catch many. There also have been plenty of the largest kind of bluefish here all the season. Some of the schools of them, my fisher-

men think, would cover an acre of ground, and, instead of leaving, seem to stay. This past week there seems to be one or two large streaks of blood in the water; one of them, my men think, was one and a half miles in length and five or six miles off shore. The menhaden also seem weak: as soon as the net goes around them, and they are fast, they sink right down in the net, dead, so that it is almost an impossibility to raise them. Some of my men think it is the bluefish not giving them time to feed; others lay it to the heat making them so weak. Please advise me if the above communication is of any service to you. If so, I will report any other peculiarity I may notice. Will you also, if convenient, advise me what you may think is the cause of the weakness? Respectfully, JAMES E. OTIS.

**FISH IN MARKET.**—There is a falling off in the number of bluefish from the East coast but many are coming from New Jersey. The first smelt of the season have arrived from New Brunswick. Large Spanish mackerel, averaging four pounds, are arriving from New Jersey. Sleephead are more plentiful from Barnegat. Soft crabs from Long Island are also plenty. The first scallops of the season were received this week from East Greenwich, R. I. Prices: Salt water fish: striped bass, 25 cents per pound; smelt, 35; salmon, 35; mackerel, 15; weakfish, 10; Spanish mackerel, 25; halibut, 18; haddock, 6; kingfish, 25; codfish, 10; blackfish, 12; flounders, 8 to 10; porgies, 12; sea bass, 18; eels, 18; sheephead, 25; smoked salmon, 20; green turtle, 15; lobsters, 10; soft crabs, \$1 per dozen; scallops, 40 per quart. Fresh water fish: whitefish, 15; salmon trout, 15; frogs, 35 cents per pound.

FLY-FISHING FOR BLACK BASS.

Fifth Paper.

THE MECHANICS OF FLY-CASTING.

It has been deemed advisable, for the purpose of making plainer the *modus operandi* of casting the artificial fly, to introduce the following cuts and diagrams. As stated in my last (fourth) paper, the backward movement, or throw, is made in one time and one motion; while the forward movement, or cast, is made in one time and two motions, according to the following formula of time:—

$$1. = 2. (a) \bullet (b) \bullet.$$

No. 1 represents the backward throw, in one motion; in the time of a half note. No. 2 represents the forward cast, in one time and two motions, *a* and *b*, in the time of two quarter notes. This is not to be understood as fishing by note, but the relative time of making the different motions in casting the fly approaches very near that of the formula given. This is better explained by a reference to the following cuts; where figure 1 represents the backward throw, and figure 2 represents the first part or motion (*a*), and figure 3 the second part or motion (*b*), of the forward cast.

The following diagram represents the arcs described by the tip of the rod, and the flies:—

**O** is supposed to be the angler, and as we are looking down upon him, from above, it represents his hat. The dark line, *a b c*, is the curve described by the tip of the rod in the backward and forward movements of the cast: back over the left shoulder, and forward over the right; while the dotted curved line, *d e f*, is the approximate arc described by the tail fly, leaving the water at *d*, and alighting, by a lengthened cast, at *f*.

By studying these diagrams in connection with the instructions heretofore given, the theory and mechanical principle will soon be mastered by the novice. He should then by assiduous and patient endeavor make a practical application of these principles, and become tolerably proficient in casting the fly, before he attempts to venture near the haunts of the bass.

GENERAL INSTRUCTIONS AND REMARKS.

It has been doubted by some that the black bass will rise to the fly, or at best, that they are very uncertain in their modes and times of doing so, as compared with the brook trout. These doubts are mostly raised by those who angle for the black bass in precisely the same way as for the brook trout, upon the supposition that the two fish are identical in habits and instincts. But while their habits of feeding are very similar—both feeding on the bottom, in midwater, or on the surface, on crustacea, larvæ, minnows, insects, etc.—they differ greatly in other habitual features and idiosyncrasies.

The black bass will rise to the fly as readily, under any and all conditions, as the brook trout, when fished for understandingly, and under proper precautions. There are times, seemingly favorable, when neither bass nor trout will rise to the fly.

One reason why the bass is thought to be uncertain in rising to the fly is this: While he is fully as wary as the trout he is not so timid. A trout darts inconspicuously away at the first glimpse of the angler, and is seen no more; but the bass will retire but a short distance, and as often will stand his ground, and on balanced fins will watch the angler vainly casting his brown hackle or couchman over him, perhaps laughing in his sleeve (shoulder girth) at his discourtesy. The truth of the matter is, the bass is not uncertain, but he is too knowing to be deceived by his flies, so long as the angler is in sight.

Fish are more suspicious regarding objects on the surface of the water than those beneath. I have often demonstrated this, causing them to skurry away, by holding a long stick immediately over them, above the

surface; while I could introduce the same stick underneath the water and even prod the fish with it, without alarming it much. This is why more caution is necessary in fly-fishing than in bait-fishing; the bait in one instance being on the surface, and in the other, beneath. If a black bass, in rushing to the surface for the fly, sees the angler, he at once stops in his course, and thenceforth the faintest flies, never so deftly thrown, will be cast in vain while the angler remains in view.

The most important rule, then, to be observed, first, last and all the time in fly-fishing, is: *Keep out of sight of the fish*; and the next is: *Keep as quiet and motionless as possible*. Let your necessary movements be deliberate and methodical, avoiding all quick, sudden or energetic motions. Fish see and hear much better than we give them credit for. To keep out of the fish's sight we must be screened by such natural objects as bushes, trees, rocks, etc., or by keeping well back from the brink and making long casts. In wading the stream it is also necessary to make long casts. The latter is the best plan of fishing a stream, as the angler, being so near the water, is not so apt to be seen.

It is useless to cast for black bass from high elevations near the water, as a bold bank, a projecting rock, a dam, etc., under ordinary circumstances; for the angler must remember that the most commanding situation for seeing the fish also furnishes the best facilities for being seen in return, and *vice versa*. In fishing from a boat, it must be kept in deep water, while long casts are made in shore, toward the feeding grounds. We should never fish with the sun at our back, or in such a position as to throw the shadow of our rod or person upon the water.

From what has been said, it will be apparent that it is absolutely necessary that there be a breeze sufficient to ruffle the surface of the water. It is perfectly folly for the angler to cast his flies upon a smooth surface, if the water is clear enough for fishing. A gale is better than no wind at all, and it does not matter from what direction the wind blows, if the condition and temperature of the water are right. A good breeze is the angler's best ally, for by rippling the water it breaks the line of sight, to a great extent, between him and the fish.

The angler should endeavor to cast his flies as lightly as possible, causing them to settle as quietly as thistle-down, and without a splash. After casting, the flies should be skipped along the surface in slightly curving lines, or by zigzag movements, occasionally allowing them to become submerged for several inches near likely-looking spots. If the current is swift, allow the flies to float naturally with it, at times, when they can be skittered back again, or withdrawn for a new cast. Two or three times are enough to cast over any one spot, when a rise is not induced.

When bass are biting eagerly and quickly, whipping the stream is to be practiced, the flies being cast as they are to be often and rapidly repeated, first to one side, then to the other, allowing the flies to settle but a moment. In casting and manipulating the flies, the line must be ever taut; for often a bass will thus hook himself, which he never does with a slack line.

The angler should strike by sight, or by touch; that is he should strike the moment he sees the rise; for the bass has either got the fly in his mouth, has missed it, or has already ejected it, when the rise is seen; it is very seldom that the rise is seen before the fly is reached by the fish. The angler must also strike at the moment he feels the slightest tug or tug from the fish, for often the bass takes the fly without any break at the surface, especially if the flies are beneath the surface.

Striking is simply a twist of the wrist, or half turn of the rod, either upward or downward (upward with stiffish rods, and downward with very willowy ones), which is sufficient to set the hook if the rod and line maintain a proper state of tension; but when the careless angler has a slack line and, consequently, a lifeless rod, he must necessarily strike by a long upward or side sweep of the rod, called "yanking," and should he succeed in hooking the fish, the chances are that it will shake the hook out again before the slack can be reeled up.

The rod must always be held upward, so that it constantly maintains a curve with the line; and never under any circumstances must the rod point in the direction of the flies after they reach the water, for this allows the line strain of the fish to come upon the line or leader. When a bass is hooked, he must be killed on the rod; the rod must stand the brunt of the contest; the more pliable and springy the rod, the less likelihood of its breaking, for a stiff rod is more pliable than a flexible one. Give the bass more line only when he takes it; make him fight for every inch, and take it back when you can; hold him by the spring of the rod, and do not hesitate to turn the butt toward him to keep him away from the stream, rocks, snags or other dangerous places; this will bring him up with a round turn, and is called "giving the butt."

Don't be in a hurry to land him; the longer he resists, the better for your sport; take your time, and only land him when he is completely exhausted; for if he is well hooked, and the proper tension of rod and line maintained, he cannot get away; on the other hand, if he is tenderly hooked, the more gingerly he is handled the more he will resist; always keep a bent rod and taut line; if the bass breaks water, the best plan is to lower the tip, so as to slack the line, and immediately raise the rod and tighten the line when he strikes the water again, for if he falls on the tightened line he is most sure to escape; this is one of his most wily tricks.

No. 2.

No. 3.

No. 1.

It is best, always, to fish down stream, even with the wind against one, for obvious reasons. Cast just below ripples and rapids, over eddies and pools, along the edges of weed patches, under projecting banks and shelving rocks, near submerged trees or driftwood, off gravelly shoals, isolated rocks and long points or spurs of land: it is useless to fish long, deep, still reaches of water.

The most favorable time for fly-fishing for black bass is during the last hours of the day, from sundown until dark, and also on bright moonlight evenings. On streams, an hour or two following sunrise, in warm weather, is quite favorable. On dark, cloudy and cold days the middle hours are best. Bright sunny days, especially in hot weather, are not favorable to fly-fishing, except in the cool, shaded and breezy still reaches of water. The best conditions are a mellow or dusky light, a good breeze, and translucent water; while the most unfavorable are a bright sun, a still atmosphere, and a smooth and glassy surface, with the water either very fine or very turbid. And now, in concluding these papers, let me say a parting word to the beginner: Cast a straight line; keep it taut; strike upon sight, or touch; just your fish on the spot you take your aim. It is better to cast a short line well, than a long one bunglingly. Should you cast your fly into the branch of a tree overhead, or into a bush behind you, or miss your fish in striking, or lose him when hooked, or crack off your tail-fly, or slip into a hole up to your armpits, keep your temper; above all things don't swear, for he that swears will catch no fish. Remember, yours is the gentle art, and a fly-fisher should be a gentleman.

Cynthiana, Ky., Aug. 6th.

J. A. HENSHALL.

**BIRTH OF A SEA-LION.**—A sea-lion is announced as having been born in the circus of W. C. Coup, now in Virginia, and the bills say: "This Polar midget is at once the theme and unqualified delight of all beholders. The little folks are especially delighted with this oceanic infant, no larger than a kitten and the only one on exhibition on the earth's surface," etc. We cannot do justice to the big letters, and the rest of the phraseology is inseparable without them, but if Coup says he's got it, we believe it.

## Game Bag and Gun

—Address all communications to "Forest and Stream Publishing Company, New York."

### GAME IN SEASON IN AUGUST.

Woodcock, *Philohela minor*. Red-backed sandpiper, or ox-bird, *Tringa americana*. Great northern grebe, or marlin, *Larus fedoa*. Black-bellied plover, or eye-bird, *Tringa americana*. Long-billed curlew, *Nunentus longirostris*. Willet, *Tringa semipalmata*. Sharp-shinned hawk, *Accipiter striatus*. Yellow-bellied, *Totanus forsteri*. Red-breasted snipe, dowitcher, *Macrophthalmus griseus*. This enumeration is general, and is in conflict with many of the State laws.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf-bird, phalaropes, avocets, etc., coming under the group *Littorales*, or shore birds. Many States permit prairie fowl (plumbeous grouse) shooting after Aug. 15th.

**POST THE GAME LAWS ON RAILROADS.**—New York, Aug. 16th.—*Editor Forest and Stream*.—As partridge shooting begins on the 1st of September, and as the trappers and snare-birds begin their work on that same day, would it not be well for our different game associations to try to prevent them, and thereby stop the wholesale slaughter of the finest bird we have. Some years ago the supervisors of Orange and Rockland counties passed a law making it a misdemeanor for an express company or a railroad to carry or transport or trapped or snared birds. I therefore would suggest the following: Let the different game associations get up printed copies of the laws against trapping and snaring; let said notices be put up in the baggage car of each train running on the Erie Railroad between Jersey City and Port Jervis, also on the Hudson River between New York and Albany, and also on the different railroads of Long Island; let, also, said notices be put up in each station along the above-named railroads. Permission will be easily gotten from the railroad authorities, and the expense of said notices would not be very large. The Long Island Railroad could be attended to by the Long Island Game Protective Association, the Erie Railroad could be looked after by the Hudson River Game Association, and the New York Game Protective Association could take care of the New York Central Railroad and the markets where those trapped birds are sold. I, for one, am willing to pay my share toward the expense of all this, and, without any doubt, a good many gentlemen will do the same. Let us move in this matter at once, and thereby we will have thousands of birds, quail as well as partridge. A TRUE LOVER OF THE SPORT.

**WANTED, MORE LIKE HIM.**—The following communication is addressed to the editor of the *Tarrytown, N. Y. Argus*, and published in that paper with an editorial endorsement of the writer's faithfulness and energy:—

In your last issue appeared an article signed "Philo Minor," in which he speaks of woodcock shooting and the violation of the game law. While I agree with him on his remarks on shooting birds before the law is up, (which I think no true sportsman will do), I think he speaks rather too harshly about game constables. While there are some who need to be reminded of their duty, there are others who do all that lies in their power to enforce the laws; and one of the latter class I claim to be, because I feel interested in the protection of game birds and have for a number of years, from time to time, had the game laws published in the *Argus*. After I was elected to the office of game constable I did all I could to enforce the laws, and I am willing to attend to all complaints that are made to me; and the fact that I have several hundred copies of the game laws printed, which have been distributed through the town of Mount Pleasant and some in Greenburgh, in order that people might know the laws, will show that I mean business.

I claim to take as much interest in the protection of game, and am willing to do as much work toward the same, as any true sportsman can, not excepting "Philo Minor."

GEO. LAICK.

Game Constable, Town of Mount Pleasant.

**VIRGINIA QUAIL SHOOTING.**—*Editor Forest and Stream*.—Please inform me where a party of two can go in Virginia to get first-class quail shooting this fall, not over a day's ride by railroad from Washington, D. C.? Would not object to going to a farmer's where they are pleasant and where birds are plenty. Don't want to go where people object to gunning. Will want to remain about two weeks, if the shooting is good, and want to go where we can have a good, free and easy time. F. & B.

A Washington correspondent kindly furnishes the information desired as follows:—

Last fall there was first-class quail shooting on the Rappahannock bottoms near tide water. King George Court House is a good place of rendezvous, and from there one can move off in almost any direction and obtain good shooting. A General State law "posts" all lands in the State, but gentlemen can almost invariably obtain the privilege of shooting by proffering a polite request.

There is also good shooting to be had in Accomac County. Quail will be very plentiful in Maryland and Virginia next fall owing to the mild winter and the weather of the spring, which was favorable to the broods. Last fall was so hot and dry that dogs had considerable difficulty in working, and the quail were not slaughtered by the wholesale, as usual. By the way, I see that the *Sun* last week copied my article on "Sportsmen in Congress" from the *Forest and Stream*.

**AN ANCIENT FLINT-LOCK.**—A Vernon, Ind., correspondent sends us a clipping which describes a curious relic of the old times:—

Robert Levitt, of Vernon, has deposited in the State Museum the remains of an ancient flint-lock breech-loading gun which was found several feet below the bed of the creek near Vernon. It was first exhibited at the old settlers' meeting, but none of the pioneers remember ever having heard of a breech-loading, flint-lock gun. The barrel, rusted through in several places, is three feet long, with a large bore. The spring is still strong, but the stock, of black walnut, is badly decayed and only a small piece of wood could be secured. The only theory advanced to account for its presence in the creek was that an Indian trail from Lawrenceburg was frequently used by soldiers, and that the gun had been lost on this trail, the gun was lost or thrown aside, only to be brought to light in this day of breech-loaders, Gatling guns and heavy ordnance.

**GEORGIA DOVE SHOOTING.**—*Macon, Ga., Aug. 16th.*—I notice a communication from J. D. H., Nashville, Tenn., in regard to the shooting of doves in that State. I have had fine sport recently in that line, several parties killing as high as 600 birds in one day's shooting. Five of us killed 252 one day, and four others the next day bagged respectively 60, 94, 102 and 105. This calls to mind a day's hunt in an adjoining county in 1868, in which 1,200 doves were bagged. Muzzle-loaders were used, and two brothers bagged respectively 110 and 133, shooting six hours.

**NEW HAMPSHIRE.**—*Lake Village, Aug. 16th.*—Woodcock hunting is good in this place, Meredith and Belmont. Large bags are brought in every few days. Myself and friend shot thirteen over the same dog after 4 P.M. Friday of last week. A party went to Centre Harbor one day last week, and brought home eighteen that were very fat and in splendid condition. Grouse in this locality are very plenty, and promise a good season's sport.

**MEADOW LARK SHOOTING.**—The answer to a correspondent in our last week's issue, who inadvertently gave without a name, is as follows: In 1889, amendments to the New York game law, the season for meadow lark shooting is from Oct. 1st to Jan. 1st, and does not begin, as was dated, Sept. 1st.

**NEW YORK.**—*Hornellsville, Aug. 16th.*—Not over a dozen woodcock have been killed here so far this season. A few miles from here three men got twenty-one in one day, which is the best bag I have heard of this season.

—Three Wilson snipe were killed on the Newark meadows last week. Although these are early birds, yet it is not unusual for English snipe to be shot in that vicinity early in August. We remember once of hearing of thirteen birds being shot on the Elizabethtown meadows in July. No doubt the birds had bred there.

—We have received the constitution and by-laws of the Kirtland Shooting Club, of Cleveland, Ohio.

### SHOOTING MATCHES.

MASSACHUSETTS STATE GLASS BALL ASSOCIATION.

This association is the result of the Lynn Sportsman's Club meet at Oak Island the 17th of June last, when a number of shooters considered that the interests of glass ball shooting would be better met through the power and influence of combination. Success has attended every footstep, and when it is mentioned that the constitution and by-laws have been printed and all the preliminaries gone through which rendered this last shoot so successful, it will be admitted that little time has been lost in practicing the desire of the 17th of June meeting. The aspect having no neutral ground where the shoot could be held, determined to accept the invitation of the Lynn Central Club to hold it upon their grounds at the Ocean House, Revere Beach, where all the conveniences could be had for a shoot of this kind, the Ocean House, Boston, and Lynn being in hourly communication and close proximity to each other. The Committee of Arrangements, to carry out all preliminaries, consisted of three from the association and three from the Lynn Central Club, coupled with the efforts of the Secretary, Mr. F. H. Lander, of the Oak Island Club, contributed largely to this meeting going off in such good style; it consisted as follows: for the Association, D. Kirkwood, President; P. T. Noble; E. W. Webster, Treasurer; for the Lynn Central, I. C. Haskell, O. L. Baldwin, J. C. R. Hillard 12.

R. E. Hillard. The appended scores give the full result of the two days:—

#### FIRST DAY, OPENING AT 10 A.M.

The first contest was the individual association glass badge shoot; open to members of the association; entrance fee, \$1. Forty per cent. to go with the badge at first prize; 30 per cent. second prize; 20 per cent. third prize; 10 per cent. fourth prize; 5 per cent. fifth prize; Card rotary trap. There were 50 men tied at 15, not missing a ball, when the tie-breakers shot, the prizes were awarded as follows: Badge \$1.50, P. T. Noble, 1st prize; 30 per cent. C. Spofford, of Amesbury, took second prize, and C. H. Wales, of W. P. Pond, of Worcester, and G. Monk, of Quincy, divided third and fourth money. The individual scores were as follows:

C. H. Clark 33, J. A. Rowell 15, C. Ellsworth 14, F. T. Noble 13, C. R. Sloss 12, W. S. Mooney 13, G. E. Goodhue 12, W. E. Jagger 13, A. L. Laid 13, C. B. Holden 14, G. Monk 15, H. W. George 15, P. Mann 14, M. J. White 11, E. J. Rowell 14, E. W. Webster 14, W. B. Hildreth 14, H. L. Hildreth 14, H. L. Hildreth 14, G. Oswood 14, A. C. Simpson 15, H. Harrison 14, E. Barry 13, A. K. Raymond 15, W. S. Perry 14, P. Pond 15, W. H. Allen 11, S. Howland 12, F. H. Lander 12, W. H. Leighton 14, W. S. Stone 12, K. Keating 10, F. H. Lander 13, A. C. Simpson 15, H. Harrison 14, E. Barry 13, N. P. Barry 14, H. N. George 15, N. Brigham 12, O. F. Belcher 15, A. L. Baldwin 15, R. C. Schaefer 15, J. C. Haskell 13, J. G. Howe 14, O. L. Hildreth 12, D. Kirkwood 13, C. De Hochmuth 13, J. H. Frost 15, I. R. Hudson 12.

The second was the team match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls, 10 per cent. to go with the badge at first prize; 10 per cent. second prize, 10 per cent. third prize, 10 per cent. fourth prize, 5 per cent. fifth prize. The teams in this match from the following clubs: Raymond; Worcester; Westboro; Marlboro. The Lynn Central and Amesbury Clubs, first teams, secured 55 and divided the first prize. The second team of the Amesbury Club took the second prize, securing 50; the first team of the Raymond Club and the second team of the Lynn Central Club scored 55, dividing third money. The fourth team was from the Lynn Central Club, and scored 45. The team scores were as follows:—

Raymond, first team, 55; Worcester, first team, 52; Lynn Central, second team, 51; Westboro, first team, 53; Marlboro, first team, 51; Worcester, second team, 50; Westboro, second team, 48; Raymond, second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. After Mr. Eager had broken his ball he informed Mr. Hildreth that he had broken his ball, but Mr. Hildreth later missed his ball, and Eager pocketed the "pot." H. Dutton and E. W. Pond divided the second money. F. H. Lander, D. F. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money, and E. W. Pond, H. L. Hildreth, W. S. Mooney, J. C. Haskell, and G. E. Goodhue divided the money.

The next contest of the day was an all-comers' match, open to teams of 3 men from any organized club in the State; entrance fee, \$10; 20 balls per man. Card rotary trap; 40, 30 and 10 per cent. 4 prizes. The teams entered in the shoot were the following: Worcester; Lynn Central; first team, Marlboro; second team, 48; Raymond; second team, 45.

The individual sweep was the next on the list, and the entrance fee was \$3, open to members of the association, 10 balls. Card rotary trap, 40, 30 and 10 per cent. four prizes. The four men who tied in this match, the final shooting coming down to H. W. Eager and H. L. Hildreth. Goodhue divided the money.

NASHUA, N. H., Aug. 15th.—Glass ball shooting. The contest for the gold badge closed last Tuesday, George H. Brigham having won three times, the last score being 20 balls!—  
H. G. Bixby..... 25  
D. W. Lakeman..... 22  
E. Toune..... 21  
J. F. Burnham..... 20  
J. G. H. Brigham..... 23

The rifle club show very creditable scores. They meet weekly at the Stark Range. The sportsmen have fair luck with the woodcock. Chas. E. Laton, of the club, bringing in half a dozen fine birds last Monday. Partridge and squirrels promise to be plenty this season, and a game supper looms up in the near future.

YONKERS, N. Y., Aug. 21st.—The meeting of the Yonkers Gun Club opened with the following pigeon match. Hurlingham rules to govern; 15 birds is a side!—  
J. Waring, Jr., 111-111111111-13 | Oscar Austin 111000111110-18

WASHINGTON GUN CLUB.—Brooklyn Driving Park, L. I., Aug. 20th.—Regular monthly competition for the champion gold badge, at 7 birds, 21 yards rise. The birds were a fine lot and required the best skill of the marksmen to bring them to the ground. The contest was exciting and the shooting was the best exhibition ever shown by the club. Six out of thirteen killed their birds in succession, viz: Dierking, Hittenshouse, Hedeman, Evans, Killeit, and Altendran. These gentlemen shot all the five at 5 birds each, and Mr. Altendran won the badge.

FALCON GUN CLUB.—Dexter Park, Jamaica, L. I., Aug. 19th: Kelly, 21 yards, 5; Lemcken, 23 yards, 9; Vagis, 23 yards, 4; Van Schooten, 23 yards, 7; Miller, 25 yards, 4; Ogerman, 21 yards, 7; Rudin, 25 yards, 6; Lager, 21 yards, 9; Meyer, 21 yards, 5; Mansel, 23 yards, 8. Leucken and Lager shot off the tie and won by Lager, N. Y. State Association rules and Falcon Gun Club handicap rise. Prizes, gold club badge and Westly-Richards breech-loader, which when won three successive times becomes the property of the shooter.

KIRTLAND SHOOTING CLUB.—Cleveland, Ohio, Aug. 17th.—Score of the monthly shoot of the Kirtland Club for gold badge. Card rotary trap, screened, 15 birds:—

J. Wightman.....	14	A. Berger.....	10
J. M. Daykin.....	13	D. A. Davis.....	13
J. Woods.....	13	J. Kostrer.....	9

KEYPORT, N. J., Aug. 18th.—Mr. Geo. Walt, of the Raritan Shooting Club, of Keyport, N. J., in a match to break 90 balls out of 100, thrown from a mole trap standing 18 yards, and all to be thrown at an Aug. 17th, scored as follows: 5555555555555555 55—total 18. S. P.

ERB VS. HAUWORTH.—The third match between Fred Erb, Jr., of St. Joseph, Mo., and W. B. Hauworth, of Quincy, Ill., came off at the latter place Aug. 18th. The first meeting was two years ago, when Erb won with a score of 63 to 10. The second match, a few weeks since, was won by Hauworth, score 94, Erb withdrawing on his 45th bird, having killed 87. The last match was at wild birds, 21 yards, plunge traps, use of one barrel. Hauworth missed his 30th and 75th birds, and won with a score of 98; Erb missed his 4th, 10th, 11th and 32d; score, 96.

PUBLISHERS' DEPARTMENT.

—See advertisement of black bass fishing at St. Clair Flats.  
—The Mountain Kennel, Mr. Chas. F. Kent, proprietor, is open to receive a limited number of dogs to board. Attention is called to notice in another column.

—We take pleasure in calling attention of our readers to the fine stock advertised for sale in another column by Mr. O. Z. Milley, of this city. In some of the cases, which seemed to be the best of the last stages, and which had been given up by practitioners of both schools, the only change wrought by this remedy seemed but in the fact that the animals, I am convinced that or Bright's disease, in all its stages, no remedy heretofore discovered can be held for one moment in comparison with this.

AN EDUCATIONAL ENDORSEMENT.—The Rev. C. A. Harvey, D. D., of New Haven, Conn., of Washington, has addressed the following letter to Messrs. H. H. Warner & Co., of Rochester, N. Y.:—  
GENTLEMEN: I take pleasure in stating that I have for two years past been acquainted with the remedy known as Warner's Safe Kidney and Liver Cure, and with its remarkable curative efficiency in obstinate and so-called incurable cases of Bright's disease in this city. In some of the cases, which seemed to be the last stages, and which had been given up by practitioners of both schools, the only change wrought by this remedy seemed but in the fact that the animals, I am convinced that or Bright's disease, in all its stages, no remedy heretofore discovered can be held for one moment in comparison with this.

The Kennel.

FIXTURES.

Toronto, Canada dog show, Sept. 8th, 9th and 10th. Entries closed August 21st. H. J. Hill, Secretary, Toronto, Ont.  
St. Louis Kennel Club, St. Louis, Mo., Oct. 5th, 6th and 7th and 8th. Entries close Sept. 20th. Charles H. Turner, Secretary, St. Louis, Mo.

Pennsylvania State Agricultural Society International Colley Trial, Philadelphia, Sept. 20th, 21st, 22d, 23d, 24th and 25th. D. W. Seiler and Elbridge McConkey, secretaries, P. S. A. Society, Harrisburg, Pa.

Nebraska State Sportsmen's Association Field Trials, Norfolk, Nebraska, Sept. 30th and Oct. 1st and 2d. Entries close Aug. 31st. J. H. Hartley, Secretary, Lincoln, Neb.

Pennsylvania State Field Trials Association Trials, Lancaster, Pa., commence Nov. 9th. J. R. Stoyton, Secretary, Pittsburg, Pa.

Eastern Field Trials Club's Second Annual Trials, Robins Island, Peconic Bay, L. I., Nov. 2d, Jacob Pentz, Secretary, New York.

National American Kennel Club's Second Annual Field Trials, Vincennes, Ind., Nov. 15th. Chas. De Hongre, Secretary, 31 Broad street, New York.

NATIONAL AMERICAN KENNEL CLUB.

THE committee of this organization, at a recent meeting, decided that the club field trial Derby should be run at Vincennes, Ind., on or about Nov. 15th. The following gentlemen were selected, and have consented to act as judges:—Mr. Theo. Morford, of Newton, N. J., and Captain Patrick Henry, of Grady's Landing, Ark. These trials, beyond question, will outshine in every respect anything of the kind ever witnessed in this country. Subjoined will be found the rules and instructions to judges of the club. The latter we do not think are as clear as they might be, particularly the instructions on backing and quartering. In the brace stakes the maximum for ranging and maximum for quartering are raised from 6 to 10 points each, making the total 108, instead of 110, as published officially:—

AMERICAN KENNEL CLUB.  
NEW YORK, Aug. 10th, 1880.

RULES FOR FIELD TRIALS.

Rule 1.—Managers of field trials shall advertise the time and place where the meeting will be held, the date of closing entries, the scale of points and the names of judges at least thirty days before the trials take place. In the event any judge or judges fail to act, the competitors shall fill all vacancies, each competitor being entitled to one vote.

Rule 2.—Dogs shall be drawn in braces by lot and run in heats, the beaten dogs to be retired (except as hereinafter provided), and the winner to be run again in the order in which they won their successive heats. If there should be a bye, the dog getting the benefit of the bye shall be run in the first heat of the next series of heats. If two dogs owned or exhibited by the same person should be drawn to run together or come together in any successive heat, the second dog shall change place with the next dog in the order of running. This shall be continued until only two dogs remain, and the winner of these two shall be winner of first prize. The last dog beaten by the winner of first prize shall compete for second prize with the best of those dogs previously beaten by the winner of first prize. The winner of this heat shall be declared winner of second prize. The dog beaten in this heat shall compete with the best of those previously beaten by the second prize winner, and the winner shall be third in the race. The discretion is given the judges of deciding which is the best of these beaten dogs in the competition for second and third places by selection or by running extra heats between them.

Rule 3.—When two dogs owned or trained by the same person shall be drawn together, one shall run only in that heat, and he with the next dog in the order of running not so owned, unless at the latter end of the trial it be found impossible to avoid running two such dogs together, when it may be permitted. A withdrawal from any heat is a withdrawal from the race. If, in drawing there be a bye, and a dog be withdrawn in this heat, the dog with the bye and the other dog in this heat withdrawn from shall be compelled to run against each other, as if so drawn.

Rule 4.—The judges shall order up the dogs as soon as they have determined which is the best according to the scale of points in Rule 5. The privilege is granted the judges of ordering up any dog or brace of dogs that have not sufficient merit, in their opinion, to get placed; but these may be put down again if there is a possible chance for them to win.

Rule 5.—Positive points for merit: Pointing, 35; pace, 20; backing, 7; style, 6; stanchness, 6; ranging, 6; quartering, 6; obedience and disposition, 4; retrieving, 10. Total, 100. Negative points for demerit: False pointing, 1 to 7; breaking in (each offense), 3; breaking shot (each offense), 5; chasing or breaking shot and chasing (each offense), 10.

Rule 6.—No person except the judges, attendants and reporters will be permitted to accompany the handlers of the dogs. Two persons will not be permitted to work one dog or a brace of dogs. If from any cause the handler of a dog or a brace of dogs is disabled to such extent that he cannot shoot, the judges shall appoint a person to shoot for him. The handlers of the two dogs shall go together as if it were a brace of dogs, so that the dogs shall be upon an equality as to ground, opportunities for pointing, etc. No spectators will be allowed nearer the handlers of dogs than seventy-five yards to the rear, and a marshal shall be appointed to enforce this law. No person shall make any remark about the judges or dogs in hearing of the judges. Such person so offending shall be expelled from the grounds. Should any handler of dogs annoy the judges after having been ordered to desist, the judges shall order such dogs as he is handling up and out of the race. The privilege is granted the handlers to ask the judges for information or explanation that may be desired in hearing upon any point at issue; pending such question the dogs shall be under judgment. Dogs afflicted with any contagious disease or bitches in season will not be permitted on the grounds.

Rule 7.—Pointing fur, feather or reptiles shall not be considered making a false point. A dog making a false point and discovering it to be such without any encouragement from his handler shall not be penalized.

INSTRUCTIONS TO JUDGES.

Pointing.—The judges will allow only those dogs the maximum that point all the birds possible for them to point under existing circumstances; a dog to earn the maximum number of points under this head must display a first-class nose and exhibit great judgment in finding and pointing his birds, and make no flushes that a dog with the above qualities would avoid in ordinary hunting. The dogs are to be hunted in all respects as in an ordinary day's shooting. Inexcusable or willful flushes will detract from a dog's score under this head, but the character of the flush must be always taken into account in estimating the penalty, if any. The judges must not ask the handlers if their dogs are pointing, but must decide for themselves. They shall always consider the nature of the ground, the wind and the birds, and not penalize a dog for flushing a bird it would be impossible to point. The penalty for flushes to be graded by the character of the offense. The judges shall not require the handlers to work their dogs down wind. Judges are allowed the discretion of declaring a dog or dogs out of the heat if absent when called.

Pace.—The dog that maintains the fastest gait throughout the trial, except when in cover or on game, to receive the full number of points, all others to be graded by him.

Backing.—The maximum only allowed such dogs as stand or drop only at sight of another dog pointing. But no dog shall be expected to back unless the dog pointing stands and is motionless. A dog shall not be said to refuse to back unless he sees the dog pointing. To get credit for a back the dog must stop at least ten yards (when practicable) in front of the handler.

Style.—The judges shall consider the dog's grace in ranging and drawing, and attitudes in pointing and backing.

Stanchness.—The maximum allowed such dogs only as do not advance from their point when they are on game until ordered on.

Ranging.—The maximum only allowed the dogs that maintain the most killing range throughout, viz., wide or close, as the necessity of the case may require.

Quartering.—The maximum only allowed such dogs as work at right angles with the handler, unless the nature of the ground renders such work impracticable.

Obedience and Disposition.—The maximum only allowed to a dog that works promptly to the gun, without noise or severity, and is obedient, prompt, cheerful and easily handled.

Retrieving.—To receive the maximum under this head a dog shall go promptly and cheerfully for the bird and deliver it to the handler without mouthing or mutilation.

False Pointing.—The judge shall give a dog ample opportunity to discover whether or not he is on a true point, and the penalty shall range from one to seven for his acts throughout the heat.

Breaking In.—Is when a dog through imperfect breaking or from excitement leaves his position when the birds rise, whether the gun is fired or not, and starts to break shot or chase, but stops within a few feet of the point from which he started, of his own accord, or by command.

Breaking Shot.—Is when a dog runs in when a shot is fired with the intention of getting the bird, and does not stop promptly at command.

Chasing.—Is when a dog follows the birds, either when the gun is fired or not, to an extent to be beyond the control of the handler for the time being.

PUPPY STAKES.—Rule.—Dogs over eighteen months old shall not be eligible for the Puppy Stakes. There will be no points allowed for retrieving in this stake. Rules otherwise as above.

BRACE STAKES.—The rules governing the Brace Stakes shall be the same as those used in the All-Aged Stakes, with the following exceptions: The maximum for ranging shall be ten instead of six, the maximum for quartering shall be ten instead of six, and the total 110 instead of 100. The brace to earn the maximum for quartering must cross each other systematically, and work independently of each other, or one dog must quarter the ground on one side of the handler while the other dog quarters the opposite side, the dogs meeting at or near the center. Each brace will be run separately instead of running in heats, and be judged by the scale of points as above and explained. In case only one dog retrieves the brace shall only be entitled to half the number of points for retrieving.

PENNSYLVANIA STATE FIELD TRIALS ASSOCIATION.—The first monthly meeting of the Pennsylvania Field Trial Association was held at Pittsburg, Pa., on Aug. 18th, when it was decided to run the trials at Lancaster, Pa., on Nov. 9th, and several days following. The purpose of the association is the encouragement of the raising and training of pointers and setters. The judges selected are Messrs. B. F. Wilson, of Pittsburg, Pa., Theodore Morford, of Newton, N. J., and Dr. W. Twaddell, of Philadelphia. Mr. B. F. Wilson, of Philadelphia, resigned as a member of the Executive Committee and Mr. S. Brown, of Pittsburg, Pa., was elected to fill the vacancy. Mr. F. A. Diffenderfer, of Lancaster, Pa., was appointed a committee of one (with power to add to the committee at pleasure) to select the grounds for running, and to make all necessary arrangements for the trials. The constitution, by-laws and field trial rules of the National American Kennel Club govern the association. No dog is eligible to run unless he shall have been owned in the State at least three months prior to date of commencement of trial on Nov. 9th. Puppies whelped on or after April 15th previous year are eligible for Puppy Stakes, and the puppies whelped on or after Oct. 15th, for Nursery Stakes. The trial will include four stakes: First, Free to all—entrance, \$10. Second, Puppy—entrance, \$5. Third, Nursery—entrance, \$5. Fourth, Association—entrance, \$5. No forfeit in any of the above stakes. The fourth is only open to members of the association owning and handling their own dogs. The officers are:—President, Mr. Samuel G. Diffenderfer, Philadelphia. Vice-President, Mr. Edgar Huidkops, Philadelphia. Treasurer, Mr. F. A. Diffenderfer, Lancaster. Secretary, Mr.

Isaac R. Stayton, Pittsburg. Executive Committee: Messrs. B. F. Dorrance, chairman, Wilkesbarre; William A. McIntosh, Pittsburg; Edward Greig, Pittsburg; S. S. Thompson, Pittsburg; J. J. Snellenburg, New Brighton; and S. S. Brown, Pittsburg.

### THE ST. LOUIS DOG SHOW.

#### LIST OF PREMIUMS.

THE second annual bench show of dogs, given under the auspices of the St. Louis Kennel Club, will be held at the Fair Grounds, St. Louis, Mo., Oct. 5th, 6th, 7th and 8th, and promises to be one of the grandest successes of the kind ever held in the West. Mr. Charles Lincoln has been secured as superintendent, and his well-known proficiency and long experience is a sufficient guarantee that the exhibition will be regulated like clock-work. We learn that three of the judges have been already appointed, and that the one judge system is to be observed. This is as it should be, and a glance at the subjoined names shows the selection to be a most excellent one in all respects:—

#### JUDGES.

Pointers—Mr. E. F. Stoddard, Dayton, Ohio.  
English and Irish Setters—Mr. C. H. Turner, St. Louis, Mo.  
Gordon Setters—Mr. E. C. Sterling, St. Louis, Mo.  
The judge for spaniels, hounds and other sporting and non-sporting classes has not yet been selected.  
The following is the classification of dogs and the list of premiums. Fifty-one classes; \$1,130 total amount of premiums:—

#### DIVISION A—POINTERS.

Class 1.—Champion pointer dogs, over 55 pounds (see N. A. K. C. rules), \$25.  
Class 2.—Champion pointer bitches, over 50 pounds (see N. A. K. C. rules), \$25.  
Class 3.—Champion pointer dogs, under 55 pounds (see N. A. K. C. rules), \$25.  
Class 4.—Champion pointer bitches, under 50 pounds (see N. A. K. C. rules), \$25.

#### OPEN CLASSES.

(See N. A. K. C. rule 9.)  
Class 5.—Pointer dogs, over 55 pounds, \$25 and \$15.  
Class 6.—Pointer bitches, over 50 pounds, \$25 and \$15.  
Class 7.—Pointer dogs, under 55 pounds, \$25 and \$15.  
Class 8.—Pointer bitches, under 50 pounds, \$25 and \$15.  
Class 9.—Pointer puppies, under 12 months, dogs, \$10.  
Class 10.—Pointer puppies, under 12 months, bitches, \$10.  
Class 11 (special).—For the best pointer, dog or bitch, in the show, \$25.  
Class 12.—For the best pointer, dog or bitch, of any age, by Bow, \$15.  
Class 13.—For the best pointer, dog or bitch, of any age, by Faust, \$15.  
No entry fee will be charged for classes 12 and 13.

#### DIVISION B—ENGLISH SETTERS.

Class 14.—Champion English setter dogs (see N. A. K. C. rule 9), \$25.  
Class 15.—Champion English setter bitches (see N. A. K. C. rule 9), \$25.

#### OPEN CLASSES.

(See N. A. K. C. rule 9.)  
Class 16.—Imported English setter dogs, \$25 and \$15.  
Class 17.—Imported English setter bitches, \$25 and \$15.  
Class 18.—Native English setter dogs, \$25 and \$15.  
Class 19.—Native English setter bitches, \$25 and \$15.  
Class 20.—English setter puppies, under 12 months, dogs, \$10.  
Class 21.—English setter puppies, under 12 months, bitches, \$10.  
Class 22 (special).—For the best English setter, dog or bitch, in the show, \$25.

#### DIVISION C—IRISH SETTERS.

Class 23.—Champion Irish setter dogs (see N. A. K. C. rule 9), \$25.  
Class 24.—Champion Irish setter bitches (see N. A. K. C. rule 9), \$25.

#### OPEN CLASSES.

(See N. A. K. C. rule 9.)  
Class 25.—Irish setter dogs, \$25 and \$15.  
Class 26.—Irish setter bitches, \$25 and \$15.  
Class 27.—Irish setter puppies, under 12 months, dogs, \$10.  
Class 28.—Irish setter puppies, under 12 months, bitches, \$10.  
Class 29 (special).—For the best Irish setter, dog or bitch, in the show, \$25.

#### DIVISION D—GORDON SETTERS.

Class 30.—Champion Gordon setter dogs (see N. A. K. C. rule 9), \$25.  
Class 31.—Champion Gordon setter bitches (see N. A. K. C. rule 9), \$25.

#### OPEN CLASSES.

(See N. A. K. C. rule 9.)  
Class 32.—Gordon setter dogs, \$25 and \$15.  
Class 33.—Gordon setter bitches, \$25 and \$15.  
Class 34.—Gordon setter puppies, under 12 months, dogs, \$10.  
Class 35.—Gordon setter puppies, under 12 months, bitches, \$10.  
Class 36 (special).—For the best Gordon setter, dog or bitch, in the show, \$25.

#### DIVISION E—SPORTING DOGS.

##### (Other than pointers and setters.)

Class 37.—Irish water spaniels, \$10 and \$5.  
Class 38.—Cocker spaniels, \$10 and \$5.  
Class 39.—Foxhounds, \$10 and \$5.  
Class 40.—Beagle dogs, \$10 and \$5.  
Class 41.—Beagle bitches, \$10 and \$5.  
Class 42.—Greyhounds, \$10 and \$5.  
Class 43.—Basset dogs, \$10.  
Class 44.—Fox terrier dogs, \$10.  
Class 45.—Fox terrier bitches, \$10.

#### DIVISION F—SPORTING DOGS.

##### (Other than pointers and setters.)

Class 46.—Shepherd dogs or collies, \$15 and \$5.  
Class 47.—Bull terriers, \$10.  
Class 48.—Black and tan terriers, \$10.  
Class 49.—Rough-haired terriers, \$10.  
Class 50.—Yorkshire terriers, \$10.  
Class 51.—Miscellaneous class (for any breed of dogs for which a class is not provided), \$10.

Note.—Separate entries must be made for all classes marked "Special," and all dogs must previously have been entered in the regular classes, to enable them to compete in the special classes. No entry at the railroad companies have agreed to carry dogs free, when accompanied by their owners.

The express companies will, on prepayment of their usual rates to the show, receive and deliver the dogs.

No dog belonging to the St. Louis Kennel Club, or to any member thereof, will be entered for competition, but the club's dogs will be on exhibition.

The show will be held under the rules of the National American Kennel Club.

CHARLES LINCOLN, Superintendent.

Office at J. W. Crooke's, 604 North Fourth street, St. Louis.

PENNSYLVANIA STATE AGRICULTURAL SOCIETY INTERNATIONAL CATTLE TRIALS.—These trials will be held on the grounds adjoining the main exhibition building, Fairmount Park, Philadelphia, Sept. 20th, 21st, 22d, 23d, 24th or 25th. Prizes will be awarded in two classes: First class—All age class; first premium \$100; second premium, \$50; third premium, \$25; Second class—Puppy class; first premium, \$50; second premium, \$25; third premium, \$10.

The following are the rules:—

The culler trials will be held under the personal direction of the

Superintendent in charge, and for these trials blank applications for entry, containing columns for name, age, sex, color, marks, etc., of the dog may be obtained of the secretary at 5 p. m. the time of running. Kennels will be provided for the dogs. No dog can be entered except for trial.

Each dog competing will be required to take five sheep from a pen, drive them a certain distance to another, and pen them there.

A fresh flock of sheep will be provided for each dog. He, in driving, may bark or not, as may be his habit, but biting his sheep will be a demerit.

Each shepherd may take his dog over the ground before the sheep are brought in, and show or tell him what he wants him to do.

The shepherd may precede or follow the sheep as he may choose; he will not be permitted to assist his dog except by voice or gesture. Hauling, heaving, or much barking or noise will detract from the estimate of the performance of the dog.

When a dog is working, no other dogs shall be present to distract his attention.

No person except the Superintendent in charge, and the members of the jury, shall enter the sheep ring while the dog is working.

The jury will carefully note the disposition and docility of the different flocks of sheep, and make due allowance for those that are more wild than others.

Each shepherd will have the privilege of exhibiting the working of his dog by choosing his own kind of work with the sheep, after the regular trial has been completed. He may also show the training of his dog for other practical purposes as a farm or house dog.

Dogs and bitches fifteen months old, or over, must compete in the adult class. Puppies under fifteen months, having competed in the puppy class, will also be eligible for entry in the aged class. All ties will be run off on flocks of three sheep.

Tractability, ready obedience, steadiness in driving, gentleness in working the sheep, and general aptitude in the dog for the business before him, will have due influence with the jury in making the awards.

W. S. RUSSELL, President.

D. H. SEILER, Recording Sec'y.

EDWARD MCNEELY, Cor. Sec'y.

Office of International Exhibition of Sheep, Wood and Wool Products, near the corner Tenth and Chestnut streets, Philadelphia.

NEBRASKA FIELD TRIALS.—The first annual meeting of the Nebraska Field Trials Club will be held under the auspices of the Nebraska State Sportsmen's Association, at Milford, Neb., Sept. 30th and Oct. 1st and 2d, 1880. It will be open to all comers. Entries will be received up to the evening of Aug. 31st at the Secretary's office, Lincoln, and at any time previous. All entries to be accompanied with the forfeit money. Trains will leave Lincoln for the trial grounds (Milford, twenty miles west) at 7 A. M., on the morning of Sept. 30th, and on each day of the trials. Good accommodations have been arranged for men and dogs at Milford. The arrangements of the trials will be under the direction of the Milford Sportsmen's Club.

The following is the premium list:—

All-aged Stakes—Open to all setters and pointers. First prize, \$75; second prize, \$50; third prize, \$25. Entrance fee, \$15; forfeit, \$10.

Puppy Stakes—Open to all setters and pointers under fifteen months of age. First prize, \$50; second prize, \$25; third prize, \$25. Entrance, \$10; forfeit, \$7.

Brace Stakes—First prize, \$50; second prize, \$25. Entrance, \$10; forfeit, \$7.

In all stakes the purses are to fill, or the prizes to be scaled.

J. H. HARLEY, Secretary.

EXPRESS CHARGES.—Editor Forest and Stream.—I wish to say a word about express charges from the West.

We sent two pups to Mr. Waidell, Topeka, Kan.; charges, \$2.80. Belle came in the same box; charges, \$3.50. This, we think, is downright robbery, as she only weighed about eight pounds more than the pups.

J. OTIS FELLOWS.

### OF ENGLISH DOGGES.\*

The third Section of this

abridgment.

Once followeth in due order and convenient place our English Dogges of the third gentle kind, what they are called to what use they serve, and what sort of people plant their pleasure in the, which because they need no curious canvassing and nye sytting, wee meane to be so much the briefer.

Of the delicate, meate, and pretty kind of dogges called the Spaniel gentle, or the com-

forter, in Latine, *Melitoeus*

or *Fotor*.

Here is, besides those which wee have already delivered, another sort of gentle dogges in this our English soyle but exempted from the order of the residue, the Dogges of this kinde doth *Callimachus* call *Melitoeus* of the Island Melita, in the sea of Sicily, (what at this day is named *Malta*, an Island in deede famous and renowned, with courageous and puissant souldiours valiantly fighting vnder the banner of Christ their unconquerable captaine) where this kind of dogges had their principal beginning.

These dogges are little, pretty, proper, and fyne, and sought for to satisfy the delicate and daintie dames, and wanton womens wills, instruments of folly for them to play and dally withall, to trye away the treasure of time, to withdraw their minde from more commendable exercises, and to content their corrupted consciences with vaine disport (A sely shift to shunne yrelesome ydleness.) These puppies the smaller they be, the more pleasure they prouoke, as more meete play fellows for misusing mistresses to chew in their louses, to keepe company with them in their chambers, to accoure with sleape in bed, and nourish with meate at board, to lay in their lappes, and lick their lippes as they ryde in their waggons, and good reason it should be so, for courtesnesse with finenesse hath no fellowship, but feattnesse with neatnesse hath neighbourhood enough. That plausible prouerbe verified vpon a Tyrant, namely that he loued his sowe better than his sonne, may well be applyed to these kinde of people, who delight more in dogges that are deprived of all possibility of reason, then they doe in children that are capable of wisdom and iudgement. But this abuse peraduenture raineth where there hath bene long lacke of issue, or else where barrenes is the best blossome of bewty.

\*Of English Dogges, I the diuersities, the names, the natures and the properties, I haue treated in a treatise written in Latine by Johannes Baptista Cusani de Arte Memo, i. e. Doctor of Physicke in the University of Cambridge (And newly drawne into English by Abraham Fleming Student of the same University) Printed at London by Richard Iohnes, and are to be sold ouer against S. Sepulchre Church within, and in Newgate 1579.

The vertue which remaineth in the Spaniel gentle otherwise called the comforter.

Notwithstanding many make much of those pretty puppies called Spaniels gentle, yet if the question were demanded what propertie in them they spey, which shoulde make them so acceptable and precious in their sight, I doubt their answers would long a conyng. But seeing it was our intent to traualle in this treatise, so that y<sup>r</sup> reader might reape some benefite by his reading, wee will communicate vnto you such conieures as are grounded vpon reason. And though some suppose that such dogges are selye for no service, I dare say, by their leaues, they be in a wrong boxe. Among all other qualities therefore of nature, which be knowne (for some conditions are couered with continuall and thicke clouds, that the eye of our capacities cannot pearse through) wee find that these little dogges are good to assuage the sickness of the stomacke being oftentimes thereto vpon applied as a plaster preservative, or borne in the bosom of the diseased and weake person, which effect is performed by their moderate heate. Moreover the disease and sickness, chaungeeth his place and entrench (though it be not precisely marked) into the dogge, which to be no vnto-truth, experience can testify, for these kinde of dogges sometimes fall sicke, and sometime die, without any harm, outwardly enforced, which is an argument that the disease of the gentleman or gentle woman or gentle whateuer, entrench into the dogge by the operation of heate intermingled and infected. And thus haue I helietho handled dogges of a gentle kind whom I haue comprehended in a triple diuision. Now it remaineth that I annex in due order such dogges as be of a more homely kinde.

#### A Diall pertaining to the

##### third Section.

In the third section is contained one of the gentle or the co-forter which is called the	Spannell gentle or the co-forter	It is also called	A chamber companion	generally called
			A pleasant playfellow	comely
			A pretty woman	delicious

### KENNEL NOTES.

SALES.—Nancy.—Mr. N. Elmore, Granby, Conn., has sold his black and tan foxhound bitch, Nancy, to Mr. Charles E. Horton, of Wakefield, Mass. Victor-Lucy, whelp.—Mr. N. Elmore has sold a very handsome white, black and tan English beagle puppy, Victor-Lucy, to Mr. Waldo A. Howland, of Lowell, Mass. Victor-Bunnie, whelp.—Mr. N. Elmore has sold a fine, two months old, beagle dog puppy, out of Bunnie by Victor, to Mr. Franklin Cleaves, of Saco, Maine. Victor-Lucy, whelp.—Mr. N. Elmore has sold a fine English beagle dog puppy, out of Lucy by Victor, to Mr. A. A. Atkins, of Turner's Mills, Mass. Victor-Lucy, whelp.—Mr. N. Elmore has sold a fine black and tan English beagle puppy, out of Lucy by Victor, to Mr. H. G. Jerome, of Gale's Ferry, Conn.

CORRECTION.—Belle.—In issue of Aug. 12th, we noticed sale of this cocker spaniel bitch. She was out of Blanche by Beau, not Beau, as printed.

WHELPS.—Daisy.—Mr. James Page Stinson's, Wiscasset, Maine, pointer bitch, Daisy, out of Belle by Straehan's Flash, whelped Aug. 13th seven puppies—five dogs and two bitches—by Hubbard's Imported Shot. All the puppies are liver and white. Cypre.—Mr. C. M. Zieley, Lancaster, Pa., pointer bitch, Cypre, whelped Aug. 13th ten puppies—six dogs and four bitches, by Rock. Nellie Horton, whelp.—Mr. G. E. Brown's, Dedham, Mass., whelped Aug. 13th seven puppies—four dogs and three bitches—by Donna's Tom-Stockton's Dash-H. Smith's Fly.

DEATH.—Stougham.—Mr. M. P. McKoon, of Franklin, N. Y., has lost by diarrhoea his cocker puppy, Stougham, by Captain out of Beauty.

BRED.—Fly-Music.—Dr. H. B. Wygant's, (Peekskill, N. Y., cocker-spaniel bitch, Fly, to Mr. Geo. Wygant's first-prize winner, Music.

## The Rifle.

### RANGE AND GALLERY.

DR. RUTH'S EXHIBITION SHOOT.—Dr. John Ruth, the California shot, of whose performances so much has been said in the papers, gave the first display of his ability as a marksman at the grounds of the Fountain Gun Club, in the Brooklyn Driving Park, on Saturday afternoon last. The Doctor is the Western man out and out—long and litho of limb, with his hair swept back over his shoulders. A broad, light-tinted felt hat, with a velvet shooting-jacket, gave the Doctor a marked appearance. Mrs. Ruth is a lady with a very much tanned complexion and the carriage of a backwoods woman. She wore a sort of Gainsborough hat, and when handling the pistol or rifle did not even take the trouble to remove her face matts. Capt. L. C. Bruce, the celebrated rifle shot; C. W. Winger, the Secretary and one of the cracks of the Fountain Gun Club; T. C. Banks, and many expert shooters, were present, and watched the performance narrowly, and all united in declaring that Dr. Ruth was fully the equal of any other such marksman who has yet made his appearance about New York.

The performance was opened by Mrs. Ruth aiming with a pistol at glass balls, and they were shattered in almost every case. With the pistol held sideways there was a miss or two more, but generally every shot told. When the pistol was inverted and the aim taken below instead of above the line of fire there was no apparent loss in the percentage of hits. When the ball was hung by a string and set swinging Mrs. Ruth stood 18 yards off and made a clean break on her first shot. The rifle was then handled through clean ranges of shots, and the usual want of grace with which all women handle guns was apparent; but if the weapon was not brought to shoulder with the lazy swing of the old marksman, the balls were hit just as accurately. When the balls were thrown up in the air Mrs. Ruth stood a good distance off and shattered a dozen out of the fifteen, and this feature, when encored, was equally as good.

Dr. Ruth next began to show his ability as a snap shot. The sights of the rifle seemed to be of no special assistance to him, for when they were covered by a card he would hit the mark on balls placed on the stand and again at the glass spheres thrown

No. 14, Cavalry State Match; open to teams of Troop any troop, or other organization armed with carbines, of the National Guard, S. N. Y., each being certified by their commander to be a regular member, in good standing, of the troop he represents, and to have been such on June 1st, last; they shall appear in the uniform of the United States Army, and carry: distance, 300 yards; position, standing rounds; capon, 16 pounds; equipment, cavalry carbine, State model, with either carbine or infantry ammunition. Potrance fee, \$1 each man. First prize, to the troop whose

team makes the highest aggregate score, a trophy, value \$70; second prize, to each member of the team making the second highest aggregate score, 100 rounds of ammunition, value \$24.50. No. 15. Short Range Team Match: open to teams of 4 from any regularly organized rifle club or association or military organization (troop, battery or company) in the United States; each competitor must be certified to as being a regular member in good standing, of the team making the highest aggregate score, cash, \$50; been such on June 1st, 1880; distances, 200 and 300 yards; rounds, 7 at each distance; weapon, any rifle or carbine within the rules; position, standing. Entrance fee, \$1 each man. More than one team may be entered from the same organization, but the same individual will not be allowed to appear in two teams. First prize, to the team making the highest aggregate score, cash, \$50; second prize, to the team making the second highest aggregate score, cash, \$25; third prize, to the team making the third highest aggregate score, cash, \$10.

No. 16. Military Team Match, 200 yards: open to teams of 5 men from any company, troop or battery of the National Guard of New York, or other States, or of the United States army, navy, or militia; each competitor must be certified to as being a regular member of the company they represent on June 1st, 1880; position, standing; weapon, an embossed flag, value \$100, to be won three times before becoming the property of the organization; second prize, \$25; third prize, \$15.

Stewart's Aggregate Prizes: offered annually by Mr. J. H. Stewart, optician, N. Y. A., 406 Strand, London, W. C., England. The disposition of these prizes will be announced later.

A New Fire-arm.—Lieut. Andrew H. Russell, Ordnance Corps, United States army, who is at present stationed at the Watertown Arsenal, Mass., has taken out letters-patent, dated Aug. 3d, 1880, on an improved magazine fire-arm. His invention relates to the class of small arms designated as bolt guns. Some of the features of his system, he claims, can be employed beneficially with machine guns and with breech-loading cannon, by increasing the size and strength of the parts. The invention is very ingenious. Lieut. Russell claims 32 combinations of ideas embraced in this new fire-arm.

## Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

HIGHLAND PARK, ILL., Aug. 10th.—The following is a report of the first of three matches arranged between the Wabash Merry Bowmen and the Highland Park Archers. The conditions were, teams of six, 90 arrows at 60 yards, each club to shoot on its own ground on same day, and report scores by mail. The Merry Bowmen, being able to get out only five men, authorized the Highland Park Archers to disregard their lowest score in deciding the match. Consequently, the gross scores are as follows:—

HIGHLAND PARK ARCHERS. 402-1,904  
Wabash Merry Bowmen. 386-1,808

HIGHLAND PARK ARCHERS WIN BY 6-128.  
WABASH MERRY BOWMEN.

HIGHLAND PARK ARCHERS.

	21-100	21-100	21-100	21-100	21-100	21-100	Totals.
Swartwout.	23-111	20-110	20-110	21-103	21-103	21-103	84-424
Hammond.	16-68	21-85	24-110	23-107	23-107	23-107	84-400
Hall.	17-87	21-105	23-102	20-98	20-98	20-98	80-382
Kyle.	22-124	23-107	19-77	19-81	19-81	19-81	81-389
Dr. Weston.	17-83	18-96	22-118	16-82	17-83	17-83	83-379
Grand total.							401-2,366

The above score, made by the Highland Park Archers, has one rather remarkable feature in it. It not infrequently happens that the archer making the highest score, makes a less number of hits than the second or third man. But it probably very rarely happens, as in the above case, that the sixth and lowest score is accompanied by the largest number of hits. This case well illustrates the different results sometimes obtained in scoring by gross scores alone, and in scoring by points, the method now adopted by the National Association in shooting for the champion medals. If we give two points for best gross score, and two for greatest number of hits, and consider each 24 arrows by itself, giving one point for score and one for hits, we shall have 12 points, and divided among the archers as follows:—

	Points.	Mr. Kyle.	Points.
Dr. Weston.	41	Mr. Street.	1
Swartwout.	21	Mr. Hammond.	0
Mr. Hammond.	21	Mr. Hall.	0

In scoring by points can we more accurately determine the relative skill of the shooters, as shown in a given match? It will be noticed that two changes have been made in the different arrangements. Dr. Weston goes from last to first place, and Mr. Hall from third to last. Is this fair? Points say so. Dr. Weston made the greatest number of hits, and a larger number than any member of the club ever made, and points reward him with first place. Mr. Hall, though making a fine score, was not first either in hits or score in either 24 arrows, and points put him last. In scoring by points, as a rule, the archer making the greatest score would be the winner. But we see this would not always be the case.

## Cricket.

ORIGIN OF ROUND-HAND BOWLING.—We shall publish in next week's issue an interesting letter on the subject of the origin of round-arm bowling. It comes from an old personal friend of Mr. Wills, perhaps the only survivor who knew Mr. Wills and his charming family personally. The account differs materially from those that have been handed down in cricket annals and companions, and will be of interest to our readers. It will be remembered that the introduction of the new style created quite a stir among cricketers circles at the time, which Mr. Wills tried on at Marylebone, we think, in 1822, but which the authorities would not permit. This excited the wrath of Mr. Wills to such a degree that he left the ground, and his place, by agreement, had to be filled up. The loss of such a man, at such a time (England vs. Kent), caused a considerable amount of ill expression by the backers of his party, although in the end Kent defeated Marylebone signally.

—Eleven Leucases played and defeated the Horeham Cricket Club Aug. 3d and 4th.

—The United States-Canada match, as above noticed, will be played in Philadelphia Sept. 13th and 14th. We sincerely trust that both the associations of Canada and the United States will arrange to place representative teams in the field. According to the rules, the actual traveling expenses of players going to Philadelphia to play against Canada will be defrayed out of the proceeds of this match.

—The "Cricketers' Association of the United States has decided to arrange a match for the benefit of the association, to be played at Philadelphia Oct. 6th and 7th. It has been suggested to select eleven as follows: one composed of members under thirty, and one of those who have reached three decades.

—Eleven Americans will play eleven Englishmen, Sept. 23d and 24th, at Stenton. The Girard Club will select the English team, and the American team will be chosen by the Young America Club.

—Mr. E. Kearney, of Halifax, has kindly sent us an excellent photograph of the "Canadian team," which recently visited England. It shall be placed in our large collection of cricket pictures.

—The Philadelphia match committee has written Mr. Alexander, manager of the Australian team, that it would be unable to arrange a match as desired by him.

—The Staten Island Club's first eleven was engaged to play the Longwood on Saturday last at Stenton, but was obliged to excuse itself, as a team could not be found to go.

LONGWOOD vs. HAMILTON.—First match of the Longwood's tour to Canada. Played at Hamilton, Aug. 8th and 10th, and after a nip and tuck contest resulted in favor of the tourists by 9 runs:—

A glance at the scores of the Longwood Cricket Club, of Boston, made during its first eleven visit to Canada, shows us that four matches were played and three of them won by the tourists. A most excellent showing. Through the courtesy of George Wright, whom we remember long before he knew "what pte meant," we have been enabled to give our readers the full scores and bowling analyses of the tour. He kindly informed us from every cricket center, and he knows whereof he writes. Unfortunately we were away from the city when his letters reached this office, otherwise they would have been published, which a want of space will not permit. He winds up by saying: "Throughout the trip we met with the best of treatment at the hands of our opponents, and it reminded one of what cricket used to be in bygone days in matches between Canada and the United States."

Subjoined are the batting and bowling averages of the four events:—

PENINSULAR vs. ST. MARY'S.—Played at Detroit on Aug. 12th:—

**SHREWSBURY REGATTA.**—The race for the Thompson pavilion stakes was sailed last Saturday on the Shrewsbury River, N. J. There were three classes, jib and mainsail, and under 30 ft.; two prizes in each class. The entries were poor, and all handicaps put prizes in consequence. Madge, Geo. Lanthier owner, won in first class in 2h. 45m. 2s., beating Madeline, Mamie Finlay, Capt. Ford, won in second class, beating Glenn D., and Chippy Bird in 2h. 4m. 40s. The regatta was a success, and the tub races followed, affording much amusement to the spectators.

FOREST AND STREAM PUBLISHING COMPANY.  
New York City, N. Y.

A MUSICAL AND SYMPATHETIC ELEPHANT.—An American Menagerie and circus proprietor announced lately for his benefit, a learned elephant to play some pieces on a "magnificent Hirsmead." Every one rushed to hear the tusked virtuoso, and a large amount was taken at the door. Before the end a new piano was brought into the middle of the circus and the top removed. After the usual obsequies, the elephant advanced to the piano. Raising his foot, he placed it on the keys. Suddenly he uttered a fearful cry, which sounded like weeping, and on occasion no small alarm. The proprietor came forward and stuck his head in the the animal's jaws to learn the reason. Taking his head out again, he ordered the tusked virtuoso to be led away; then turning to the audience, said the elephant could not play on that piano, as

in the keys of the instrument he recognized the teeth of his mother. A broadwood was immediately telegraphed for to London.

We suspect that the above, which comes to us from London, contains the covert advertisement of a piano manufacturer, but the elephant must nevertheless go on record.

AN AFTER SCRATCH.—One day last week I saw my old cocker "Fannie" while going at full speed go on three legs and try to get burrs off her belly with the other; too busy to stop for burrs when there was a chance to get up a woodcock.

FELLOWS.

—Some Parisian ladies have taken to frog shooting. The arm they use is a highly ornate steel cross-bow, from which a dart may be discharged with sufficient force to transfix the most corpulent and tough-hided of frogs at a range of twenty feet. By means of a silken cord this missile is attached to the breech of the cross-bow, a contrivance enabling the successful marksman to dispense with the services of a retriever for the collection of her game. Having shot a frog, she can haul her wriggling victim to her very feet, where the duty of "bagging" it devolves upon her keeper. From five to six brace constitute a good average bag, and furnish a succulent dish of slender hind legs, delicately fried in batter.

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has just returned from Murcia, Spain, where all the high quality gut is made. While there he organized the most extensive and perfect factory for making this article in the world. The grades named below will run at least 25 per cent better than those of any other manufacturers.

## SETTERS FOR SALE.

Out of my bitch Maud (Fancy-France), an orange and white ticked dog, by a very fine native dog. He is the champion young setter, and is strong, handsome and has a fine nose; price \$75. Also a very handsome orange and white bitch, out of my bitch Maud, by a very fine native dog, and has been bred; is a splendid retriever. She will make elegant dog. Price \$50. Also two dogs out of Maud by Maxwell's dog, and they are Hyer's Belle and One-eyed Sando. These pups are very bright, quick and intelligent. Price \$150. The pups are orange and white, and are known as the working dogs, most of them being champions. Great care has been taken in breeding all of my dogs, and they are very easily broken. Address G. F. OSBORN, New Haven, Conn. Aug. 19-3c

**RIFLE FOR DOG**.—A Sharps mid-range rifle, good as new, with all improved sights. Will exchange for first-class young setter, thoroughly broken in all respects. Must be perfect field dog. Address W. H. BERNARD, Wilmington, N. C. Aug. 19-1c

## The Kennel.

**CHAMPION RORY O'MORE PUPPIES**. For sale several large, handsome pure Irish setter puppies, whelped July 30th, 1889, sire champion RORY O'MORE (champion Rufus ex champion Friend), dam, my red Irish bitch Gussie (Judge Pratt's Dan ex imported Ruby). Gussie is a full sister to Arlington, bred at Boston and St. Louis, 1879. She is thoroughly broken, and one of the best field dogs in America; she is also a great beauty, sold by good judges to be the largest and one of the handsomest Irish bitches in the country. She was placed, Ruby, V. H. C., at New York, 1880 (only time exhibited), when in very poor condition, having been hunted hard all winter in the South, and a few weeks previous to the show. For blood, beauty and field quality no better can be found. For printed addresses, prices, etc., address W. E. FURBER, Peekskill, N. Y. Aug. 12-1c

## Imperial Kennel

Setters and Pointers thoroughly field broken. Young Dogs handled with skill and judgment. Dogs have daily access to salt water.

### TRADE—"BEATS THE WORLD."—MARK.

### Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS  
are perhaps not aware, that in  
smoking Cigarettes made of the  
ordinary pure rice paper, they have been  
inhaling THE MOST DEADLY OF POI-  
SONS, thrown off by all burning paper,  
namely: The Oil of Creosote, CHARLES  
G. EMERY, of the firm of GOODWIN &  
CO., manufacturers of "OLD JUDGE"  
Cigarettes and Smoking Tobacco in-  
vented and patented a process, March  
5th, 1878, by which the Rice Paper used  
as wrappers for "OLD JUDGE" Ciga-  
rettes has been so prepared that the un-  
pleasant ODOR and the injurious effects  
of the Oil of Creosote are completely  
neutralized or destroyed, and the paper  
made safe proof to prevent its break-  
ing or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing  
to the fact that this process has been followed by no one else having the  
right to use it. The great advantage and importance of this invention will at once be recognized by  
all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.  
Sold by all leading dealers. Try them and you will use no others.

Manufactured by **GOODWIN & CO., 207 and 209 Water st.,  
NEW YORK.**

### Hotels and Boutes for Sportsmen.

**Lake House,**  
PRINCETON, MAINE.

### "THE FISHING LINE."

TAKE THE  
**Grand Rapids & Indiana R.R.**  
Mackinac, Grand Rapids and Cincinnati Short Line

FOR THE  
Trout, Grayling, and Black Bass Fisheries,

FAMOUS SUMMER RESORTS AND LAKES  
OF  
**NORTHERN MICHIGAN.**

The waters of the  
**Grand Traverse Region**  
and the Michigan North Woods are unsurpassed,  
if equaled, in the abundance and great variety of

**BROOK TROUT** abound in the streams, and  
the famous AMERICAN GLAYLING is found  
in the lower waters of the same.

THE TROUT season begins May 1st and ends Sept. 1st.  
THE GLAYLING season opens June 1st and ends  
Nov. 1st.

**BLACK BASS, PIKE, PICKEREL, and MUSCALONGE**,  
also abound in large numbers in the  
streams and lakelets of this territory.

The sportsman can readily send Trophies of his  
kill to his friends or "club" at home, also for  
padding, can be had at many points.

TAKE YOUR FAMILY WITH YOU. The econ-  
omy of the North Woods and Lakes is very beau-  
tiful and pure, dry and bracing. The climate  
is peculiarly beneficial to those suffering with

**Hay Fever and Asthma Affections.**  
The accommodations are good, far sur-  
passing the average in countries new enough to  
afford the finest of fishing.

During the season Round Trip Excursion Tick-  
ets will be sold at low rates, and attractive tri-  
angles offered to Tourists and Sportsmen.  
Dogs, Guns and Fishing Tackle Carried Free at  
owner's risk.

It is seldom to make sportsmen feel "at home"  
on this route. For Tourists' Guide an attractive  
Illustrated book of 80 pages, containing full in-  
formation and accurate maps of the Fishing  
Grounds and Lakes, Cards, Address, A. B. LEET,  
Super. Lake Agent, Grand Traverse, Mich.

DEALER IN

**Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for**

**J. Stevens & Co.'s Celebrated Arms.**

New York, May 23d, 1877.

DEAR SIR: For the benefit of my friends and all marksmen in general, I desire to endorse the "Stevens' Arms."

In my gallery, where so many tastes are to be suited, I will say that your rifles and pistols are the favorites. They have made the best shooting on record at my place, and I do not, but not least, they are seldom or never out of repair.

According to my ideas, which, by my long experience, I trust are correct, the shooting qualities of the J. Stevens & Co.'s arms are as near perfection as human ingenuity and skill can make them.

I take pleasure in making this voluntary contribution to your already large number of well-deserved recommendations. Yours truly,

JAS. S. COSTLIN,  
Shooting Gallery, 1222 Broadway, N. Y.**CHARLES L. RITZMANN,**

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

REGISTERED JULY 1877

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary run rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: THE OIL OF CREOSOTE. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 24, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared, that the unpoisonous OIL OF CREOSOTE, and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made safe, so that the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK.

ALLEN'S DECOY FRAME. ALLEN'S DUCK CALLER.

ALLEN'S DECOY FRAME IS SIMPLY A DEVICE TO HOLD:

THE DEAD DUCK IN A NATURAL POSITION IN THE WATER, or on the ice as a decoy.

We claim that they will decoy better than any other device ever made. They cost less than any other decoy (\$4.00 per dozen.) They weigh less. You can carry two dozen in your hunting coat pockets, and in one minute after shooting your duck can set it in the water in its natural position as when alive. We make three sizes: No. 1 for mallards, No. 2 for canvas-backs, etc. No. 3 for wildgeese, blue-bills, gadwalls, etc. and No. 3 for teal, etc.

For sale by all gun dealers, or by F. A. ALLEN, Monmouth, Ill. Sent to any address on receipt of money, draft or P. O. Order, \$3 per dozen.

WE MAKE THE MOST NATURAL-TONED AND EASIEST BLOWING DUCK CALLER IN THE WORLD. SENT BY MAIL ON RECEIPT OF ONE DOLLAR. LIBERAL DISCOUNT TO THE TRADE.

Dogs of Great Britain, America and Other Countries.

PRICE, \$2.00.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use. DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING," PFG and PFFG. The FG for Long Range Rifle Shooting, the PFG and PFFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all grades and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder. U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by:

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or PFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

Hazard's "Electric Powder," Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting," Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting," Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, and water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle," PFG, PFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lb. kegs, and canisters of 5, 1, and 1/2 lb. kegs. PFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The PFG and PFG are favorite brands for ordinary sporting, the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURABLE TO ORDER.

The above can be had of dealers or the Company's Agents, in every prominent city, or wholesale at our office.

PUBLISHERS' DEPARTMENT.....	69

FROM the inauguration of field trials in America, at Memphis, Tenn., in October, 1874, up to this date, this mode of practically testing what a dog really is at bottom has steadily been gaining favor in the eyes of the American breeder and sportsman. In this, and in last week's issue, the FOREST AND STREAM contains a list of the coming autumnal fixtures, the official programmes of each event, the data of management, and the rules by which each trial is to be governed and under which it is to be run. We have published these in full, acknowledging their great necessity and confidently expecting that the growing interest will increase until we shall see every State in the Union have its own field trials club and its annual competitions. Meetings of this kind are of paramount importance, not only as a means of bringing our sportsmen into contact, thus affording an opportunity for them to compare notes, and from their experience improve their breeds, but also as opening a way to infuse a greater admiration for the noblest and most intelligent of all dumb animals. Rightly conducted, field trials cannot but tend to raise the standard of the sport of shooting game birds, and greatly to increase the number of well-broken dogs. A perusal of the rules of both the National American Kennel Club and the Eastern Field Trials Club shows us that several of them have not been drawn up as carefully as we would wish to see. One in particular does not meet our views. We refer to the instruction to judges on the subject of chasing. We consider this so grievous a fault that the dog so offending should be instantly disqualified as unworthy of a place in the competition. As dogs, and particularly young ones, are imitative, it can be readily seen what a deal of harm such a bad example might produce. We would not shoot in the field with a man who owned a brute that ran his birds. Evil communications, certainly in dog flesh, as among men, are quite sure to corrupt good manners.

No laws for competitions of this kind can be too fully or plainly expressed. They should be explicit and admit of but one construction. The success of every enterprise depends upon the straightforwardness and intelligence by which it is run. Indefinite rules, framed carelessly, even by inadvertence, are liable to be twisted by interested parties so that they shall seem to mean the very opposite of what is intended. Dissension and cavil rob all true sport of its pleasures, and disgust all men of gentlemanly instincts. Wherever competitions of any kind take place there have been since the world began men who cannot take a beating in a mainly way; and occasionally persons are met with who would resort to any means to bring about their own desired results. If they cannot win they do not wish to see their neighbors do so.

As a protection for the judges, the laws and instructions should be clearly given, and it will cause the gentlemen who accept the onerous office much trouble if they are not. Fortunately the selection of judges thus far has been most excellent, and we cannot let this opportunity pass without congratulating the committees we have heard from on their tact and the soundness of their choice, and their good fortune in having these gentlemen accept. As long as such men as Messrs. Morford and Wilson, Capt. Henry and Dr. Twaddell are found to the fore, there need be no fear but what every owner will get his dues.

MR. OBER'S RETURN.—Mr. Frederick A. Ober (Fred Beverly) arrived in this city, from St. Thomas, last Friday. Mr. Ober began his ornithological explorations of the Lesser Antilles in 1876 under the auspices of the Smithsonian Institution, and was engaged in them two years, when, the funds giving out, he was obliged to return, with the work unfinished. The great success of this mission in a scientific way (twenty new birds having been discovered and a vast amount of information respecting the islands having been obtained) impelled Mr. Ober to return and complete a work so auspiciously begun. But a few islands of the chain remained unexplored, and a few hundred dollars would have been sufficient to complete the survey. Even this small amount

the Smithsonian was unable to advance, and consequently Mr. Ober went out, at his own expense, to finish a work which should have been accomplished by aid from English or American scientific societies.

The result has been highly satisfactory, as several new birds have been discovered, much new information elicited regarding the topography of the islands, as well as the fauna, and the scientific world is to be, for the first time, put in possession of a complete history of the birds of the Lesser Antilles. The catalogues of the birds of each island will be published in the "Smithsonian Reports," supplementing the other various catalogues published two and three years ago. Mr. Ober has with him a live specimen of the great imperial parrot, inhabiting only a single island in the Antillean chain, and known nowhere else in the world. He sent, three years ago, the first skins of this bird that ever reached the United States, and now brings the first specimen alive. He has also a pair of agoutis—animals peculiar to South America and the West Indies—and a monkey, peculiar to one of the islands, about which the naturalists are in doubt—as to the species—whether it is an inhabitant of the new world, or was introduced from Africa.

This question, as well as many other curious and interesting problems that have vexed our scientists for years, will be settled by the specimens now in possession of Mr. Ober. He has visited every island between Porto Rico and Trinidad, and among other recent visits has paid one to the famous Boiling Lake of Dominica, which surprised the inhabitants of that island last January by an eruption of hot water, mud and stones. In the interval between his two exploring trips Mr. Ober wrote a book describing his adventures in the forests of the Caribbean Islands. This book was published by Messrs. Lee & Shepard, Boston, and has since appeared in England, meeting with a good reception on both sides the Atlantic. Having made engagements to lecture this winter, he returns to fulfill those engagements and to write out the further adventures of his recent trip.

PACIFIC COAST FISHES.—The west end of the United States Fish Commission, composed of Prof. D. S. Jordan and Mr. C. H. Gilbert, are actively at work. They have made stations for collection and study of fishes at San Diego, San Pedro, Santa Barbara, Monterey and San Francisco. Twenty-eight species, new to science, have been introduced into the system thus far by them, viz.: A sole (*Aphoristia*); a flounder (*Pleuronichthys*), and two new genera of flounders. A new ray (*Raja*); a sting-ray (*Dasyatis*); a ray of a Chinese genus (*Platyrrhina*), and a ray of a new genus; two new *Enbiotocoids* (genera *Abeona* and *Brachystius*); three new blennies (*Xiphister*—two species; *Apodichthys*, one); a new *Agonus*, and a new deep water fish, which, with one previously described by Mr. Lockington, seems to constitute a new family (*Coesteidae*), and, finally, no less than thirteen new species of the "rock fish," genus *Sebastichthys*. These, with the twelve species previously known, are now all brought into the San Francisco markets with more or less frequency. Most of the new species are from deep water, and were not in the markets in Dr. Ayres' time, twenty years ago, since which time no one has attentively studied this group on our coast.

Numerous species known from further south have been added to the United States fauna. Notable among these are eight sharks: the great basking shark (*Cetorhinus*); the man-eater (*Carcharodon*); the tiger shark (*Galeocerdo*); the mackerel shark (*Isurus*); the swelling shark (*Cephaloscyllium*); the horned shark (*Pseudocorymbus*); the blue shark (*Carcharias*); and the oil shark (*Galeorhinus*).

JOSEPH W. LONG.—Joseph W. Long, the author of "American Wild Fowl Shooting," died recently at Osceola, Nev. Mr. Long was well known as a practical gunner, and his book holds a deservedly high place among the few books of sport that are really worth anything.

—The very interesting review of the work of the Fish Commission will repay a careful perusal. It is a good showing of results.

For advertising rates, instructions to correspondents, etc., see prospectus at end of reading matter.

## FOREST AND STREAM.

NEW YORK, THURSDAY, SEPTEMBER 2, 1880.

ANONYMOUS LETTERS.—There is one form of epistle frequently received in all newspaper offices to which, besides a cursory glance and a toss into the waste basket, no further thought is ever given. If these letters, which usually come signed "A Reader," "Truth," or perhaps by the dishonestly assumed title of some organization, are full of petty spite, unmerited personal abuse, insinuations, innuendoes, hints, vituperations, threats and stage fury, they are apt to provoke a laugh or an impatient grimace, according to the mood of the recipient, but beyond this—nothing. An anonymous letter intended for publication may be, if it finds its way into print, either contemptibly ridiculous or cowardly and mean. Consigned to the waste basket, it can be neither; and such is the fate of all such letters which come to the FOREST AND STREAM, even when their peculiarities of handwriting disclose their authorship. The individual who pens abusive letters and sends them to this office anonymously is simply wasting time, ink, paper, postage and, let us hope, is sacrificing self-respect.

GERMANS AT THE BUTTS.—The New York Schuetzen Corps, Major George Aery, captain, will hold their annual fall festival at Thompson's Pavilion, at the Highlands of Navesink, on the 14th and 15th of September. Special arrangements have been made for the transportation and hotel accommodation of the entire corps, with their invited guests. The interesting features this year will be off-hand shooting, as usual, and prize bowling by ladies, none but those accompanying the members of the association being allowed to compete. There will be a ball the first evening, and an excursion and a fishing match for the ladies the next morning.

## The Sportsman Tourist.

### ROUGH NOTES FROM THE WOODS.

HOW THE RED MAN WATCHES A LICK—CAMPING, COOKING AND ANGLING—INDIAN WOODCRAFT.

WHEN Chief William led up to the lick he took me by pulling stones and pleasant places. My way led through a beaver meadow—and that same beaver meadow business is an institution, so to speak, found nowhere so frequently or in such perfection as in the Northern Wilderness. On all the waters of the Moose, wherever you find a small stream emptying into river or lake, you find with something like certainty find a beaver meadow on the course of the brook, usually about midway of the stream. The beaver is the first wild animal of importance to disappear before the white man; but there are men now living who remember when these beaver meadows were beaver ponds, with busy, sagacious, shy inhabitants. At present they are perfectly level meadows, invariably dotted with graceful, light green tamaracs, with an occasional spruce, standing singly or in groups of three or four, resting in calm quiet in the bright sunlight, scarcely moved by the furious gales that sweep the mountain tops bare of timber. From the very apex of Bald Mountain (the Mt. St. Louis of Colvin) you look down into one of these oases, a thousand feet below. You could almost throw a stone there. Quiet and motionless it lies, while the signal staff on the summit is bending before the gale, and you are fain to keep a few paces from the edge of the precipice lest a sudden gust knock you off your balance, and send you into the tree tops five hundred feet below. Far more lovely and interesting to me are these beautiful, lonely nooks than the mountains that overlook them; to me they seem to have been strangely overlooked by tourists and writers who frequent this region. This is digression.

Silently as ghosts we stole through the meadow and up to an unusually thick clump of spruce and tamarack. Through the thick foliage I looked about and dimly saw three rudo poles lashed to the branches twenty-five feet from the ground. Silently I commenced to climb, and soon found a seat on one pole, feet trying to rest on another. The Chief sighted a hole through the branches, made his old coat into a ball, and pitched it at my head with a force and accuracy that nearly knocked me off the perch. There was a scrambling among the branches, and the butt of William's preposterous musket appeared in reach. I drew up, placed it against the left hand spruce with his old coat, and then came the butt of my rifle, followed by the head of the Chief. We sat silently and watched warily. I saw by his eye that he expected the deer on his side of the "blind," and repented me that I had not placed his coat and blunderbuss against the other spruce. We had not long to wait. The sun was still shining with yellow, slanting rays on the light green of the tamaracs, and glancing behind and beyond the Chief, I saw the old, old sight—a timid doe in the red coat, gliding cautiously into the tall grass of the meadow, ears forward and nose on the alert for any suspicious tint of enemies. We had been cautious and silent. She detected nothing wrong, and turned toward the blind; halted at forty yards between two clumps of tamaracs, and stood still to listen and sniff the air.

Now, it strikes me that I was a noble red man, and had taken a fancy to pale face. If I had taken that pale face to my lick for a shot, and knew his rifle to be a nail-driver, I would have leaned backward a little and let the white man send a ball into the deer's vitals instead of chancing a musket with eleven small buckshot at a range of forty yards. The Chief did not see it in that light. With a slow, steady motion he cocked and raised the old piece, held it for an instant as in a vise, and then the flash of the firing, and a great expansion of powder smoke, and the deer was gone. I caught her. She no doubt had one or two fawns waiting for her on the hill; and being burdened with the cares of maternity would be but tough eating at the best. Even had the deer been a buck and in condition I would not have given him twenty-five cents for his shot. He laid the musket with his coat, climbed down in silence, and I saw him for a quarter of an hour hunting diligently for some sign of a hit; but he found not a trace, and he came back looking a little beaten, I thought. Then he spoke for the first time since entering the meadow.

"Watch any more?" he asked.

"No. Definitely, no. The smoke settled down on the meadow, and the grass is trampled at the very spot where the deer came in."

I pitched his coat and musket into the soft moss, followed them with my rifle, and we started for camp.

"Poor camp; only bark," said William.

I thought differently. It had a good roof of bark with bark, end and sides closed in with the same. We in Pennsylvania would reckon it an excellent camp. And what a grand woodsman the Chief was. He would hardly allow me to lift a stick of firewood, but toted old dry trunks of dead trees, bark and branches, picked browse for a fresh bed, and by the time it was fairly dark we were snugly in sleep. I kept him awake for an hour beyond his usual time, but he had given me points concerning the wilderness, of which he is reputed to have as much and as accurate knowledge as any man living. At length he tired of stories and talk, drew his blanket about his head, Indian fashion, and subsided in sleep.

"Wake me up early; look after deer," he said the last thing before settling into a steady, subdued snore, that was not at all agreeable to me.

I sat up late—snored, nused, built fires and listened to my old acquaintances, the owls, until, overcome with drowsiness, I, too, pulled my blanket about my ears and slumbered sweetly, after the manner of those who rest all night in open camps.

It was daylight when I awoke. I roused first the fire, and then Chief William. He shook himself together, borrowed my rifle and was off on the trail.

"I don't let deer, be back in hour," he said, laconically.

"A fool's errand," said I, and went down to the spring hole to try fly-fishing. I pooled a couple of half ponds, came back to camp, and cooked a trout breakfast in my best manner. William had been gone more than his hour; breakfast was ready and hot, and I was getting im-

patient, when far from beyond the beaver meadow on the mountain came the plain, sharp crack of my rifle. He had found the deer after all. And I ate breakfast alone.

It was past 9 A.M. when, getting impatient, I started up the trail, and at the first turn met the Chief, a smile of Christian satisfaction on his face and the limp half of a freshly-killed deer wagging at his hip. It was a bit of good hunter craft. He explained how he had quartered the ground like a setter for a hundred rods before finding blood. Once found he had followed it like a sleuthhound, losing it again on the ridge, and finding the deer at last by patiently quartering the ground again. It was badly wounded on one kidney (all luck), but made a short run and laid down again. He crept up within thirty yards and shot through the heart. Few white hunters would ever have tracked out and killed it.

William cooked himself a hearty meal of venison, of which, being well-fed, I could not partake; and then, still insisting on carrying my traps, started to put me, by a short cut on the trail, to my next objective point,

#### JONES' CAMP.

Albert Jones came into the wilderness about three years ago, so sick and weak as to be lifted from the wagon, and unable to speak aloud on his arrival at the Forge House, foot of the Fulton Chain. He had been a strong man, with an iron constitution, and, like many Americans, had broken himself down by constant overwork and anxiety. He had been a business man; a miner in the early California days; a ranchman; had served and run sawmills; had been a tamer of wild horses among the Spaniards and "buckskin" of Mexico, and had spent the best part of an active, vigorous life in the multifarious pursuits, chances and changes peculiar to an adventurous American.

It came to an end by a general physical breakdown. The doctors said "general debility." They always said that when they are stumped. Jones was a native of Northern New York, and in his younger days had often gone to the Wilderness for sport and recreation.

When hand and brain could work no longer, he said, "Take me to the woods; if I am to die let me die there." They took him in to die. In less than two months he had so far improved as to go out and attend to business, which had rather piled up on him in his absence. One month of that settled him. He was down again, and again "broke his hold" and came to the woods. Again he got the benefit of rest and a care-free life, and when he thought himself pretty well able to manage his affairs he went out of the woods and got down to business. And it floored him in just three weeks. Then he let go and came to the Wilderness for good, as he says. He built a comfortable log camp (or house) at the foot of the Moose River stillwater, built and bought half a dozen boats, keeps boarders (when they come) at most reasonable rates, and passes his time as quietly as any man I know.

He has regained health and spirits, and, on the whole, make an excellent subject for "Admiral Murray," if that gentleman were writing another book.

His place is situated at the foot of navigation for the Fulton Chain, and it is a twelve mile paddle from the Forge House landing, foot of First Lake. I will only add that of all the camps I have eaten and slept at none as good a supply of good-sized brook trout as Jones' Camp. And this is a bird's nest, a rock in eighteen pound canoe and knapsack for a trip to the other side, as much as if I might find interesting and profitable.

I might mention that I made the acquaintance of a young man at Jones' who is a permanent boarder there, having sought the forest for relief from asthma, from which he had been a great sufferer. The relief was found, and he is another witness to the great benefit so often derived from a residence in the Wilderness.

Not all invalids improve by coming here. I had a pleasant camp of bark, with open front, pointed out to me on Fourth Lake, where a young man afflicted with incipient consumption tried all last summer the effects of open air life in the Wilderness. His camp was pleasant and in a healthy location. There was nothing lacking for a fair trial, and he tried it long and fairly, but, vainly, he slept, and his fathers. Scores come here for health who will tell you frankly that they might as well have staid at home. Very many receive decided and permanent benefit. Some bad cases of asthma and consumption in its first stages are, apparently, cured. One thing is certain: you pay your money, you do not always take your choice.

From Jones' I proposed to start on a canoe trip through or into any part of the woods that might strike me as interesting or desirable. In pursuance of this plan I paddled off from Jones' landing one bright morning, reaching the Forge House in time for dinner and realizing pretty fully the difference between up stream or down when the paddle is in question, especially as I got fogged on the course and paddled sixteen miles instead of twelve.

The Forge House, kept by J. W. Barrett, is the starting point for most parties who go to the Fulton lakes. The house is well kept, and it is a great rendezvous for guides, whose boats may be always be seen at the landing, where the owners come to get their boats.

*En passant*, as this is the season both for lakemen and brook trout, and as many are deterred from visiting the woods at the best season for fishing by those intolerable nuisances, flies and mosquitoes, I may as well fulfill a promise made in my last, of an infallible recipe for these pests, by using which one may walk the trails and climb mountains, fish by day and sleep by night, free from the poisonous stings of flies or mosquito. I know there are a score of remedies all more or less effective, and I have tried most of them during the last twenty-five years. The one I have found most effective is made as follows:—

Three ounces castor oil and two ounces best tar. Bring to a slow boil on the stove in any vessel, letting it simmer for half an hour. When partially cool add one ounce of pennyroyal, and mix thoroughly. To use, pour a teaspoonful into the palm of your hand, rub your hands together, and then rub every exposed inch of skin with your palms. A light coat will do, and don't wash it off. You may have to repeat it once or twice daily for the first two days, but after that one application each day will leave you in peace. It is in no way filthy, and is not disagreeable to most persons, while the effect is all that can be desired.

NESSECK.

#### CAMP CREAM O'TATTAR.

NO MAN'S LAND, August, 1880.

DEAR FOREST—"You have, of course, received our invitation to 'call and see us,' but as you have not put in an appearance I fear the sincerity of the invitation is doubted, 'wherein you wrong us deeply,' as Hamlet or Ophelia, or some other of Shakespeare's magniloquent talkers said."

I have to report a terrible conflagration and explosion, with no insurance and no loss of life. Our shanty caught fire, or was set on fire, or set fire to itself last night, it was discovered by the scorching of the Major's left heel, which woke him after some time. The lake was close at hand; the Tin-dipper Company (the Doctor) went actively to work; the Scribe carried water industriously for some time in a bail, but afterwards discovered that a large tin hole had been burned in its bottom, which incapacitated it for retaining anything more fluid than a bucketful while the Major, with great presence of mind, begat a long experience under fire, kept rapidly filling his mouth with water and spouting it upon the flames. Once, by accident, he got at the wrong tumbler, and cast upon the fiery billows a mouthful of old rye. This untoward accident caused the flames to rage more fiercely, and then the Doctor's powder-flask blew up.

The scene at this time must be imagined to be appreciated. The lurid glare cast a crimson tinge upon the water, which dashed upon the beach as if in wild mockery of our misery. The lurid glare also fell upon the dark form of the Scribe, who, having discovered the hole in the pall's bottom, was lighting a cigar and cheering on the Fire Department.

As soon as the flames found nothing else to burn they succumbed, and then morning woke and the sun rose, smiling as though one ought to smile back again. Then we found some trout which had been prepared for the morning meal. These we cooked over the embers of our house, and then proceeded to investigate damages.

The Doctor had suffered most. His powder-flask in exploding had blown up his cracker-box cover essay on the "Grasshopper," his Complaint in Whitecherry Time, and the world and the London *Lancet* inside forever. It probably saved our lives, however. It lay upon the flask, and the heaviness of the essay, by keeping the explosion down, prevented any harm to us. Powder couldn't move it (nitro-glycerine would have had its hands full to do it), and it reposed peacefully but scorched on top of the flask's fragments. Our shanty was gone, and our shelter tents were saved, so we are comparatively happy.

We have had a great laugh at the Doctor. A countryman, with a face as hard as a billiard ball and about as expressive, told the worthy scientific man a long story about a remarkable dog, which was located on a farm about four miles away. According to the bucolic gentleman this dog was a cross between a bull terrier and a grasshopper. The Doctor, on a very hot day, to see if he could find him, said, "That country gentleman this pup, and didn't find him. That country gentleman had better not visit our camp again, for the Doctor had prepared a large rock with which to 'rock him to sleep' if he reappears."

The country came night upon being plunged into mourning last week. Slitting lights of the medical, murdering and meditative professions were nearly quenched by the Scribe's powers. The Doctor, the Major, and the Scribe were near and far. That country gentleman for food. It was thus: I was sitting in the stern of the boat, the Doctor was in the middle, and the Major in the bow. The Doctor and I were using hand-lines and the Major a pole. He had his back to us and was afflicted with poor success. Suddenly a very great fish broke water near us.

"I'll have that fellow," quoth the Major, and so saying he swung his line over his shoulder and caught, the Doctor right across the bow. "Hello! I'm fast," said the Major, without looking around, and with that he gave a pull, and the Doctor's nose followed the pull, and the Doctor "followed his nose."

I was so full of laughter that I couldn't speak, and the sufferer was so surprised that he couldn't; and the Major gave another pull, and the Doctor's nose went over the side of the boat, and another pull would have brought him overboard, then the bowman one gave vent to such a horrible sound—a compound of snarl and swear—that the Major paused and look over his shoulder. Then he presented a beautiful tableau. The astonishment and contrition of countenance of one and the furtive clawings of the other at his nose and the horrible mug he presented were indeed rare spectacles; and when I at last recovered from my agony of laughter I was sent back into it by the anonymous ejaculation of the sufferer.

"How I will look going home to town with a fish hook in my nose." The Scribe butchered the hook out after his hand had become steady with a penknife. Then the Doctor sat "dipping his beak in the Gascon wine," as Thackeray has it. The Doctor was very soon restored to his usual normal state of cheerfulness and then he passed beyond it; then he undertook to dance a walk round on the gunwale of the boat. Nothing could dissuade him. Up he got on one side of the frail craft, and in order to counter-balance him we were forced to sit hanging over the other side. Thus some moments passed of violent salutatory movement on his part, and of objugation on ours. Then the medical gentleman made a misstep and disappeared suddenly into the lake with a wild and cheerful halloo. The boat, relieved from his weight, gave a vallop to port, and in the twinkling of an eye the Scribe and the Major were overboard. The Major, who can't swim, caught the painter and hung on for his life. Up to the surface came the unterrified Doctor and began to gambol about the bank and sing the Canadian boat song. This insult, added to injury, was too much for the Major. He scrambled into the boat, and seizing the boat-hook latched the Doctor such a crack on his crown that he was sobered instantly and came about, swearing that his skull was fractured. It was not, but he has not yet been able to get his hat on over the lump.

THE SCRIBE.

—An old angler says that a fish does not suffer much from being hooked. Of course not. It is the thought of how his weight will be lied about that causes him anguish.

—Falconry is being introduced in Boston, and over 200 estimable old hens have met violent deaths while being used by Beacon Hill young ladies in practicing, — *Commercial Advertiser*.

## THE AMERICAN ASSOCIATION MEETING.

THE twenty-ninth annual meeting of the American Association for the Advancement of Science was largely attended, and in all respects successful. The arrangements of the local committee were excellent, and everything has progressed in a most satisfactory manner.

At 2 o'clock on Tuesday, Aug. 24th, a meeting of the Cambridge Entomological Club was held, at which, after an opening address by Mr. Scudder, its President, were read a number of important papers. Among these was one by Mr. A. R. Grote on the generic characters of the *Noeluidæ*, one by Prof. A. J. Cook, treating practical apiculture, and one by Rev. H. C. McCook on the honey ants of Colorado. Prof. John L. Leconte read a paper on "Lightning Bugs," which was of great interest. A number of other contributions of value were read, among them one by Dr. H. A. Hagen on the Hessian Fly.

The opening exercises of the meeting and the general business having been accomplished during the morning of the 25th, the feature of the day was the address of Prof. Barker, the retiring President, On the Origin of Life, which excited very great interest and was listened to with deep attention. In concluding the speaker said that, physiologically considered, life had now no mysterious passages, no sacred precincts into which the unallied foot of science might not enter, and that research had day by day diminished the phenomena supposed to be vital, and that sooner or later every action of the living body would be pronounced chemical or physical.

The session of the Physical Section, of which Prof. Asaph Hall is President, was interesting, and several astronomical and physical papers of value were read. Section B (Natural History) was addressed by Prof. Alexander Agassiz, its President, who delivered a most learned and suggestive discourse on Biological Development in the Animal Kingdom, as Manifested in the Paleontological and Embryological Study of Sea Urchins. Some of the papers read before this section are as follows: Comparative Anatomy as a Part of the Medical Curriculum, by Dr. Harrison Allen; Distinguishing Species of *Populus* and *Juglans*, by Young Naked Branches, by Prof. J. W. Bell; Observations on Japanese *Brachiopoda*, by Mr. E. S. Morse; Evolution of Parasitic Plants, by Thomas Meehan; On the So-called Fine Blight of the Apple Tree, by Mr. T. J. Burrill. In the sections of Geology, Chemistry and Microscopy important papers were read.

The session of the Permanent Sub-section of Anthropology, presided over by Major Powell, was very interesting. Prof. A. S. Bickmore's paper upon the Ethnology of Africa was illustrated by a colored map locating many of the races of that continent. Myths and Folklore of the Iroquois, by Eminence F. Smith, was listened to with close attention, and other papers of interest were read.

In the afternoon the exercises were not less interesting than in the morning, and in the evening the association listened to an address by Prof. J. Graham Bell, the inventor of the Bell telephone, who discussed the production of sound by light.

The exercises during the remaining days of the week were well attended and of great interest, but lack of space prevents our giving any detailed account of the proceedings. Cincinnati was chosen as the next meeting place, and on Tuesday the following officers were elected: President, Prof. Geo. J. Brush, New Haven, Conn.; Secretary, Prof. C. W. Riley, Washington, D. C.; Treasurer, Prof. W. S. Vaux, Philadelphia, Pa. Prof. Alfred M. Mayer, of the Stevens Institute, Hoboken, N. J., was chosen President of Section A.

## A TRIPARTITE CONTEST.

THE following anecdote comes to us from a thoroughly reliable source, and certainly deserves to be recorded. It is not often that such a combat is witnessed by a man who can give an intelligent and trustworthy account of it:—

On the 24th of July last Mr. Henry Braithwaite, of Frederickton, an experienced hunter, when engaged in exploring timber lands in the interior of New Brunswick, between the headwaters of the Northwest Miramichi and those of the Tobique, witnessed an unequal contest, such, indeed, as was probably never witnessed by any other person. In his expedition he was accompanied by a well-known Melicite Indian, usually called by hunters "Big Louis."

When traveling up the inlet of the Big Southwest Miramichi River, about 5 or 6 o'clock in the afternoon, Mr. Braithwaite heard at a distance of a quarter of a mile a very strange noise, which he describes as a combination of growling and bellowing, which increased as he advanced toward it. On turning to Louis and asking his opinion of the cause of this noise, the Indian replied, "Bears fighting."

At the time that Mr. B. heard this noise his small Weissen rifle was unloaded, and he had but two cartridges in his pocket, the rest being in his bundle, and not easily reached. Starting with these two, Louis called gently to him, "Take more cartridges in your pocket."

Mr. Braithwaite replied, "If I stop to get the cartridges the noise may stop, and I may not be able to find the game," and accordingly pushed on with but two cartridges, throwing off at the same time his bundle, expecting Louis to bring it along with his own. He, however, failed to do this, and left both behind, and followed after with but his axe. At a distance of 100 yards, after running a quarter of a mile, Mr. Braithwaite saw the causes of the strange and unwanted sounds.

A huge bear, the largest that he ever saw, and he has seen many, was seated on top of a young moose, upon which he had sprung anawares, breaking his back at the first jump. Whenever the animal attempted to struggle the bear would seize him by the neck and shake him as a dog would a hare. When the moose remained quiet the bear would lick the blood which issued from his wounds.

Running up to within twenty yards of the bear, loading in the meantime, Mr. Braithwaite leveled his rifle, and not being able to get a fair view of the bear's head, fired where he supposed the animal's heart to be. The ball passing through him, the latter sprang back off the moose, and staggered and fell, the blood running from both sides. After retreating a few steps he stopped, and looked around to see where the shot came from. Not being able to get a fair view of his head, Mr. B. again fired at the same part of his body, and again struck him. This seemed to give him new energy, and he started off on a run for the stream.

Mr. B. then turned around to the Indian, thinking that he had the bundle with the cartridges, intending to load and follow, but found that he had not brought up ammunition. There was nothing left but to go back, which Mr. B. did, and reloaded. It took some time to find the bundles, and in the meantime a heavy thunderstorm, accompanied by rain, had set in. They took up the trail and followed it easily, guided by the feet marks and blood, for about 200 yards; the woods then getting very open, the rain had washed out the blood and tracks, so that they lost the trail, and as night was coming on, returned to the moose and prepared to camp.

The moose they found nearly dead; it was a spring calf, and would weigh about 200 pounds. After dressing the meat and cooking some for supper, they laid down to rest. It rained nearly all night, and as all they had in the way of provisions was the moose meat, and they had eight miles to go for bread, they did not follow up the bear, which they could have done. The moose hide the Indian carried to the settlement.

✓ **KINGBIRDS CATCH FISH.**—*Editor Forest and Stream*:—Probably most observing people have noticed with what unerring expertness the kingbird (or bee martin) will catch insects in the air. These birds are very abundant about my premises, meeting in some cases within a few feet of my residence. I never disturb them, believing them not only a valuable insectivorous bird, but having frequent ocular demonstrations of their valuable services in driving off hawks and crows. I have often noticed them striking the surface of the water in my fish ponds, but supposed they were either taking a bath or else catching insects which were flying near the surface of the water. When I constructed my bass pond, a few years ago, I stocked it with minnows to afford ample food for the bass. At times the entire surface of the pond seems alive with them. A few days ago I observed at least a half dozen kingbirds perched on trees and bushes near the margin of the pond, and almost every moment some of them would dive into the water precisely like a kingfisher, and I concluded they were catching bugs or other insects which were floating upon the surface of the water. Watching them closely, I soon saw one of them leave the water with something perceptibly shining in his bill. It alighted on a tree about fifty yards from where I was sitting, and acted precisely as a kingfisher does when killing a fish. Taking a telescope, I also took an observation and discovered that the kingbird had a minnow not less than three inches long. I continued my observations for about fifteen minutes, and during that time these birds caught several small minnows and ate them. Others more observant may have long known of this trait of the kingbird, but I have never chosen to read or hear of it, and quite likely may be laughed at for so very unimportant a mattering what may be well known to every ornithologic amateur.

MILTON P. PERCE.

✓ **A CONUNDRUM.**—*Summerfield, St. Clair County, Ill., Aug. 23d.*—In the spring I shot a heron which was carrying in its bill a dead snake about fifteen inches in length. Some five inches of the reptile's tale was drawn through a slit in the lower mandible of the bird, and was held there so firmly, even after the bird was dead, that the snake would have been torn to pieces easier than withdrawn from the bird's bill. How does the bird get the snake there?

G. B. K. S.

We do not get from our correspondent's description any very clear idea of how the snake was attached to the bird's bill. Was the bill split along the side, or did the snake lie between the vami of the mandible and pass through the chin?

✓ **CROWS AS FRUIT THEIVES.**—*Editor Forest and Stream*:—I send you the following item from a late paper, and can supplement it with a little experience of my own: "Malachi F. Dodge, living near Manchester, N. H., recently saw five large crows descend from a tall pine tree in the Stark woods and alight in a tree laden with ripe August apples. Each crow planted its bill firmly into a rosy specimen, and, detaching it from the stem, flew away with the prize to the pine, where they ate the fruit with evident relish." A short time ago I happened to notice the almost daily visit of a small party of crows to a certain tree in my apple orchard, and it occurred to me that the fruit might be the attraction, as it was a large, tender and sweet variety. A visit to the tree proved my surmise to be correct. They had destroyed quite a number of apples by pecking out from a quarter to a half. When the stem would give way the apple fell and another would be attacked. This may be nothing new, but in living on a farm constantly visited by crows for nearly thirty years, I have never had occasion to accuse them of mischief before, though the indictment was strong enough without it. If any of your readers have had a similar experience I hope we shall hear from them. Respectfully yours,

P. C. BROWN,

Framingham, Mass., Aug. 25th.

✓ **AN UNLUCKY CROW.**—Mr. George G. Cole has related to us the following incident, which occurred not long since near Glen's Falls, N. Y.: Mr. H. P. Champney, of that place, being annoyed by large hawks which prey upon his chickens, keeps his shot gun loaded and kills a great many of them. A short time ago a hawk was seen approaching the house, but before the owner could seize his gun the bird had passed out of range and was passing over a piece of woods. Here it was seen to seize a crow, and after coming nearly to the ground to bear it heavily off and alight a short distance further on among some tall weeds. Curiosity prompted Mr. Champney to proceed to the spot, where he found hawk and crow still struggling on the ground, and by a lucky shot killed both of them. The hawk, from the meager description given of it, would appear to have been a young goshawk.

# Fish Culture.

## THE FIRST DECADE OF THE UNITED STATES FISH COMMISSION.

ITS PLAN OF WORK AND ACCOMPLISHED RESULTS, SCIENTIFIC AND ECONOMICAL.

BY G. BROWN GOODE.\*

There are nine departments of the government devoted, in part or wholly, to researches in pure and applied science—the Geological Survey; the Coast and Geodetic Survey; the Naval Observatory; the National Museum; the Department of Agriculture; the Entomological Commission; the Tenth Census, with its special agencies for the study of the natural resources of the country; the Smithsonian Bureau of Ethnology, and the Commission of Fish and Fisheries. The Smithsonian Institution, established upon an independent foundation, should also be mentioned, as well as the Medical Museum of the army, and the various laboratories under the control of the Army and Navy Departments.

The Geological Survey is not now carrying on any of the schemes of zoological and botanical investigation engaged in by its predecessors.

The work of the Entomological Commission and that of the census, though of extreme importance, are limited in scope and duration, while that of the Agricultural Department is necessarily, for the most part, economical.

The work of the National Museum is chiefly confined to the study of the collections made by government surveys or individual collectors and sent in to be reported upon. The work of the Fish Commission, in one of its aspects, may perhaps be regarded as the most prominent of the present efforts of the government in aid of aggressive biological research.

On the 9th of February, 1874, Congress passed a joint resolution which authorized the appointment of a Commissioner of Fish and Fisheries. The duties of the Commissioner were thus defined: "To prosecute investigations on the subject (of the diminution of valuable fishes) with the view of ascertaining their numbers and what diminution in the number of the food-fishes of the coast and the lakes of the United States has taken place; and, if so, to what causes the same is due; and also whether any and what protective, prohibitory or precautionary measures should be adopted in the premises, and to report upon the same to Congress."

The resolution establishing the office of Commissioner of Fisheries required that the person to be appointed should be a civil officer of the Government, of proved scientific and practical acquaintance with the fishes of the coast, to serve without additional salary. The choice was thus practically limited to a single man for whom, in fact, the office had been created. Prof. Baird, at that time assistant secretary of the Smithsonian Institution, was appointed and entered at once upon his duties.

The summer of 1890 marks the tenth season of active work since its inception in 1871. The Fish Commission now fills a place of more extensive and useful than at first. The present series aims to show, in a general way, what it has done, is doing and expects to do—its purposes, its methods, its results.

## THE PLAN OF WORK.

The work is naturally divided into three sections:—  
1. The systematic investigation of the waters of the United States and the biological and physical problems which they present. The scientific studies of the Commission are based upon a liberal and philosophical interpretation of the law. In making his original plan the Commissioner insisted that to study only the food-fishes would be of little importance, and that useful conclusions must needs rest upon a broad foundation of investigations purely scientific in character. The life history of species of economic value should be understood from beginning to end, but no less requisite is it to know the histories of the animals and plants upon which they feed or upon which their food is nourished; the histories of their enemies and friends, and the friends and foes of their enemies and friends, as well as the currents, temperatures and other physical phenomena of the waters in relation to migration, reproduction and growth. A necessary accompaniment to this division is the amassing of material for research to be stored in the National and other museums for future use.

2. The investigation of the methods of fisheries of past and present, and the statistics of production and commerce of fishery products. Man being one of the chief destroyers of fish, his influence upon the abundance must be studied. Fishery methods and apparatus must be examined and compared with those of other lands, that the use of those which threaten the destruction of useful fishes may be discouraged, and that those which are inefficient may be replaced by others more serviceable. Statistics of industry and trade must be secured for the use of Congress in making treaties or imposing tariffs, to show to producers the best markets, and to consumers where and with what their needs may be supplied.

3. The introduction and multiplication of useful food fishes throughout the country, especially in waters under the jurisdiction of the general government, or those common to several States, none of which might feel

\*Read before the American Association for the Advancement of Science, Boston, Aug. 25th, 1890.

1876.  
This year the Commissioner was unable to take the fishes and useful invertebrates in behalf the Commission

* The number of dredging and trawling stations on record is as follows:—	
1871. Woolf's Hoil	1
1872. Eastport, 200 by hand, 35 by steamer.	235
1873. Portland	149
1874. Noank	283
1875. Fogel's Hoil	149
1877. Salem	149
1877. Halifax	378
1878. Gloucester	—
1878. Provincetown	—
Total.....	1,560
The number of seine hauls is about 600.	

field for fishery investigations, having been instructed to exhibit, in connection with the Philadelphia International Exhibition, the methods of fish culture and the American fisheries. Much, however, was accomplished by single investigators in various localities. The propagation work continued. This year the first carp were introduced from Germany.

1877.

The field of investigation was resumed at Salem, Mass., and later at Halifax, N. S. A larger steamer of 300 tons made deep sea research possible. The Commissioner and his staff served as experts before the Halifax Fishery Commission. The propagating work was on the increase, and the government carp ponds were established in Washington.

1878-1879.

In 1878 the summer station was at Gloucester, Mass., in 1879 at Provincetown. These centers of the fishing interests were selected that more attention might be devoted to studying the history, statistics and methods of the sea fisheries. A plan for the systematic investigation which seemed yearly more necessary in view of the dissensions between the governments of the United States and Great Britain. In 1879 a combination was formed with the Superintendent of the Tenth Census, by which the Commissioner was enabled to carry more rapidly forward this branch of the work. Specialists were dispatched to all parts of the country to study the biological, statistical and practical aspects of the fisheries. In 1878 the breeding of cod and haddock was accomplished at Gloucester. In 1879 the propagation of the oyster was accomplished by cooperation with the Maryland Commission, under the direction of Maj. Ferguson, and the distribution of the carp throughout the country was begun.

1880.

The summer station is at Newport, R. I. The Fish Hawk, a steamer of 151 tons, constructed expressly for the work of the commission, lies at the wharf, now equipped for scientific research, later to be employed in the propagation of sea fish, such as the cod and the mackerel. Over fifty investigations are in the field in the service of the commission. The season was opened by the participation of the commission in the International Exhibition at Berlin. The first honor prize, the gift of the Emperor of Germany, was awarded to Prof. Baird, not alone as an acknowledgement that the display of the United States was the most perfect and most imposing, but as a personal tribute to one who, in the words of the President of the Deutscher Fischerei Verein, is regarded in Europe as the first fish culturist in the world.

## Sea and River Fishing.

### FISH IN SEASON IN SEPTEMBER.

#### FRESH WATER.

Grayling, *Thymallus triolator*.  
Land-locked Salmon, *Salmo salar*.  
Lake Trout, *Salmo namaycush*.  
Mackinac, *Esox niger*.  
Pickering, *Esox reticulatus*.  
Pike or Pickerel, *Esox lucius*.  
Pike-perch, (white-eyed pike) *Stizostedion americanum*, s. *griseum*.  
Yellow Perch, *Perca flavescens*.  
Striped Bass, *Roccus lineatus*.

#### SALT WATER.

Sea Bass, *Centropomus atrarius*.  
Sheepshead, *Archamia probatocephalus*.  
Togzie, *Stenotomus argenteus*.  
Striped Bass, *Roccus lineatus*.  
White Perch, *Morone americana*.  
Spot, *Leiostomus xanthurus*.  
Sea Trout, *Salmo trutta*.  
Tautog, *Tautoga onitis*.  
Pollock, *Pollockus carbonarius*.  
\* In Maine until Sept. 15th.

HOW BIRDS DESTROY FISH.—We have believed with Prof. Goode that the fishes taken from the sea by man was but a fraction of what is destroyed by their enemies in the water, as fish, seals, etc., and by the birds. Prof. Goode made this statement in reference to the capture of the menhaden for oil, and its destruction by the hundreds of different kinds of enemies, who number far into the millions of individuals. In speaking of the destruction of herrings by the gannets a recent writer in *Nature* says:—

Of the five Scotch stations where the gannet breeds, the number of birds frequenting each is put down as follows: Ailsa Craig, 12,000; the Bass Rock, 12,000; St. Kilda, 50,000; the Stack, 50,000; Gulla Sgeir, 10,000, or a total of 424,000. Each of these birds will consume at least a dozen herrings in the day if it could get them; but, estimating the daily average as six to each gannet produces 2,544,000 as the quantity consumed in one year, and reckoning 800 herrings to the barrel gives us 1,160,700 barrels captured by the gannets, as against 750,000 barrels, the total taken by fishermen on the west coast of Scotland for 1872.

SALMON OF THE PACIFIC COAST.—Humboldt Harbor, Puffin Island, Shumagin, Alaska Territory, Aug. 19th. Editor *Forest and Stream*.—In your paper of May 12th I have seen a note by my friend, Prof. Jordan, on the redfish of Idaho, which he thinks is the same as the species figured in *FOREST AND STREAM* of Nov. 13th, 1879, and afterwards received from Capt. Bendire in the U. S. National Museum. I have examined Capt. Bendire's specimens and am prepared to say that they are Kennerly's salmon, *Salmo kennerlyi*, of Suckley; *Oncorhynchus kennerlyi*, of Gill and Jordan. They are not different, except in size, from the types of Kennerly's salmon. Now, unless this salmon is identical with the *nerka* studied by Prof. Jordan, we have no right to call Capt. Bendire's redfish *nerka*. I have not yet seen a salmon in Alaska which I can positively identify with *O. nerka*, but

in the systematic work of Gill and Jordan one receives the impression that it is much like *quinnat*. Kennerly's salmon is not closely like *quinnat* in some respects; for instance, it has a much greater number of teeth in the middle of the roof of the mouth, and its jaws are much more oblique.

The name redfish is a source of confusion. In some localities it is safe to assume that the red color of the skin is the foundation for the name. In Cook's Inlet the color of the flesh gives rise to the name, and it is certainly well founded there, the deep red of the drying fish brightening up whole villages in the fishing season.

I have not seen the Yukon redfish, but there is reason to believe that it is one of the small scaled species.

It was my intention to publish a somewhat extended notice of Capt. Bendire's specimens last spring, but my preparations for collecting in Alaska, and various other duties, prevented me from doing so. Perhaps, after all, it is just as well to let the salmon family rest until we have material enough to enable us to settle on the right names and hold to them. T. A. R. H. BEAN.

With such investigators as Dr. Bean and Prof. Jordan after them the salmon of the Pacific coast will soon have to give up their family secrets, and allow their relationships to be published to the world. It would be interesting to know the exact time covered by the spawning of each alleged species, as this would show the possibility of some of them being hybrids.

BIG BASS IN VERMONT.—Sheldon, Vt., Aug. 16th.—On the 14th inst. Mr. H. C. Caswell, with our better halves, and Mr. B. Thomas, visited Bass Lake, or, as it is commonly called, Franklin Pond, where we made a big catch of small-mouthed bass. We used live minnows for bait, and caught the most of our fish between the hours of 6 and 9 A. M. in about fifteen feet of water. I tried fly-fishing, and only took a few small bass in shallow water, which caused me to take to the minnows and deeper water. I selected five of my largest fish and they weighed as follows: 41 lbs., 41 lbs., 41 lbs., 54 lbs., and 54 lbs. My scales were rusty and gave light weights. Friend Caswell followed me closely in size of his fish. We both used Scribner's light greenheart rods. My better half scored next in numbers, leaving Mrs. C.—and Thomas far in the rear. The bass are being well protected here during the close season, which makes this lake the best bass lake in the State, and will afford plenty of sport between now and 1st of November to all "jolly anglers" who may visit its waters. STANSTEAD.

We would like to see a "small-mouth" of the weights given. We often hear of them, but on examination they have always turned out to be the "big-mouth." If our correspondent is positive as to species, we would advise him to send one to the Smithsonian.

The black basses grow very large in the Southern waters, but we have doubted whether the "small-mouth" exceeded four pounds in any Northern State.

BASS AND PIKE-PERCH FISHING IN THE SUSQUEHANNA.—Harrisburg, Aug. 7th.—Having read your valuable paper for some time, I have never seen any notes of fishing on this river. About ten years ago black bass were introduced into this river through the efforts of a few gentlemen of Harrisburg, who worked with perseverance for two or three years, but they at last succeeded in stocking the river so that it is now an easy day's work to catch as high as thirty a day—frequently you hear of catches ranging between forty and sixty. The bait used is loads, minnows, crabs and belgians. They will also readily take the troll. As for fly-fishing, although very few fish for them that way here, it is exceedingly good, and as many as six or seven can be caught in the evening by fishing in water about three to five feet deep, where there is plenty of eel grass, as the bass lie in this the same as trout in moss. "Salmon" (pike-perch) fishing last fall was better than I have ever known it to be. The bait used is the humprey, and trolled along slowly. Just fast enough to keep the bait off of the bottom, the catches ranging between twenty and forty a day. E. H.

BIG BROOK-TROUT.—The Thunder Bay *Sentinel* (Lake Superior), says: The largest genuine speckled brook trout ever seen in this district was taken in the nets of L. Le Sueur, of Thunder Bay, and sent to Amherst Bay on Tuesday last; three fish weighed 15 lbs., the largest one weighing 6½ lbs.

ST. CLAIR FLATS.—Mich., Aug. 20th.—The following party are from Frankfort, Ky.: have fished here three days, and caught over two hundred genuine black bass. They will stay until the first of September. This party has the reputation of being the best fishermen in Kentucky; Gen. J. W. Rodman and wife; J. W. Rodman, Jr., and wife; H. W. Rodman; Judge Hines.

NEW HAMPSHIRE—Lake Village, Aug. 16th.—Black bass fishing in the Wakawan Lake, at Meredith, is very fine. On Wednesday I took twenty beauties from the water, nine of them weighing two pounds each. I met a friend who had taken one that afternoon for a solid four pounds—one of the largest of the season. GIC.

A NEW MAINE SOCIETY.—Monson, Maine, Aug., 9th.—We are about organizing an Association here for protection and stocking our ponds and protection of game. Fishing in this vicinity was never better. Ship Pond is furnishing a large amount of speckled trout and land-locked salmon. E. R. H.

NEW YORK—Fishkill Landing, Aug. 26th.—The drought has made sad work with the streams that the Wicapee Association stocked with trout last spring, all the water remaining in them being in the swamps, and that is warm and impure, so the prospects for a good trout fishing next season are anything but encouraging. G.

FLY-FISHING FOR BASS.—On page 69, last issue, line 21 from the bottom, for "a stiff rod is more pliable," etc., read "a stiff rod is more friable," etc.—a typographical error.

## Game Bag and Gun

—Address all communications to "Forest and Stream Publishing Company, New York."

### GAME IN SEASON IN AUGUST.\*

Moose, *Alce americana*.  
Caribou, *Rangifer caribou*.  
Elk or wapiti, *Cervus canadensis*.  
Red or Virginia deer, *C. virginianus*.  
Squirrel—red, black and gray.  
Hares—brown and gray.  
Reed or rice bird, *Dolichonyx*.  
Wild turkey, *Meleagris gallopavo*.  
Pinnated grouse or prairie chickens, *Cupidonia cupido*.  
Ruffed grouse or pheasant, *Bonasa umbellus*.  
Quail or partridge, *Ortyx virginianus*.  
Woodcock, *Philohela minor*.  
Black-bellied plover, *ox-eye*.  
Squatarola herodias.  
Long-billed curlew, *Numenius longirostris*.  
Turnstone or calico back, *Streptopelia interpres*.  
Red-breasted snipe, dowitcher, *Tringa americana*.  
Red-backed sandpiper, *Tringa americana*.  
Tattler, *Totanus melanoleucus*.  
Lincoln field, *Lincoln field*.  
Willet, *Totanus semipalmatus*.  
Yellow-shanks, *Totanus fortis*.  
\*This enumeration is general, and is in conflict with many of the State laws.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limicola*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

### CHICKEN SHOOTING IN AUGUST.

HERE in Northern Illinois we have had no rain for over a month. Everything is dry and the weather since Aug. 15th has been extremely warm, so that neither man or dog could stand more than one or two hours' hunting in the early morning and late evening. My favorite resort is a two hours' ride from Chicago, where I drop down at a farm house the night before I wish to shoot. It is five miles from the nearest railway station, with good shooting in any direction. I am satisfied I go a less distance and fare better than others who go further, and perhaps fare worse. The multitude fly to the far off prairies of Nebraska, Minnesota and Iowa, leaving little oceans of cream within one hundred miles of Chicago that are seldom skimmed. In this refuge I have bagged forty-eight grouse with a muzzle-loader in a day's shooting, and have never failed to get twenty-five to two guns on the first day's shoot.

Last Monday found me as soon as it was light enough to shoot, trapping a stubble over which, with one exception, I had made an annual parade for the last ten years. My dog was a new acquisition, wonderfully up in the tactics, but lacking the experience of dogs I had hunted over that field in other seasons. I expected surprises in the development of my dog; and what sportsman does not know when he has a good thing in a dog, even though he has not killed a thousand birds over him? My Knight proved his mettle before he had been afield twenty minutes, and I the satisfaction of "flushing my first shot" in a pair of fine young bird, while the third shot failed to flash and poor Knight seemed to debate in his mind (brain I should say), whether he should not try and catch that single young chick as long as I missed it. A gentle "charge, sir," steadied his nerve, and retrieving the pair we moved on. Most of the morning was taken up trying to cross patent barbed wire fences. Did you ever try to get over, through, under, or on top of one? Like the drouth they prevail in this country, and unless you carry a jumping box do not attempt to cross one. Farmers need no longer post "No shooting on these here grounds." Just let them build a five strand barbed wire fence, and sportsmen will cross it just as quick as dogs will eat live porcupine.

Knight proved my judgement in his breeding and training to be correct, and he had but one surprise in store for me. One or two in a covey had been flushed when a young chick flushed from under Knight's nose and dropped on the stubble in plain sight, not ten yards from the dog. The chick stepped jauntily along and quick jerks of its tail until Knight became disgusted, and knowing I would not shoot the bird sitting, he made a beautiful dash at it and succeeded in flushing it, and giving it a good start. Visions of check cord, a charge of fine shot, and the whip flashed through my mind, but it was too hot. Giving Knight credit for more sagacity than I supposed he had, as he knew I would not shoot until the bird rose, I sat down and waited his return. He soon came trotting back, and I saw that on his face that told plainly he had not caught that chick. I had a friendly talk with him, took him to where he started, made him charge, and gave him an energetic lecture on the foolishness of chasing; that he would eventually get overtaken with a charge of shot or run into a spiked collar if he ever did it again. During the morning we found four fine coveys, none of the birds full-grown and a few old birds from which I bagged thirteen, at no time being over a mile and a half from the house. The same evening I bagged nine, making twenty-two for the day, and my best day. After the second or third day I became wearied and exhausted with the heat when I returned, determined that the right time to shoot game in this latitude is in the fall, not earlier than Sept. 15th, when birds are strong of wing and full in size, and when some pleasure may be had in a day's sport when you can breathe a bracing atmosphere as you walk the crackling stubble and when the game you bag will not be unfit for food before it can be brought to the table. Hoping to be able to chronicle the graduation of Knight from his October fields with high degree, I am, TOM TRAMP.

### FIELD SPORTS IN MINNESOTA.

SACK CENTRE, August, 1880. ONE of the most enjoyable pastimes a man can engage in, is in the field with dog and gun. This section of country is well known to a great number of sportsmen who pay yearly visits here in order to find the much sought pinnated grouse (*Tetrao cupido*) and enjoy a week's sport in the field. The law time for killing this noble bird is Aug. 15th to Oct. 1st, too long a time by half, for they are becoming more scarce every year. Yesterday, in company with a friend, we took our

breach-loaders and pointer and went out to the stubble fields for a short time, which we describe below. Now our dog is on a "trail," and see how animated he is. "There, look out he is close upon the game. Now he points; be ready!" cries my companion. The dog still crouches close to the earth with every muscle rigid. I advance and urge him on, but he does not like to go, but now he "creeps" a little closer, when up comes a fine, large bird. Bang! and down he comes. Whirr, whirr, whirr, now follows, and bang! bang! bang! Four birds and not half the covey up yet. Our dog now moves a trifle to the right, and becomes like a statue once more. Now, here comes a stray bird, flying from a field close by where there are three hunters. It is a "cross shot," but it must be made, and I say to my gun, "fire!" Will you make it?" "Too far for my gun," he replied; and up mine was brought, and in a much shorter space of time than it takes to write this I had brought the swift flyer down at a very long distance, surprising my sporting friend not a little. The report of my gun started those that the dog was pointing (three), and on their taking wing were brought to bag like the one previously shot. We are contented with twenty, so we "strike out" for home with the feeling of having had a few hours' pleasant recreation.

The following will assist those of our sporting friends who desire to recreate a few days in Northern Michigan: From St. Paul to Sauk Centre, take the St. Paul, Minneapolis and Manitoba R. R. Fare will be \$5.50. Board at Sauk Centre House from \$4 to \$5 per week, owing to accommodation, etc. Team to drive out in the country, with a first-class driver who can direct you to some of the best chicken grounds to be found in the Northwest, \$3.50 to \$5 per day. I think this covers all expenses, and can, of course, be increased or diminished at pleasure.

Chicken shooting this year is excellent around Sauk Centre. Perhaps it would be more pleasant for Eastern sportsmen to wait until Sept. 1st, when wild fowl are in season. Geese, duck, brant and crane are in large numbers.

#### MORE EVIDENCE AGAINST THE CAT.

"AQUADALE," Wrenoh, N. J. Aug. 23d.

*Editor Forest and Stream.*—Your editorial in the issue of Aug. 19th concerning the enemies of our upland birds, touches a point rarely considered by the friends of the birds. The domestic house cat and their vagabond offspring which have no special habitation, are undoubtedly the most destructive enemies with which our game and song birds are afflicted. "Aquadale," my little home here containing a few acres only, is richer and more varied in bird life than any similar spot in this latitude with which I am acquainted, and which is surrounded by a dense population. The presence of so many birds is coincident with an almost total absence of cats about the place. Up to the present year we have had a very valuable little English rat-terrier on the place, who has rendered us extremely uncomfortable by his attacks on cats which come prowling around the premises. This sagacious little dog early learned the cry of distress which many birds utter when cat, weasel, snake or other enemy comes prowling around, and would frequently go unbidden to their aid. It was interesting to observe the change of note and tone of the birds when they saw the dog approaching, for they had learned that he was their friend. I have seen him chase a cat across the field while quite a covey of birds of different varieties would fly close over him uttering notes of fear. I have seen them in a like manner hover close over him, while he was engaged in killing snakes. Last year, however, a notorious chicken thief in the vicinity killed the dog and the birds at "Aquadale" lost their most active friend. Since then I have kept a rifle loaded most of the time, and a shot gun all the time. If a strange cat comes around the rifle makes short work with it. If a neighbor's cat pays a visit, a covey of bird-shot at long range suffices to send it home in double time and it rarely pays a second visit. I can most any day find a covey of quail and occasionally a few ruffed grouse within two hundred yards of my residence, and a greater variety of other birds than I have ever seen elsewhere in the same compass. We have several varieties with us all winter.

MILTON P. PRITCH.

We have called attention to this abuse of game destroying cats with the sincere hope that our friends may take some active measures, each in his own way, to remedy the evil. Doubtless many of the readers of this letter can recall similar instances from their own experience. Those who are fond of the song birds may profitably try the experiment of exterminating the cats for a season. The domestic cat, by reason of its multiplicity, is one of the abominations of the day.

*Do it Now.*—New York, Aug. 28th.—*Editor Forest and Stream.*—Regarding the article entitled "Post the Game Laws on Railroads," I would like to say, that a resolution to that effect was offered by Mr. R. A. Munn, at a meeting of the New York Society for the Protection of Game, some two years ago, but the club for some unknown reason declined to do it. I also tried to get the society to put a stop to the open violation of the game laws by the Long Island Railroad in transporting snared and trapped birds, but without success. This road, or rather the baggage masters on the trains, collect a large number of trapped quail and snared ruffed grouse along the road and sell them to the new.

I am in hopes that the new society, mentioned in your paper a few weeks ago, when organized will put a stop to all this poaching business. I hope "A True Lover of the Sport" will send me his address, and join us.

W. HOLBERTON.

*MIGRATORY QUAIL RETURNED.*—Allentown, Pa., Aug. 27th.—The migratory quail which we let go near Linneport, about seven miles from the city, have returned. We did not get a chance to find out whether some had returned or not until to-day, when Mr. Francis Biting, a farmer, came to this place and told us that some were breeding near his house and were in the same place; found them about two weeks ago with four eggs, while now it is breeding with a beautiful nest full of fourteen. He has taken special pains to watch them, and saw that

they make a very poor nest, just about like one made by a chicken in a field. He also saw that every day since he found it, until it began to set, it laid an egg every day. This is the first instance which we know of since we let them go.

C. S. B.

*ANOTHER WOODCHUCK BLUNDERER.*—Boston.—Your correspondent's story of Daniel Webster's gray squirrel reminds me of a similar mistake of a couple of my acquaintances. Feeding unusually early one morning, they loaded up the old musket—"45" is the date on it—donned their war paint and with various precautions in the way of chain mail, helmets, scalping knives and squirt guns, vowed vengeance on all that day—prepared for the errors of the mighty woodchuck. Chapman, as eldest, carried the gun while Bert, as stockholder, held the ammunition. Suddenly the dreaded foe appeared far in the distance along a hedge. With unparalleled hardihood Bert volunteered to attract his attention while Chapman ran up behind the hedge. But Bert made a miscalculation and the enemy dove into its hole. Much chagrined he walked up to the place and stood on the little mound. Chapman, running along the hedge saw the outline of the "woodchuck" through it and blazed away; recovering from the awful recoil he burst through the hedge, and thus astonished to find Bert instead of the woodchuck, speeding over the ground faster on one sound leg than Chapman could on his two well ones. All of which exemplifies "Puck's" saying, "What fools these mortals be." J. P. TRUE.

*LOUISIANA.*—We have before now called attention to the attractions of Louisiana for fall and winter shooting. This resumé of the game of St. Landry Parish, La., is given in the *Opelousas Democrat*, whose editor is a sportsman himself: Many portions of St. Landry abound in the finest of game. In the fall and winter, and the early part of spring, ducks and geese are to be found almost everywhere about the ponds and sloughs, which are quite numerous in this parish. Prairie chickens are everywhere abundant some distance west of Opelousas, as also snipe, quail, etc., bears, turkeys, deer, and all sorts of varmints, roam the dense woods bordering on the Atchafalaya, Calcasieu, Boeuf, Crocodile, and other streams. Our hunting grounds afford much pleasure and recreation to sportsmen, and not a few of them literally pass the hunting or game season with gun in hand and a brace or two of well-trained pointers or setters at their heels. The finest kind of fish—trout, bass, white and sun perch, and all other varieties of the finny tribe—can be caught in our larger streams and lakes and lagoons.

*BEAR LAKE SHOOTING CLUB.*—Fort Wayne, Ind., Aug. 20th.—The "Bear Lake Shooting Club" of this city have elected the following officers for the ensuing year: President, Robert Cran; Vice-President, Richard Green; Secretary, George Raymond; Treasurer, Henry Horstmeier. Regular meetings first Tuesday in each month, at which time each member gives on honor a statement of all game shot during the preceding month, of which a record is kept and read at the annual game supper. One member reports 169 woodcock from July 4th to Aug. 4th, 1890, which is considered very good, as the members are all laboring men, and cannot go when they choose. Forty-one of the woodcock were bagged on one day. Trap shooting of the club was the second and fourth Fridays in each month. Although I am not a member, the boys are all my friends, and hale fellows well met, and strict observers of the law. They report all kinds of game plenty this season.

W. D. M.

*SOMETHING WRONG WITH THE GAME LAWS.*—There is evidently something wrong with the game laws of the State of Louisiana if such an occurrence as the one detailed below can take place. It should not be lawful anywhere to kill gravid animals, but it is unusual, we think, to find deer carrying young in August. The season opens in Louisiana Aug. 1st, which in our opinion is much too early. The *Opelousas, La.* *St. Landry Democrat* of Aug. 21st, 1890, says:—

Friday before last Mr. Henderson B. Taylor, living at Barry's Landing, killed a doe which had in her two spotted fawns, one dead and one dying. The doe had taken home and fed, and at last accounts it was living and doing well.

*FOLLOW IT UP.*—*Editor Forest and Stream.*—I desire to add my testimony to the statement of the "Poughkeepsie man," in regard to the exorbitant charges at Cobb's Island in times past. If a change has been made for the better as your correspondent "Chasseur" states, we and good. My object in this is to suggest that all sportsmen follow the example of the "Poughkeepsie man." When they meet with extortion make the fact known through *FOREST AND STREAM* or some other reliable source. Many look to your journal for information where and how to find sport and health. You do not wish to be a lure for "land pirates," so it is to the interest of all to expose and publish extortion wherever met with.

AMONDACK.

We hope that our correspondents will follow up this suggestion.

*FISHKILL LANDING, N.Y., Aug. 26th.*—There is every indication of good sport with us this fall. Woodcock, quail and ruffed grouse are quite plenty, quail being more abundant than for a number of years before. There has been a good many woodcock killed since Aug. 1st, but I am glad to be able to say that the game laws have been much better observed than usual; even the pot hunters have acted more like sportsmen than for many seasons past.

*MINNESOTA—Detroit, Aug. 25th.*—The hunting season promises to be remarkably good in this locality this fall. Deer are very plentiful. Chickens are beginning to come in from the great prairies out West, and duck will soon migrate from the Northern river swamps. Immense quantities of fish have been taken in the season. It is estimated that at least 6,000 pounds have been caught since May, with hook and line. Black and Oswego bass have been caught, that weighed six pounds.

HUNTSMAN.

*CONNECTICUT—Lyme.*—Bay snipe shooting has been good here this week. One party killed on Wednesday, Aug. 25th, 129 curlew, dowitchers and large and small yellow-legs. On Thursday the same party killed seventy-four birds, but on Friday not a snipe was to be seen.

*LONG ISLAND.*—The shooting at Montauk has not been good this year, though the Easterly storm of Monday last will probably more the birds. A number of parties have been out, but have not met with much success.

*OUTBOAT SPORTSMAN'S CLUB.*—At a late meeting of the Outboat Sportsman's Club, of Franklin, N. Y., the following officers were elected for the coming year: President, Dwight Bartlett; Vice-President, M. P. McKoon; Secretary, Eli Howe; Treasurer, E. P. Howe; Executive Committee, Dwight Bartlett, Walter Rutherford, Walter Hamilton.

*MAINE SHOOTING.*—Dover, N. H., Aug. 24th.—Have just returned from a day's sport at Well's Beach, Maine. Result: 150 birds of different kinds. Plover, yellow-legs, ring necks and Wilson snipe have just begun to arrive, and in the course of two weeks they will be quite plenty. The above birds are the first that have been bagged this season. As is usual in telling of our exploits in gunning and fishing, I forgot to tell who bagged the most of the game, fully two-thirds. It was that true sportsman, E. H. Whitney, of Cambridgeport, Mass. May he have as good success in all his undertakings as in gunning.

W. A. G.

*PRAIRIE CHICKENS.*—Chicago, Aug. 23d.—On my late shoot in Northern Illinois I found birds plenty, but weather too dry. Large number of sportsmen take our trains weekly for the West. A good share of the chickens sent to this market are unfit for food on arrival, and good ones sell at 32 per dozen.

J. R. M.

*ROBIN SHOOTING IN NEW YORK.*—Section 13 of the New York game law, as amended in 1880, reads: "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any robin, meadow lark or starling, save in the months of October, November, or December, under a penalty of five dollars for each bird so killed, or exposed for sale, or had in possession."

*SHOOTING IN MINNESOTA.*—A letter dated in camp near Fairmont, Minn. Aug. 21st, gives us the following particulars with regard to the shooting near that town:—There is a good hotel (the Occidental) at Fairmont, plenty of chickens near by, and a very pleasant country to shoot over. Birds are very abundant, not only chickens, but ducks and geese; snipe and plover by the million.

*NEBRASKA.*—Platte Centre.—Chickens and quail very plenty, some of them nearly full grown. Sportsmen often make bags of 100 to 150 per day to two guns.

G. A. F.

*MASSACHUSETTS.*—Farmers are mowing the wild rice on the Agawam shore, regardless of the value of the rice harvest.

*NEW YORK.*—Marbletown, Aug. 13th.—Woodcock shooting is a failure in this section this season—no birds.

B. A. M.

—A gentleman writes from Asbury Park, N. J., that he manages to kill from twenty to fifty bay birds almost every day, and the prospects are that shooting will be better still next week.

#### SHOOTING MATCHES.

*CINCINNATI, Aug. 21st.*—Match between the Lincoln Shooting Club and the Cincinnati Gun Club. The Cincinnati Club has been very much on the wicket during the season, and gave a rotary trap bill that day. Weather clear and pleasant; 10 balls each, from Card's rotary trap, 18 yards rise, Bogardus rules:—Cincinnati Gun Club—Chas. Healey 10, E. D. Williams 10, F. H. Locke 8, C. A. Smith 8, F. L. Nichols 7, James Fish 8, Myron J. Glover 7, J. N. Warner 7, O. E. Nichols 7, William H. Potter 6—total 78.

Lincoln Shooting Club—H. Mury 10, D. W. Lane 9, Geo. Edwards 8, Lew. Matherson 7, Geo. Cope 8, Con. Satt 7, B. B. 7, C. Lansing 8, A. W. Stephens 5, W. Hunt 10—total 77.

E. D. W.

*WINCHESTER, Ky., Aug. 20th.*—Score made by the Winchester Gun Club, shooting for a gold medal:—

N. P. Bush	18	S. A. Lewis	10
Dr. Miller	16	J. V. Morton	10
W. H. Garner	16	R. French	15
C. J. H. Haggard	16	J. Haggard	15
J. E. Garner	16		15
J. Robinson	13	Total	152

Bush and Fox tied on 15, and shot at 19 balls:—

Birds shot:—

*BAT SHOOTING.*—New Orleans, Aug. 21st.—Hand your score of N. G. Gun Club in a double shot (death of the club) at Cook 25, Le Breton 24, Johnson 16, Griffin 30, Fontaine 16, Leverich 12, Fortier 12, Cousin 23, Born 13, Hantlett 16, Ogden 16, Mayronne 16, Renaud 13. Total killed, 213 out of 350. These bats were thrown by a colored gentleman at a distance of 30 yards. To the uninitiated this sport may appear tame and uninteresting, but the way "Leatherwing" shows his tail to the shooter is demoralizing to the man at the score, but highly interesting to the spectators.

Some of the above shooters, low in the "teens," invariably get their 50 out of 10 pigeons. We recommend the bat to our fellow sportsmen. We obtain our bats from our parish prison, which may account for their curiously crooked flight.

LETT.

We would much rather chronicle a score of 213 out of 350 than one in which the killed were in larger proportion, for while we have no doubt that the zigzag flight of the bat makes this kind of shooting an excellent test of skill, we do have very serious doubts as to the advisability of bat shooting. The bat is insectivorous; as such it should be given immunity from pellets of lead! Probably, however, the trap shooting of our New Orleans friends will have little real effect upon the number of bats infesting the chimneys of that city.

*LOXO BEAVER GUN CLUB.*—On Saturday, Aug. 23th, the members of the Long Branch Gun Club shot at Deal, N. J., for a silver cup presented by the West End Hotel, at Long Branch. The cup was won after some fine shooting by Mr. Polhemus, at 30 yards who shot off a tie with Messrs. W. G. Murphy and Greene, Mr.

C. M. Dewey made the presentation speech in his usual happy style. The cup presented to the "very worst shot" was taken by Mr. E. L. Stow, of Adams Express. The following is the score and conditions: 10 birds each; entrance fee, \$5; hand-icap, 80 yards; 5 ground traps. Ties shot off, miss and go out—

Yards Kilo.		Killed.	
Polhemus	3	1111110111111111	12
W. G. Murphy	24	1111110111111111	11
W. S. Grier	24	1111110111111111	10
Dr. Huyler	27	10101111111111	10
R. W. West	29	11011101111111	8
H. L. Leary	29	11011101111111	8
J. L. Briggs	29	1111111111111111	8
E. G. Murphy	30	11100111111111	8
G. Gilbert	30	11100111111111	8
C. Lyndon	30	11011111011111	8
G. Bright	30	11111101110110	7
Mr. Stokes	31	10011101111111	6
P. H. Strokes	31	11100111011111	6
Mr. Sherwood	34	00001111111110	5
J. A. Johnston	38	01111000111110	4
J. G. Ward	39	11111011111110	4
S. Jones	39	10101111111110	4

Mr. J. S. Frick, of Baltimore, was referee.  
A sweep at 5 birds, same conditions, followed, Benjamin West taking the stakes, his killing 5. Dr. Zellner and A. Sewell were next, killing 4 each.

A 5 bird sweep, \$5 entrance, 3 moneys, showed the following scores:

Yards. Killed.		Yards. Killed.	
Edgar Murphy	30	C. Polhemus	30
J. Hook	30	W. G. Green	30
Edgar Murphy	30	Dr. Huyler	27
Carroll Livingston	30	D. Zellner	30
Mr. Johnson	25	A. Sewell	30
H. Strokes	31	J. Pluck	29
Col. Armstrong	30	M. George	25

On the shoot off Edgar Murphy won the first money, J. Hecker second money, and Walter Murphy third money. Several other exciting sweeps concluded the day's sport.

NAUTIC, Mass., Aug. 28th.—The Natick sportsmen, 9 in number, met at their ground and before a large number of spectators contested the tenth year for the club badge, which was won by Matt Brigham in shooting off the ties. The conditions were 20 balls at 18 yards from rotary trap. The following is the score:—

M. Brigham	011111011111111111	17
A. Leach	110011111111111111	17
W. H. Smith	110111111111111111	16
G. H. Bigelow	11111101111111111001	17
J. Mahard	011011111111111111	15
E. H. Wright	111111011111111111	16
R. H. Bigelow	11111101111111111011	15
C. O. Wilson	11011000111111111111	14
W. W. Clark	11100011011111111111	14

YONKERS, N. Y., Aug. 21st.—The first field meeting of the Yonkers Gun Club took place on their grounds, Valentine's farm, to-day. The prize for the best shot is silver medal of appreciation to the one who makes the largest number of shots during the year, in 12 monthly competitions. The Hurlingham rules—30 yards rise, with 80 yards boundary—were adopted. The time of shooting was 2 hours and 40 minutes. N. B. Valentine acted as referee. Their next practice takes place Tuesday, Sept. 21st. Below is the score of to-day's match:—

E. L. Thomas	111111111111111111	10
M. A. Kolb	011100111111111111	4
A. J. Jones	110111111111111111	11
H. Sawyer	100111111111111111	11
S. L. Farrington	101011011111111111	4
R. H. Ward	110111111111111111	11
Richard Ward	011111111111111111	10

A pigeon match for a prize of \$10 took place on the grounds of the Yonkers Gun Club to-day between J. T. Sawyer and A. Austin, the former winning with a score of 13 birds out of 15, to the latter's 8 out of 15. Time of game, 1 hour, the Hurlingham rules being strictly followed. J. O'Brien and A. Kolb acted as judges, and E. L. Thomas referee.

CANTON, GUN CLUB.—The Canton, N. Y., Gun Club have engaged Capt. Bogardus to give an exhibition shoot at that place Sept. 15th; and if the enterprising managers do not have the whole of St. Lawrence County present upon that occasion it will certainly not be the fault of the very ingenious circular which announces the event.

BOOSTON, Aug. 30th.—The following private shoot took place Saturday, Aug. 28th, at Ball's Crossing: 20 pigeons (wild); 23 yards; both barrels: E. H. Dawson 12, D. B. Fuller 17, Frank Jenkins 18. Mr. Dawson shot a light 12 bore Dalgry gun. Mr. Fuller shot a 12 bore Scott, and Mr. Jenkins a light 12 bore Day. This is the first time Mr. Jenkins shot at pigeons, which explains his low score.

CLEVELAND, Ohio, Aug. 21th.—The Kirtland and Cleveland Gun Clubs had a match shoot at 15 balls, Card's rotary, refereed, of which the following is the score:—

Kirtland Club—O. Davis 11, G. Randerson 12, G. Saul 11, O. Aigler 13, N. P. McKean 11, Al Burger 14, C. Rook 14, Webb Bentley 12, J. Millemann 11, T. A. Closser 9, Mark Daykin 12, G. Mulhern 11, G. Fauber 5, J. C. Meyer 10, F. Wheat 13, H. Glidden 10; total, 181.
---

Cleveland Gun Club—D. Power 14, C. Arnold 16, T. Wallace 10, G. Kline 10, J. Henderson 10, F. Murgat 10, C. Dabbell 12, C. Towne 10, J. Hiltch 13, J. Humphreys 10, F. Miller 10, E. Harrison 10, F. Tumbling 12, S. Hydanbach 12, C. Ballou 10, J. Schup 10; total, 171.

BRUNSWICK, Aug. 24th.—At a pigeon shoot held here to-day, at 10 birds, plunge trap, 21 yards rise, the following score was a side by the Riverside Shooting Club: C. L. York 10, S. Knight 8, J. S. Bonney 5, A. H. Perry 6, A. Q. Goud 6, C. Winslow 5, G. H. Goud 5, C. H. Greenleaf 5, C. Baker 3, H. Steinson 3. J. S. B.

MONROE COUNTY SPORTSMEN'S CLUB.—Smoke ball match between the Monroe County Sportsmen's Club and the Rochester Gun Club, Aug. 24th. This is the second match of the series. The third will probably be at Bridgeport.

MONROE COUNTY SPORTSMEN'S CLUB.

I. H. Andrews	111011111111111111	16
Sullivan	111111001111111111	15
H. Brown	111111111111111111	15
J. H. Brown	111111111111111111	15
Brownell	110110111111111111	17
Crouch	111111111111111111	17
Rice	111111111111111111	17
Edman	111111111111111111	19
Edman	111111111111111111	19

ROCHESTER GUN CLUB.

J. Webster	101010111111111111	14
F. Ward	111011111111111111	14
G. Raymond	111111111111111111	14
H. Ward	111111111111111111	14
A. P. Bigelow	111111111111111111	14
M. A. Stearns	111111111111111111	14
C. L. Sumner	111111111111111111	14
D. B. Butler	111111111111111111	14
R. Adams	111111111111111111	14

Total, 182.  
We missed capturing the Monroe County veterans by one ball, enough glory for us youngsters.

CANTON, N. Y., July 20th.—Regular weekly contest of Canton Gun Club at glass balls, 21 balls each, Bogardus trap and rules, 18 yards rise and go out—

F. Scribner	138	J. Cornell	132
J. B. Browney	135	A. F. Nims	132
J. H. Rushton	135	R. J. Kieckieff	132
Henry Rich	134	Will Kipp	130

### PUBLISHERS' DEPARTMENT.

—See kennel advertisement of H. Vondersmith.  
—See reward offered for return of gun to David King, Jr., Newport, R. I.

A PASTOR MADE HAPPY.—I have been greatly troubled with my kidneys and liver for over twenty years, and during that entire time I was never free from pain. My medical bills were enormous, and I visited both the Hot and White Springs, noted for the curative qualities of the water. I am happy to say I am now a well man, and entirely as the result of Warner's Safe Kidney and Liver Cure. Not only this, but my little daughter has been cured of St. Vitus' Dance by Warner's Safe Serrine, which I always keep in my family. With such glorious results, I am only too glad to testify regarding the remedies which have made me so happy.

REV. P. F. MARKLER.

### FIXTURES.

Toronto, Canada, dog show, Sept. 8th, 9th and 11th. Entries close August 21st. H. J. Hill, Secretary, Toronto, Ont.

Pennsylvania State Agricultural Society International Colley Trials, Philadelphia, Sept. 20th, 21st, 22d, 23d, 24th and 25th. Dr. L. A. Twiss, Secretary, Philadelphia, Pa.

Montreal Poultry, Dog and Pet Stock Association, Montreal, Canada, Sept. 21st, 22d and 23d. Entries close Sept. 14th. J. H. Cayford, P. O. Box 166, Montreal.

Nebraska State Sportsmen's Association Field Trials, Milford, Nebraska, Sept. 30th and Oct. 1st and 2nd. Entries close Aug. 31st. S. H. Harley, Secretary, Lincoln, Neb.

St. Louis Kennel Club, St. Louis, Mo., Oct. 5th, 6th, 7th and 8th. Entries close Sept. 20th. Chas. H. Turner, Secretary, St. Louis, Mo.

Pennsylvania State Field Trials Association Trials, Lancaster, Pa., commence Nov. 9th. J. R. Stoyton, Secretary, Pittsburg, Pa.

National American Kennel Club's Second Annual Field Trials, Vincennes, Ind., Nov. 15th. Chas. De Rongé, Secretary, 51 Broad street, New York.

Eastern Field Trials Club's Second Annual Trials, Robins Island, Peconic Bay, L. I., Nov. 23. Jacob Pentz, Secretary, New York.

### PENNSYLVANIA STATE FIELD TRIALS.

LANCASTER, Pa., Aug. 28th.

#### Editor Forest and Stream:—

The sportsmen of this city and county are anticipating with much pleasure the meeting of the State Field Trial Association, which takes place in this city Nov. 9th. The ground selected for the trials is several miles from this city and is highly suitable for the purpose. It is accessible by railroad, and comprises some of the richest land in the county, while it affords ample cover for the birds, which promise this year to be unusually plentiful. Our game protective association has interested itself in the matter, and all the indications point to a highly successful meeting. May the best dog win. A few days since we were invited by Mr. Geo. Pownall of Christiansa, this county, to visit his kennels and see his beagle puppies, now about four months old. Twenty-one of the little beauties were enough to gladden the heart of any sportsman. Of fine form, beautiful markings, and lively dispositions, they were the ideal of what beagles should be. Had our purses been very plenteous we would have bought the entire lot and run them as a pack, but as it is, we modestly contented ourselves with a pair. With these we hope, on some crisp October or November morning, to waken the hills of the Octoraro with music, doubly delightful to the ear of the ardent sportsman.

CONESTOGA.

We have heard Mr. Pownall's kennel highly spoken of.

### PLAIN WORDS ABOUT DOG MURDERERS.

NORTH ANDOVER, Mass., Aug. 16th.

#### Editor Forest and Stream:—

The black English setter advertised for sale in your paper by E. Elwell, being dead, you will oblige me by stating that I lack in the columns of your valued journal, which will explain to numerous correspondents, who still continue to telegraph and write from all parts of the country, the reason why they get no answers to their questions and generous offers. I commenced to answer them by mail, but they are coming in so thick and fast that I must appeal to you to say dead dog for me. It seems that a venomous snake is the owner or possessor of a miserable pot metal gun, with which he has been ruthlessly shooting any and every kind of bird which came near his shop for him, to reach with his infernal blunderbuss. When a bird lights, if no one is near, bang goes the old gun, which none but a fool would shoot at all, and the luckless bird falls, or more likely flies away to die a lingering death, and suffer perhaps a thousand deaths, and leave a nest of poor young birds to starve and die. After finding this sort of game growing scarce in this vicinity, this brute then commenced on neighbors' cats and pigeons, but the former proved too cautious of life, and the latter soon grew too gamey for the bungler, and his brutish nature was not satisfied by seeing a cat crawl off on two legs with its back broken by a spike from his gun, or a pigeon fly or run out of his reach with a leg or wing broken. Nothing but death, the more ghastly the better, could satisfy his fiendish nature; and he has paid cash to become a citizen in a free country. Last week as a valuable setter dog, the property of G. W. Edwards, was passing his shop, this inhuman reptile sent a charge of iron bolts and nails plowing and cutting through the poor animal's ears, nose and jaw, into his head and shoulders, mauling him in the most hor-

rible manner. In this condition the poor dog crawled home, and who can imagine the feelings of his master as he brought out the gun, and very sight of which in days gone by set the noble animal bounding with joy to end by a well directed aim his terrible sufferings? Or who can imagine a being of man's image, so despicable as to commit such a diabolical outrage? The dog was well known as remarkably intelligent, well trained, and perfectly peaceable, never known to do injury to any person or thing, and he was advertised for sale to make room for a high bred Gordon bitch, from the well-known kennel of Mr. E. C. Alden, Dedham, Mass., which name is sufficient guarantee for a strictly first-class dog, as every one who has been fortunate enough to obtain a dog from him will testify. His method of breeding has been learned by careful study and long experience, and in breaking, the same experience and observation as a thorough sportsman and gentleman enable him to know what is required of a dog, and just how to breed and train to meet those requirements. With thanks for all would-be purchasers, and hopes of better success in the future, I beg to subscribe myself a friend to all true sportsmen.

G. W. E.

### ENGLISH DOGGES\*

The fourth Section of this *décourfe*.

Dogges of a Course Kind serving for many Necessary uses, called in Latine Canes Rustici, and first of the shepherds dogge, called in Latine Canis Pastorialis.

Dogges of the course or sort are (These two are the massore or the principal Bandogge.)

THE first kinde, namely the shepherds hounde is very necessary and profitable for the auoyding of harmes and inconveniencies which may come to men by the means of beastes. The second sort serve to succour against the snares and attempes of mischievous men. Our shepherds dogges is not large, vaste, and bigge, but of an indifferent stature and growth, because it hath not to deale with the bloudthyrsty wolf, sythence there be none in England, which happy and fortunate benefite is to be ascribed to the pusaunt Prince *Edgar*, who to thint y<sup>e</sup> the whole countrey myght be evacuated and quite clered from wolfs, charged & commaunded the welsheme (who were pestered with these butcherly beastes above measure) to paye him yearlyly tribute which was (note the wisdome of the King) three hundred wolles. Some there be which write the *Edward* of Wales payed yearlyly to King *Edgar* three hundred wolles in the name of an exaction (as we have said before). And that by the meanes hereof, within in the compass and terme of foure yeares none of those noysome, and pestilent Beastes were left in the coastes of England and Wales. This *Edgar* wore the Crown royall, and bare the Scepter imperiall of this kingdome, about the yeere of our Lord nye hundred fifty, nyne. Synce which time we recorde that no Wolfe hath bene in England, bred within the boundes and borders of this countrey, many there have bene dieters brought over from beyonde the seas, for greedynesse of gaine and to make money, for gasing and gapping, staring, and standing to see them, being a strange beast, rare, and seldom scene in England. But to returne to our shepherds dogge, This dogge either at the hearing of his masters voyce, or at the wagging and whisteling in his fist, or at his shrill and horse hissing bringeth the wandring weathers and straying sheepe into the selfe same place, where his masters will and wishe, is to have the, whereby the shepherd reapeth his benefite, namely, that with litle labour and no toyle or mowing of his feete he may rule and guide his flocke, according to his owne desire, either to hawe them go forward, or to stand still, or to drawe backward, or to turne this way, or to take that way. For it is not in England, as it is in *France*, as it is in *Flawnders*, as it is in *Syria*, as it is in *Partharia*, where the sheepe follow the shepherd, for hence hee shepherde the shepherd followeth the sheepe. And sometimes the straying sheepe when no dogge runneth before them, nor goeth about & beside them, gather themselves together in a flocke, when they heere the shepherd whistle in his fist, for feare of the Dogge (as I imagine) remembering this (if vnreasonable creatures may be reported to haue memory) that the Dogge commonly runneth out at his masters warrant which is his whistle. This haue we oftentimes diligently marked in taking our journey from towne to towne, where we have had a shepherd, while we have rayned on our horse and stood styll a space, to see the prooffe and triall of this matter. Furthermore with this dogge doth the shepherd take sheepe for y<sup>e</sup> slaughter, and to be healed if they besicke, no hurt or harme in the world do to the simple creature.

Of the mastiue or Bandogge called in Latine

Vallatius or Cathenarius.

THIS kinde of Dogge called a mastiue or Bandogge is vaste, huge, stubborn, ougly, and eager, of a heuy and burthenous body, and therefore but of litle swiftnesse, terrible, and frightfull to beholde, and are more fearece and fell then any *Arcadian* curie (notwithstanding they are sayd to haue their generation of the violent Lion). They are called *Vallatius*, because they are appointed to watche and keepe farne places and cuntry cotages separated from wraime recourse, and not abutting upon other houses by reason of distance, where there is any feare conceaued of thieves, robbers, spoylers, and night wanderers. They are seruiceable against the Foxe and the Badgar, to drive wilde and tame swyne out of Medowes, pastures, glebelandes and places planted with fruite, to bayte and take the bull by the eare, when occasion so requirith. One dogge or two at the vttermost, sufficient for that purpose be the bull neuer so monstrous, neuer so fearece, neuer so furious, neuer so stearne, neuer so vnconquerable. For it is a kinde of dogge, capable of courage, violent and valiant, striking could feare into the hearts of men, but standing in feare of no man, in so much that no weapons will make him shrinke,

\* Of English Dogges, the diversities, the names, I the nature and properties. A Short Treatise written in latine by Johannes Caius of late memo rie, Doctor of Physike (in the Uniuersitie of Cambridge) And newly drawne into Eng- lish by Iohn Iulius Caesar, Gent. And written in French by Iulian Iulian. Scene and allowed. Printed at London by Richard Iohnes, and are to be sold euer against S. Sepul- chre's Church without [Newgate] 1576.

Rule 7. Pointing hares, "stink birds," larks, turtles, bitterns or any bird generally considered game, shall not be deemed false points. A dog making a false point, and discovering it to be such, without any encouragement from his handler, shall not be penalized.

#### INSTRUCTIONS TO JUDGES.

**Pointing.**—The judges will allow only those dogs the maximum that point all the birds possible for them to point under existing circumstances; a dog to earn the maximum number of points under this head must display a first-class nose and exhibit great judgment in finding and pointing his birds, and make no flushes that a dog with the above qualities would avoid in ordinary hunting. The dogs are to be hunted in all respects as in an ordinary day's shooting, in a sportsman-like manner. Inexcusable or wilful flushes will detract from a dog's score under this head, but the character of the flush must be always taken into account in estimating the penalty, if any. The judges must not ask the handlers if their dogs are pointing, but must decide for themselves. They shall always consider the nature of the ground, the wind and the birds, and not penalize a dog for flushing a bird it would be impossible to point. The penalty for flushes to be graded by the character of the offense. The judges shall not require the handlers to work their dogs down wind.

**Pace.**—The dog that maintains the fastest gait throughout the trial, except when in cover or on game, to receive the full number of points, all others to be graded by him.

**Backing.**—The maximum only allowed such dogs as stand or drop instantly at sight of another dog pointing. But no dog shall be expected to back unless the dog pointing stands and is motionless. A dog shall not be said to refuse to back unless he sees the dog pointing. To get credit for a back, the dog must stop at least ten yards (when practicable) in front of the handler. Should a dog refuse to back, and, instead, go ahead, or alongside of the pointing dog, and steal a point, the same shall not again be allowed to come nearer his pointing competitor than twenty yards, and be kept charged while the birds are being flushed over the pointing dog.

**Style.**—The judges shall consider the dog's grace in ranging and drawing, and attitudes in pointing and backing.

**Stanchness.**—The maximum allowed such dogs only as do not advance from their point when they are on game until ordered on.

**Ranging and Quartering.**—The maximum only allowed the dogs that maintain the most killing range throughout, viz.: wide or close, as the necessity of the case may require, and who cover their ground systematically excepting where the nature of the ground renders such unwarrantably impracticable.

**Obedience and Disposition.**—The maximum only allowed to a dog that works promptly to the gun without noise or severity, and is obedient, prompt, cheerful and easily handled.

**Retrieving.**—To receive the maximum under this head, a dog shall go promptly and cheerfully for the bird, find the same, and deliver it to the handler without mauling or mutilation. The handler shall not assist the dog in finding the dead bird by leading the same toward it, except in such circumstances as suit that the dog cannot reasonably be expected to find the bird, or not without much loss of time.

**False Pointing.**—The judges shall give a dog ample opportunity to discover whether or not he is on a true point, and the penalty shall range from 1 to 7 for his acts throughout the heat.

Breaking in is when a dog through imperfect breaking or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to break shot or chase, but stops within a few feet from the point from which he started, of his accord or by command.

Breaking shot is when a dog runs in when a shot is fired, with the intention of getting the bird.

Chasing is when a dog follows the birds, either when the gun is fired or not, to an extent to be beyond the control of the handler for the time being.

**Puppy Stakes.**—Rule : Dogs over eighteen months old shall not be eligible for the Puppy Stakes. Rule as above.

**Brace Stakes.**—The rules governing the Brace Stakes shall be the same as those used in the All-Aged Stakes, with the following exceptions : The maximum for ranging and quartering shall be 20 instead of 10, and the total one hundred and ten instead of one hundred. The brace to earn the maximum for quartering must cross each other systematically, and work independent of each other, or one dog must quarter the ground on one side of the handler while the other dog quarters the opposite side, the dogs meeting at or near the center. Each brace will be run separately, instead of running in heats, and be judged by the scale of points as laid down and explained.

**Nursery Stakes.**—Rule : Dogs over twelve months old shall not be eligible for Nursery Stakes. There will be no points allowed for retrieving in this stake. Rules otherwise as above.

#### THE FIELD TRIAL RULES DISCUSSED.

NEW YORK, Aug. 30th.

Editor Forest and Stream :—

The rules which are to govern N. A. K. C. Field Trials, which have appeared in the FOREST AND STREAM, and those of the Eastern Field Trial Club, just issued, call for some notice and even criticism on the part of those who, whether as competitors in the trials, or merely as practical sportsmen and owners or breeders of dogs, are interested in the improvement of the field dogs of America. No one who is at all conversant with the contests of the field trials to be run next fall without feeling a deep interest in their success; for it is acknowledged by all practical shooting men, that such trials contribute more to raise the standard of excellence of our setters and pointers than anything else can. Bench shows are, of course, very well in their way, and a prize winner is a beautiful object to the eye, but many a dog that has taken a blue ribbon would not be worth, to the sportsman, the charge of powder and lead that would blow out his brains while some animal at which the judges disdain to cast a second glance, may do his work in the field, day after day, in a style that would satisfy the most exacting lover of the gun. For myself, while I yield to

no one in my admiration of a beautiful animal, as near the type of his kind as may be, I would rather do my shooting over a dog, if it were well bred and had a good nose, than be obliged to use some of the dogs that have stood first in the ring. And this, I think, is the feeling of many, if not most, of my brother sportsmen in this country. They want the dog which will find the most birds, point them the most stanchly, retrieve them with most certainty, and be able to do this at least three or four days in the week—throughout the season, if necessary. If that I have assumed is true, the very general interest in field trials is explained, and I think that I hazard nothing in predicting that the accounts of the trials to be run in the autumn will be more eagerly read by shooting men than any previous canine competitions that have been held in the United States. The importance of having the rules to govern the trials, and the directions to judges clear and concise, is self-evident. They should be brief, simple and couched in language that can be by no possibility be misinterpreted or twisted from its legitimate meaning. In contests of this kind there is too often manifested a disposition to find fault with the decision of the judges and even to wrangle; but by making the rules unmistakably clear, and by choosing as judges men of undoubted reputation, there is no reason why the coming trials should not pass off without any of those unfortunate misunderstandings, to use no harsher term, which have disgraced such meetings of sportsmen in the past. While not professing any very profound knowledge on the subject of dog breaking, I am accustomed to work my own dogs in the style that suits me, and I therefore venture to offer my views on the rules for field trials, as laid down by the two clubs already mentioned. It seems to me, in the first place, that several of the rules in the circulars referred to are lamentably obscure, and some of them, to my mind at least, convey no meaning whatever. On the whole, the rules of the Eastern Field Trials Club are the most intelligible; but even these might be improved upon. The last clause of Rule 3, in the N. A. K. C. circular, is extremely indefinite and blind. Thoughts of probable means may be made out of the reading. Rule 3, of the E. F. T. Club is perfectly clear. Rule 4 is in both cases unmistakable in its meaning and needs no comment, but I cannot help thinking that the scale of points by which the dogs are to be judged is in some respects not what it should be. The highest credit that any dog can get for "pointing," is 35; "pointing" as here defined, including nose and judgment. Style has a separate mark, and so has stanchness, so that neither of these is taken into account. Yet a dog's stanchness is scarcely worth speaking of, and surely style is as important on the point as it is when the animal is ranging. The term "pointing," it seems to me, is unsatisfactory, and I shall endeavor below to suggest a more appropriate one. Pace, in the Rules of the N. A. K. C., is rated at 20, and in those of the E. F. T. C., at 15. The latter, I think, is the proper figure. Nothing is more wearying and annoying than to follow a potter, and "pace" is certainly one of the most important attributes of a good field dog. Backing is rated at 10 in the set of rules, and 8 in the other; too high in both. To a well bred dog it is as natural to back as it is to point, and I have seen, as no doubt have many others, young puppies, that had never seen a bird, back as stanchly as the best broken dog. The puppy has inherited his disposition to back from his well broken ancestors, and, besides this, his attention is fixed and his curiosity aroused, by the stopping of his companion and the rigid attitude which the latter has assumed. The breaker must outwits and fosters this inherited tendency to stop at the sight of a pointing companion; and to teach a dog to back—a well bred dog, be it understood—is one of the easiest of the handler's tasks. For style the marks are 6 and 7. As I have already indicated, style in pointing is quite as important as style in ranging, and if, as seems probable, the style referred to is only style in ranging, it should be explicitly stated that this is the case. I am disposed to think that if in style in ranging and ranging are included, the marks assigned to it in the rules are too far from being proper number. Stanchness, 6 and 8, I know of but one attribute of a field dog that is more important than stanchness. No matter how many good qualities your dog may have, if he is not stanch he is not worth his salt. Many a man hunts over a dog that does not pretend to find, that goes about hunting in his own way, has no style, peters, very likely, perhaps even does not retrieve, but when he fires we meet, we stay there until the gun comes up. He will never flush, he never loses his point unless dragged away by main strength. The owner of such a dog thinks he has a treasure—and he is right in so thinking. He may lose some birds because his dog does not retrieve, but not nearly so many as he would if the animal was unsteady. Stanchness I consider of the very highest importance, and I would make it much higher than is here done. In the N. A. K. C. Rules, ranging is marked 6, and quartering 6, and in the E. F. T. C. Rules, ranging and quartering together 10. These marks are not far from the proper percentage, though in view of the great importance of other qualifications, they are perhaps somewhat too high. Obedience and disposition are rated at 4 and 7, the latter being about the proper figure. Retrieving, which is of great importance, is rightly rated at 10. Rule 6 is admirably worded and will no doubt be strictly enforced. With regard to the "points of demerit," I have only one criticism to make. Chasing is so serious a fault that it should disqualify the dog the first, not the second time that it occurs. An animal that is not under sufficient command to come in, or drop, when ordered, should not be entered in the trials. There should be also, I think, a penalty of not less than 6 for wilful flushing. Simple flushing from excitement or heedlessness should be punished by loss of marks in pointing." In the instructions to judges there is nothing which calls for anything but praise, until we come to the last clause, which I have never heard worded. The instructions in both circulars say : "To get credit for a back, the dog must stop at least ten yards (when practicable) in front of the handler." This rule is intended, we presume, to prevent the person working the animal from ordering the latter to stand, but this seems unnecessary, for the presence of the judges would restrain the handler from speaking to his dog, and if their presence does not, the distance of thirty feet would prevent his giving the necessary command. There is here a looseness of phraseology which, I think, offers an opportunity for a quibble.

Stanchness is not clear. The dog may come to a point on birds, but if they run it is clearly his business to break his point and follow them, whether he is ordered on or not. Ranging and quartering in the E. F. T. instructions are clear enough, but the definitions are too general. In the N. A. K. C. instructions, however, I am unable to understand what the definition of quartering intends to convey. What does working "at right angle to the handler" mean? Does it mean at right angle to the course the handler is pursuing? I presume so. If it does not mean that it means nothing as far as I can discover. In practice a dog scarcely ever works at right angle to the course of the shooter, but usually at an angle of about 45° with it. His course is that of a smart sailing vessel tack against a head wind.

And now a word about the scale of points for judging, and I am done. I have already stated that, in my opinion, the marks for the different attributes of a good dog are not divided as they should be in view of the relative importance of the various acts to be performed. Nose is certainly the most important qualification that a dog can have. You can, by care and patience, teach him almost anything, but you can never teach him to have a nose, and he must be born with that. Without nose he is, of course, utterly valueless for hunting purposes. With nose he can, with sufficient training, be made of some use. Nose and judgment, or intelligence, usually go together, though judgment is, after all, only another term for the experience which can only be acquired in the field. This combination of qualities corresponds more or less closely with what is called "pointing," but it seems to me that finding would be a more fitting term which to designate it. Finding, then, should rank the highest in the scale of points, and should be marked less than 30. After finding comes stanchness, which, as I have already tried to show, should have a high mark, say 18. Pace comes next, and this I would rate at 15. Retrieving is only less important than pace, and saves the weary shooter many steps and many birds. I would place it at 10. This is a point that requires to be carefully watched by the judges, for although most dogs retrieve, the percentage of those who do it properly, i. e., with a tender mouth, returning the bird to the hand cheerfully, is very small. Style is a refinement, a luxury rather than a necessity, yet its presence in a dog adds so much to the pleasure of the shooter that I would place it next in order with marks 8. Then should follow ranging and quartering 7, and obedience and disposition 7; and, last of all, backing 5.

In the points of demerit, false pointing and breaking are in venial offenses; breaking shot is more serious, and should receive from 5 to 10 marks, according to the character of the offense, while real *bona fide* chasing should receive 100 and be out of the contest at once. Wilful flushing, as above remarked, I would punish with 6 marks for each offense.

This letter has far exceeded the bounds I had marked out for it, and yet I have left much unsaid. In concluding I would say that both the N. A. K. C. and the E. F. T. C. are to be congratulated on the energy that they have shown in the matter of these trials, as well as on the judgment that they have shown in the selection of the judges so far as announced. I wish that they would amend their rules so that there may be no opening for complaints from dissatisfied competitors; for with clear rules and good judges, each man who enters his dogs will know precisely what he has to expect, and must abide by the decision rendered.

Coufles.

**EASTERN FIELD TRIALS.**—The following is the programme of the trials to be run by the Eastern Field Trial Club next fall :—The Second Annual Meeting will be held under the auspices of the Eastern Field Trials Club, at Robin's Island, Peconic Bay, Long Island, N. Y., on November 29th and 30th and December 1st, 2d, 3d and 4th. Open to the world. All-aged stakes, open to all setters and pointers. Limited to 50 entries. First prize, \$200; second, \$100; third, \$50; fourth, \$25. Entrance fee, \$25. Open to all, Puppy Stakes, open to all pointers and setters under 18 months of age. Limited to 25 entries. First prize, \$100; second, \$50; third, \$25; fourth, \$15. Entrance fee, \$15. Forfeit, \$10. Nursery Stakes, open to all setters and pointers under 12 months of age. Limited to 15 entries. First prize, \$60; second \$40; third \$20. Entrance fee \$10. Forfeit, \$7.50. Brace Stakes, Open to all setters or pointers, five braces to run or prizes to be scaled. First prize, \$350; second, \$125; third, \$80. Forfeit, \$35. Club Stakes, open to members of the club only : dogs to be owned and hunted by the member making the entry. Prize, a hundred dollar piece of plate to be selected by the winner. Entrance 10 per cent. of the value of the prize. This stake to be run after the close of the running of the Brace stakes, and entries close on November 18th. Entries will be received for the open stakes up to midday of November 27th, at the office of the club, and on the grounds up to the evening before the trial. Entries must be accompanied by the forfeit money in all cases.

—Mr. Charles Lincoln, Superintendent of the St. Louis dog show, has sent us a number of premium lists and entry blanks, which can be had by calling at this office.

#### KENNEL NOTES.

**NAMES CLAIMED.**—BRAIN.—Mr. George Norbury Appold, of Baltimore, Md., claims the name of Bravo for pointer dog puppy, out of Kate, by Bragg. LARK.—Mr. H. G. Jerome, of Gale's Ferry, Conn., claims the name of Lark for his English beagle bitch puppy, purchased by him from Mr. N. Elmore. MAX.—Mr. A. A. Atkins, of Turner's Falls, Mass., claims the name of Max for his English beagle puppy, purchased by him from Mr. N. Elmore. BONAPARTE and LIENAU.—Mr. Thomas M. Smith, of Jersey City, claims the names of Bonaparte and Lienau for his brace of red and white setter puppy, whelped May 14th, 1889, out of Nell II. by T. O'Moore; he by Rory O'Moore. BARNES (Stoddard's Friend; Nell II., Goldsmith's Plunkett-Nell. Nellie.—Mr. Thomas M. Smith, of Jersey City, claims the name of Nellie for red and white bitch puppy, out of Nell II., by T. O'Moore. WHIT.—Mr. Charles B. Barnes, of Boston, Mass., claims the name of Whist for his lemon and white dog puppy, whelped July 9th, out of Sibel, by Rufus II., owned by Mr. Henry Smith, of Boston. SPEED.—Mr. N. Elmore claims the name of Speed for black and tan foxhound bitch puppy, presented to him by Mr. George Fournell, of Christiansburg, Pa. FLORA BELL.—Mr. H. B. Stoll, of Corning, N. Y., claims the name of Flora Bell for his red and white

setter bitch, whelped July 20th, and presented to him by Mr. Ed. Jetter, of Geneva, N. Y., out of his bitch by Sport. *Alco*, Mr. George Lack, of Raytown, N. Y., claims the name of *Alco* for his bred and white setter dog puppy, out of Mr. G. H. Hauptmann's Jessie by Mr. G. S. Sedwick's Bang. *Meigs*—Mr. N. Elmer claims the name of *Meets* for the white, black and tan English foxhound bitch puppy, presented to him by Mr. McKoon, of Franklin, N. Y. *Thor*—Miss Cople, of Bethlehem, Pa., claims the name of *Thor* for her smooth-coated St. Bernard puppy, whelped June 14th, 1880, out of Mr. J. S. Schuyler's Josephine by his Guy. *Firth*—Mr. William S. Thurston, of Huntington, L. I., claims the name of *Firth* for his lemon and white pointer bitch, whelped March 15th, 1880, out of Mr. R. T. Green's Girl, Maryland-Tell by Mr. W. F. Steel's Glenmark, Rush-Komp.

**NAME CHANGED.**—*Neva*.—Mr. George Norbury Appold wishes to change the name of his Irish setter bitch Bessie (formerly Red Betsy), out of Jessie by Boston, and recently purchased from Mr. J. J. Jennelle, Du Quoin, Ill., to *Neva*.

**WHELPS.**—*Rose*.—Mr. S. C. Elliott's Rose whelped two puppies by Blossom. *Mina*.—New York, Aug. 31st. *Editor Forest and Stream*.—My kennelman writes me of the following whelps by my champion Mina by champion Dash III.: "Last night (Aug. 29th) Mina whelped seven puppies, four dogs and three bitches. The pups which the mother has suckled are all white. The pure white will probably be marked with orange, the white is very handsomely marked with tan around the margin; two are marked just like Mina, and one has black around each eye and white ears, a very singular marking. They are all strong and healthy and Mina does well."

WALTER H. BECKS.

**BIRD.**—*Madcap-Bello*.—Mr. G. D. Macdougall's (Lachlan Kenner's) black cocker bitch Madcap (second, Montreal, 1880) to Mr. J. H. Kenner's black (black—second, Toronto, 1877) at Toronto, Aug. 20th. *Cora-Wildcat*.—Mr. G. D. Macdougall's (Lachlan Kenner's) liver colored cocker bitch Cora (first, Montreal; first, New York, 1880) to the Hornell Cocker Kennel Club's Wildcat (black), at Hornellsville, N. Y., Aug. 23rd. *Molt-Blossom*.—*Blossom*.—Mr. T. H. Smallman's Gordon setter bitch —, to Dr. Niven's Blossom. *Grace-Car*.—Mr. E. F. Mercellott's champion bitch Grace to Mr. P. H. Morris-Car, on Aug. 24th, 1880. *Mollie-Blossom*.—Mr. Edwin Finley's (Hamilton, Ont.) Gordon setter bitch Mollie, Grouse-Fansy to Dr. Niven's Blossom, Aug. 19th, 1880.

**PRESENTATION.**—*Maxim*.—Mr. George Van Wagener, of this city, has presented to Mr. R. J. Morgan the pointer bitch Maxim, out of Dutchess by Rush.

## The Rifle.

—Address all communications to "Forest and Stream Publishing Company, New York."

### ONTARIO RIFLE ASSOCIATION.

TORONTO, Ont., On the 23rd ult. the annual matches of the Ontario Rifle Association commenced on the Garrison Common. The day, though bright, was not too much so, and there was a fairly steady breeze blowing from the southeast. The arrangements which had been made by the Executive Committee were as nearly perfect as possible, and all concerned deserve great credit for the manner in which the first day's shooting was carried out. The number of entries was not quite as large as last year, but the shooting was better than it had been in the past, comprising 100 men, numbered from 1 to 17, near the Exhibition Building. The first 3 targets were devoted to the Canada Company's match, and the remainder to the Macdonald for the first part of the day, and to the Affiliated in the afternoon.

The several matches shot and decided were as follows:—  
Canada Company Match.—Restricted to the active militia of the Province of Ontario who have never won a prize at any provincial or dominion association; 7 shots at 400 yards; cash prizes, \$30; Private Henderson, 31; Private Wilson, 32; Capt. Hunter, Thirty-second, 35; Lieut. Henderson, 36; Lieut. Elliott, Seventh Fusiliers, 37; Private Morrison, Guards, 43; Private G. Glennie, Dufferin Rifles, 33; tie won by Glennie. Lieut. Colby, Thirtieth, 32; Gunner Kennedy, Nanpané G. A., 30; Corp. Dunn, Thirtieth, 30; Adj. Corlie, Twenty-fifth, 30; Capt. Tann, Twelfth, 30.

The Macdonald Match.—Seven shots at 200 yards; any position; open to members; total cash prizes, \$300; Sergt. Armstrong, Guards, 31; Lieut. Moore, Twenty-fifth Battalion, 33; Private Schwarz, Thirtieth Battalion, 32; Private W. Jack, Tenth Battalion, 32; Private Kilpatrick, Twenty-fifth Battalion, 32; Lieut. Col. Gibson, Thirtieth Battalion, 32; Sergt. T. Mitchell, Tenth Royals, 31; Major Wilson, Thirtieth Battalion, 31; Lieut. Adams, Thirtieth Battalion, 31; Private Marlett, Twentieth Battalion, 31; Private C. N. Mitchell, Tenth Royals, 31; Sergt. Panie, Thirtieth Battalion, 31; Lieut. Fox, Twentieth Battalion, 31; Sergt. Thompson, Q. O. R., 31.

Affiliated Match.—Open to members; ranges, 200 and 500 yards; 5 rounds at each range. Cash prizes: "The Ladies' Challenge" Cup, value \$50 and \$40; second prize, \$30; third prize, \$20; fourth prize, \$15; fifth prize, \$10. Individual prizes, \$25 each: Private Moore, Georgetown R. A., 47; Lieut. Col. Gibson, Thirtieth Battalion, 40; Major Bennett, Fifty-eighth Battalion, 40; Color Sergt. Hancock, V. I. C., 40; Private Morris, Thirtieth Battalion, 40; Private C. N. Mitchell, Tenth Royals, 45; Private Moore, Thirtieth Battalion, 45; Lieut. Crowe, W. F. B., 45; Mr. J. L. Cox, Second Military District, 45; Private H. Johnson, Sixth Fusiliers, 45; Mr. Todd, Bruce R. A., 45.

Team prizes.—First prize, ladies' challenge cup, value \$150, presented by the ladies of Toronto, and \$40—Thirtieth Battalion, Hamilton, 210; second prize, \$40, Ottawa Rifle Club, 210; third prize, \$30, Sixth Fusiliers, Montreal, 205; fourth prize, \$20, St. Thomas Rifle Club, 204; fifth prize, \$10, Guelph Field Battery, 203.

The Gilmour Match.—Presented by the President; 7 rounds at 500 yards. Total cash prizes, \$300. Capt. White, Thirtieth, 31; Sergt. Allenby, Twenty-second, 33; Capt. Strachan, Forty-seventh, 31; Mr. John Steen, Q. O. R., 31; Major Wilson, Thirtieth, 31; Lieut. Wilkins, Q. O. R., 31; Capt. Anderson, Second Mil. Dist., 32; Mr. W. Smith, L. R. C., 31; Lieut. Adams, Thirtieth, 31; Staff Sergt. Lewis, Q. O. R., 31; Private Stewart, Twentieth, 31; Wheeler Ogg, W. F. B., 31; Private G. W. Pitt, Seventh Fusiliers, 31; Private Moore, Twentieth, 31; Staff Sergt. Shanay, Thirtieth, 31.

On Tuesday afternoon the Gordon match was finished in bad weather, and consequently, with one or two exceptions, the shooting was not good. The following is the score: 7 rounds at 600 yards; open to members; cash prize \$200; Major Wilson, Forty-fifth, 31; Mr. F. Oakley, Second M. D., 29; Sergt. P. H. Bailey,

Forty-seventh, 29; Staff Sergt. Walker, Q. O. R., 23; Lieut. Snart, Dufferin Rifles, 23; Gunner Telegen, Cobourg R. A., 23; Sergt. Mitchell, Thirtieth, 23; Capt. Moore, Thirtieth, 23.

During the night it rained heavily, and a heavy gale blew from the eastward. Those who had camped out were not much inconvenienced, as the tents were well sheltered. At 9 o'clock the firing commenced, the matches for the day being the Merchants' cup for battalion teams, and the Brassey cup, for company teams, besides the Extra Series match for special prizes. Great interest was attached to the cup matches from the circumstance that if the Thirtieth won the Merchants' it would become their absolute property, they having secured it the two previous years, while the same would happen if the Guards won the Brassey. The scores of the day stood:—

Merchants—Brassey—200, 500 and 600 yards; 7 shots each range Battalion Team Prizes—First prize, Merchants' Challenge Trophy, value \$250, and \$75 each, Thirtieth Battalion, 630; second prize, cash \$50, The Guards, 618; third prize, cash \$40, The Queen's Own, 604; fourth prize, cash \$30, Twentieth Battalion, 588; fifth prize, cash \$24, Twenty-fifth Battalion, 561.

Brassey—Company teams—First prize, Brassey cup, value \$125, and \$50 cash, No. 3 Company, Thirtieth Battalion, 402; second prize, cash \$30, No. 1 Company, Guards, 298; third prize, cash \$20, No. 1 Company, Thirtieth, 331; fourth prize, cash \$15, No. 9 Company, Tenth Royals, 547; fifth prize, cash \$10, No. 3 Company, Thirtieth, 512.

Individual Prizes—Lieut. Mitchell, Thirtieth, 93; Sergt. D. Mitchell, Thirtieth, 92; Sergt. Armstrong, Guards, 89; Corp. Brady, Q. O. R., 89; Private Anderson, Guards, 89; Private Johnston, Sixth Fusiliers, 83; Sergt. Panie, Thirtieth, 83; Lieut. Col. Gibson, Thirtieth Battalion, 87; Wheeler Ogg, W. F. B., 89; Lieut. Crowe, W. F. B., 89; Major Wilson, Sergt. Speers, Twentieth, 85; Major Bennett, Fifty-sixth, 85.

The fourth day, though fine, was by no means a good shooting day, for when the gun fired at 9 o'clock it was blowing half a gale from the southeast, which did not moderate, but rather increased as the day grew older. The first competition was that for the Gzowski cup and \$60, to be competed for by the four military districts, 6 men each, and in addition cash individual prizes.

For the aggregate prizes, Lieut. Crowe, of the Wellington Field Battery, who had been shooting steadily throughout, came to the front and swept the board, winning the Governor-General's silver medal, the Ekington cup and the Dominion Rifle Association medal.

The score of the Gzowski stand:—  
Seven rounds at 500 and 600 yards; team prize, silver cup, presented by Lieut. Colonel Gzowski, and \$60; to be competed for by twelve members of the district. Cash prizes, \$210.

Team Prizes—Fourth Military District, 583; First Military District, 582. Individual—Lieut. Crowe, W. F. B., 62; Sergt. Armstrong, Guards, 60; Private W. H. Pencock, Q. O. R., 59; Lieut. W. Mitchell, Thirtieth, second, 57; Staff Sergt. Walker, Q. O. R., 55; Sergt. W. Mitchell, Thirtieth Battalion, 55; Private G. Bell, Twelfth, 55.

The Sir Peter Tait Cup.—Prize, silver cup, value \$250, presented by Sir Peter Tait, of London, Eng., to the active militia of Canada in commemoration of the visit of Lieut. Col. Skinner and the Ontario team to Wimbeldon, 1871, and \$80 added by the Association. Total cash, \$60. First prize, Thirtieth Battalion, 1,516; second, the Guards, 1,433.

The Skirmish Match.—Ranges from 200 to 400 yards. Number of rounds, 10, 5 and 5, and 5, and 5. To be competed for by 6 officers, non-commissioned officers, or men from any battalion, brigade or regiment of artillery, squadron of cavalry, or field battery of the active militia in skirmishing order. First prize, \$50; second prize, \$40; third prize, \$30; fourth prize, \$20; fifth prize, \$10. Five prizes. Total cash, \$150. First, Queen's Own Rifles, 156; second, Thirtieth Battalion, 172; third, Tenth Royals, 167; fourth, Twentieth Battalion, 160; fifth, Thirtieth Battalion, 159. On the fifth day of the meeting, the small bore matches opened at 800, 900 and 1,000 yards.

### RANGE AND GALLERY.

CANBERRA, N. J., Gen. Grubb and the officers of the Stockton Rifle Range Association are doing an excellent line of work. For September the following programme of matches has been issued:—

Sept. 2d, Mid Range Off Hand Match.—All comers, 500 yards, off hand, any rifle, 10 rounds, allowance to military rifles used as such 4 points, rétrogrades permitted.

Sept. 4th, 11th and 18th, Sharps Match for Sharps Military Rifles.—Second series of 15 competitions for 15 Sharps military rifles, all comers, 200 yards, off hand, 10 rounds, weapon Sharps military rifle, 10 rounds, 200 yards, 10 rounds, 200 yards.

Sept. 7th and 21st, the Alford Match.—Six competitions to take place during the season. Prize, a brooch-lance, double barrel shot gun, English walnut stock, Damascus steel barrels, engraved; value \$80; all comers, 300 yards, off hand, any rifle, 10 rounds, rétrogrades allowed. The prize to be awarded to the highest aggregate of six scores whenever made by any one competitor.

Sept. 9th, Everybody's Match.—All comers, 300 yards, off hand, any rifle, 5 shots, allowance to military rifles 1 point.

Sept. 11th, Thirtieth Battalion Match.—Three competitions, open to everybody, any rifle, 100, 200 and 300 yards, 5 shots at each, off hand, rétrogrades allowed, but only the highest score to count. Competitors shooting with military rifles as such will receive an allowance of 1 point at each distance (total 3 points). Prize, to the competitor making the highest aggregate score of two competitions participated in out of the three, a short range rifle, American walnut checked stock and fore-arm, pistol grip, hard rubber butt plate, short vernier grip sight and wind gauge, weight 9 pounds, value \$40.

Sept. 13th, Mid Range Match.—Prize, a new model 22 caliber gallery rifle, all comers, 500 yards, any position, any rifle, 10 rounds military rifles allowed 4 points, rétrogrades permitted.

Sept. 23d, Stockton Badge Match.—Prize, a massive gold badge, presented by Hon. John P. Stockton; open to members of the National Guard of the State of New Jersey, 200 yards, standing, 10 shots, any rifle, to be shot for annually. Won in 1879 by Col. D. B. Murphy.

Sept. 23d, Champion Marksman's Badge of 1880.—Open to all members of the Second Brigade National Guards of New Jersey, 200 and 500 yards, 5 rounds at each, weapon, the military rifle in use by the State, position standing at 200, any with head toward the target at 500 yards; prize, a fac-simile in gold of the marksman's badge issued by the State of New Jersey. This badge will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times.

On Sept. 29th the annual prize meeting will open and continue for three days. The matches are:—

Sept. 29th, Everybody's Match.—Ten prizes, all comers, 200 yards, any rifle, military rifles allowed 2 points when used as such, 7 shots, off hand; rétrogrades permitted.

Sept. 29th, 21th and 30th, Ballard Match.—Prize, a Ballard mid range rifle, value \$90; three competitions, one on each day, all comers, 10 shots, 200 yards off hand, any rifle, military rifles allowed 2 points when used as such. The prizes as above will be awarded to the maker of the highest aggregate of three scores in the three competitions.

Sept. 28th and 29th, Hunter's Match.—For a model 570 Winchester repeating rifle, two competitions, all comers, 500 yards, position any, any rifle, 5 shots, allowance to military rifles 2 points when used as such. The prize will be awarded to the maker of the highest aggregate score in the two competitions.

Sept. 28th, Short Range Match.—Prize, a Sharps military rifle and a Winchester repeating rifle, all comers, 200 yards, off hand, 5 shots, any rifle, military rifles allowed 2 points when used as such.

Sept. 30th, Dupont Powder Match.—For 25 pound canisters Dupont's rifle powder, presented by E. J. Dupont de Nemours & Co., Wilmington, Del., all comers, 500 yards, 10 shots, position any, any rifle, allowance to military rifles 4 points when used as such; first prize 10 canisters of powder, second prize 7 canisters of powder, third prize 5 canisters of powder, fourth prize 3 canisters of powder.

Sept. 30th, Military Mid Range Match.—All comers, military rifle, 500 yards, position any with head toward target, 10 shots; prize, a short and mid range rifle, 40 caliber, 30 inch barrel, pistol grip stock, combination peep and open rear sight, beech front sight, using straight shell cartridges 21½", value \$32.

ELIZABETH, N. J., Aug. 21th.—Besides Drinton, the range of the N. J. State Rifle Association, the Singer Rifle Club, of Elizabeth, limited to the men employed in the Singer Sewing Machine Manufacturing Company, has a short range for its own convenience in the neighborhood of the factory.

VIRGINIA CITY, Nev., Aug. 12th.—At the Caledonia Picnic, in Treadway's Park, Carson City, 6 teams of 20 men each from the militia companies contested for the prizes which were, first, a gold watch and chain, value \$20; \$30 coin for second, and \$25 third prize. The first was won by the 3rd Infantry, 2nd Division. The following are the total scores of each team, ten shots per man, 200 yards: Sarsfield 82, Emmets 78, Carsons 78, Washingtons 77, Montgomerys 73, Tigers 68. Following is the individual score of the Sarsfields, which is said to be the highest ever made in any competition by 20 men from one company:—

The Gallagher, Capt. of team	5	4	4	4	5	4	4	3	4
J. B. Chandel	4	4	4	4	4	4	4	4	4

Total, 1,802.  
On Sept. 5th another shoot takes place for \$100 coin and \$50 coin second prize.

OTTAWA, Aug. 21th.—The forthcoming meeting of the Dominion Rifle Association, to be held at Blount Hill Range, Ottawa, commencing on 6th September next, promises to be the most important and successful competition that has yet taken place here, the programme of prizes being framed with a view of inducing a large attendance of marksmen from all parts of the Dominion, the aggregate cash prizes alone amounting to \$5,033, exclusive of prizes in kind, viz. London Merchants' Vase, the Macdougall cup, 3 Snider rifles (Ingram's), N. R. A. medal and D. R. A. medal, besides 10 special badges to winners of the prizes, presented by His Excellency the Governor-General and Her Royal Highness the Princess Louise. The following is a synopsis of the prize list:—

All-comers' match, 60 prizes, \$400; Dominion of Canada match, 32 prizes, \$635; Battalion, 35 prizes, \$455; Macdougall Challenge cup, 41 prizes, \$385; Provincial match, vase, three rifles, and 43 prizes, \$441; Affiliated Association match, 48 prizes, \$430; Grand Aggregate, two medals and 20 prizes, \$300; Prizes presented by His Excellency the Governor-General and H. R. H. Princess Louise, badges and 3 prizes, \$500; Extra series No. 1, 17 prizes, \$190; Extra series No. 2, 17 prizes, \$190; Skirmish match, 3 prizes, \$100; Small-bore match, 16 prizes, \$235; Wimbledon team for 1881, 30 prizes, \$750—total cash prizes, \$5,033.

Eleven new targets have been erected, and there will be 20 in operation, exclusive of the long range target of 1,000 yards. All are on the "Barnel" principle. The usual camping, telegraphic, postal, and other facilities will be provided.

The executive committee met this evening for the purpose of completing the details for the approaching meeting, appointing range officers, etc. The arrangements for marking, etc., will be made in such a way as to inspire the fullest confidence. Possibly some of the markers will be taken from "B" Battery, Kingston. The improvements being made at the range are about completed. It is expected that the Governor-General will be present, but no definite information has as yet been received. All the Provinces of the Dominion (including Manitoba and British Columbia) will be represented, and it is expected that there will be a team from the regular forces at Halifax under command of Captain Partridge; but as it is rumored that the regiment is to be removed to Bermuda, this is uncertain.

NEWARK, N. J.—The gallery shooters here are laying out big plans for next winter's sport, and even now the cool recesses of the shooting tunnels are not entirely deserted. The Newark Rifle Association is composed of two delegates from each club, who are empowered to make rules governing matches in tournaments, also to select the range for opening tournament and transact such business as may arise from time to time in different associations. The officers are, President, Wm. Gardner, of the Amateur; Secretary, William Van Dorn, of Barnard. The standing of the several clubs are as follows: Freinshusen Rifle Association, President, W. Fred Lynn; Secretary, A. C. Neumann. There is a membership of 28. The range is situated at No. 181 First street. The club shoot with a Ballard rifle, 22 caliber, on a 72 feet open range.

Amateur Rifle Association, President, Wm. Gardner; Secretary, J. H. Huegel. The range is situated at Montgomery's, Clinton street, and is a tunnel range. Shooting distance 74 feet, using a Ballard rifle, 22 caliber. The association numbers 41 men.

Essex Amateur Rifle Club, President, Fred Hebring; Secretary, J. H. Huegel. The range is situated at No. 340 Bank street, corner Lush street. This association has a membership of 33. The distance of range (tunnel) 75 feet. They use a Ballard rifle, 22 caliber.

Plymouth Rifle Association, President, Geo. M. Townsend; Secretary, Wm. Cox. At present the club shoot at Hill's tunnel range, No. 51 Broad street. Length of range 80 feet. A Ballard rifle, 22 caliber, is used. The membership is 12.

Washington Rifle Club, shoot on the tunnel range of John Haycock, No. 125 Market street. Distance 75 feet. They use a Ballard, 22 caliber. The membership is 25. President, Wm. Carr; Secretary, Wm. Bowers.

Barnard Rifle Association, President, D. Lamb; Secretary, M. B. Wood. Place of shooting, Hill's range. Rifle, Ballard 22 caliber. Newark Catholic Institute Amateur Rifle Club, 76 and 78 New street, President, E. Dennis; Secretary, T. J. Raech. Length of (tunnel) range 60 feet. Rifle, Ballard 22 caliber. Membership 20.

The Enos Runyon Rifle Club is composed of members of D. Company, First Regiment, and numbers 25 men. The association has no regular range. The officers are, President, F. M. Palmalter; Secretary, Walter Anderson.

**CREEDMOOR.**—The New York Rifle Club announce a special match, to be shot at Creedmoor Sept. 23, and styled Senbury's All Gunners' match. There will be \$200 in cash prizes. The conditions of the match are: Professionals debarred. A professional rifleman as interpreted by Col. Sanford before the National Rifle Association. Two hundred yards; of hand. Shots, 7; no sighting; pool targets will be open for preliminary practice; any rifle. Military rifles, 1 point allowance; full scores cannot be beaten. Entrance fee, \$1 each for first and second entries; 50 cents each for every additional entry. Entries unlimited. Match commences at 9:30 A.M.; entries received up to 4:30 P.M.; match closes at 5 P.M. Prizes distributed on the day of the match. A shot may be challenged according to the N. R. A. rules; should the challenger be correct he will receive \$1 in addition to his deposit. Ties, equal scores, irrespective of the usual Creedmoor rules, to be shot off, 3 shots each, or any plan mutually agreed upon by those lying. To win either the first, second, third, fourth, fifth or sixth prize, the total of the two best scores of each competitor will be counted; single entries for all the rest. Any dispute which may arise not herein provided for, will be settled according to the rules of the N. R. A. by the officer in charge of the match. Only one prize can be won by each contestant. The first prize will be \$50 cash, the second \$30, the third \$25, and so on down. All riflemen are invited to participate.

**NEW ORLEANS, La., Aug. 21d.**—The first competition for the prize offered by the officers of the First Division U. S. G. took place this evening at the Washington Artillery Range, Spanish Fort. The weapon used was regular army rifle, but some of the men had been out of practice for over a year, and consequently their achievements were inconsiderable. The prize is to be won three times before becoming final property. The following is the score:—

LOUISIANA FIELD ARTILLERY TEAM.									
Weiss	1200 yards	5	4	3	3	4	4	37	55
Thompson	1200 yards	3	4	4	4	4	4	28	56
Forlier	1200 yards	5	5	4	4	0	5	5	50
Goldthwaite	1200 yards	3	3	4	0	3	5	23	49
Solban	1200 yards	4	4	3	4	4	4	30	43
Gschwindt	1200 yards	3	4	4	0	3	4	21	43
Total									306

CONTINENTAL ARTILLERY TEAM.									
Johnson	1200 yards	3	4	4	0	2	4	25	32
Maltby	1200 yards	4	4	2	3	3	3	22	48
Franklin	1200 yards	4	4	3	4	3	4	21	43
Pierce	1200 yards	3	3	4	4	3	3	21	43
Morse	1200 yards	3	3	4	4	4	4	23	52
Knight	1200 yards	2	5	2	5	1	3	22	50
Total									242

WASHINGTON ARTILLERY TEAM.									
Manlon	1200 yards	5	4	3	3	4	4	28	42
Charlton	1200 yards	3	3	3	2	2	2	12	42
Solph	1200 yards	0	0	3	4	5	5	21	51
Bradford	1200 yards	4	4	4	5	4	4	30	61
Mills	1200 yards	5	5	5	5	5	5	30	34
Sporl	1200 yards	3	3	4	3	3	2	22	43
Total									270

NEW ORLEANS ARTILLERY RIFLE TEAM.									
Schroeder	1200 yards	2	2	4	2	3	4	20	20
Gardner	1200 yards	2	2	3	4	0	0	19	27
Hussun	1200 yards	3	3	4	4	2	0	19	26
Sambola	1200 yards	0	0	0	0	0	0	3	15
Total									88

Two of the members of this team failed to shoot, but were immediately after the Tyler medal was shot for by the Louisiana Field Artillery; fifth competition; 5 shots each distance:—

Thompson	200 yards	23	43	Goldthwaite	1200 yards	17	36
Sullivan	200 yards	19	42	Guerin	1200 yards	16	35
Kerr	200 yards	17	33	Forlier	1200 yards	13	33
Weiss	200 yards	19	38	Gschwindt	1200 yards	11	33

This makes two winners for Thompson, two for Weiss and one for Gschwindt.

**SAN FRANCISCO, Cal., Aug. 21d.**—Shooting for places in the Creedmoor team to represent the military division of the Pacific coast, including the departments of California, Columbia and Arizona, began on Thursday last, at the Presidio reservation, and concluded to-day. Those competing were the persons making the highest scores in previous matches, of which there were 39. The following are the scores of the 11 highest, who are to represent the coast at Creedmoor:

First Lieut. T. L. Wilson, Fourth Artillery	278
Sgt. Peter Peterson, Company F, Fourth Artillery	262
Sgt. T. H. Sullivan, Company C, Second Infantry	263
First Lieut. W. R. Quinn, First Cavalry	261
Private E. C. Terry, Company H, Fourth Artillery	261
Sgt. John Wilson, Company M, First Cavalry	261
Sgt. Louis, John Fletcher, First Cavalry	261
Private John Bernard, Company E, Eighth Infantry	261
First Lieut. William Ennis, Fourth Artillery	257
Sgt. E. P. Fressler, Company K, Twenty-first Infantry	253
Sgt. H. W. Hagan, Company A, First Cavalry	251
First Lieut. H. P. Kingsbury, Sixth Cavalry	251
Sgt. George W. Dougherty, Company M, First Cavalry	251
Private C. A. Homan, Company D, Twenty-first Infantry	251
Total	2,866

The gold medal donated by General McComb for the highest score made during the tournament was won by T. L. Wilson, First Lieut. of the Fourth Artillery, with 273 points.

**BOSTON, Mass., Aug. 23d.**—At Walnut Hill, to-day, the usual short range matches were shot. The day was fair one for the marksmen, although the wind, blowing strong from 8 o'clock, caused some trouble and necessitated constant watching, but careful attention by the gentlemen present resulted in some excellent scores. Subjoined are the scores:—

CREEDMOOR MATCH.									
W. Charles	1200 yards	4	5	4	5	5	5	5	48
O. M. Jewell	1200 yards	5	5	5	4	5	5	5	49
A. B. Archer	1200 yards	4	4	5	5	4	5	5	45
C. U. Melgus	1200 yards	5	4	4	5	5	4	5	45
J. B. Fellows	1200 yards	4	4	5	4	4	4	5	44
B. Freeman	1200 yards	5	4	4	4	4	4	5	42
G. Warren	1200 yards	4	5	4	4	4	4	4	42
H. P. Buzzell	1200 yards	3	4	4	4	5	5	4	42

MASSACHUSETTS MATCH.									
C. U. Melgus	1200 yards	12	10	9	11	12	9	12	100
J. F. Rabbeth	1200 yards	11	11	9	10	12	10	11	101
A. B. Archer	1200 yards	12	9	11	8	9	11	8	96

**MEDFORD, Mass., Aug. 27th.**—The Raymond Sportsman's Club held its regular shoot to-day at Bellevue range. In the 60 ball match C. A. Loko broke 48, W. B. Withersell 46, W. F. Brackett 44, J. F. Withersell 42, L. E. Johnson 40, and J. R. Smith 37. Following are the best scores made with the rifle:—

D. Kirkwood	1200 yards	5	6	5	5	5	6	5	55
E. J. Smith	1200 yards	5	6	5	5	5	5	5	53
E. James	1200 yards	5	6	5	5	5	5	5	51
A. G. Cooke	1200 yards	5	5	4	5	5	5	5	50
B. Freeman	1200 yards	5	5	4	5	5	5	5	41

The meeting closed on the 27th with small bore shooting. There was not much wind, but the light was very bad, and occasionally the target could hardly be seen, owing to a haze hanging over them. The contest for first place was between Sergt. T. Mitchell and Lieut. Adams, the former winning by 2 points, the latter at 500 yards unfortunately making a bull-eye on the wrong target, for which he was fined \$1. The range prize for the greatest number of points at 1,000 yards was won by Lieut.-Col. Gibson with 33 points. At 6 o'clock the gun fired and the most successful meeting ever held by the Ontario Rifle Association was brought to a close. Ranges, 500, 900 and 1,000 yards; 7 shots at each range. The scores stood: Sergt. T. Mitchell, 70; Lieut. Adams, 68; V. R. C. 65, Private O'Grady, 64; Private C. N. Mitchell, 64; W. Mitchell, 64; V. R. C. 62; Staff Sergt. Lewis, 61; Private Joseph Mason, 61; R. C. 61; Major Petherill, 60; Staff Sergt. McLaughlin, 60; 47; 53; Lieut. Cruik, 52; Second Dist. Engineers, 51; Lieut. F. E. Ewan, 50; R. C. 57; Capt. Bailey, 47; 50; 51.

**SOUTH GARDNER, Mass., Aug. 28th.**—The following scores were made at Hackmatack range to-day by members of the Gardner Rifle Association: 200 yards, of hand, using the inch ring and Creedmoor target combined, 2 scores of 10 shots each:—

	R.	C.	R.	C.	Totals.
J. N. Dodge	85	45	84	44	169
G. F. Ellsworth	91	45	87	44	168
A. Mathews	87	46	74	43	161
Wm. Austin	73	44	84	43	161
H. S. Pierce	70	43	67	43	146
J. E. Newton	73	43	73	44	149
P. Nichols	73	44	73	44	144
Chas. Merritt	63	41	69	41	123
F. H. Knowlton	55	42	59	41	114
Chas. Smith	45	44	49	43	101

Six members of the Gardner Rifle Association visited the Ashburham Rifle Club last Wednesday and received a most cordial welcome. After shooting 3 scores each they returned home, well pleased with the range and members of the club.

**MEDFORD, Mass., Aug. 25th.**—The renewed competition in the Gold Medal and Bunker Hill Matches was shot to-day. In the Gold Medal Match there were 45 entries. The leading scores were:—

H. Kimball	1200 yards	5	5	4	5	5	4	5	5	48
H. R. Russell	1200 yards	5	5	5	5	4	4	5	5	48
P. Abbot	1200 yards	5	5	5	5	4	4	5	5	44
C. Hartwell	1200 yards	5	4	4	5	4	5	4	5	41
A. B. Archer	1200 yards	5	4	4	3	4	5	5	5	41
C. D. Harrison	1200 yards	5	4	4	3	4	5	5	5	41
J. Edwards	1200 yards	4	4	4	5	4	4	5	5	41
A. C. Greene	1200 yards	5	5	4	4	4	4	4	4	43
J. W. Weston	1200 yards	5	5	4	4	4	4	4	4	43
J. R. Toole	1200 yards	4	4	4	4	4	4	4	5	41

In the Bunker Hill Match there were 22 entries, and the best scores made were as follows:—

W. Charles.....	6	6	6	6	5	5	4	5	0	55
A. B. Archer.....	5	6	6	4	5	4	5	5	5	51
J. R. Teele.....	5	5	6	6	3	6	6	5	5	51
C. D. Harrison.....	5	5	5	5	6	4	5	5	4	50
C. H. Russell.....	5	5	4	6	6	4	6	3	3	50
A. C. Greene.....	5	5	5	6	4	5	4	4	0	48

The winners of the general prizes were A. B. Archer and W. Charles in the first, and A. C. Greene and N. P. Ames in the second class.

**SHREWSBURY, Mass., Aug. 27th.**—The following scores were made at the Pine Grove range yesterday:—

	500 Yds.	1000 Yds.	1500 Yds.	2000 Yds.	Grand Total.
A. L. Rice	41	51	55	79	76
P. Abbot	38	50	50	74	72
F. Weson	48	53	50	76	73
S. Clark	47	48	53	84	81
G. F. E. E. E.	47	48	53	84	81
A. Bartlett	31	48	49	89	81

**BOSTON, Aug. 25th.**—At Walnut Hill, to-day, the fifteenth competition at long range was shot. At the opening of the match a heavy rain fell, wetting the rifleman thoroughly. The day, with this exception, was a good one for shooting. Mr. Sumner made a brilliant record, 230, which has never been beaten at this range with the exception of the score of 221 made by Mr. Sumner three years ago, and 221 by Mr. W. Gerrish in 1873. Appended are the scores:—

J. S. SUMNER.													
800 yards.....	5	5	5	5	5	5	5	5	5	5	4	5	5-74

**THE MUG-HUNTERS' CHAMPION.**—Boston, Aug. 27th.—Editor Forest and Stream.—Why do you not, in the next issue of Forest and Stream, give a list of the names of the persons who desire to stigmatize as "mug-hunters," or those who "shoot for ducks"? You might as well. According to your expressed intentions, we should suppose that the gentlemen who honor Creedmoor by their presence should only come to shoot at a target, and sternly and with majestic indignation should decline all prizes. Of course the Leach and "Wimbledon" mugs "must not be shot for." Let us hear no more of this vulgar and silly slang, or of these impertinent and impudently malicious allusions. Be sure they will reach upon FOREST AND STREAM, as a bad rifle does upon the marksmen.

A READER.  
The remarks in your columns on the course of those who are notorious for the avaricious element in their shooting, have evidently struck home and brought out the above transparently anonymous protest. We can assure "a reader" that while the Wimbledon and Leach trophies shot for at Creedmoor are, in truth, "mugs," they can never become the prey of the mug-hunter. Of course, a meeting without prizes, or without some element of victory, would be an anomaly and almost an absurdity, but there is a wide difference between generous rivalry for emblems of victory, and making the possession of these prizes the whole aim and object of the struggle. We have seen rifleman who have gone into a match and have acquired themselves so well as to be adjudged worthy of a prize; and then, and not till then, did they concern themselves to find out what that prize was. This is one spirit of rivalry. Another one goes into competition as he would into a commercial speculation, considering his time and effort wasted if he be not the winner of more in cash value than he has spent in time and money; his point is to win, honestly if he can, but to win, and we have, as a result, the Wimbledon scandal and such squirming protests as that given above.

Archery.

PRIVATE PRACTICE CLUB.

ANNUAL REPORT FOR THE SEASON ENDING JUNE 30TH.

**B**ECAUSE of the preeminence in archery to which Mr. Horace A. Ford attained, it is quite natural for us to acquiesce in any opinion by him formally advanced with reference to his once favorite pastime. The more faith is due to these opinions, because, like his arrows, they were all carefully delivered and with an aim. So careful was he in determining the truth of a theory before advancing it, that in the years that intervened between the appearance of the first and second editions of his work on the theory and practice of archery he did not wish to modify any idea which he had at first advanced. To many of us his theory seemed so revolutionary that we were loth to adopt them, but no one can faithfully study his book without yielding to his unanswerable logic, backed by his unapproachable skill. Looking to him as we do, as a model, who combined almost complete knowledge of his art with matchless powers of execution, it is the part of wisdom to give the utmost heed to his free and generous advice.

Nowhere in his writings, however, appears a more valuable truth than he conveys in these words: "Those who have not been in the habit of having one (daily) register can have no idea of the great intensity of which it is invested the most solitary practice, and how conducive it is to its steady and persevering continuance. It begets a desire to improve, for no man likes to have evidence before his eyes of his pains and exertions being of no avail, and himself at a standstill in any pursuit he takes an interest in. It insures a due carefulness in the shooting of every arrow, since without it the score will be bad, and, therefore, disagreeable to chronicle. It excites emulation, by enabling one man's average shooting to be compared with another's, and restrains by its sternly demonstrating figures those flights of imagination occasionally indulged in by bad memories as to feats performed and scores achieved. By noting, too, in this register the causes of failure at different times, a better chance will exist of their occurring again, as it keeps the same always in the mind's eye and

tirely appeared in the records of all the members of the society, and has since continued. As it thus conclusively appears that the members of the Private Practice Club have been by their attachment to the club, drawn to love and practice the long ranges and necessarily to keep a true record of every arrow shot, the question is pertinent "What proof appears that they have advanced more than archers who have pursued a different course?" The Grand National Meeting at Buffalo gave most convincing evidence that with rare exceptions the general advance of archers throughout the country has not kept pace with that of the members of this society. At that meeting, out of the 17 highest scores recorded, 12 were opposite the names of members of the Private Practice Club. Among the 12 lowest scores can be found only two names of members, and one of these shot only half the number of arrows. Could there be a stronger argument advanced of the wonderful advantage to be derived from membership?

Not that the other members of the society can aid the individual, but that his honor is bound to a certain method of practice which necessitates improvement. How strikingly the theory that practice at long ranges will assist the archer at short range was exemplified in the team shoot. The team winning first place was composed of 4 members of the P. P. C. The highest score at both 50 yards and 40 yards was made by a member of the P. P. C. who had shot only 3 scores at 40 or 50 yards in the year 1890.

Reversing the system, let us ask the advocate of short range practice if it would be possible for an archer who had been shooting only at 40 and 50 yards for one year, or for a lifetime, to accomplish a like result at a public meeting at 100 yards and 80 yards?

We have said that a characteristic of the good archer is to desire to attend and take part in our great public meetings. The founders of the P. P. C. believed that members would naturally be attracted toward the National meetings, and the result has proved that they were right. Of the 31 members belonging to the club at the date of the National meeting, 14, almost one half, attended and took part in the tourney. Of those who did not attend 4 were sick and 2 beyond the Rocky Mountains. The 6 gentlemen who traveled the greatest distances to attend the meeting were all members.

It is unnecessary to multiply evidences of the fact that the club has been a powerful aid to the National Association and to archery generally, as well as to its members, by inducing a strong fraternal attachment among the members, which served to draw many of them to meet and compete with their classmates at the National meeting.

There being no real objection which can be urged against the "theory and practice" of the Private Practice Club, there is usually but one objection offered by archers why they do not attach themselves, and that is the necessity of keeping and preserving all his scores.

That this one thing has more than almost anything else to do with his improvement the archer will soon or later find out, and we hazard the declaration that the archer does not live who will not overestimate his ability unless he has preserved all his scores.

One objection made against the club by certain archers was the fact that the club offered cash prizes. This objection was removed by the change made in the constitution at the business meeting held at Buffalo when such prizes were abolished. While no member objected to the abolition of cash prizes, and while a great pressure was brought to bear upon the National Association to induce it to abolish cash prizes, it is a curious fact that out of thirty-three gentlemen who attended the National meeting and shot the Double York Round through twenty-six shots in the subscription handicap, and three other gentlemen, to our own knowledge, Mr. Poddinhaus, Mr. Burnham and Mr. Bone, were in favor of cash prizes, and failed to shoot in the handicap only because they were very tired, and preserved themselves for the team shoot. So it would appear that opposition to cash prizes is only made by a few persons, and they such archers as do not expend the time and money necessary to attend our great public meetings. Of course there are exceptions, as we met two gentlemen shooting throughout the meeting who were opposed to cash prizes. But at any rate the Private Practice Club, out of its sincere desire to do good to as many archers as possible, removed this bar to the admission of the opponents of such prizes, and we shall expect to see the club enlarged from their ranks. The re-classification of members to be made by the Secretary, as provided by the amended constitution, will make the practice of members much more pleasant, as archers will now compete in classes where the members are more nearly upon an equality. The amendment to the constitution required the Secretary to place members of like average skill in the same classes, so as to give as nearly as possible an equal number of members to each class, and he has done so to the best of his power, though in endeavoring to do so he has found it necessary to give class III, a few more members than either of the other two classes. There are many good reasons why the third class should be the larger one, if equality of members is not attainable. Archers shoot more regularly who shoot well, and almost all new applicants for admission desire place in the third class. After much comparison of records and taking into consideration the scoring of each archer at each range, the secretary has re-classified the club as follows:

CLASS I.	
L. L. Peddinghaus.	Maurice Thompson.
The Henshaw.	Lorenzo Davol.
Will H. Thompson.	Frank H. Walworth.
Frederic Devol.	Jessie H. Devol.
C. G. Hammond.	E. B. Weston.
CLASS II.	
Ford P. Hall.	T. T. Church.
C. De Traff.	J. H. Wilbur.
W. O. Kyle.	R. D. Patterson.
Gen. F. Henry.	C. G. Slack.
C. C. Moore.	A. S. Brownell.
CLASS III.	
Howard Fry.	C. W. Sherman.
C. F. Kaxter.	W. P. Lacey.
W. H. Holberton.	E. E. Wells.
W. H. Dorrance.	W. G. Beecher.
H. E. Jones.	William Jones.
E. P. Berliott.	M. D. Evell.

No doubt the classification is faulty, and there are one or two members in the second class who would do honor to the first, and some in class III, whose rightful position would be in the second grade, but no division could be perfectly fair, and these errors of place occurred in several cases. From the fact that the archers failed to return the scores for April, May and June.

(TO CONCLUDE NEXT WEEK.)

NEW JERSEY.—New York, Aug. 20th.—Below you will find a rough draft of the archery match to take place at Waverly Park, N. J., during the twenty-second annual fair of the State Agricultural Society. The society will provide liberal prizes, and as the entrance fee is low, viz., \$1, it is to be hoped that the archers in this vicinity will turn out strong and give good encouragement to the managers, who are trying to introduce this noble pastime

to the public. Wednesday, Sept. 23d, 10 A.M., match for the New Jersey State championship, open to residents of the State only; society's gold medal and other prizes; single American round. Afternoon, 2 P.M., ladies' team of 3, open to all, Columbia round; gentlemen's team of 4, open to all, American round; also a long range match of 24 arrows at each 60, 80 and 100 yards. Further particulars hereafter.

W. HOLBERTON.

## Cricket.

### FIXTURES.

Sept. 2d.—At Newark, Staten Island vs. Newark.  
Sept. 4th.—At Stenton, Chestnut Hill vs. Young America.  
Sept. 4th.—At Ardmore, Young America (2d) vs. Merion (2d).  
Sept. 4th.—At Staten Island, Staten Island Juniors vs. Germantown Juniors.  
Sept. 8th.—At Hoboken, St. George vs. Newark.  
Sept. 8th.—At Stenton, Chester City vs. Young America (2d).  
Sept. 10th and 11th.—At Prospect Park, Manhattan vs. Staten Island.  
Sept. 11th.—At Ardmore, Merion vs. Young America.  
Sept. 11th.—At Harrowgate, Belmont vs. Girard.  
Sept. 15th and 16th.—At Nicetown, United States vs. Canada.  
Sept. 15th.—At West Philadelphia, Chester City vs. Belmont (2d).  
Sept. 17th.—At West Philadelphia, Belmont vs. Staten Island.  
Sept. 17th.—At Prospect Park, Manhattan (2d) vs. Young America (2d).  
Sept. 18th.—At Nicetown, Girard vs. Germantown.  
Sept. 18th.—At Ardmore, Merion vs. Belmont.  
Sept. 23d and 24th.—At Stenton, Eleven English vs. Eleven Americans.  
Sept. 23th.—At Harrowgate, Girard vs. Belmont.  
Sept. 23th.—At Ardmore, Merion (2d) vs. Girard (2d).  
Sept. 23th.—At West Philadelphia, Germantown (2d) vs. Belmont (2d).  
Sept. 27th.—At Ardmore, Staten Island vs. Merion.  
Sept. 29th.—At Nicetown, Germantown vs. Staten Island.

UNITED STATES vs. CANADA.—The Executive Committee of the Cricket Association of the United States met on Aug. 21st, to arrange the details for the international match, to be played against All Canada, on the grounds of the Germantown Club, at Nicetown. It was decided to make a charge of twenty-five cents for admission, with an extra charge of twenty-five cents each day for reserved seats. The United States team will be selected on Sept. 3d.

At a committee meeting of the Ontario Cricket Association, held at the Roscoe House, Toronto, on the 21st ult., the following resolutions were passed:

"That the secretaries of the Montreal, the Halifax Town and Halifax Garrison Cricket clubs be requested to send two representatives each for consideration of the committee, with a view of selecting the international eleven to play against the United States."

"That each club shall assume the expenses of their representatives who may be chosen to play in the international match."

The match, East vs. West, played yesterday, at Toronto, between teams comprising gentlemen from Toronto, Windsor, Hamilton, Barrie, St. Catharines, Ottawa, Chatham, Galt, Whitby, Vanderburg (Toronto), Port Hope, Guelph and London, will decide, in many cases, the representatives of Canada in the coming match.

CHIPPewa vs. WELAND.—Played at Chippewa, Ont., Aug. 23d, and resulted in the defeat of the latter by 12 runs. Score:—

LEAGUE OF WESTERN CRICKETERS.—After the match between the St. Louis and Chicago cricketers, a meeting was held at the Madison House, Chicago, Ill. Dr. E. J. Ogden, President of the Chicago Club, was unanimously chosen to select a representative from each Western team, all to meet for the purpose of perfecting and arranging the details of the organization. It is the aim of this association to establish the game on a permanent basis in the West. The Chicago cricketers anticipate visiting St. Louis during fall week, Oct. 4th, when they will be accorded a hearty reception.

—This date, Barratt (for Surrey) took all 10 wickets of Australians at Oval, in 1878.

—In the match, Gloucestershire vs. Middlesex, played on Aug. 12th, Mr. A. J. Webb, proved a taker, and his fine hit innings of 142 was the feature of Middlesex innings of 235.

—In the match, Yorkshire vs. Surrey, Aug. 12th, Uytend's 141 was a brilliant display of batting, without an absolute fault. Bates hit vigorously, as he usually does, for 59.

CHICAGO vs. ST. LOUIS.—The return match between these clubs was played at Chicago on Aug. 16th. Won by the home club by 10 wickets:—

The Montreal team went to the bat for a second innings and rolled up 115, but darkness set in by the time they were disposed of, and the game was decided on the first innings scores.

YOUNG AMERICA vs. GILBERT.—The long talked of match between these first-class clubs came off, as announced, on Aug. 20th, in the presence of a large number of spectators. In a late number of the FOREST AND STREAM we predicted that the champions would have their hands full, and although a cricket match

**I**F it were possible to have a competent reporter on board every yacht engaged in racing or while on a squadron cruise, the performance of many a craft would be painted in very different colors from what it is. During the cruise of the N. Y. Y. C., recently brought to a close, many interesting features have been lost, and

T. C., East Poultney, Vt.—I am a young man, twenty-four years of age, and am naturally fond of sport, and what I would like to know now is, could a fellow make a living hunting game, say during September and October. If I could I would get a pointer or setter and hunt where game is plenty, especially of the feathered tribe. Ans. If you are counting about for a permanent employment we should by all means advise you to learn a trade or to engage in some of the ordinary pursuits of industry. You cannot make a decent living by hunting; there are too many men trying to do that now. Stick to your work if you have any; if you have not had something besides bird shooting. You are young yet, but even at the age of twenty-four you can ill afford to go off on any wild goose chase.

AMATEUR VIXEN—I have a pointer puppy suffering from a tumor, which I am confident is neither mange, scab or smallpox. The eruption in its first stage consists of small red pustules about half an inch apart; these rapidly grow into ordinary looking pimples or boils, and expand into what looks like water blisters the size of an old-fashioned three cent piece, and full of thick yellow matter. These pustules break, a scab forms, which comes off whole, taking the hair with it, leaving no scar or (as in smallpox) brown spot. The eruption is principally confined to the body and does not seem to cause any itching. The dog has a peculiar sickening odor, is feverish, very much depressed, bowels good and appetite fair. Any information will be gratefully received. Am. & V.ine

the dog scumite and arsenic, homoeopathically. Ans. Give two or three drops of Fowler's solution of arsenic three times a day. Discontinue the scumite. Give two grains of quinine three times a day, and apply either sulphur ointment or the following mixture externally: Powdered bicarbonate of potash, one ounce; powdered white vitriol, one quarter ounce; sub sulphur, two ounces; lard, eight ounces. Mix and rub well into skin.

C. D. A., New York.—Your answer to C. J. C. prompts me to ask another question of a similar nature. Under the head "Fish in Season," I formerly read "Land-locked Salmon, *Salmo gloveri*." Now it is changed to *Salmo salar*, with nothing to distinguish it from the true salmon. Has it only been ascertained, after all these years, that the fish are identical, and is there really no such thing as land-locked salmon in a sense entitling it to a name of its own? Ans. Glover described the land-locked salmon as *Salmo gloveri*, supposing it to be a distinct species; and also thought he found differences even in some specimens from Sebago Lake to found another species upon, which he called *S. selago*. Later naturalists consider them as only varieties of *S. salar*, and not different species. They differ only in color, and are simply the common salmon with its habits changed. If you have read the paper attentively you will see there have been changes in the fishery department, of which this is only one. The angler can see differences in color between the land-locked and common salmon, but zoologists requires different structure to found a species.

FOREST AND STREAM.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 and 40 PARK ROW (Times Building), NEW YORK.

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements. Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence. Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address. All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply to FOREST AND STREAM PUBLISHING COMPANY, New York City, N. Y.

Experienced Sportsmen

Buy their Shooting Suits of G. W. Simmons & Son, (Oak Hall, Boston), who are the makers of the Prize medal "Boston Shooting Suit," which is the very best that is made; never tears, or rips—has its seams sewed with silk and linen—and its buttons so securely fastened they never come off. If any one wants the proper outfit let him send to G. W. Simmons & Son, OAK HALL, 32 to 44 North Street, Boston.

LAKE RONKONKOMA.—One mile from Lakeland, L. I. The central resort of the island for shooting and fishing. The hotel will remain open during the fall. Terms \$1.50 per day. MRS. L. FINCH, Proprietor.

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has just returned from Murcia, Spain, where all the high quality gut is made. While there he organized the most extensive and perfect factory for making this article in the world. The grades named below will run at least 25 per cent better than those of any other manufacturers.

### The Kennel.

## TO BREEDERS -AND- SPORTSMEN.

The following very valuable high bred setters and pointers (nearly all imported from the most renowned kennels in England, regardless of cost), all of which have the finest pedigrees, on the show bench and in the field.

Sold for no fault; they are healthy and strong, and very handsome, and warranted as described, and are sold simply to reduce my kennel, being overstocked. Four of the dogs offered for sale were exhibited by me at the Westminster Kennel Club dog show, where I took the silver tankard, valued \$50, for the best kennel of dogs (quality and variety) owned by one individual or club in America.

### ENGLISH SETTERS.

Sepoy, by Gladstone out of Mersey, orange and white, whelped March, 1879. Very promising; now in Mr. Wammanaker's hands, breaking. Duke of Beaufort, pure Laverack, whelped February, 1880; color black, white and tan; by Pride of the Border, out of Fairy II; very handsome, magnificent coat and feather; took second prize W. K. C. show, 1880, in the Imported English setter dogs. First time he was ever shown.

Imp. Norma (B. K. C. S. B. 5670), by Dan (3330) - Nellie (5332); color black, white and tan; whelped 1875. Perfectly broken in the old country; never been sold over in this country; only imported four months.

### POINTERS.

Imported Bang ..... Lloyd Price's Bang, 730.

whelped May, 1879; color liver and white; very handsome; not broken; invaluable as a stud dog, has the finest blood in England, both on his sire and dam's side.

Bullait, pointer bitch; color, lemon and white; whelped April, 1879; own sister, same litter. Original champion Ross, by Flake (1244) out of Lily; very handsome and grand field bitch.

Imp. Belle II, pointer bitch; color, liver (dark) and white; whelped February, 1878; own sister to Bow Belle, by Bang (730) - Leache's Belle; was sold as a perfectly broken bitch, but have never tried her, as she was in whelp when I bought her in March, 1880; she is very handsome and an excellent mother.

Imp. Countess Luna, pointer bitch; color, very dark liver and white; whelped about 1876; by Bang (730) - champion Luna (3301); the finest bred bitch in England; was awarded by Garnet in England, and her pups, which are now wanted, and without exception the best, but have never been seen, all sold, and had she had double the number, I could have sold them; unbroken.

### IRISH SETTER.

Betty; color, dark red; whelped January, 1870; by Studdard's Bob, out of Kitty (1742); has a splendid litter of pups, by champion Berkeley, ready to wear; without her pups or with them; never been broken in the field, but very tractable.

### GORDON SETTER.

Imp. Nell, whelped 1876; color, rich black and tan; winner first prize, Birmingham, 1877; very handsome; by Bruce (1370), out of Smith's Daisy; not broken.

### COCKER SPANIEL.

Daisey, whelped January, 1877; color, rich dark liver and white; by Countess's Dash - Finley's Daisy; awarded by champion Charlie.

For further particulars as to pedigree and price, address CAPTAIN BLAKE, Kennel Manager Moorfield Kennel, General Wayne P. O., Montgomery County, Pa.

### MOORFIELD KENNEL.

Valuable English Gordon setter and pointer pups. The first of their imported stock offered for sale.

Femur-Lily English setter pups, black, white and tan; very handsome; six bitches and one dog; whelped May 22d, 1880.

Imported Rhododendron own brother to Count Windmill. Imported Norma English setter pups, two dogs and one bitch; black, white and tan; just had distemper; whelped April 19th, 1880.

Bob (champion imported), Imported champion Mona Gordon setter; six dogs and three bitches; very handsome; rich black and tan, no white; whelped June 24th.

Donald imported; Imported Belle (own sister to Bow Belle); pointers; three dogs and two bitches; all liver and white; very evenly marked; whelped 10th of March. For further particulars and price apply to Captain Blake, Kennel Manager, General Wayne P. O., Montgomery County, Penn.

### The Kennel.

"THE FISHING LINE."

TAKE THE  
Grand Rapids & Indiana R.R.

MacKinnon, Grand Rapids and Cincinnati Short Line

FOR THE  
Trout, Grayling, and Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the  
Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE TROUT season begins May 1st and ends Sept. 1. The GRAYLING season begins June 1st and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL, and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, "size for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing, and the climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries near enough to afford the most of fishing.

During the season the Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Gunboats, Fishing Tackle Carried Free of charge.

It is our aim to make sportsmen feel "at home" in this route. For the sportsman's guide, an attractive illustrated book, of 80 pages, containing full information as to accurate maps of the Fishing Grounds and other facts, address: A. H. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

**J. Stevens & Co.'s Celebrated Arms.**

CHICAGO, Aug. 21st.

Charles Folsom, Esq., Agent for Stevens &amp; Co.'s

Rifles, 15 Chambers street, New York.

Sir—I have been using the Stevens rifle in my galleries for the last four years, and I find that it gives the best satisfaction of any rifle made. I can cheerfully recommend it. For beauty and finish, ease of loading, accurate shooting and durability it takes the lead. I now have the first one ever owned. It has been fired more than a hundred thousand times, and is as good to-day as when I got it. I have rifles of other makes in my racks, but the Stevens is called for ten times to the others once. Respectfully,

**R. B. FULLER,**  
Shooting Galleries, 173 S. Clark street,

## Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

ing or melting in the mouth. The unprecedented popularity of  
to the fact that this process has been used exclusively in their manufacture, no one else having the  
right to use it. The great advantage and importance of this invention will at once be recognized by  
cigarette smokers, and is fully demonstrated by the first "OLD JUDGE" Cigarette they smoke.  
Sold by all leading dealers.  
Manufactured by GOODWIN & CO., 207 and 209 Water st.,  
NEW YORK.

THE MAJORITY OF SMOKEES  
are not aware, that in  
smoking Cigarettes made of the  
ordinary pure paper, they have been  
inhaling THE MOST DEADLY OF POI-  
SONS, thrown off by all burning paper,  
namely: The Oil of Crocote. CHAS.  
G. EMBURY, of the firm of GOODWIN &  
CO., manufacturers of "OLD JUDGE"  
Cigarettes and Smoking Tobacco, in-  
vented and patented a process, March  
5th, 1878, by which the Rice Paper used  
as wrappers for "OLD JUDGE" Ciga-  
rettes has been so prepared that the un-  
pleasant ODOUR and the injurious effects  
of the Oil of Crocote are completely  
neutralized or destroyed, and the paper  
made saliva proof to prevent its break-  
ing or melting in the mouth. The unprecedented popularity of  
"OLD JUDGE" Cigarettes is owing  
to the fact that this process has been used exclusively in their manufacture, no one else having the  
right to use it. The great advantage and importance of this invention will at once be recognized by  
cigarette smokers, and is fully demonstrated by the first "OLD JUDGE" Cigarette they smoke.  
Sold by all leading dealers.  
Manufactured by GOODWIN & CO., 207 and 209 Water st.,  
NEW YORK.

### CANOE AND CAMERA.

A Photographic Tour of Two Hundred Miles  
through the Maine Forests.

BY THOMAS SEDGWICK STEELE.  
"It is one of the handsomest books of the sea-  
son, fully illustrated by drawings from the au-  
thor's own pencil, and from his photographs."—  
Charles Dudley Warner.

LIST OF ILLUSTRATIONS.  
The Author's Sanctum; Dedication; Illustrations;  
The Angler; Canoe and Camera; Isak Walton;  
Kineo House; Anticipation; Picking a Course;  
Map of the Tour through the Maine Forests; The  
Guides; We Dream of Game; Home Appetite;  
Camp Appetite; Morris—Northeast; Carry in  
sympathy with Nature; Discouragement;  
"Changing Pasture"; Penknife Souvenirs; Pine  
Stream Falls; Mud Pond Carry; Mud Pond—  
Looking East; "This is the way I long have  
sought"; Reflections; Camp on Chamberlain Lake;  
Chamberlain Farm—Looking West; The Room in  
which we were Ushered; Not in the Patent  
Office; A Study in Natural History; Great  
Northern Diver; Teles Cut and Lake; Teles  
Dam and River; Photography—The Wet and Dry  
Process Illustrated; Webster Lake and Dam; An  
Apparition; Fly Catchers versus Fly Fishing;  
Allurements; Study of Trout—by the Author;  
National Academy; Looisen, 1871; Running  
Rapids on Webster River; Lunch Time; Grand  
Falls; A Boom; Starting a Boom; It's not all  
Poetry; Matagamonis Lake; Discovery of a  
New Lake; Matagamonis or Grand Lake; Our  
Salmon; On the East Branch; Strip Falls; Ac-  
cepting the Situation; Hauling Machine Falls;  
Dropping Canoes over Falls; The Archers; Hunt's  
Farm; Mt. Katahdin—Study by P. B. Church;  
Junction of East and West Umbagogues; Pen-  
obscot; Glimpses of Civilization Begin to Dawn;  
Net Results; Map of Maine, in pocket of cover  
to book, 4 by 26 inches. Square 22mo., elegantly  
bound in gold, black and cloth, \$1.50, post-paid.

## GUNPOWDER.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1805, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

**DUPONT'S DIAMOND GRAIN.**  
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

**DUPONT'S EAGLE DUCKING.**  
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

**DUPONT'S EAGLE RIFLE.**  
A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

**DUPONT'S RIFLE FG.** "SEA SHOOTING," FFG and PFG. The FFG for Long Range Rifle Shooting, the PFG and PFG for general use, burning strong and moist.

**Sporting, Mining, Shipping and Blasting Powders.**

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

**F. L. KNEELAND, 70 Wall Street, N. Y.**  
N. B.—Use none but DUPONT'S FG or PFG Powder for Long Range Shooting.

## THE HAZARD POWDER COMPANY

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, PFG, and "Sea Shooting" FG in kegs of 25, 12 1/2, and 6 lbs. and cans of 5 lbs. PFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The PFG and PFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

**Superior Mining And Blasting Powder.**

**GOVERNMENT CANNON AND MUSKET POWDER** also, **SPECIAL GRADES FOR EXPORT**, OF AN REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

# FOREST AND STREAM.

NEW YORK, THURSDAY, SEPTEMBER 9, 1880.

## THE TILESTON MEMORIAL FUND.

NEW YORK, Sept. 3d.

Editor Forest and Stream:—

I have acknowledged the receipt to date of further subscriptions to the "Tileston Memorial Fund" as follows:—  
Previously acknowledged, \$550 00 Jacob Penn..... \$5 00  
A. S. Smith, through FOR..... DuBois Wagstaff..... 5 00  
EST AND STREAM..... 5 00 Phoenix Rensen..... 5 00  
A Friend..... 5 00 John F. Vill..... 5 00

Total..... \$650 00  
At a meeting of the committee, it was decided to close the fund on Oct. 5th.

We have received this late date as our treasurer (Mr. Morris) has received notification from several clubs that they would send us subscriptions after the regular meetings, which take place this month, and we trust all parties who are making collections will send them in as soon as possible. Yours truly,

FRED. N. HALL, Secretary.

THE PENNSYLVANIA STATE TRIALS.—We had a very pleasant call this week from Mr. Theodore Morford, who expressed his regret that he had been obliged to decline the honor of serving as one of the judges at the Pennsylvania State Trial Trials in November, he having previously arranged to officiate at Vincennes, Ind., for the National American Kennel Club's Field Trials, which occur on almost the same date.

—The present number of the FOREST AND STREAM is of special interest to anglers. Our next issue will be equally rich in material of great value to the shooting fraternity.

—We conclude to-day the publication of "English Dogges," a book which certainly deserves a place among the curiosities of sporting literature. Those who desire the work in more convenient form may secure the book by writing to "The Bazaar," 170 Strand, W. C., London.

## THE TURBOT AND SOLE IN AMERICA.

A PHILADELPHIA gentleman is trying, through the newspapers, to revive the long obsolete belief that the turbot and sole of Europe occur on our coast. Although he has never seen them himself, and fails to bring forward evidence that any one else has seen them, he insists that they occur in the greatest abundance in New Jersey, particularly in the vicinity of Atlantic City, "and doubtless all along the Atlantic coast, from Portsmouth, N. H., to Wilmington, S. C." (sic). He upbraids the American public for their incredulity, though this does not surprise him so much when he calls to mind that "our Government Fish Commissioner has actually contemplated sending a steamer to English waters to procure turbot-seed to plant along our shores." He would not be surprised if incredulity were to continue longer "under such official indorsement." He accounts for the ignorance regarding them by the theory that the English trawl-net is unknown in America, and that our fishermen would not know how to catch such fish if they were aware of their presence, and have not become aware of their presence because they have no means of catching them. He intimates that he is preparing to form a company for the purpose of developing a turbot fishery upon our coast; an enterprise "in which but little will be risked and the results will be a surprise to all." He closes one of his letters to a New York journal with the following appeal: "I trust that you will not let this question subside, but persevere in calling attention to it until we do away with the extraordinary anomaly of this enlightened nation being within reach of treasure that for more than a century they have been unaware of, and have remained presciently blind to."

All this is very entertaining, and furnishes a neat text for a few remarks on the history of this belief as well as an opportunity for demonstrating to the public a fact which has for forty years or more been known to ichthyologists, that the turbot and the sole never have been seen on the Western side of the Atlantic, and never will be, unless they are introduced by artificial means.

From the beginning to the end we encounter the well-known source of confusion—the giving of old world names to species which resemble in a general way the old world species which bear them, and the unquestioning acceptance of these names as authoritative by persons who are not trained to close discrimination.

When Boston was occupied by the British during the revolutionary war, the officers of the fleet are said to have been bountifully supplied with turbot which were caught in the neighborhood of an outer harbor. This fact is recorded by Dr. J. B. C. Smith, in his Natural History of the Fisheries of Massachusetts (Boston, 1833), on the authority of William Ladd, Esq., Maine. He also mentions "a statement of Mr. Parker, the conductor of the Marine Telegraph," who told him that "many years before, Admiral Sir Isaac Coffin brought out to this country a trawl-net, such as are used on the coast of Holland, for taking sole for the London markets, with which he succeeded in capturing that delightful fish in Ipswich Bay, which was not before supposed to exist here." The fish found in this manner were no doubt the common flat fishes of Massachusetts Bay. The common flounder *Pseudorhombus dentatus*, taken in Provincetown water, where it is commonly called "plaice," was in 1840 sold in Boston under the name "turbot." Capt. Mackinnon, of the Royal Navy, who visited this country in 1850, conceived the idea that turbot ought to be found on the shores of the United States, and took pains to search for them with a trawl-net. The net which he used has been reported ten years before by Mr. Nathan Smith, an American gentleman, who had hoped to introduce them, but had never used them. Capt. Mackinnon tried the net at Newport, R. I., and succeeded in taking a number of different kinds of flat fish. He carefully refrains, however, from pronouncing any one of them to be identical with the turbot or the sole, though from the vagueness of his language it is evident that his ichthyological knowledge was very scanty, and that he was not accustomed to observe the differences between the different species of

fishes which somewhat resemble each other. His experiences are described at length in his book of travels, entitled "Atlantic and Trans-Atlantic Sketches, Afloat and Ashore," (Harper & Bros., New York, 1852, pp. 166-170), Capt. C. C. Churchill, U. S. A., who saw the results of Capt. Mackinnon's experiment, tells us that the fish taken were the common species of New England flat fishes and flounders.

We fancy that the inspiration of the new advocate of the turbot-in-America question, as well as the information upon which he bases his conclusions, were drawn from this very same book of Capt. Mackinnon; for he uses many of the same phrases, and he repeats in almost the same words Capt. Mackinnon's statement: "The fish markets in America are not at all in keeping with the size and wealth of the cities." A statement which, however true it may have been thirty years ago, will be amusing to any one who has recently had opportunity to compare the fish markets of America and Europe. The Philadelphia gentleman sums up his evidence as follows: "The turbot, sole and plaice are, however, in abundance in your deep water and banks. They were caught there in 1813 by English sailors, and in 1850 turbot have been obtained off Atlantic City, if the Baltimore American is any authority."

The notion that the introduction of the English trawl in America would be novel and would at once open up a field for a fishery industry of boundless extent, deserves a word. The trawl has been assiduously used by the summer collecting party of the United States Fish Commission for ten years past, and also by Prof. Agassiz upon various exploring trips. The steamers of the fish commission have used it on every portion of the New England coast, and as far north as Halifax. Prof. Agassiz has used it in the Gulf of Mexico and on the coast of Florida, and during the present summer, while on the coast survey steamer *Bache*, has employed it in running five lines of research at right angles to the coast from Cape Hatteras at points nearly equidistant between Charleston and Cape Cod, one of them directly out from the entrance to Delaware Bay. These lines were carried from near the shore to a depth of twelve hundred fathoms or more.

In 1854 Prof. Baird made a careful exploration of the coast of New Jersey with a special reference to the fishes, and since that time every stretch of coast line from Brownsville, Texas, to Eastport, Maine, has been thoroughly investigated by the officers of the United States Fish Commission. It is true that a new species of fish is occasionally discovered, but the new fishes always belong to one or two classes. These are either swift-swimming species, members of the West India fauna, which come upon our northern shores in summer, or they are inhabitants of waters more than six hundred feet deep which had never previously been explored. The turbot and the sole are shallow water species, and had they occurred in our waters would have been discovered many years ago.

There are thirteen species of flat fishes on the eastern coast of the United States. Two of these belong to the same family with the sole, but are utterly worthless as articles of food. The nearest relative of the sole is often called the American sole (*Achirus lineatus*), and is known on the coast of New Jersey as the "hog-choker," "cover-clip," or "cover." Of the eleven flat fishes, only two are positively unfit for food, and these two, strangely enough, are the representatives of the sub family (*Rhombinus*) to which belong the turbot and brill of Europe. One of these (*Lophopsetta maculata*) is sometimes called the "spotted turbot," and in New Jersey is called "window-pane" or "daylight," because it is so thin that when held to the light the sun can be seen through its translucent flesh. The most important flat fish is the halibut, which is identical with that of Europe. This species and the sole flounder, which has recently been brought to light in our waters by the Fish Commission, are the only two of the thirteen referred to that are found on both sides of the Atlantic. We have in our waters an abundance of flat fish, some of which, for instance, the common flounder of the New York market, *Pseudorhombus dentatus*, are probably fully equal to the turbot for food

uses. In fact it may be had in the New York restaurants and hotels under this name. Another fish, *Platyomathichthys hippoglossoides*, resembling the turbot in flavor, is sometimes brought to New York in winter. It is found at great depths on the coast of Newfoundland, and is often called the "American" or the "Newfoundland Turbot." The pole flounder is very similar to the sole in flavor and in the texture of its flesh, but it unfortunately inhabits somewhat inaccessible localities at great depths, and it is hardly to be expected that, with the present supply of excellent food-fish to be obtained at so much smaller expense, our fishermen will take the pains to go in search of them. That the popular taste for flat fish is already well cultivated, is shown by the fact that in 1879 1,796,000 pounds were sold in New York alone.

It is needless to refer to the efforts of the United States Fish Commission to introduce sole; they are familiar to all who are interested in the subject. The introduction of the trawl-net has been for many years under consideration, but this expensive mode of fishing does not seem to be required at present, since the supply of fine flavored food-fishes is more than equal to the demand. With an eye to the interests of the American fisherman, Prof. Baird has recently detailed an attaché of the Fish Commission, one of the most experienced fishermen of Massachusetts, to study the trawl fishery in the German Ocean, and his report will soon be published.

Finally, it may not be amiss to state that Mr. E. G. Blackford, of Fulton Market, New York, has for some time been authorized by the Commissioner of Fisheries to pay twenty-five dollars to any one who should present a true turbot or a true sole caught on this coast. This offer is still standing, and our Philadelphia friend may thus obtain fifty dollars of his required capital by capturing a specimen of each and calling upon Mr. Blackford, which we hope he will do before he addresses the public again upon a question which he does not understand.

#### FISH IN SEASON.

SO many inquiries have lately appeared concerning our published list of fishes in season, and our changes in the scientific nomenclature of some of them, that we have given the list a thorough revision, and invite criticism upon it. We deem it necessary at this time to go over the list of common names and make some explanations, lest anglers who use another name for one of them may think their favorite fish is left out. Beginning at the top with those known to have an alias, we will say of the lake trout that this is also called salmon trout, a name applied to several fishes. Pickerel (a diminutive of pike)—this fish is known in the Eastern States by this name, and is not found except in the Atlantic streams and the lakes. Pike—by this is meant the great pike, so called in Europe and America, except New York, where it is confounded with the smaller one above. Pike perch is the misnamed "salmon" of the Susquehanna, Mississippi, Ohio and other Western and Southern rivers, the *Luciopeca* of Cuvier and angling authors, the wall-eyed pike of New York. Yellow perch is the barred perch, raccoon ch., etc., of the South.

Striped bass—the rockfish or rock of Philadelphia and the South. White bass is the striped lake bass of the Great Lakes and upper Mississippi. Rock bass is also called red-eye and black sunfish in different localities; there are two species, *A. rupestris* and *A. cavifrons*; the common name seems to be applied to other fishes. They are called black bass in some places, because they are really blacker than the fish usually so-called. Warmouth—a fish somewhat resembling the above, found in the Southern States. Crappie—the grass bass, strawberry bass, chinkapin perch, speckled hen, etc. Batchelor—so-called in Ohio, the newlight of Kentucky, and crappie or croppie of the lower Mississippi. Chub—only the large cyprinoid, growing to half a pound weight, is meant; it is also called fall fish.

In the salt water list the gorgie is the scup of Massachusetts and the East. Tautog is the blackfish of New York. Sea trout, or salt water trout, is the name given to what is known as Southern weakfish in the New York market. Weakfish is the squetague of the East and the salt water trout of Washington and the South. Bluefish is called taylor south of New Jersey, and snapping mackerel when young; called also horse mackerel. Kingfish—called barb in New Jersey and whiting South.

It will be seen that it is no easy task to know what fishes are meant by writers of different sections, who often use one name for different fishes, or have many names for the same species. Nor is it easy for us, cosmopolitan as we are, to select a common name for some of them which have many. In making our list we have been guided by general usage as obtains in the great markets, except in the case of pickerel for the great pike, which we consider a gross blunder.

—At the National Fair, to be held at Washington, Oct. 5th to 16th, three classes will be provided for the exhibition of dogs, guns and food fishes. Full provision is made for the protests of exhibitors, and the best of facilities offered for working up a national dog show *cause celebre*.

#### A DISGRACE TO THE RIFLE WORLD.

THAT wretched Halford-Hyde match seems destined to keep up its stench in the nostrils of riflemen for some time to come. Not content with making himself ridiculous in the eyes of all America and with a persistent stupidity rushing on to a defeat which was foreseen by all but himself, the gun-agent author of that match has now turned letter writer, and cropping up here and there are explanations, extenuations and lame apologies for his disgraceful defeat. There is not enough sportsman about him to say with a manly frankness: "I am beaten, better luck next time." He will not give the British team the credit for the fair, square set-back which they seem to have given him, but instead a black streak of the match is dragging its slow length along in the daily press, while Mr. Hyde is gradually entangling himself in the web of his own excuses. The fact simply is, that by hook or crook he succeeded in inveigling a number of good shots into his company, and when pitted against the British team he and they were ignominiously beaten. The why and wherefore is plain to any but the most prejudiced and blinded apprehension. The team was woefully mismanaged, and as a consequence defeat came upon it. All of this could be endured. It might be explained as the error of overenthousiasm, that the manager of the match, overconfident in the ability of the American riflemen, had miscalculated and had forgotten that even the fleetest runner may stumble and fall. For the violence of the letter-writing sequel no such excuse can be offered. The letters thus far written are more spiteful attempts at retaliation like that of a "whipped cur" who turns and snarls at those who will not stop and caress it.

To come to particulars, in one of his explanatory letters, Hyde says of a member of the genuine American team:—

Clarke Clark is, in a great measure, responsible for the defeat. He was one of the original team, pledged to it long before the Irish match was thought of, as I have his letters to show, and was, in fact, the only one of all the riflemen of America who came to me and asked for a chance to shoot in this match. He pledged himself anew at Dublin, after the Irish match, and up to the day before the match we had every expectation he would shoot. Then we learned that he, passing in sight of Wimbledon without visiting it (fancy a genuine rifleman doing that) had turned tail, like a whipped cur, and fled to America with his master.

And again, in another letter, he speaks of the same gentleman:—

It was this opposition, coupled, perhaps, with a glowing prospect of being "received" at New York with Col. Bodine, that caused Clark to run away, and it was his non-appearance unquestionably that caused Farrow's defection, as rais leaving a sinking ship; either that, or the explanation is to be found in the fact that the betting was two to one on the American team up to the morning of the match. His nominal excuse was that he had been unjustly deprived of a barrel of his favorite tipple. It is fair to assume that had Clark remained, Farrow would not have sold out or deserted—whichever it was—and that they would have made the average of the other six 232, and that their help to the others and the absence of any "squabble," would have added five points per man all around, and consequently have won the match.

Messrs. Farrow and Clark were free to act as they chose in the matter, but preferred taking their counsel from the members of the National Rifle Association. It is, indeed, poor logic to say that had the membership been stronger than it was, the team had never been beaten. That goes without saying. The team was strong enough to do better work, and but for its wretched handling it would have made a more creditable showing.

The hints and slurs in the above quotation are beneath notice, and should have their proper effect in barring their author from every rifle range in America. The gambling explanation of the absence of Mr. Farrow may be a reflex from the mind of the writer. This certainly is a fair view to take of it, when the facts of this match and the utterances of the letters are brought together.

TWENTY-THREE MILES AN HOUR.—This is in round numbers the speed attained by a new torpedo launch, of only sixty feet in length, just completed for the Russian government, particulars of which will be found in another column. We have all along held that under the Herreshoff system a higher rate of speed could be obtained than from any other practice, and the successful trial of the new launch substantiates the correctness of our views. With their wonderful light but tough hulls, their light and efficient coil boiler, and the matchless proportions of their engines, it would not be astonishing to see full twenty-five miles an hour turned out from the famous Bristol yard before another year rolls around.

PROFESSOR JORDAN.—We are pleased to hear that Prof. D. L. Jordan, the able ichthyologist and Assistant of the United States Fish Commission, has returned from his labors on the Pacific coast, and is once more at his home engaged in his long promised synopsis of salt water fishes, which was begun some two years ago, but postponed on account of a pressure of other work. He has added greatly to the knowledge of the fishes of the Pacific coast within the past year, and has sent several tons of new species to the Smithsonian Institution.

#### FROM THE WATER TO THE FIRE.

HE was a famous fellow, as well known to the frequenters of the streams as any of the most prominent landmarks upon it, and right merrily had he led the dance for more than one angler. He was no unsophisticated trout, but a consummate master of foraging and skirmishing, and for cunningness and resources a worthy compeer of the heathen Chinese, and although he had had many a narrow escape to recount to his companions he had so far managed to free himself from the most intricate meshes into which his appetite had lured him. More than one leader with its cast of flies had disappeared in that whirling eddy. He was the hero of many an evening yarn spun by the camp fire, and although never more than a momentary glimpse had ever been seen of him his weight was known to an ounce.

The pool where he made his headquarters was chosen with the skill of a military engineer, inasmuch as it was a natural fortification. On one side where the water was blackest and portentous of unknown depths was a precipitous bank, up or down which no one could climb with his fishing tackle in fighting order. The opposite side, a dense mass of fallen trees, the branches of which reached half way across the stream and furnished convenient biding posts, around which his troutship could wind a leader and escape at his leisure. The water whirled to the left and fretted itself into foam-capped disorder and broke its head against some boulders and then quietly went to slumber in the black pool below. This fish lay on the edge of the swirl and could only be reached from above, and if reached he had invariably unmuzzled himself by managing to effect a junction with the fallen tree tops. His first rush after feeling the hook had always been in that direction, and how to prevent it without taking an unfair advantage of him was a puzzle, but there was an avenging Nemesis on his track who was destined to solve the problem.

A leader of extra strength was rigged with two yellow professors and a Montreal fly, and at the third cast the middle fly, a professor, was fast to the old grandee of the pool. A silvery streak flashed in the sunlight, flashed but an instant as he made his first break, and was away like an arrow toward his old allies, the tree tops, the rapid current adding momentum to his run and making the reel fairly hum. He was an incandescent desperado. The manner of his leave-taking proved it. A fellow less in earnest, with less demoniacal energy, would have given up and made no flurry about it. Not so this one. His preliminary rush was whizz-z-z-z, and it was merely supplementary to the other maneuvers he displayed before we were on speaking terms. Whizz-z-z-z! the most exhilarating music that ever tickled the tympanum. There was a commotion all around that vicinity. Away he went as though he had forgotten something. He's the Old Scratch himself let loose. A nervous man would say better unhitch an African simoon or a North American tornado. But the elastic rod, steady and unrelenting, snubbed him smartly as he headed for the tree-tops and checked every rush in the nick of time.

That particular trout was fenced in; in fact, cornered. He had never before entered into a speculation in which the profit promised so small a return for his investment. He would willingly have settled for ninety-nine cents on the dollar, but his principal creditor was inexorable in his demands, and would accede only to a settlement in full.

Great Scott! but he fights just as a man does when he is driven into a corner and knows he must strike heavy and quick or take a "licking," and perhaps get it anyhow." Inch by inch, foot by foot, he comes. Now the landing net; so-o-o-o. Oh, Piscator! by all the powers, well done! My eyes, what a beauty—purple, silver and gold—resplendent as a tropical sunset; weight, four pounds fifteen ounces. We might call him an even five pounder, but that would be lying for an ounce, and we are no light-weight liars.

What a splendid fellow he is, to be sure, considered aesthetically. The stream, from its source to its debouchment, contains no finer. The pulse-tingling excitement you have just experienced speaks of his prowess, and to-night's supper will find of his succulent obesity, fit for the palate of Sardanapalus, or for the gullet of the most fastidious tramp that ever tapped at the kitchen door.

What an ignoble end of a happy life! Brought up in the purest surroundings, with never a care to trouble, all wants lavishly supplied, growing more and more beautiful as the seasons advance, until he develops into that prince of swimming things, the perfect trout, and then in his overweening confidence in his own prowess the bubble of his pride is pricked; he falls from his high estate, and ends by sizzling on a broiler. MILLARD.

THE CREEDMOOR FALL MEETING.—By the date of our next issue the range at Creedmoor will be in active use with the matches of the eighth annual fall meeting. Already there is prospect of a good attendance of marksmen, while by teams a large number of organizations will be represented. The regular army is coming for-

## The Sportsman Tourist.

SNOEK FISHING IN TABLE BAY.

BY E. B. BIGGAR.

THE glorious Southern Cross gleams brightly from above the broad top of Table Mountain and there is scarcely a sign of dawn, as the rumbling of boat-ovens announces that the fishermen of Capetown are beginning their day's toils. If the reader will, let him accompany me with one of the snook boats that are now preparing to enter the waters of Table Bay. The fishermen whom I ask for permission to go with them cheerfully grant the request. They are not the tall, light-haired, wiry-looking men to be found on the Atlantic Coast of America, but the dark and dreamy fisher of the Eastern seas, with such Oriental names as Abdol, Apollis and Makmoot.

Our boat issues from a little, narrow-beached, ill-savored cove, called Rogge Bay, sheltered by a primitive pier at the foot of the leading street in Capetown. The coarse, low-toned, booming voice of some boat-hand echoes strangely against the silent town and over the bay as we move off over its silent surface, boat by boat, like some black specters over a sea of death. On my remarking at the stillness of the broad bay, the fishermen hint that before we are ashore we will have enough of an opposite extreme. Passing out slowly from the gloom of the grand old mountain, we are at length behind the Lion's Rump, with Robben Island stretching long and low on our right and Green Point Beach, under the Rump, on our left, with the surf rolling solemnly on its rugged shore. The stars, which have been shining with a brilliancy unknown to the gazers of northern climes, begin to pale in the dawn and day hastily approaches, glorified in tints which I cannot attempt to picture with pen. The slightest haze is all there appears to be of fog over sea or land this morning—for clear air is the wonderful feature of these latitudes and the temperature, which at first was only moderately cool, is soon quite genial. In the broad day I can now tell you what my crew are like while they are settling themselves to work. Abdol is a middle-statured, sack-coated, barefooted, olive-complexioned, aquiline-nosed, thin bearded and wrinkled man. He bears a name of Arabian odor and his appearance might bear out the character; but he is a Malay, the son or grandson of some slave brought from that country by the old Dutch settlers of a hundred years ago. Apollis is hardly the gentleman, graceful being he was already fancied, but a stout-built, big, barefooted man, with a face like the "full rounded moon" in shape, but densely eclipsed and swelled as by the refractive effects of a dim horizon. As a peculiar savor hints, this exaggeration is produced by the excessive use of Cape beer. Possibly from the same cause his voice is hoarse and coarse. Apollis is an African—one of his parents from Zanzibar, the other a Cape negro. Makmoot—well, his nationality is a moot question. He is dark in color, though not black. He has a name of Arabic pronunciation, speaks the Dutch language, wears English clothes and an African countenance, professes the Mohammedan religion, keeps the Christian Sabbath and sends his children to Sunday-school, yet is known as a Malay.

Makmoot lifts his coil of line, and fixing the bait to his trolling hook, tosses it over the side. We are now about half a mile off from shore, between those beautiful mountains of Lion's Rump and Lion's Head, and are making toward the open sea. The breeze is not favorable for trolling for the Providence (with an *o*) hardy crew under her small sparker. Yet the line has scarcely been dropped in the water before it is jerked taut. Apollis in the meanwhile pulls a small baton from beneath a thwart and hands it to Makmoot.

"What is he going to do with the club?"

"Master wait—see," replies Abdol, who, I should remark, is the commander and owner of this craft, allowing certain shares of the day's take to each of his mates. It took me a minute to explain the use of the baton. Makmoot, hauling the fish with gleeful adroitness out of the water, gives it a toss which lands it high and close under his left arm. It is hardly lodged in this position before the baton is swung around and brought down with charming dexterity on the fish's nose. A twist of the hook from its mouth and the victim is dropped into the boat kicking its last. Thus the process was accomplished. But it was performed so quickly that, like the premier trick in a magician's performance, I wanted to see it again. I took up the hook that had been used in the hauling of the boat is one of the most plentiful of the many remarkable varieties to be found in Table Bay and around the Cape peninsula to False Bay and Simon's Bay. It is about two feet long, but Abdol informs me that it is a very small specimen and we are yet to catch them three feet or three and a half in length. It is long-nosed, tapering from jaw to nozzle in lines as regular almost as an isosceles triangle; it is scaleless, its skin being salmon-colored and dark on the back, thin as its sides and belly. Its body is not broad between back and belly, but well rounded and very supple. With ample tail its speed in swimming is very great. This quality is a matter of necessity in its existence, for it is one of the most voracious of fishes. Daring like a meteor on all sorts of small fry of edible kind, it is equally at home in grovelling and glutting in the filth and sewage that flows into the bay from Capetown. The Dutch name given to it signifies its character. As I have already eaten it, I know that, whatever its appearance, its flesh is excellent, of fine grain; but, except during a short season in winter containing but little oil. When smoked, its flavor is simply delicious, and though now chiefly appreciated only within the Colony, the time may come when the smoked snook will be esteemed abroad equally with the very daintiest of fish. But more on the trade aspect when we get ashore, for Abdol now offers me charge of the helm and sheet, and all three are settling to work. Makmoot tosses out his line some distance and again is soon hauling in a fish. Swinging it under his arm, the baton comes down on the poor thing's nose, and the hook withdrawn, it is thrown into the bottom of the boat. Abdol throws out his line, but with the grace and air of a man who understands every point in the whole nature of a snook evidently. Two or three deft hand-over-hand draws and up the fish flies like a bird, lighting under his armpit as if it had volitionally leaped into its own native place; tap goes the baton and down goes the snook. How easy I yet how much like a trick of legerdemain. I watched

again, Apollis, with less skill and no small bluster, hauls away, causing the boat to lurch, and dealing his victim a fearful blow, throws him down with savage force in wide and interesting unconsciousness to the polished style of Abdol, who now again unconscious of his high art adds another to the number in the boat. A gently stiffening breeze from seaward increases our rate of speed and attracts the fish in quicker succession. The fun is furious. The tightening line, the thrashing of the water and the thump of the club followed each other so fast that the fishers themselves laugh and congratulate each other upon the run. Evidently it is rather an unusual fortune, for after a time there is a sudden rest. I ask if it is the capricious nature of snook, and Abdol replies by suggesting that if I will bear off again from the shore we will run faster and catch more fish, whereat Makmoot and Apollis laugh. I awake to the fact that I have unconsciously, while so intent upon the fun, allowed the boat to run up into the wind and lose way. Thus I had to pay the penalty of want of attention to my duty. However, we get under way again, and the takes are tolerably numerous, though never so lively as before. I had now watched the magic trick till I had, point by point, taken in a pretty correct idea of the whole *modus operandi*, and I said: "Abdol, hold this tiller till I try my hand."

"Master want to catch snook?"

"Yes."

I threw the line out, and it was some time before I got a bite. Then I jerked in with a style hardly so graceful as Abdol's, and after some lurching of the boat, I got him above water. Then I performed the swing under my arm; he struck the right spot exactly. I raised my club and struck my arm a blow sufficient to have stunned a whale, much less a snook. But I think I must have hit the snook—somewhere about the tail perhaps. However, he fell outside the boat and shot like a gleam through the water. "There," thought I, "goes the line, hook and all." But Abdol had fortunately tied the end in the row-lock, and he was brought to a check soon enough. I hauled him up, and scorning the armpit trick, decided to dispatch him in my own way. So I got him down against the side of the boat and made a stab into the back of the baton. The blow made an impression in one of the ribs, but none on the snook, for he was that moment floundering over the corpses of his fellow creatures in the other end of the boat. By the time I had recovered for another effort of skill, I saw him lie still for a moment. Now, I thought, is my time, so I aimed a shot of a horribly fatal nature at his head. The baton bounded over a thwart and went whirling like a boomerang off toward the equator. This is a somewhat exaggerated account, but at all events I did not kill the snook, and Abdol, mercifully rubbing me on the elbow, lifted him up and dispatched him with a single tap. I resumed the tiller. After all—I consoled myself—snook catching is not an elevated pastime; it is only fit for the cunning sleight of some magic-working Oriental.

At about 11 o'clock our boat is about two-thirds full and Abdol considers it time to return, for a southeaster is likely to spring up. Though now a considerable distance off we make good headway in, and while we go a lunch is brought out, consisting of fried snook and bread, and is eaten with eager appetites. The crew meantime conduct their conversation in barbarous Dutch, and I fancy upon their pleasures, the subject of the conversation is a certain incident of the day. A crowd of people, Point toward the docks of the town, a white cloud gathers in a clear sky over the brow of Table Mountain, and that is the herald of the southeaster, which even before we reach Rogge Bay is lashing the water into white caps. And now the "sport" of the day is done; if the reader wishes to hear nothing else he may stop here, but if a few facts on the business aspect of the question will interest him he may read to the end.

Preceding and following us to and from the cove was a fleet of some thirty boats, all precisely like our own in size and appearance, manned by crews equally varied in race and color, and engaged in the same business. As I stand on the beach watching them come in I see every boat has, what seems to me, a profitable load, some less than half full, others loaded almost to the gunwale. Each boat is welcomed by a crowd of chattering humanity of every continent, nationality, tribe, kindred and tongue, and perhaps the least cultivated and refined of each class. The boat is pulled up and its load removed up the strand, each fish being taken by the head in removal. As I see colored servants carrying the fish on a tray, I could not carefully in the same way. I saw learn the reason why the fish is killed on being caught. The flesh is not only of fine grain, but exceedingly tender, so much so that where a slight bruise has taken place the bruised part if fried after a day or so will go into meal like fine mashed potatoes. Such portions putrify sooner than others. If the fish were left to die in the boat its thrashing about would spoil the flesh, hence the process of clubbing. Along one side of the beach a row of benches stands. Here stand the cleaners—some men, some women—and the facility with which they prepare a fish is admirable. From a basket on his left he lifts the fish and severs the head; then, with a careful though quick curving movement of the knife, opens out the entrails, which fall out clean and easily, and with a lightning stroke draws the knife from head to tail, and the red flesh of the snook is opened out into two broad, rich halves, and thrown into another basket, done. The baskets are then taken to the "fish kraals," or drying sheds, where, under the influence of a dry atmosphere and a warm sun, they rapidly dry, having been salted. Others are smoked dry, and these, though dearer, are becoming much esteemed, as they deserve to be. On the beach a snook will sell at from two pence (four cents) to eight pence, according to the season; a dried snook at about six pence, and a smoked one at eight pence to a shilling and three pence. The supply in the sea here seems exhaustless, and the snook could be caught all the year round, though from October to January they are few in number, poor in quality, and often have white worms or grubs in the flesh. These worms are considered poisonous, though the fishermen eat the fish at this season as throughout the other parts of the year. While the market here is large, snook are caught in equally large quantities on the other side of the peninsula, in the waters of False Bay, Simon's Bay and Kalk Bay. What is done with them? Well, at one time they were considered fit food only for the poorest colored people; now they are largely consumed in the

ward with an energy quite noteworthy, and each team sent out to compete represents an amount of practice which would have been deemed extravagant five years ago. The States are also falling into line, and the New York team will find competitors from Pennsylvania, New Jersey, California, and, perhaps, several other States. Massachusetts and Connecticut should certainly come. There is a prospect of some fine, close work in the off-hand matches, where many excellent clubs will be pitted against each other. Col. Bodine, the executive officer, has been making preparation for a prompt shooting off of all competitions, and an abundance of shooting will be provided at the bullseye targets for general practice, and for the filling up of odd moments during the several days of the meeting. All who come and participate at the meeting may depend upon accurate marking and a fair opportunity to show their ability. Compared with such a meeting as that at Wimbledon, the Creedmoor gathering takes on a very modest aspect as to size and general stir, but when the records are compared the comparison is vastly in favor of the American range. In the several classes of short range, long range, and in military shooting, there is no danger that the work of this year will fall below the average. On all the smaller ranges good work has been doing, and the spirit of rivalry is strong enough to bring out the best work, independent in large measure of the prize list.

**TATHAM'S TRAP SHOT.**—As many of our readers may not know the new trap shot, advertised by Messrs. Tatham Brothers, it seems proper to give them a brief explanation of the new article. This shot is numbered from 7 to 10, each number being one-half size smaller than the ordinary shot of the same number. The peculiar feature of the trap shot is its almost absolute evenness of size, and it is confidently asserted that the number of pellets to the ounce will not vary more than four or five either way from the number which an ounce should contain. The manufacturers are so well satisfied that they have attained this evenness of size that they stamp upon the bags the number of pellets that there should be in each ounce, so that any one who purchases it may count it for himself and see how closely it agrees with the standard. Such a shot as this is just what should be used in gun trials, and there is no doubt that at game it will give better results than their old fashioned make.

**THE IDENTIFICATION OF FISHES.**—We wish to call the particular attention of those who, having never paid attention to the structure of fishes, claim to identify them, to our letter from Alaska. Here is a case which points its moral. "Pisco" is a veteran trout angler and a close observer; also has the advantage of years of contact with the first ichthyologists of the world, and has imbibed much of their lore, so much that we would prefer his judgment on a fish to that of any mere angler. Yet he was mistaken in supposing that he had found an Eastern brook trout in Alaska—a *fontinalis*—as his fish was marked so like the ones which he knew so well by sight; but he did not happen to know that the presence or absence of teeth upon the hyoid bone (the bone which supports the tongue) was an all-important factor in the diagnosis, until Dr. Bean, one of the celebrated ichthyologists of the Smithsonian Institution and the Fish Commission, came along and rectified his mistake, which he so gracefully acknowledges in his present letter.

We make this comment to show how easy it is to be mistaken, and why we are sometimes skeptical about fishes which are positively asserted to be "genuine" brook trout or black bass when we do not know the ichthyological attainments of the writer, who, by the way, is usually positive in proportion to his ignorance of structure; and the error acknowledged by "Pisco" should be treasured up by all. Having learned a new and valuable lesson himself, our accomplished Alaska correspondent wishes to enlighten his brother angler and share his knowledge.

**DICK, THE WOODCOCK.**—The correspondent who writes to inquire about the tame woodcock is referred for full particulars to recent issues of FOREST AND STREAM. Better than reading about the bird is seeing him, and we recommend those who are interested to call on Mr. Morris at 17 Jefferson Market and see his pet. Dick will be found in the greenhouse surrounded by flowers, and with dozens of feathered companions of different kinds. His owner, in addition to his business of florist, has a number of birds, most of them native, though canaries, skylarks and other foreign song birds are to be found at his place. We noticed, during a recent visit, young robins, bluebirds, catbirds and cardinal grosbeak, all of which seemed to be doing well.

**FROM THE ENDS OF THE EARTH.**—The FOREST AND STREAM draws its good things from the uttermost parts of the globe. To-day we publish letters from Alaska and from South Africa.

**WILD RICE.**—Wild rice may be obtained this season in good supply and quality from Richard Valentine, Janesville, Wis., and Chas. Gilchrist, of Harwood, Ont. We shall shortly publish full directions for the sowing of the cereal.

inland districts of the colony by the white classes. They are also exported interior to the Diamond Fields, to Natal and to the island of Mauritius, where they are chiefly consumed by the coolies, or East Indian laborers, who are employed on the sugar plantations of the island. They are a cheap food, and being very tender when dried or smoked, are palatable and better suited to the stomach in a warm climate, where strong meats are injurious. Such are a few notes concerning sneek catching at the Cape of Good Hope.

Cape Town, South Africa.

### ANIMALS OF THE MOUNTAINS OF NORTH CAROLINA AND TENNESSEE.

Editor Forest and Stream:—

In the summer of 1888 I explored the mountains of North Carolina and Tennessee, botanizing and measuring their heights with barometers. In the March (1889) number of the *American Journal of Science* is an article from me about these mountains. As the *Journal* has a small circulation, I give the following extracts from the article: "The tedium of the night, when encamping on the mountains, is almost always enlivened by the stories of the guides of their adventures in hunting. They all positively assert that the bears in early spring, when first emerging from their winter quarters, are as fat as when they first retire for the winter. During the winter they shed the soles of their feet, which renders their walking difficult in the first spring. Then their food consists of young plants, on which diet they soon become lean, and remain so until the ripening of berries in August and September. They are very fond of hogs and pigs, pork and honey being their favorite diet. Why they bite and scratch the bark and limbs of the balsam and black spruce, I cannot tell. It cannot be for food, because they do not generally leave the marks of their teeth on a tree except in one or two places. Sometimes they rise on their hind legs and make long, deep scratches in the bark with their forepaws. It may be done for sport, or to let their companions know their whereabouts. We have seen these fresh bites and scratches on different trees during the entire warm season. The bears show great sagacity in feeding to the leeward of the paths of the mountain ridges, along which the hunter is almost obliged to travel; hence, if the wind blows, it is almost impossible to get a shot at them, their keen scent discovering the hunter long before he gets within shooting distance. They are stupid and unwary about traps, entering without fear, and fall into them, which are shallow, with a depth of not more than two feet, over which is raised a very heavy top, which falls and crushes the bear when he disturbs the bait. Hundreds are caught in this manner every year. In the unfrequented parts of the mountains the large steel trap is concealed in the bear trail; but this is dangerous, and liable to catch dogs, of which we saw two caught in one morning to our great sorrow. The piteous yells of these dogs rang in our ears long afterward. The bears rarely attack calves or young cattle, but in one locality of the Smoky Mountains we were told that they did much damage in killing young cattle, and that there could be no mistake about it, because a large bear had been caught in the act of killing a young steer.

"The panther, wild cat and wolf are all troublesome to the mountain farmer of these regions. The panther destroys sheep and hogs; the wild cat, lambs and pigs. Both are cowardly and cunning hunters. The red squirrel (*Sciurus hudsonicus*), called mountain bunn in North Carolina, is common in all the higher mountains. It rarely descends into the valleys. It is fond of the seeds of the balsam and black spruce (*Abies fraseri* and *nigra*), and as it is rarely molested by the hunters it is very noisy, active and fearless of man.

"We were told by a traveling fur merchant whom we met that the skins which he bought among the mountains are equal in fineness and goodness of the North, and that Northern merchants could not tell the difference; still, in order to get the highest price, he was obliged to send his skins to New York through Ohio, via the Erie Railroad, as if they had come from the Northwest. The principal furs obtained in the southern Alleghenies are the skins of the otter, mink, black fox, red fox, raccoon and muskrat."

To the above extracts let me add that twenty years ago trout and deer were abundant in these mountains and streams; that twenty-four of their peaks are higher than Mount Washington; that they have finer and grander scenery than any other portion of the Appalachians extending northward to Canada. Also, there is another very important item in favor of the Southern mountains as a place of resort—mosquitoes and gnats are not there to torment one, as in Maine, Canada and Minnesota. The valleys are from one to three thousand feet above the sea; hence these mountains and valleys have a Northern climate. On many of the higher mountains I found species of plants which I had previously seen on Mount Washington, in New Hampshire.

S. B. BECKLEY.

Austin, Texas, Aug. 10th.

Editor Forest and Stream:—

In a late number of your paper, you referred to the question of the best place for hunting bears.

On the map of North Carolina, in Macon County, may be observed a place called Aquone, in the western portion of the State. This little village of three or four houses, with a post-office, 2,600 feet above the sea, and seventy miles from a railroad, lies at the base of two ranges of high mountains, the Nantihela on the east, and the Valley Mountain on the west. The surrounding country, being thickly wooded and thinly settled, abounds with many varieties of game, such as bears, panthers, deer, wild turkey, etc., which are hunted only with difficulty, as the mountains are steep and lofty.

At Aquone lives Alec Mundy, a man as well known for his genial, social qualities, as for his proficiency in hunting. I have had the pleasure of enjoying Alec's hospitality on four occasions, when passing through that lonely mountain country, as he lives on the road leading

from Cleaveland, Tenn., via Ducktown, to Asheville, N. C. His favorite sport is bear hunting, and he keeps two well-trained dogs for that purpose. On the last occasion when I was there, he told me the dogs then in his possession had assisted him in killing nine bears and five bears. Through him I became quite well posted in "bears literature." Among those mountains the bears usually "den up" early in January, and come out again about the 20th of April, when a particular plant is large enough for them to eat, with which they purge themselves. They are fat when they "den up," and are fat when they come out again, but become poor, and remain so until autumn, when they feed on acorns and chestnuts. A fat bear soon comes "to bay," but a lean bear runs like a deer and "makes" for the nearest precipice, either to ascend or descend in order to escape from the dogs. When descending, they double up and roll down. Alec says his dogs can find a bear any day in season. When they overtake one, each dog assumes his position, one on each side of their enemy. Dog No. 1 seizes a thigh of the bear, which immediately turns to fight it off. No. 1 lets go contemporaneously with a bite from No. 2, which lets go synchronously with another bite from No. 1. In this manner bruin is entertained until Alec comes up on horseback, dismounts at some distance, then approaches quite near with his shot gun, which he perfers to a rifle. On several occasions, when a bear was wounded, it rushed at him with purposes not peaceful, and he might have been killed, but his faithful dogs, apparently knowing the danger to their master, seized the bear by the thigh, and diverted its attention long enough for Alec to reload his gun and fire again. Alec says the requirements of a good bear dog should be courage to attack, and cowardice to let go when the bear attempts to seize it. He states that a cross between a bulldog and foxhound meets the case better than any other dog he ever saw.

Trout are quite abundant in the Nantihela River, which flows past Alec Mundy's house. I have never found them in the Southern States in waters further south than in this river or its tributaries. I have heard contradictory reports of their existence in Georgia, in the headwaters of the Oconee, a branch of the Hiwassee. I think the extreme southwestern distribution of this fish is a very interesting subject for inquiry, and it could probably be determined by some of our Southern subscribers. I mean the stream where they occur naturally, as well as that where they thrive well after being transplanted. I have not found trout in North Carolina at a lower altitude than 2,000 feet above the sea. In Macon County, N. C., these fish may be found in the headwaters of the Sugar Fork Creek, 4,000 feet above the sea. This is probably the highest altitude where they may be found in the United States east of the Mississippi River.

### HERONS AND CORMORANTS.

ON the 21st day of August, the present year, I was in heavy, late timber in the Illinois River bottom, twenty-five miles above the mouth of the river. I was surprised to find myself in the midst of a large nesting place of the great blue heron (*Ardea herodias*) and little white egret or snowy heron (*Ardea candidissima*) in about equal numbers, and with a few nests occupied by the two young to a nest of either the double crested cormorant (*Graculus alopophus*) or the Mexican cormorant (*G. mexicanus*). The nests occupied by all appeared to be exactly the same, and I should judge, or rather guess, that the cormorants had despoiled the herons of their nests, or at least occupied an old nest from the beginning of the season, for it is hardly reasonable that birds of such very different characters would build nests exactly alike, and it is a well known fact that these nesting places and nests are used by the herons year after year. The nests were placed in the highest forks of the tallest trees.

These cormorants are known by the "hoys" on the Illinois River as "nigger geese," and are quite plenty, and I had for years tried to capture one to determine their species; so I picked out the largest pair I could see—they were all standing or sitting, for they always stand up sitting down, both upright in their nests—and let go at them with a very good shooting No. 12 gun—a first-class glass ball gun, and loaded for balls with 4 drachms and 15 oz. No. 8 shot. The young cormorants merely shook their heads, and the old ones merely uttered a little cry of salutation. I gave them the other barrel with the same result, then both again—they appeared to enjoy the fun. I then got a little mad, took another position and gave them my best choke, and pulled the trigger very hard. I guess the one nearest to me "stubb'd his toe" and fell down, but he "got right up," and sat down on his tail again. Well, I thought there must be something the matter with my gun, so I tried it on the young blue herons, which I think thought the Fourth of July had come, as they had nearly all left their nests and walked out on the dry limbs to see the fun. I let loose on the biggest one I could see, and down he came, and so did three more. By this time the old herons began to think there was trouble in camp, and came squawking in from every direction. I saluted the first one that came near, and killed him, and shot down like an empty sack, and also three more twenty or thirty feet from the trees. I then concluded I would make the two young cormorants lay down or empty all my shells at them, so I climbed up on an enormous log, drew a bead on their heads, and let go, when one laid calmly down on his back in the nest and the other pitched forward and came to the ground, and the long wished for "Nigger goose" was mine. I had him as many as one hundred and fifty No. 8 shot in his corpse. I found his feet were about as tough as that of an old woodchuck, and thickly covered with stiff feathers and matted down, passing through his pelt and riveted on the inner side like that of a loon. I now had my bird, but how was I to find his proper name? For the information of other young students in ornithology, I will tell how I did it. If my bird had been known by any common name that Dr. Coues had ever heard of, I could have turned to his general index of his "Key to North American Birds," and found it, but the Doctor's early education was neglected, and he had never heard of "Nigger geese." In his "Key to the Genera," Dr. Coues groups all birds in four great groups by the number and position of their toes. My bird, I found, had four toes. I look at the Key and find "Toes

four, two in front, two behind," and "Toes four, three in front, one behind." Now my bird has four toes, all in front, so far as I can see, and what makes it worse, the four toes are firmly connected by three full webs. Have I struck a snag?

If there was a class of birds with one toe in front, two at the side and one behind, I could get along, but there was no such group. Well, there were four toes, and one of them might be called a hind toe if it did not point to the front when the bird "stood up," so I turn to Group 4, and then to Sub-group A (the hind toe elevated). Trouble again, for I have found a hind toe. I cannot see that it is elevated, but I follow down to Sub-sub-group 1, "Feet toepalmate (all four toes webbed, hind toe semi-lateral and barely elevated (A))." So I follow down until I find A, and suddenly down I find all the characters of my bird in the genus *Graculus*, to which I turn, but as my bird is young and not quite fully fledged or colored, I am not able to certainly determine which species of *Graculus* or cormorant it is; so, the "Nigger Goose" question must remain unsettled for the present, so far as I am concerned. But I write this to give my testimony on two facts in Natural History, to wit, that these two groups in this region I have always found breeding together in the same grove, and generally with more than one nest of each on the same tree; that their nests, so far as can be observed from the ground, are exactly alike, and that a cormorant was using and rearing its young in exactly the same nests, and that all three birds had young of about the same maturity—almost full fledged, just leaving their nests on the 21st day of August, this year of 1889. I am of the opinion that they are about the same, but this year, when I give facts, I do not know how long it is from egg-laying until the birds leave the nests?

As a student, I thought it very strange that a bird with feet like this cormorant, with four toes completely webbed together, should habitually perch and roost on trees; so I could not believe that my young bird was a "Nigger Goose" until I got the opinion of some of our old river guides, who told me that the nests were exactly like, and exactly the same as "N. Geese," and all said the young was a "Nigger Goose." This bird must, when it perches on a tree, clasp its toes around the twig just as a man without thumbs would grasp.

Lacon, Ill., Aug. 24th.

BYRNE.

### OWLS.

ABOUT the middle of last June I found a young screech owl in a box which I had placed high up on one of the posts of the verandah at the back part of the house, as a hiding place for some worms, but they would not occur to it. The old owl had sat day after day on the brackets of the adjoining posts. This led me to get the step-ladder and look into the box. No nest was there. The bottom of the box was nearly covered with the elytra and wings of insects, mingled with the wings and feathers of small birds.

The young owl was nearly full grown, but still covered with clay-colored down, with a white belly, white legs and across its head. Its horns were prominent and composed of small feathers. When the young owl first saw me he retreated backwards to the far corner of the box, and fronting me gave vent to a hissing noise, opened and shut his jaws, looking as fierce as possible—a real comical chap. As I was about to take him in my hand he threw himself on his back and presented his claws and open mouth. I brought him down and placed him on the floor, where he still showed a pugnacious disposition. His performances and appearance were so singular and amusing that I afterwards showed him to some visitors, when he was as brave as ever. His feathers came out rapidly, so much quicker than I expected that he flew away and escaped a prison cage. I intended also to shoot one of the old birds for close inspection. I saw or heard nothing of them for several weeks, but recently I have heard them on the night.

I am not sure that these are true screech owls (*Scops asio*). They may be Western mottled owls (*Scops nathali*). They certainly make a noise at night very much like screech owls, and also resemble them in plumage.

Do the old owls carry their young from place to place for safety? No nest was in the box and but one young owl. I think the other young birds were killed and this one carried to the box by the parent birds. The box was in a frequented place near the kitchen window, and the old ones would have been apt to have been seen there about when eggs were being laid and set upon, but they were only seen a short time before I saw the young one. In the winter of 1876 a snowy owl (*Nyctea nivea*) was shot near Austin and brought to me for name.

Austin, Texas, Aug. 17th.

S. B. BECKLEY.

COOL.—About a week since, while examining the web of a well-fed house spider of ordinary size which had stretched his net across the corner from the body of the house to the extension, and had supplied his ladder with a goodly stock of mosquitoes, moths, etc., I observed at the same time a black looking wasp come along along the side wall, when all at once he went to the spider's web. I thought he was caught, sure. Every half second he would kick and shake as though indeed he was entangled, but was he? We shall see. The spider was slow in responding, but after a number of shakes he darted out and attempted to secure the wasp, but no sooner had he cast a strand of his web around the foot of the wasp than the latter gave the spider a jerk, bringing the spider with him. The spider, however, was not deceived, he recovered himself enough to think of running he was inclosed in the deadly embrace of the wasp, and in less than a second the latter had doubled up and had pierced the poor spider with his deadly sting a dozen times. One would suppose the web would offer some obstacle to the wasp, but not a bit; he was as much at home in the web as the spider. He took the dead spider in his mouth, deliberately crept through the web, went down the side wall, out under the bottom and bore off his victim, I suppose, to fatten the young progeny of the captor.

STRAIGHT BORE.

In this connection we would refer our readers to an article entitled "The Solitary Wasps," printed on page 378 of volume XI. of this journal.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO SEPT. 1ST.—One elk (*C. canadensis*), one llama (*Lama peruviana*), one zebu (*Bos indicus*), one yak (*Bos grunniens*), all born in garden. One passenger pigeon (*E. migratorius*), hatched in garden. Two egrets (*Hierodias egretta*), one military macaw (*Aras militaris*), one bald eagle (*H. leucocephalus*) all presented. Three crane monkeys (*Cercopithecus callitrichus*), one vervet monkey (*C. leucoides*), two common macaque monkeys (*M. cynomolgus*), one brown capuchin (*Cebus fustellus*), one black handed spider monkey (*Ateles melanochirus*), one Indian elephant (*E. indicus*), one brown thrush (*Uropythicus rufus*), three Baltimore Orioles (*Icterus baltimore*), seven orchard Orioles (*I. spurius*), one cowbird (*Molothrus pectoris*), six bobolinks (*Dolichonyx orizivorus*), three yellow headed blackbirds (*Xanthocephalus tescorum*), four pink breasted grosbeaks (*Guiraca ludoviciani*), six indigo birds (*Cyanocitta cyanea*), 7 nonpareils (*C. cyra*), three Virginia cardinals (*C. virginiana*), one red-headed woodpecker (*Melanerpes erythrocephalus*), four cut-throat finches (*Ammodramus fasciatus*), six Java sparrows (*Pardaliparus javanicus*), four zebra waxbills (*Estrilda alpestris*), four amadavau finches (*Estrilda amandava*), four red-faced weavers (*Touitia erythrops*), four orange weavers (*Euphonia francolinus*); all purchased.

FRANK J. THOMPSON, Sup't.

## Fish Culture.

### SOLES AGAIN BROUGHT TO AMERICA.

CAPTAIN J. H. MORTIMER, of the ship Hamilton Fish, a gentleman well known to the naturalists of Europe and America by his valuable contributions to science in many of its departments, has succeeded in bringing over some live soles and depositing them in our waters. Our readers may remember that the attempt was made in the winter of 1877-8, and only two specimens survived the change of air from the gulf stream to the "banks," and were deposited in Massachusetts Bay. (See Rep. U. S. Fish Commission, 1877, p. 867.)

In both these cases valuable assistance was rendered by Mr. Moore, of the Liverpool Museum, and Mr. C. L. Jackson, naturalist of the Southport Aquarium, in procuring the fish. The following is the report made by Captain Mortimer to Prof. Baird of his methods and the incidents of the transportation of this most valuable little fish, which is deservedly a favorite in Europe:—

When at Liverpool last March it occurred to me that my return passage to the United States would afford a favorable opportunity for the transportation of live soles across the Atlantic at that early period of the present year. The existence of ice abounding on the ordinary track would induce me to take a more southerly course, which, in connection with the more equable temperature of a middle passage, would afford a better prospect of success in my undertaking.

Communicating my intention to Mr. T. J. Moore, curator of the Derby Museum, who for years has been ever ready to assist in my attempts to transport fish, mollusks, anemones, etc., and which have been ordinarily successful, very much owing to his kindness in furnishing me material and data (all important), referring to the habits and habitat of intended companions for the voyage. Considering the habits of various fish, especially the sole, in this case I suggested to Mr. Moore that very young sole should be procured from the Mersey River fishermen and placed in the tanks of the aquarium for the purpose of acclimatizing them, as it were, to the confinement to my small globes or tanks on shipboard. While the ship remained at Liverpool this was accomplished, and on the eve of my departure for New York the number of sole obtained was only nine, the largest not being more than five inches in length. The season not being favorable for obtaining the smaller fish, which I much preferred on account of the lesser amount of aeration required for their well doing, I was supplied with fine gravel, coarse river sand, earth worms in sod, mussels and cockles, which I had hoped to have preserved alive for fish food.

My method of transporting these soles was in ordinary glass globes of about four gallons capacity, which, resting on a disk of wood equal to their diameters, were suspended by six cords to hooks in the carlines of my cabin where they were suspended in accordance to the ship's motion, and with but very little disturbance to the water contained in them. Gravel to the depth of two inches was placed in the bottom of the globes, which were three parts filled with water from the aquarium, and three soles were placed in each tank, which were then suspended where they would swing clear of each other. During the first three days of our passage, and through the Irish Channel, my ship duties prevented me from giving much attention to the fish, other than that the water was dead. Without loss of time I prepared a fourth globe, which I filled with ocean water brought to a density comparative with the original Mersey water by an improvised hydrometer and admixture of fresh water from the ship's tanks, and which was allowed to remain six hours until it had acquired a temperature equal to the water in the other globes; meanwhile, the fish had been removed from the impure water, and were subsequently removed to the fourth globe and new water. This accomplished, I attempted to feed them for the first time by suspending pieces of mussels and a living worm attached to a piece of fine thread. This for the purpose of withdrawing from the water the food, if not accepted by the fish, and so preventing the impurity its remaining in the globes would cause, the water in all of which was kept aerated at least every four hours, night and day, during the passage of thirty days.

The following morning the fish which had enjoyed a change of water were both dead, and were afterward preserved in methylated spirits. Presuming from this fatality that the reduced seawater was not congenial to sustaining the sole, I had recourse to the original supply of Mersey River water, which, every three days, when slightly contaminated by the fish, was decanted by a siphon from one globe to another, allowing the stream from the siphon to fall some four feet through the air, carefully avoiding the sediment. This method, by decanting three times, would thoroughly re-aerate and sweeten the water, and this process was maintained for the remainder of the time the fish were on shipboard, making up the loss by wastage and evaporation by adding sea and fresh waters of as near a density as could be determined. It was observed that the sole were inclined to burrow. The gravel being rather dense for that accomplishment, I added sand that had been well washed until it would settle in a short time without clouding the water. The sole took immediate advantage of this addition, and would remain under the sand, excepting a small portion of the head, and were only distinguished by their brilliant eyes peering out of their comfortable bed, except when disturbed by the aeration process, or absence of air, when they would come to the surface and, by their splashing, advise their keeper that it was time to use his surface net or disturber. For the first few days the fish were easily alarmed by the approach of any strange object, but afterward seemed reconciled to their new habitat, and, like Dr. Tanner, lived upon air and water; for, during the whole voyage, they declined the food offered to them. Upon arriving at New York harbor I took on shore, in two globes, five of the nine soles which I had embarked, all seemingly in good condition after their long fast and the changes of temperature they had been subjected to, and, with, at one time, while passing the flow of the Arctic current, in longitude 48° west, the water temperature was as low as 34° Fahrenheit, while the mean temperature for the passage was about 56°. Mr. E. G. Blackford, at New York, took charge of these, which, within twenty-four hours were planted in New York Bay, just outside of Sandy Hook, care having been taken that the temperature of the water they were in was gradually brought to an equality with that of the bay water, which was much colder.

At this writing the time of my departure is near for a voyage to the North Sea, which will prevent a repetition of my experiment, at least with the sole. But from the recent experience with them I feel satisfied that their introduction is practicable. I would suggest that they could be brought by steamers in the swinging globes, and during a passage of twelve days would need no change of water, nor food. The only labor connected with their transportation would be a simple aeration of the water, say every eight hours, and protection from the very severe and sudden changes of temperature which must occur about midway the transatlantic passage. There might also be taken into consideration the propriety, perhaps necessity, of a preserved habitat, which might be arranged for their reception, the sole being doubtless quite able to take care of himself, through his acquaintance with the habits and offensive means of his British enemies. Knowing of their extensive colonies in native waters, we may assume that they will swell up in the philosophy of the survival of the fittest. But do they know our methods, that will swallow any moving object within the capacity of their swallowing? Does he know of the facility with which the sheephead may crush a clam, or of the affectionate embrace of the starfish? If not, he must be protected until a knowledge of the defensive means to be used are acquired by the sole. Then they will adapt themselves to the most favorable surroundings within their reach, "colonize and increase," and following such a happy result, our ichthyophagists may enjoy a fillet of sole that may not have been sliced from a fishy flounder.

### CODFISH HATCHING HAS BEEN SUCCESSFUL.

GLOUCESTER, Mass., Aug. 24th.

Editor Forest and Stream.

Inquiries among the boat-fishermen, who fish off this harbor, have brought to light some interesting facts connected with the hatching of cod (*Gadus morhua*) at this place winter before last by the United States Fish Commission. It appears that last summer, a few months after the young fish had been "set adrift" off the harbor's mouth, to seek for themselves, many were found in the harbor from an inch and a half to two inches long, presumably some of those that were hatched at the station.

This summer none have been seen in the harbor, but the fishermen report having frequently caught, just outside the harbor, a mile or so from the entrance, small cod measuring from five to seven inches in length. Sometimes as many as six or seven have been taken at one time by a single person, and this is all the more remarkable as the fishermen say they have never known the like to occur before. Unfortunately no specimens have been obtained, as the fishermen have thrown them away, they having no market value. Although there can be no absolute certainty that these are the fish that were hatched by the Commission, there is yet being any authentic account of any being caught labeled U. S. F. C., still, taking into consideration their size, and the fact that codfish of such a size have never been found plenty before, it seemed no more than reasonable to suppose that these are some of the lot sent out by Uncle Sam, and that the little fellows are still hanging around home. J. W. C.

### CALIFORNIA SALMON EGGS.

The following circular has been issued to the different State Fish Commissions:—

UNITED STATES FISH COMMISSION,  
FISH AND FISHERIES,  
WASHINGTON, Sept. 1st, 1880.

As the California salmon eggs collected by Mr. Livingston Stone at McCloud River, Cal., during the present season will before long be ready for distribution, it is requested that you will take notice of the fact that, in view of the season of your State, to be hatched out and planted in public waters.

It should be understood that the freight from the hatching station is to be paid by yourself, and possibly an additional charge not to exceed \$1 per thousand for the expense of packing and shipping.

Please advise me of the address to which the eggs are to be shipped. Due notice will be given you by telegraph, or otherwise, of the time when the eggs may be expected. They will be ready to forward at, or not long after Oct. 1st.

STENECOR F. BAIRD, Commissioner.

LAKE TROUT EGGS TO BE HAD IN QUANTITY.—The following letter is self-explanatory:—

WOLFE ISLAND, Aug. 28th.

Prof. S. F. Baird:—

Sir:—I beg to inform you that the fishing grounds in Lake Ontario, situated about ten miles from Cape Vincent, where the New York Fish Commission have obtained all their salmon-trout eggs, is still in operation. The proprietor has been notified that the New York Commission will not require any this season, and so far no other person has made arrangements for the spawn. If you know of any fish breeding establishment which is desirous of obtaining two or three million of salmon-trout eggs please advise them to apply at once to Patrick Trout, Wolfe Island, Ontario. The salmon-trout fishing commences immediately, and ends on the 30th of October. Communications will receive strict attention.

Very truly yours,

PETER KIEL, Fishery Overseer.

We understand that eggs will be furnished already impregnated if desired.

### TROUT MURDER.

THE mill pond at the head of Caledonia Creek, including the springs, was suddenly emptied on the last day of August and the whole stream poisoned by the disturbance of the sediment and the consequent liberation of sulphuretted hydrogen. Mr. James Annin, Jr., whose ponds are the first below the spring, is the main sufferer, as he owns the stream for some distance, and depends largely upon it for his supply of eggs to meet the demands of his customers, and not so much upon the fish in his ponds, which are fed by other springs. The State hatchery also suffers in the loss of salmon, native and Western trout, which were beyond price as breeding fish.

It is claimed that this lowering of the water in the mill pond is necessary for the purpose of removing the weeds which fill it, but the owners know by experience in former years the terrible consequences attending its sudden lowering, and should be held responsible by law for all damage done to those below them. It will take at least three years to replace the trout killed, but the market value of the trout lost does not represent one-tenth of the injury to either the State or Mr. Annin, to both of whom each fish represented a definite number of eggs, which are not only lost this year but for succeeding ones also. If there is no law which covers this case, and protects fish culturists from the acts, careless or otherwise, of people who may have property above them, then we suggest that one be framed and passed at the earliest opportunity.

## Sea and River Fishing.

### FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	
Grayling, <i>Thymallus tricolor</i> .	White Bass, <i>Roccus chrysops</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	Black Bass, <i>Micropterus</i> . (Two species.)
Lake Trout, <i>Salmo namaycush</i> .	Rock Bass, <i>Ambloplites</i> . (Two species.)
Mackinnow, <i>Esox lucius</i> .	Walleye, <i>Stizostedion vitreum</i> .
Pickering, <i>Esox lucius</i> .	Watersnout, <i>Channobryllus gulosus</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Crappie, <i>Pomoxis nigromaculatus</i> .
Pike-perch (wall-eyed pike), <i>Esox lucius</i> .	Chaparral, <i>Pomoxis annularis</i> .
Striped Bass, <i>Roccus lucidus</i> .	Onch, <i>Seneciole corporalis</i> .
SALT WATER.	
Sea Bass, <i>Centropristis atrarurus</i> .	"Trout," <i>Cynoscyon carolinensis</i> .
Sheepshead, <i>Acanthopagrus probatocephalus</i> .	Weakfish, <i>Cynoscyon regalis</i> .
Porgie, <i>Siganus argenteus</i> .	Shore Whiting, <i>Merluccius setiferus</i> .
Striped Bass, <i>Roccus lucidus</i> .	Croaker, <i>Micropogonias undulatus</i> .
White Perch, <i>Morone americana</i> .	Buclish, <i>Pomatomus saltatrix</i> .
Spot, or Latchet, <i>Leiostomus xanthurus</i> .	South Mackerel, <i>Scomber maculatus</i> .
Spot, Redfish, or Channel Bass, <i>Scomber molle</i> .	Cero, <i>Cyprin regalis</i> .
Tautog, <i>Tautoga onitis</i> .	Butte, <i>Sardinia sardina</i> .
Pollock, <i>Pollockus carbonarius</i> .	Kingfish, <i>Menticolus nebulosus</i> .

In Maine until Sept. 30th.

### ALASKAN ICHTHYOLOGY.

SITKA, June 1st.

SPRING is gone, but not with it the great deposit of snow, which still covers the mountains to such extent that prospecting and quartz mining are still impracticable. We have passed through the most severe winter recorded in the annals of Alaska, but the spring has been almost continually pleasant. I doubt if there is a spot in the temperate zone where the "precipitation" has been less than that at Sitka, whose climate has been so much belied. During March, April and May there has been rain or snow on 468 hours, or on less than 21 per cent. of the time, and there has been blue sky and sunny weather on 1,300 hours, or nearly 60 per cent.; and during the intermediate per cent. of the time there has not been altogether as much fog as I have seen on our eastern coast in half a day. By months: March, 81 days, 744 hours, rain 48 hours, snow 148 hours, blue sky 433 hours; April, 30 days, 720 hours, rain 117 hours, snow 8 hours, blue sky 401 hours; May, 31 days, 744 hours, rain 148 hours, snow 0 hours, blue sky 470 hours. Can such a climate be justly termed "sunless" and made up of "fog and fog"? But when more rain we would have been better off in many ways; the snow would have washed off the mountains, and the citizens would not have been troubled with a scarcity of water. It may turn out that this temporary stoppage of mining developments in this vicinity will prove a blessing in disguise. A large number of men who have been wintering here have lost their hopefulness, as their "stakes" diminished and have taken advantage of the invitation brought by the Indians, who

last fall went from here to the Chilcat country upon the occasion of the shooting in a drunken row of the Chilcat Chief, Klotz Klotz. And on the 20th an expedition, consisting of five boats, viz., the Chilcat Chief, Capt. Edmund Bean; the May Flower, Capt. Robt. Duggan, the Industry, Capt. Wm. Zoble; the Sitka Jack, Capt. McCluskie, and the launch of this ship, the whole party under the command of Lieut. E. P. McClellan, a volunteer for the duty, started for the Chilcat country, and five days after were spoken within forty miles of their destination. With them went, as interpreter, "Dick," a nephew of the Chief, a man who is, for an Indian, reliable, and who brought down from his uncle the invitation to the miners to come. Dick's influence will be useful, inasmuch as he is the presumptive heir to the chieftainship through his blood, and he has further strengthened his claim by marrying, on his last visit, his aunt.

If this expedition proves a success, and the Chilcats yield to the advance of the whites, a terra incognita will be thrown open, and if, as is reported, there exists in that country valuable "placer" prospects, the results will be of great importance to Alaska. I am not very sanguine; self-interest teaches the Chilcats to retain in their own hands the trade with the interior tribes, and it will be only in showing them plainly that the coming of the whites will be their advantage that their consent can be obtained. *Nous verrons.*

Mr. Marcus Baker, of the Coast Survey, who arrived here by last steamer, and who, until the departure of the expedition, was engaged in magnetic work, accompanied the expedition.

The last two weeks have been very lively in Sitka: hardly had the sensation produced by the starting of the expedition died down than the town became again excited by the arrival of the schooner R. L. Handy, 19 days from San Francisco, with goods for a storekeeper, who, having seen the errors of his ways, has repented and promises to sell to us goods and groceries at something less than the exorbitant prices heretofore demanded, which have forced us to resort to Portland and San Francisco for our supplies. The arrival of a schooner may not seem to you much of an event, but five thousand arriving in one day does not produce the sensation that the Handy has. We have been here a year, and the arrivals have been, the California nine times, and one little schooner last fall with lumber. Hardly had the Handy got fairly out of sight when another schooner, this time the Yukon, Capt. Herrenden, of the Coast Survey, came in, 15 days from San Francisco, and to-day the little steamer Favorite, owned by Vanderbilt, came in from a trading voyage in Chatham Straits, and it is so that such a life is led here.

On board the Yukon I found my friend Dr. Tarleton H. Bean, and, of course, he and I have been deep in the subject of Alaska fish ever since. We have studied out and classified my collection, and for the benefit of your ichthyological readers I give you the list as willingly as I did Bean the bottles—a willingness as regards the latter more than shared by my better half, whose devotion to science is not such as to cause her to enjoy the occupation of the storekeeper shelves by pickled fish and reptiles. Partial list of salt water fish obtained in Sitka harbor:—

- No. 1.—*Bathymaster signatus*.
- No. 2.—*Sebastesichthys melanops*.
- No. 3.—*Chirus constellatus*.
- No. 4.—*Aspidocottus bison*.
- No. 5.—*Illemlipodius gibbsii*.
- No. 6.—*Lepidopsetta bilineata*.
- No. 7.—*Lepidopsetta* (to be studied.)
- No. 8.—*Chirus decagrammus*.
- No. 9.—*Cottus polyanthocephalus*.

Fresh water:—  
*Salmo trideus*.  
*Salmo clarki*.  
*Salmo spectabilis*.  
*Salmo bairdii*.  
*Salmo quinnet*.

My *Bathymaster signatus*, it seems, is my most valuable addition to the national collection; but two specimens of this have hitherto been obtained, one of which is in the possession of Prof. Cope, who originally described it in 1873, and the other is owned by the Alaska Commercial Company; both were obtained in Alaska. Bean's description of the fish is as follows:—

"It resembles the rock cod, except that the dorsal fin is continuous and extends along the whole length of back. On the head there are numerous prominent mucous pores. Our specimen is ten inches long and was caught over the ship's stern in March.

Examining my collection by the aid of the light of science I find myself compelled to own up that I didn't know half as much about trout as I thought I did. I'll correct a few of the mistakes which have occurred in my letters: First, as you will see by my list, I have not caught any *fontinalis*, which is rather mortifying, as I thought that my Adirondack experience had qualified me to be an authority on the subject. I knew they had square tails and crimson spots and various other peculiarities, but I didn't know that they were destitute of "hyoid" teeth, nor that the trout described by me as a *fontinalis*, but rather light for its length, and tail not quite so square as that of our eastern trout, *fontinalis*, was the owner of a set of the same sufficiently developed as to show him to be a *Salmo spectabilis*, of whom I never before had heard.

Next, the large trout described in my letter of May 11th as coming from a lake near Mount Edgemoor, and to me unknown, I find to be precisely identical with a trout described in my letter of Sept. 8th as a mountain trout, and that the species is *Salmo trideus*, that is, as far as can be judged from my collection of its characteristics. In everything but size Bean assures me that I describe an *trideus*, and my ten-inch bottle specimen confirms him, but thirty to thirty-six inches is a development beyond his expectations. The Edgemoor fish (we had both sexes) were outwilted with ripe ova and milt, and no other trout salmon procured thus far this spring is so far advanced.

I would like, through your paper, to inform H. Nichols and Hank Ruder that if this summer they catch in the original Piseco Lake or its tributaries a trout with hyoid teeth they had better send it, in whiskey, to the Smithsonian.

We have not yet got hold of any of the salmon trout, they not having run into the streams. Several have been taken by the Indians in their nets in salt water,

but they were eaten and none have been caught since Bean's arrival.

About the 20th of May a very beautiful trout was taken in large numbers from a little lake just back of the town, which on our chart is christened "Piseco Lake."

The habits of this trout are peculiar. Every spring, for about ten days, they are plentiful close to the shore, among the lily pads, and will bite on anything except a fly. Before and after this short season none are obtained.

My description of this trout is as follows: Specimen caught May 27th; length, 9½ inches; depth, 2½ inches; weight, 5 ounces; colors: back, dark brown, growing lighter toward median line, at which there is a longitudinal purple stripe extending from opercle nearly to tail, below the median line olive green, lightening to silver white on belly. The entire tinted portion of the fish has a beautiful golden iridescence, so much so that when looked on from the rear, being held in sunlight, the fish seems to be gilded. Excepting the belly, the surface is profusely sprinkled with oval black spots, which mark also the dorsal, adipose and caudal fins; the pectoral, ventral and anal fins are yellowish-tipped with crimson. Tail nearly square, but not as square as that of the *fontinalis*.

It has hyoid teeth, and we make it out to be the *salmo-clarkii*, a non-migratory trout from the fresh waters of British Columbia, Oregon and Washington Territory. None of those taken contained eggs, while the supposed *trideus* from Edgemoor Lake contained both eggs and milt, ripe.

Bean, who is indefatigable, has obtained several fish which I have hitherto known existed here, among which is a genuine codfish and some skates, all of which he has duly numbered and described.

The steamer Favorite brought over from the Hootze-noo banks, near Admiralty Island, quite a quantity of genuine cod, both fresh and salted, which we find to be quite as good as are the cod on our Atlantic banks.

Bean brought me the FOREST AND STREAM of April 23d and 29th, in which appear the letters from Henry Elliott and myself.

After this letter of E's, I conclude that my best plan is to give up, not my views, but the attempt to make with them any impression upon his preconceived opinions.

I will, however, in terminating my share of the discussion, simply protest against his endeavor to array Capt. Bailey—who is dead—against me, by quoting his honest and I have no doubt correct views as to "Alaska north and west of Sitka" as disproving my assertions in regard to Sitka and vicinity, and also to state, without any reservation, that Elliott's statement that, "one successful planting in four years is the rule at Sitka," is not true.

Year after year good crops are raised from seed furnished by their predecessors, and an "unsuccessful planting" is a rare exception.

And finally, I must protest against his statement that "Piseco agrees with him in the main." I decline to be placed on record as indorsing his views, which I most distinctly do not. "The war of potatoes is ended."

Strolling, to-day, along the beach, I saw, moored near a saw-mill which has been patched up and set to work, two immense spruce logs—one was 84 feet and the other 79 feet long, and very clear from knots. The lumbermen told me that they contained, one a little over and the other a little under 4,000 feet of lumber, and that such logs were plentiful within four or five miles near the water, and that, delivered at the mill, the two cost him \$10.

Some of the miners who have been hibernating here this winter have employed their time in cutting lumber, and there is on the beach a pile of spruce planks, gotten out by hand, with whip-saws and axes, many of which are from 40 to 50 feet long, 4 inches thick, and with very few knots.

June 9th.—The steamer is in, and I, of course, busy enough to justify my cutting short this letter. Unexpectedly to us she was "on time," an unusual event.

The launch sent with the expedition to Chilcat returned on the 5th inst., having perfectly accomplished its mission.

The gate has been opened, and a crowd of American miners are now prospecting this barren land with the full consent of the Indians, who have furnished to them all required facilities, and the tribes who have been making war at Wrangell have promised to cease hostilities.

Dr. Dall arrived on the steamer, and soon after her departure, he, in the Yukon, will proceed on his voyage to the Northwest.

The steamer brought me a jar of "oulachons" and some notes regarding them, which I will work up in my next.

*Dash va dania*—which is Russian for *au revoir*.

PISECO.

BLACK BASS IN THE DELAWARE.—This fish was unknown in the Delaware previous to 1875, when several thousand were placed in the river at different places between the Delaware Water Gap and Trenton by the Fish Commissioners of New Jersey and Pennsylvania. They grew very rapidly in the new home, as they have in every other instance upon record, and two years later "myriads" of young fish could be seen all along the river between the points named. The season for catching them opens June 1st, and closes in December, and all bass under six inches in length are prohibited by law from being taken at any time under a penalty of ten dollars for each fish. This law is constantly violated both in respect to the time and the fish and the season for catching. They are said to be "off their feed" in June for the reason that during that month they do not bite freely, but from the middle of July to the 1st of September they take the bait freely, and often do so far into October, although the close of September brings the close of good angling for black bass on this river. Probably the best fishing grounds are at Lackawaxen, Shohola, Pond Eddy, Port Jervis, Milford, Dingman's Ferry, Bushkill and the Water Gap. The fish are taken in great numbers, which they can reach going up on account of the dam of the Delaware and Hudson Canal Co., which was built and is used as a feeder to the canal. Here the fish seem to be larger than below, and a fishway should be provided for their ascent, as they seem to be crowding here to get up further. Few small ones are taken here, and in fact not so many in number as at other points lower down, but they are of a larger size.

## THE MAINE PONDS.

HYDE PARK, Mass., Sept. 2d.

### Editor Forest and Stream:—

Although it seems almost useless to attempt to write about the Maine woods, after reading the many and glowing accounts of the hunting and fishing in Maine which have appeared in your valuable paper since its first publication, yet I wish to make known to the readers of FOREST AND STREAM a part of Maine known to but few, because heretofore difficult of access. This is the region about Eustis, a town about fifty miles north of Farmington. Within about twelve or fifteen miles of Eustis hills are situated many ponds, of which Tim Pond advertised in your columns is one, and the only one which has had any good accommodations for sportsmen, and Alder Stream Pond. The nearest pond to the mill is Jim Pond, distance about three and one-half miles, which is reached by boat on the North Branch of Dead River, two miles, and a carry of a mile and a half over a good lumber road. At this pond Mr. O. A. Hutchins, of Eustis, under whose guidance I, with a genial companion, spent two happy weeks this summer, has just completed a fine new log camp, eighteen feet square, for the benefit of sportsmen, and with a stove and many other conveniences. This pond abounds in lake trout, *Salmo namaycush*, speckled trout, *Salmo fontinalis*, and a fish which I took to be land-locked herring, but am not sure.

By taking a team to haul the baggage to Ledge Falls, three miles, where one will find another camp just built, he can reach the chain of ponds, distance twelve miles by North Branch, which can be reached by boat in a few short carries. Here one can find a good camp, good fishing for lake or speckled trout, while there is no better spot for deer, moose or caribou, and from here several other ponds can be reached, which literally swarm with trout, while the scenery of the whole region is wild and beautiful, always changing as one moves from point to point.

If one does not wish to go to the chain of ponds, he can go by three miles to Ledge Falls to Alder Stream, famous for its trout, up Alder Stream one and one-fourth miles, then a carry of five miles, and he will come to Alder Stream Pond, a sportsman's paradise. Here one will find a new and well equipped camp, built under the directions of Mr. Hutchins. A pond so clear that one can see trout fifteen or twenty feet below the surface, and full of the handsomest silver-sided speckled beauties I ever saw, and enough to last for years if only true sportsmen go there. The scenery is delightful, and the woods full of deer, caribou and ruffed grouse.

Mr. Hutchins, with his usual enterprise, is having a road cut through to Spectacle Pond, Kibby and Spenser Streams, King and Bartlett Ponds, and Spenser Pond, on all of which he intends to build camps and boats for the benefit of sportsmen. Such forethought for the comfort of sportsmen ought to be rewarded, and I hope that Mr. Hutchins and the other guides of Eustis who are assisting him in this good work will receive the patronage they deserve. This new road to the ponds just mentioned will be completed by the 12th of September, just the time for good fishing and hunting, and letters addressed to Mr. O. A. Hutchins, Eustis, Franklin County, Maine, will receive prompt attention, and the writer will receive in return reliable information.

The fare from Boston to Farmington and return, \$9.50, from Farmington to Kingfield by stage, twenty miles, \$1.50, from Kingfield to Eustis, twenty-eight miles, \$1.50, I think. So that the fare from Boston to Eustis and return will be about \$16. This is the time of year when they catch the most and largest trout, during September and October.

E. D.

TIM POND.—Eustis, Maine, Aug. 24th.—I am here again, just arrived. This is my third annual visit to Tim Pond, and I have made great improvements, since first I came here, in boats, cabins, road, horses, etc. When I reached here all the camps were full (except the new one just being finished) with those here for the second time. They tell me trout and hunting were never better here or elsewhere than now. After a few hours with the rod and gun I find they are quite right. Am told large game is plenty, and the right sportsman are now coming here to take such. It is now necessary to reach here from New York or Boston, Conn., to Farmington by rail, then Dan River stage will take passengers direct to Kenny Smith's Farm House. From his house he runs buckboards seven miles to the cabins. Parties can always be accommodated by engaging "apartments" in advance.

J. WARREN TUCK.

THE HOLE IS LEFT YET.—Rangleley Lakes, Camp Kenabago, Aug. 23d.—Below you will find a schedule of the size and number of trout taken in the Moosehead, Gunite Lake, Aug. 28th, by Mr. Rodgers, of Mansfield, Mass., except in the case of Rufus Crosby, of Rangleley, Maine. They say round a little fishy to some of your readers, and I may as well state that I did not see them myself, but copied the list from one who did, and I have good authority for giving this as correct. They were taken in from thirty to forty feet of water. Time, from 1 P.M. until 5: One of 84 pounds, one of 74 pounds, one of 55 pounds, one of 44 pounds, two of 4 pounds, one of 3 pounds, three of 3 pounds, one of 2 pounds, six of 1 pound; total, 39 pounds.

FRED.

MINNESOTA FISHING.—A correspondent who has been fishing some of the Minnesota lakes, kindly sends us the following notes:—

On coming to be the best fishing in the State, Lake Tetonka is the best place, and abounds with pike, black bass and croppie. Rock bass are also very abundant. I caught a fine string of them, large ones, that would average nearly a pound, but on opening them I found that their flesh was filled with parasites. These seemed to be black cysts, covered with short hairs or fuzz. They were about the size of a hen's nail. I presume these are cysts that inclose the animal, whatever it is. Black bass at

first refused to bite, but yielded at last to the seduction of grasshoppers. I caught many croppie, all very large and fine, weighing about two pounds. In another lake near by I found the common sunfish, or sun perch, in wonderful abundance. I caught several that would weigh over a pound, the largest was 14 pounds. By natural fly-fishing any number can be taken. They rise readily to the artificial fly, but always contrive to nip so gingerly as not to get harmed, whereas they swallow the natural fly. This manner of biting appears to be common to the whole perch family, and even bass must be allowed to swallow the bait before being struck.

**MAXINTUCKEE.**—*Indianapolis, Ind.*—This lake is in the southwest portion of Marshall County, Ind., twelve miles from Plymouth and nine miles from Argus. It can be easily reached from either station by hack lines running backward and forward. Maxintuckee is derived from an Indian chief who was drowned long before either you or I can remember, but the old settlers around there have often related to me the circumstances as told by their grandfathers. The chief's name was Maxintuckee, and he lived with his squaws on the banks of the lake. He met a beautiful princess, who came with her father to fish in the lake, as was his wonted custom every summer; and he wooed and won not, which threw him into a fit of despondency, and now his remains lie at the bottom of the lake, where the fish swim into his hollow body and the turtle crawls around in his skull; but little do we, the merry, jolly lot of boys and girls, think of this poor Indian whose name we hear mentioned every day. The lake is surrounded by hills covered with woods, which offer some beautiful spots for club-houses. The bottom is clear to a wonderful depth, and everywhere around the lake is a smooth, sandy slope from the shores to the center. Not a place around the whole lake can there be found a "step-off," which makes it an unusually fine bathing place. The varieties of fish caught there are bass, perch, goggle-eyes, etc., but those who go there do not fish much, for the fishing is rather poor, it having been fished so much in the last year or two. In the creek season there is good sport, and the real sportsmen bank of Lost Lake, the outlet of Maxintuckee, offer splendid protection for the hunter. There are eight club houses here, and it is fast growing to be a summer resort instead of the wild, desolate spot where the sportive bass and the nimble squirrel made their home a few years ago, and we fellows, who wish for solitude, where we can fish, hunt and camp undisturbed, must look elsewhere hereafter.

**A BIG TROUT.**—*Cleveland, Ohio, Aug., 23th.*—I inclose the following clipping from the *Leader*: "In your issue of yesterday, you spoke of two trout just received from the Sault, measuring seventeen and eighteen and a half inches respectively, and saying that your columns are open for further statements. Arthur Cogswell caught in the Nepigon River and sent home last week a speckled trout measuring twenty-two inches in length, and weighing six pounds two ounces when taken from the water. Affidavits of reliable parties as to weight and measurement can be had if necessary." H. S. C.

✓ I was a member of the party to which Cogswell belonged, and weighed the trout mentioned, when taken from the water, on a pair of scales tested both before and after our trip. I am willing to take my affidavit that it was a genuine brook trout, and weighed six pounds and two ounces. We caught as near as can be estimated, two hundred trout that would weigh from three and a half to five and a half pounds, besides any quantity of smaller ones. This, however, was the largest. L. H. COWLES.

**STRIPPED BASS FISHING IS GOOD.**—The fishing for striped bass has been good at many points along the Atlantic coast this season. Last week Mr. J. W. Little, of New York, caught fifteen in three days at Narragansett pier, the smallest of which weighed eight pounds, and the largest one forty-two pounds. The latter was exhibited at Sutherland's restaurant on Liberty street, and afterward was served up at that fashionable eatery.

✓ Pennsylvania papers chronicle rockfish (the same animal under another name, and therefore just as sweet) as plenty in the Delaware. Even as high as Harrisburg they get them of half a pound weight in considerable numbers. In former years we used to take them at Albany, with a bait of sturgeon spawn, but alas, the bass and sturgeon have both gone.

✓ **NEW FISH.**—Another new fish has been found by the U. S. Fish Commission. In a recent note from Prof. Goode he says: "We have found a remarkable new fish of a new genus and probably of a new family, related to the family *Ateleopodidae*, hitherto only known from Japan. It is about three feet long and looks like a young sea serpent. It came from the stomach of a ground shark, taken by the schooner *The Gatherer*, on the Grand Cayman. We have christened it *Belorus voraginorum*. The description will appear in the next signature of the proceedings of the National Museum.

**THE "BLUE GILE" TRIP.**—*Fort Wayne, Ind., Aug. 25th.*—But four of the club went. They kept no diary, but reported bass and pickered fishing immense. One member lost in Pickered Lake a fine split bamboo rod and appurtenances. They further reported the lake very high, and the grayling streams too high to fish while they were there. They had a grand time. W. D. M.

**SALMON CANNING.**—Shipments of canned salmon from the Columbia River, Oregon, this season have been moderately active thus far. The bulk of it, 330,000 cases, has been distributed to the markets of the world from San Francisco.

# PUBLISHERS' DEPARTMENT.

**SCIENTIFIC SUCCESS.**—An American college of physicians once offered a reward for any authenticated case of genuine Diabetes which had been entirely cured. The offer remained open for several years and was never drawn. Were it in force now, it would instantly be secured by the proprietors of Warner's Safe Diabetes Cure, for several remarkable recoveries have just come to the notice of the writer. Diabetes is a most deceitful disease, and seldom makes its appearance until its results. Any readers who are suffering from ill health, and do not know the cause, should not delay, as it may be at the cost of life, which Warner's Safe Diabetes Cure is guaranteed to save.

## Game Bag and Gun.

—Address all communications to "Forest and Stream Publishing Company, New York."

### GAME IN SEASON IN AUGUST.

Moose, *Alce americana*.  
Caribou, *Rangifer caribou*.  
Elk or wapiti, *Cervus canadensis*.  
Red or Virginia deer, *C. virginianus*.  
Squirrel—red, black and gray.  
Hares—brown and gray.  
Rice bird, *Dolichonyx oryzivorus*.  
Wild turkey, *Meleagris gallopavo*.  
Hunted grouse or partridge, *Caprimulgus cupido*.  
Tufted grouse or pheasant, *Phasianus torquatus*.  
Quail or partridge, (*turnix virginianus*).  
Sora, rail, *Porzana carolina*.

"This enumeration is general, and is in conflict with many of the State laws."  
"Hay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, surf bird, phalaropes, avocets, etc., coming under the group *Limacoe*, or shore birds. Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

**EFFECTIVE GAME PROTECTION.**—Maine is on the right track. The game laws there are respected; or, if they are not respected, the game commissioners are quick to punish offenders. The *Portland Press* of the 20th inst. has this very encouraging report of the present condition of affairs:

"Within the present year the powers and duties of the Commissioners of Fisheries for Maine have been extended (as also of wardens) so as to apply to the enforcement of the game laws. Already there have been many offenders apprehended and fined for killing deer and birds during close time, and one of the more recent cases was a violation of the law on woodcock, that cost the offender \$40 and costs—a total of \$80—shooting woodcock before Sept. 1st. In all these cases one half the fine is paid to the prosecutor. In the instance referred to, the prosecution was made by one of the commissioners, and he received the amount to which he was entitled by law as prosecutor (\$20), but gave it to the County Treasurer for the benefit of the poor of the county in which the offense was committed."

"The commissioners prosecute every case of violation of the fish and game laws of which they have knowledge whenever the necessary evidence can be procured. If the Legislature of each succeeding year grants the necessary appropriation for the support of this department the fish and game laws of the State will each year be as well enforced as our laws."

"Printed abstracts of the general law of the State relative to fish and game have been distributed, so that there need be no transgressions through ignorance if no change is made in the existing well known and excellent laws."

"The next annual report of the Commissioners of Fisheries and Game will probably afford some profitable reading, especially for those who have been in the habit of ignoring the laws of this State."

The following comes to us from a Portland correspondent:—

**Scene**—Thode Davis' Gun Store, Portland, Maine. **Time**, 1 P. M., Aug. 28th.—**Enter Dr.**—**Clerk**—"Doctor (who had been after game with an old carbine), Everett Smith will be after you." Before a reply could be made the Doctor was called aside by a gentleman and entered into conversation with him. A minute or so elapsed, when to the surprise of the clerk, Mr. Smith, accompanied by his superb setters, as usual, dropped in after some shot. While the clerk was filling his order the Doctor turning from his friend who went out, addressed the clerk in answer to his sally, and averred that he would do regardless of Everett Smith.

**Everett Smith**—"Sir, my name is Everett Smith, and as you seem to be addressing your remarks to others, I inquire why you do not address me?" The Doctor's face flushed not a little, the clerk's countenance darkened, and an introduction and explanation followed. The Doctor was asked for the clerk's name, and he replied, because he now knows who the Game and Fish Commissioner was, and also that he believed Mr. Smith when he said that whoever broke the laws, be he whoever he may, persecution would follow if proof could be obtained.

SPECTATOR.

**RAIL SHOOTING.**—*New York, September 3d.*—On last Tuesday evening I went to Hackensack to catch the first day of railbird shooting. I had some trouble in getting a pusher, as they were almost all engaged. In the morning at 5:30 the tide began to rise in the meadows, and we started. There were altogether about twenty-five boats out or starting at that time. The meadows, which are not more than a mile long and a quarter wide, were full of birds. I having a muzzle-loader, and missing the first nine birds, only got or shot twenty-one, four of which we could not find on account of the reeds being so thick. Other shooters with breech-loaders did not get less than thirty-five. It was very hard work for the pushers, the tide being so low and the reeds very strong and close. The sun also was very hot, it being altogether a very warm day. Under your heading of "Game Bag and Gun" I don't see any mention of rail. Are they known by any other name than that? As this is the first time I ever shot them I don't, of course, know much about them. If you have another name will you be so kind as to let me know through your paper? If any of your readers who cannot spare more than a day from their business want to go, they can take the 8:12 P. M. train on the Midland railroad from Jersey City. When they get to Hackensack they can inquire for the Franklin House, where they can get a pusher and stay over night. If they wish a good pusher they can inquire for Mr. Leonard Terluene, who will give them a good day's sport, as he knows every inlet and outlet in the meadows, upon which he has shot ever since he was a boy. Can you tell me where there is a good place for quail shooting

near here? I am a great lover of the sport, but I have not the means to go far, nor can I stay from my business more than two days at a time. Hoping I have not taken up too much of your time, I remain, G. E. J.

There is no quail shooting in this vicinity at this season of the year.

**A PRACTICAL GAME CONSTABLE.**—*North Tarrytown, Sept. 5th.* **Editor Forest and Stream.**—In my opinion, the first step toward enforcing the game laws is to let people know the law. I would, therefore, suggest that each game protective association have a number of copies of the game laws printed in poster and handbill form, which can be done at a small cost, and distribute the same among farmers and wherever they will do some good. It would also be well for the game protective associations throughout the State to see that good men are nominated and elected as game constables at the town elections in the spring of each year, for often there are men selected only to fill up the election ticket (and I know some that could not tell a partridge from a snake or a trout from a sucker). On the solicitation of some of my sportsmen friends I accepted the nomination and was elected to the office of game constable at the election of last spring. After I was sworn into office I made up my mind to enforce the game laws if it was a possible thing to do, and the first thing I did was to have the laws published in the local newspapers (a thing that I have done from time to time for a number of years), and then I had, at my own expense, 250 copies of the law printed in circular form, and distributed the same among the farmers and wherever I thought they would do some good. It is astonishing to see how much interest a good many people take in the game laws since they knew that there is some one looking after them. Some of the sportsmen hereabouts think that the season for woodcock should not open until Sept. 1st, instead of Aug. 1st, and I think they are right, for there are a good many partridge shot during August while men are hunting for woodcock.

A GAME CONSTABLE.

The right man in the right place will always find some means of accomplishing a desired end. The way our correspondent has gone to work to perform his task proves that he is the man for the position. With the game laws in simple, plain shape posted in the village post office, railway station, and in the baggage cars of the trains, no one can plead ignorance of the provisions.

**SHOOTING NOTES FROM MINNESOTA.**—*Fairmont, Minn., Sept. 1st.* **Editor Forest and Stream.**—The recent wholesale poisoning of bird-dogs in Cottonwood County, and the equivocal tone of the local press (notably *The Windom Reporter*) in regard thereto, are still topics of peculiar interest to non-resident sportsmen in Minnesota. True, the people of Windom, many of whom chuckled over the discomfiture of "them dandy sportsmen," are now changing their tone and explaining things away, as they begin to perceive that the disasterly act was also a lamentable blunder, for the owners of valuable dogs have not been slow to shake the mud of Windom from their boots and seek their sport in less perilous regions. In future the pot-hunters of Windom will have things pretty much their own way, but the hotels and business houses of the village, as well as the neighboring farmers, will probably miss the ready cash which the average visiting sportsman lavishes so profusely during the hunting season.

[**Note.**—It has been maintained with a good deal of plausibility, that more money is annually brought into the State by sportsmen than the average net profit of the wheat crop will amount to.]

Prairie chickens are unusually abundant; this year, here in Martin County, notwithstanding a three weeks' fusillade, the grouse seem as numerous as ever, while ducks and geese are already beginning to fly. All things considered, Fairmont is the best hunting center your correspondent has yet found. Its hotel (the Occidental), is probably the best in the Western country; neat, spacious and well conducted, with good liveries and well posted drivers. Lucas, of St. Louis, is here with his famous Irish brace, Erin and Biddy. The St. Louis Kennel Club is camped a few miles south of town. Sanborn, the breaker of Nellie, winner of last year's brace stakes at Patoka, is training some magnificent Llewellyns, among them Count Noble, Dashing Lyon and Little Lady, names which will probably be heard of hereafter. Whitford, who has been master and trainer of the St. Louis Club, is also here, having with him some twenty dogs. The grouse in this section were rather early and are now full-grown. Their flight is about equal to that of a November quail, demanding fair skill on a thirty yard rise, and affording fine sport.

WAUSE.

**AN AIRDRONACK TRIP.**—*Minerva, Essex County, N. Y., August, 1880.*—Leaving New York on the 11 P. M. train Monday last brought our party into Albany about 6 A. M. Tuesday, when we changed cars for Saratoga and again for North Creek, N. Y., via Airdronack Railroad, thence by private "back board," sixteen miles, into the woods of our present log cabin, "Aiden Lair Lodge," where we are very comfortably cared for by the genial Tom Murphy, who does his utmost for the comfort and happiness of his guests.

The past week has been devoted to fishing, with the exception of one morning, when the dogs were started on a deer scent, and were stationed at the different runways to the Boreas River and Long Pond. An old dog and fawn were started by the dogs, but they were shot, instead of down, as intended, so we did not get a shot, but we saw the tracks and unmistakable evidence of numerous deer within two miles of our "lodge."

Next morning, with Fred Loveland to guide, we started to fish the Van De Whacker River, and such trout are not often seen as we brought back—one weighing one pound and a quarter, and six or seven more weighing from three-quarters to a pound each, besides the small ones from two or three ounces up. We brought back fourteen pounds of brook trout, all caught within a distance of two miles fishing on the Van De Whacker River.

We fished one day on the Hewitt Pond (which is down on Stoddard's map of the Airdronack Wilderness, and a pretty accurate guide it is), where two speckled beauties weighing four and one-half pounds were captured by

to say the extremes North, near our great lakes, and not the North or South, as is usually spoken of or understood

as such. Now, as to the size or weight of our modern cockers, I think that thirty pounds should be called the limit, although twenty-five to twenty-eight pounds is of course preferable for work, and even as light as eighteen to twenty pounds, where desired mostly for pets and house dogs, is admirable. This is an age of improvement, and cockers are better to-day than ever before, and certainly nothing could have been done to improve their usefulness for American work, more than the increase of their size, bone and muscle, from the old eighteen to twenty pounds breed to the present twenty-five to twenty-eight pound ones. I have repeatedly found that in measure of the fine specimens of the breed that twice the length at fore shoulders is the almost equal length from end of nose to root of tail, and an inch and a half or two inches either way detracts from the dog's beauty and usefulness. The hair should not be curled, but wavy and silky, neither should it be flat, as some advocate, although I have seen fine specimens with coats perfectly flat; but I always look rather suspiciously upon such. The tail, ears, breast, legs and belly should be well feathered with nearly straight hair, rather coarser than their body coat. As to the standard color, or truest color, in spaniels, I am aware that I shall differ from many who are so-called competent judges, for I consider liver with no white to be the truest and best, the genuine color originally of the spaniel race, and perhaps liver and white ticked has nearly as good a claim, as black, or black and white, or black and tan, are certainly introduced colors, and do not belong to the cocker at all, and especially the modern cocker as it should be; although many have adopted this color and inbred and interbred them until they scarcely showed the foreign blood; but this color has never given satisfaction to its breeders, it benefitted the cocker race, and I am certain it never will reach the standard of perfection that the old standard liver, or liver and white, has done. Orange and white, or lemon and white, has been the rage of them, an impossible produced color, as under color of a ticked animal and white will produce orange and white, or lemon and white occasionally, and the idea that lemon or orange indicates lumber blood is, I believe, as absurd as to say that those colors in the lumber spaniels come from introduction of cocker blood. One argument is as good as the other, and both are absurd. Orange and white, or lemon and white, although admired by some, will never give more satisfaction to their breeders than the black or black and tan have, although good cockers of these colors find a ready sale. The ears of all cockers should at maturity be long, and well covered with long silky hair, not too close, and not too low upon the head, they should trail the cheeks; a fine ear, on any dog I hold as a sufficient indication of powerful olfactory organs, or powers of smelling, and on this point I find I agree with nearly all the old time breeders. As fashion changes, so do dog's tails. Fifty or sixty years ago fashion demanded that cockers' tails should be docked to only one-third of their natural length, but I am happy to see that they are now permitted to wear about one-half or two-thirds of its original length. This I think to be an improvement, both to their beauty and style. One-fourth to one-third removed is, I think, about right, as it removes that part which becomes stiff and brittle, and the brush and bristles, and leaves enough tail to have a nice, neat, and handsome waving to the same. I shall not now go into further description of modern cockers, but may perhaps, ere long, with your permission, give you my ideas as to their necessary qualifications in manner of judicious breeding, breaking, etc.

SPANIEL.

## J. H. WHITMAN'S KENNEL

WHILE on a trip recently through the West, it was our good fortune to form the acquaintance of Mr. J. H. Whitman, of Chicago, a gentleman of large railroad experience, having been connected with one of the leading Eastern lines for nineteen years as manager of their passenger business from the West. From him we received much valuable information regarding the most noted resorts of sportsmen during the open season. For his invitation we visited his kennel of fine dogs for sportsmen, and in telling your readers might like to say some of the stock we took the liberty to say that we saw. The dogs were first inaugurated he was one of the most prominent parties in establishing them. His dog Grouse, a handsome lemon and white dog, took the first prize ever given at a show in this country; this was at the Dexter Park, where a number of sportsmen were holding a pigeon shoot, having agreed to bring their dogs for friendly competition. Soon after, a large show was given in Exposition Building, Chicago, where Grouse won first prize as the best dog of the exhibition. This dog Mr. Whitman fails to speak of, he considers him quite a failure, has owned since; still keeping the breed, and crossed with recent importations of field trial, or Laverack setters, he claims there are none superior. When therage for claiming names for dogs through the columns of sporting papers first originated, he claimed the name for this breed of prairie rangers, by which they are known in the West; he has now two dogs and one bitch which he prizes very highly. Prairie Ranger, Prairie Joe, Prairie Fly are the names; the first is a daughter of Grouse, and the second Charm, out of a daughter of Grouse, and the third is Nelly, both noted wherever known for their extra field trial. The Ranger is a large fine looking animal, pure white with the exception of lemon ears. Joe is also large, lemon and white ticked, with dark eyes and nose. Fly is much smaller, but equally well made. In examining these dogs it was plain to be seen that in muscular development they were very superior; fine glossy coats, legs and feet that looked as if they could stand any amount of work, and Mr. Whitman is proud of them from the fact that they are the offspring of Charm, whose record is placed very high during the heat of discussion regarding Minnesota Field Trials, by the editor of a Western sporting paper.

Charm is a descendant from the noted Pride of the Border and Fairy, a well-formed animal, but not of a fashionable color, being like his sire, liver, and white and of a rather rusty liver, when we saw him. He was purchased at a nominal figure, as the party owning him did not consider him valuable, but Mr. Whitman saw in him what his experience in breeding had often demonstrated, that it was not the best looking that always got the best stock, in which Charm progeny proved he was correct. He is considered one of the most valuable dogs in the

Pride. Blue Dash, a handsome blue belton setter, by Pennel of the Borders and Dorra, is a grand dog all over, and very intelligent. He is of the Laverack type, and is the best at him one would think he was slow, yet he is equally fast with the best, and his endurance is beyond question. We were astonished at his intelligence, seeming to understand exactly every order given him, which he cheerfully obeyed; he is the pet of the family, with whose little daughter he likes to be most of the time. Blue Drake, his son, of pure Laverack setter Diamond, is marked exactly like his father, although young, will when fully developed be fully as good a dog as his father. She is a bitch, by Blue Dash out of Jolly May, is yet a young one, nine months old; she has a black and white head and blue ticked body; she goes into breaker's hands this fall, promising to sustain the reputation of her sire. Pride, Judy and Flora are by Charm out of a lemon and white native bitch; they are all lemon and white. Pride and Judy are fully trained, as one could plainly see by their action in a field where they were shown. Prairie Queen is a large, powerful bitch, with a fine head, long neck, and a grand body; she was in whelp to Charm. She is a sister to Prairie Belle, winner of first prize at Minnesota Field Trials, also to Prairie Rose, winner of second prize at Nashville. Milley is a very fine white bitch with ticked body; she is by the noted Rob Roy out of Warrington's Daisy. She was secured to breed from, her progeny having been not only handsome, but extra good in the field. Flirt is a large, clean cut and game looking bitch, by a Scotch setter head, bred and bred by Geo. Waddington, out of Milley. Clifton, her brother, is the grandest young dogs we have seen; he has not yet been trained, but shows wonderfully well in the field, and goes into training next week. He is liver and tan head, liver spots on side, balance white; these are by Druid, it will be seen that no better combination of blood can be found in any kennel; and these animals show fine care. Mr. Whitman says he shall have five or six as well trained dogs as his fall, several of them having been trained by him in trainers' hands two years. He has a pair of young dogs thoroughly broken, although it does cost some money, for he has but little time to spare from business for shooting, and when he does go the great pleasure is in seeing his dogs work to perfection; none of his dogs, that he claims are thoroughly broken, cost less than \$75 to break them. Besides the setters mentioned he has as fine a pair of Scotch deerhounds as one seldom sees, and we predict he will win first prize at St. Louis, and we predict he will win it. He has a pair of pointers, but our lot to see one equal to him. The bitch was not like as well, notwithstanding she was imported and from good strains. Of the cocker spaniels, of which he has some beauties, I shall speak in future letters.

ENGLISCHE DOGGES\*

The fifth Section of this  
*treatise.*

Containing Curres of the mungrell and rascall sort and  
first of the Dogge called in Latine, *Admonitor*  
and of vs in Englishes VVappe  
or VVarner.

O *f such doyes as keep not their kinde*, of such as are mingled out of sundry sorts not imitating the conditions of some one certaine spise, because they resemble no notable shape, nor exercise any worthy property of the true perfect and gentle kind, it is not necessarye that I write any more of them, but to banish them as unprofitable implements, out of the boundes of my Booke, unprofitable I say for any use that is commendable, except to intertaine straungers with their barking in the streete, or giuing warning to them of the house, that such & such be their name, whereupon we call them admonishing Dogges, because in that point they performe their office.

Of the Dogge called Turnespete in La-  
tine *Veruuersator*.

There is comprehended, vnder the cures of the courtest kinde, a certaine dogge in kytchen seruice excellent. For whe any meate is to be roasted they go into a wheele which they turning rounde about with the waight of their bodies, so diligently looke to their businesse, that no drudge nor skullion can doe the feate more cunningly. Whom the popular sort hereypon call Turnespets, being the last of all those which wee haue first mentioned.

Of the Dogge called the Daunser, in Latine  
*Sallator* or *Tympanista*.

There be some dogges among vs of a mungrell kind which are taught and exercised to dance in measure at the musicall sounde of an instrument, as, at the first stroke of the drombe, at the sweete accord of the Cyterne, & tuned strings of the harmonious Harpe showing many pretty trickes by the gesture of their bodies. As to stand bolte upright, to lye flat vpon the grounde, to turne round as a ringe holding their tails in their teeth, to begge for their meate, and sundry such properties, which they learne of their vagabundiall masters, whose instruments they are to gather gaine, withall in Cite, Country, Towne, and Village. As some which carry olde apes on their shoulders in coloured iackets to moue men to laughter for a litle lucre.

Of other Dogges, a short conclusion, wonderfully ingendred within the coastes of this country.

Three sortes of them,	{	The first bred of a bytch	In Latine
		and a wolfe,	<i>Lyciscus.</i>
		The second of a bytyche	In Latine
		and a foxe,	<i>Lacena.</i>
		The third of a beare and bandogge,	In Latine <i>Vrcanis.</i>

**O**f the first we have none naturally bred within the borders of England. The reason is for the want of wolves, without whom no such kinde of dog can bee in-  
 \* *Of English Dogges, [the] diuersities, the names, [the] natures and the properties. [A] Short Treatise written in latine [by] Johanne Cloude of the same [un]iuerſitie, Doctor of Philosophie [in] the [un]iuerſitie of Cambridge [and] lately drawne into English [by] Abraham Fleming student, [Natura etiam in brutis vni uersalium. Scene and allowed. [Imprinted at London [by] I. C. and sold by I. W. at the doore ouer against S. Sepulchre's Church without [Newgate] 1578.*

gended, Againe it is deliuered unto thee in this discourse, how and by what meanes, by whose benefitte, and within what circuite of tyme, this country was cleerely discharged of rauenyng wolves, and none at all left, no, not to the least number, or the beginnyng of a number, which is an *Vuari*.

Of the second sort we are not vtterly voyde of some, because this our English soyle is not free from foxes (for in deede we are not without a multitude of them in so much as diuerse keepe, foster, and feede them in their houses among their boundes and dogges, eyther for some maladie of mind, or for some sicknesse of body.) which peraduenture the saviour of that subtile beast would eyther mitigate or expell.

The thirde kinde which is bred of a Beare and a Bando-  
dogge we want not heare in England.

And why should not this bee consonant to truth? why should not these beastes breede in this lande, as well as in other forreigne nations? For wee reede that Tigers and dogges in *Hircania*, that Lyons and Dogges in *Arcadia*, and that wolves and dogges in *Francia*, couple and procreate. The *Vreane* which is bred of a beare and a dogge,

Is feare, is tel], is stoute and stronge,  
And byteth sore to fleshe and bone,  
His furious force indureth longe  
In rage he will be rul'de of none

That I may vnt the wordes of the Poet *Gratius*. This dogge exceedeth all other in cruell conditions, his lering and fleering lookes, his stearne and sauage visage, maketh him in sight feareful and terrible, he is violent and mightie, whosoever he setteth his tenterhook on, he maketh such shew of his strength, that he may teether seare and rende him in sunder, then lose him to separate his chappes. He passeth not for the Wolfe, the Beare, the Lyon, nor the Bull, and may worthily (as I haue said) be compariu with *Alexanders* dogge which came out of the East, these, thus much, and thus farre may suffice sufficient.

A starte to outlandishe Dogges in this conclusion,  
not impertinent to the Authors purpose.

V Se and custome hath intertained other dogges of an outlandish kinde, but a fewe and the same beyng of a pretty byrgesse, I meane Iseland, dogges, are so rough al ouer, which by reason of the length of their heare make shewe neither of face nor of body. And yet these curres, forsooth, because they are so strange are greatly sought by, esteemed, taken vp, and made of many gentlemen, for their gentile and comfoter. The natures of men is so moubd, they are so curious in nouelities without all reason, yet, iudgement or perseverance. *Eromen dlotritus, parvomen singenis.*

Outlandishe toyes we take with delight  
Things of our owne nation we haue in despight.

Which fault remaineth not in vs concerning dogges  
 Only, but for artificers also. And why? it is to manifest  
 that wee disdayne and contempe our owne workmen,  
 be they neuer so excellent, be they neuer so skillfull,  
 be they neuer so cunning. A bегgerly beast brought  
 out of barbarous borders, fro' the vttermost countreys  
 Northward, &c., we stare at, we gaze at, we muse, we  
 maruaile at, like an asse of *Cumanum*, like Thales with  
 the brassen shanks, like the man in the Moone,

The which default *Hippocrates* marked when he was alyue as evidently appeareth in the beginnyng of his booke *Peri Agmon* so intituled and named :

And we in our worke entitled *De Ephemera Britannica*, to the people of England haue more plentifully expressed, In this kinde looke which is most blacklishe, and yet most waspish, the same is most esteemed, and not among Citizens only and lolly gentlemen, but among the learned, and noble men, and daintie courtier ruffling in their robes. Further I am not to wade in the foorde of this discourse, for it was my purpose to satisfie your expectation with a short treatise (most learned *Conrade*) not wearysome for me to to wryte, nor tedious for you to peruse. Among other things which you haue receaued at my handes heretofore, I remember that I wrote a seuerall description of the English Rogge, and there are but a fewing of them, and therefore will seldom be taken notice of, and of other kyndes you your selfe haue taken care in writing of them both lyuely, learnedly and largely. But because wee haue drowne this libell more at length then the former which I sent you (and yet brier than the nature of the thing myght well beare) regarding your more earnest and necessary studies, I will conclude this libell with a few words, and so leave you to the use and sake) of certaine specialities, concerning the whole body of this my breuiary. And because you participate in the chief pleasure, in the knowledge in the common and vsuall names of Dogges (as I gather by the course of your letters) I suppose it not amysse to deliuer vnto you a shorte table containyng as well the Latine as the English names, and to render a reason of euery particular name, so that euery thing may be sifted to the bare bottome.

A Diall pertaining to the  
*Fiste Section.*

Dogges contained in this last Diall or Table are { The Wapp or Warncr, The Turnespet, The dauncer, } called in Latine *Canes Rustici*

A Supplement or Addition contain-

g a demonstration of Dogges

now they had their

Originall.

**T**He names containyd in the generall table, for so much as they signifie nothing to you being a straunger, and ignorant of the English tounge, except they be interpreted: As we haue giuen a reason before of ye latine words so mean we to doe no lesse of the English, that every thing maye be manifest unto your vnderstanding. Wherein I intende to obserue the same order which I haue followed before.

The names of such Dogges as be contained in

## the first section.

**S**Agax, in English Hunde, is derived of our English hunte. One letter changed in another, namely T into D, as Hunt, Hunde, whom if you conjecture to be so named of your country word *Hunde* which significth the general name Dogge, because of the similitude and likeness of the wordes I will not stand in contradiction (friend Gesner) for so much as we retaine among vs to this day many Dutche wordes which the Saxons left at such time as they occupied this country of Britaine. This much also understand, that as in your language *Hunde* is the common word, so in our natural tounge dogge is the vniuersall, but *Hunde* is peticular and a speciall, for it significth such a dogge only as serueth to hunt, and therefore it is called a hunde.

## Of the Gasehound.

The Gasehounde called in latine *Agasheus*, hath his name of the sharpnesse and stedfastnesse of his eyesight. By which vertue he compasseth that which otherwise he cannot by smelling attaine. As we haue made former relation for to gaze is earnestly to viewe and beholde, from whence floweth the derivation of this dogges name.

## Of the Grehounde.

The Grehounde called *Leporarius*, hath his name of this word, Gre, which word soundeth *Gradus* in latine, in Engli-h degree. Because among all dogges these are the most principall, occupying the chiefest place, and being simply and absolutely the best of the gentle kinde of houndes.

## Of the Leuyer or the Lymmer.

This dogge is called a Leuyer, for his lightnesse, which in latine soundeth *Leuitas*, Or a Lymmer which worde is borrowed of Lymmer which the latinists name *Lorum*; and wherefore we call him a Leuyer of this worde *Leuitas* (as we doe many things besides) why we deriue and drawe a thousand of our termes out of the Greeke, the Latine, the Italian, the Dutche, the French, and the Spanishe tounge: (Out of which fontaines indeede, they had their original issue.) How many wordes are buried in the grave of forgetfulness growne out of vse? wrested awrye and peruersly corrupted by diuers defaultes? we will declare at large in our booke intituled, *Symphonia vocum Britannicarum*.

## Of the Tumbler.

Among houndes the Tumbler called in latine *Vertagus*, is the last, which cometh of this worde Tumbler flowing first of all out of the French fontaine. For as we say Tumble so they *Tumbler*, reseruing one sense and signification, which the latinists comprehend vnder this worde *Vertere*. So that we see thus much, that Tumbler cometh of *Tumbler*, the vowel, l, changed into the *Liquid* l, after ye manner of our speache, Contrary to the French and the Italian tounge. In which two languages, A *Liquid* before a *Vowel* for the most part is turned into another *Vowel*, as, may be perceived in the example of these two wordes, *Impiere & piano*, for *Impiere & piano*, l before e, changed into i, and l, before A, turned into i, also. This I thought convenient for a taste.

## The names of such Dogges as be contained in the second Section.

**A**fter such as serue for hunting orderly doe follow such as serue for hawking and fowling. Among which the principall and chiefest is the Spaniell, called in latine *Hispaniolus*, borrowing his name of *Hispania* Spaine, wherein we see the men not pronouncing the Aspiration H, Nor the *Vowel* l, for quicknesse and redinesse of speach say roundly A Spaniell.

## Of the Setter.

The second sorte of this second diuision and second section, is called a Setter, in latine *Indus*, Of the worde Set which significth in Englishe to set, or to laye downe, this name by this word *Locum designare*, ye reason is rehersed before more largely, it shall not neede to make a new repetition.

## Of the water Spaniell or Finner.

The water Spaniell consequently followeth, called in Latine *Aquaticus*, in English a water spaniell, which name is compounded of two simple wordes, namely Water, which in Latine soundeth *Aqua*, wherein he swimmeth. And *Spanie* *Hispania*, the country from whence they came. Not that England wanted such kinde of Dogges, (for they are naturally bred and ingendered in this country.) But because they beare the general and common name of these dogges since the time they were first brought ouer out of Spaine. And wee make a certaine difference in this sort of Dogges, eyther for some thing which in theyr voyce is to be marked, or for something which in their qualities is to be considered, as for an example in this kinde called the Spaniell by the apposition and putting to of this word water, which two coupled together sounde waterspaniell. He is also called a fynder, in latine *Indigator*, because that by serious and secure seeking, he findeth such things as he lost, which word *Finde* in English is that which the Latines meane by this Verbe *Inuenire*. This dogge hath this name of his property because the principall point of his seruice consisteth in the premisses.

## The names of such Dogges as be contained in the third Section.

**N**ow leauing the seruie we of hunting and hauking dogges, it remaineth that we runne ouer the residue, whereof some be used, the dogs, some course, other some mungrels or rualles. The first is the Spaniell gentle called *Canis Melitens*, because it is a kinde of dogge accepted among gentles, Nobles, Lordes, Ladies, &c., who make much of them vouchsafing to admit them so farre into their company, that they will not onely lull them in their lappes, but kysse them with their lippes, and make them theyr prettie playfellows. Such a one was *Gorgons* little puppye mentioned by *Theocritus* *Siracensis*, who taking his puppye, straightly charged and commaunded his mayde to let his Dogge as charly and warly as to his child: To call him in alwayes that he wandred not abroad, as well as to rock the babe a sleepe, crying in the cradle. This puppye and peasantly curd, (which some frumpingly terme fysteing hounds) serue in a manner to no good vse except, (As we haue made former relation) to succour and strengthen qualling and quanning stomaches.

## The names of such dogges as be contained in the fourth Section.

**O**f dogges vnder the coursor kinde, we will deale first with the shepherds dogge, whom we call the Bandedge, the Tydogge, or the *Mastvue*, the first name is imputed to him for service *Quoniam pastori famularur*, because he is at the shepherds his master, commaundment. The seconde a *Ligamento* of the band or chaine wherewith he is tyed. The third a *Saguna*, of the fatnesse of his body.

For this kinde of dogge which is usually tyed, is myghty, grosse, and fat fed. I know this that *Augustinus Niphus* calleth this *Mastvius* (which we call *Mastvius*). And that *Albertus* writeth how the *Lepiscus* is ingendered by a beare taking a wolfe. Notwithstanding the self same Author taketh it for the most part *pro Molosso*. A dogge of such a country.

## The names of such dogges as be contained in the fift Section.

**O**f mungrels and rascalls somewhat is to be spoken. And among these, of ye *VVapue* or *Turnespet* which name is made of two simple wordes, that is of *Turne* which in Latine soundeth *Vertere*, and of *spete* which is the Italian word for the English word inclineth closer to the Italian word *Turnersator*, Turnspet. He is called also *VVapue* of the natural noise of his voyce. *VVau*, which he maketh in barking. But for the better and redyer sounde, the vowel, u, is changed into the consonant, p, so y for wampe we say wappe. And yet I wot well that *Nonius* borrow his *Daubari* of the natural voyce *Bau*, as the *Grecians* doo their *Bovsein* of wau.

Now when you understand this that *Saltare* in Latine significth *Dansare* in English. And that our dogge thereupon is called a dancer and in the Latine *Saltator*, you are so farre taught as you were desirous to learne, and now suppose I, there remaineth nothing, but that your request is fully accomplished.

The winding vp of this worke, called the Supplement, &c.

**T**hus (friend Gesner) you haue, not only the Kindes of our country dogges, but their names also, as well in latine as in English, their offices, seruices, diuersities natures properties, that you can demaunde no more of me in this matter. And albeit I have not satisfied your minde peraduerture (who suspecteth all species of my performance of your request employed, to be mere delayes) because I stayde the setting fourth of that vnprefixed pamphlet which, five yeares ago, I sent to you as a priuate friende for your own reeding, and not to be printed, and so made common, yet I hope (hauing like the beare licked ouer my young) I haue waded in this worke to your contentation, which delap hath made somewhat better and *deuenter* *Pharcellides*, after writte more meete to be perused.

The end of this treatise.

FINIS.

**DOG NOTES FROM MINNESOTA.**—In *Camp near Fairmont, Martin County, Minn., Aug. 21st.*—I have been here a week now, and with Whitford, who is encamped at this place. He is training the St. Louis Kennel Club dogs. He has Lena, Trap, Viking, Trinket and Keswick at work on chickens. Keswick is a wonderful animal; she goes like the wind, but her gait is so smooth and even that running seems to cost her no exertion. She has a remarkable nose, and is as stanch as any dog you ever saw. When she is laid down to good running condition, you can see her anatomy, every cord and muscle, as well as if she were skinned. I never saw such a display of muscle on a dog. Viking and Trap are doing splendid work and will be hard to beat at the field trials.

Mr. Lucas is here with his brace of Irish setters, Erin and Biddy. I have noticed that doggy men have been giving Irish setters the go by, lately, but if there are any other dogs that can equal the brace, I should like to see them. I have shot over them for four days, and they are faultless in their work. Perhaps some would not like their quiet way of working, and would prefer the slash and dash of a big pointer or an English setter. I admit that these dogs are not showy, but they find as many birds as any; point, back, drop to wing and shot, and retrieve without ever doing for. For several days they have done the work for the guns, and never lost a bird. Part of the time four guns have been shooting over them, and get plenty of work.

Dash III. is here and Countess May, in Whitford's charge. Dash is a slashing dog, but does not work as well as May. May shows splendid qualities, but needs a great deal of work to sober her down. Mr. Sanborn is at Fairmont with several puppies in training. Messrs. Orth and Wilson, of Pittsburg, are with him. The country is a pleasant one to shoot over; the birds are very abundant. I will write again in a few days. J. M. T.

**A HINT AS TO ANATOMY.**—Country Farm, *Spottsylvania County, Va., Aug. 25th.*—Editor of *Forest and Stream*.—I have no disposition whatever to scratch on the Catherly dog scratching subject, to which ample justice has been done in *FOREST AND STREAM*. Nevertheless, you had one correspondent, a "notary public," who wrote from "Wauseon, Ohio," upon this matter, to whom, with your permission, I should be pleased to put a question or so. Your correspondent says with regard to this dog scratching business, "I would suggest that the question would be harder to answer than to read. Did any one dog scratch his left fore shoulder with his right hind leg while standing up?" Now, what I wish to know is this, it is always the way with well bred Ohio dogs (for it is of this class only the notary writes) that they scratch themselves with their legs, or do they not sometimes scratch with their paws? In Virginia dogs' paws are so far as I know to the contrary, ever armed with claws, and I was under the impression that were purposely given them to scratch with. I would like also to know if it is a fact that Ohio dogs scratch their hind shoulders with their legs or paws either lying or standing? Although Virginia has furnished your great bench show, Mr. Editor, with one of its judges for the last two years, I am satisfied we are much behind the times with regard to the anatomy of both dogs and horses. It has only been a few weeks since I observed in an editorial which ap-

peared in one of our great sporting papers the editor told us of the fore-shoulders of a horse.

BIRDRIOT.

Confess, he hath thee here.

**A RETRIEVER'S INTELLIGENCE.**—*St. Leonard, P. Q., Aug. 9th.*—A friend of mine, Mr. W., owns a very intelligent retriever bitch. A farmer near by killed a pig, and at night left the head upon a stump near the house. In the morning the pig's head had disappeared. My friend and his dog coming by, the man mentioned to him his loss. Mr. W., turning to his bitch, said: "Pup, have you stolen the pig's head?" Go right away and bring it back, you bad dog!" The bitch slunk away into the woods, and in a short time returned carrying the missing pig, which she immediately dropped before the farmer, the turning bolted for home at her best speed, and hid for the remainder of the day. Upon another occasion, daughter of Mr. W. started one evening to visit a neighbor at a little distance, carrying with her a lighted lantern. Arriving at the house she left the lantern outside in the porch. Soon afterward the bitch started out to find her young mistress, but I suppose she found first the lantern, and recognizing it as family property she took it up carefully and brought it home. As she entered the house with it alight, Mr. W. directly ordered her to "take it to Mary," and she then carried it back to the neighbor's house, scratched at the door until it was opened, and walked up to the young lady with the lantern still alight. Now a hot lantern is not the most comfortable sort of thing for a dog to carry.

Pup is first-class for duck shooting, obeying the slightest motion of the hand.

HEMLOCK.

**A DOG TANNER.**—Concurrently with the forty days' fast of the misguided American doctor, another fast has been in progress in our own country, for the truth of which I need not say a word. A friend of mine, who lives in Devonshire, left home some weeks since and made visits to his friends in distant parts of the country. A few days after he left, his servants wrote him that a favorite skye terrier was missing. My friend, after every search had proved fruitless, considered that the dog had been stolen. On his return home, after an absence of one month and five days, he unlocked the library, the doors and windows of which had been bolted and barred during his absence, and to his astonishment the missing dog crept out into the light, a living skeleton, and totally blind. He was well cared for, and has now quite recovered his health and sight. But his existence was wonderful. He had had no food and no water, and had not gnawed the books or obtained sustenance from any source whatever.—*Nature.*

**"THAT WASHINGTON LETTER."**—*Jersey City Heights, Sept. 1st.*—Editor *Forest and Stream*.—In a late issue of *FOREST AND STREAM* Mr. Charles Lannan states that a correspondent thanks me for a copy of George Washington's letter in regard to bloodhounds. As a matter of fact, it is the editors of *FOREST AND STREAM* that state they are obliged to me for the copy, which, by the way, did not refer to bloodhounds, but to the Irish wolfhounds. I offered it as evidence as to the extinction of the species of dog called Irish wolfhounds. I copied it from a letter now owned by Mr. John Downs (not Dale, as you have it), of Washington, D. C., and I have the best of reasons for believing it to be an original letter of George Washington. Mr. Lannan says the original came into his possession years ago, but does not state that it never went out of it, which leaves me in doubt as to there being two originals. This I am quite willing to accept, however, for I have not more than one "the only original" in New York city? R. T. GREENE.

**NATIONAL AMERICAN KENNEL CLUB.**—*Secretary's Office, No. 51 Broad St., N. Y., Sept. 1st.*—Field Trials of 1880, for Setters and Pointers, at farms of Col. A. G. Sloan, near Vincennes, Ind. Commencing Monday, Nov. 15th, 1880. Nov. 15th, Derby Stakes, for puppies born on and after April 1st, and under 18 months of age, 100 entries, \$5 forfeit; \$10 additional for starters; \$300 added money—\$150 to first; \$100 to second; \$50 to third, with forfeit money divided to winners in ratio with added money. Nov. 16th, Free for all stakes, \$500—\$250 to first; \$150 to second, \$100 to third; \$10 forfeit; \$15 additional for starters to close Nov. 15th, 1880, at 8 o'clock, P.M. Nov. 17th, Brace stakes, \$350—\$150 to first; \$75 to second; \$25 to third; \$10 forfeit; \$15 additional for starters; to close Nov. 15th, 1880, at 8 o'clock, P.M. Judges, Capt. Patrick Henry, of Graddy's Landing, Ark.; Theo. Morford, Esq., of Newton, N. J.; D. C. Burghental, Esq., of Indianapolis, Ind. Officers—President, C. H. Raymond, New York; First Vice-President, Luther Adams, Boston; Second Vice-President, Harry Bishop, Louisville, Ky.; Secretary, Chas. De Rongé, New York; Treasurer, Theo. Morford, Newton, N. J.; Executive Committee—Chairman, J. H. Deane, Columbia, Tenn.; J. H. Smith, Jr., of Stratford, Conn.; G. Nichols, Battle Creek, Mich.; Capt. Pat. Henry, Clarksville, Tenn.; M. C. Campbell, Spring Hill, Tenn.

**MONTREAL POULTRY, DOG AND PET STOCK ASSOCIATION.**—We have received from Mr. J. H. Cayford, Secretary, Montreal, Canada, the prize list and rules for governing the special exhibition of the above named association which is to be held in Montreal, P. Q., on Sept. 21st, 22nd and 23rd. All entries must be made at the Exhibition Rooms, No. 235 St. James street, with Mr. W. E. Shaw, or before Sept. 15th, on proper blanks, which will be furnished upon application. The dogs are divided into fifty-two classes, and the prizes are two dollars and one dollar, for first and second respectively.

**NEBRASKA FIELD TRIALS.**—As already announced in the *FOREST AND STREAM*, the Nebraska Field Trials will be run at Milford, eighteen miles west of the city, Sept. 30th, and Oct. 1st and 2d, the arrangements being under the direction of the Milford Sportsmen's Club. Frank, Nebraska, Tenn., I. H. Smith, Jr., of Stratford, Conn., and no doubt there will be a good attendance and a good time during the trials. This is a good chance for Eastern dog men, to visit their Western cousins, and we trust that the trials will be a success in every respect.

—Waterbury, Conn., has been having a dog show of its own, at Messrs Briggs & Higby's drug store. There was but one entry, that of the beautiful litter of puppies belonging to the head of the firm. It took the first prize.

showers," the turf that was laid out for a special purpose, devoted exclusively to another. We have not for years worked hard to increase the interest of cricket to now allow an innovation like lawn tennis to crowd out our manly game without a word of protest. Lawn tennis is a delightful game for women and children, and, perhaps, for those of our own sex who are of feeble body and mind; but this is no argument why a cricket ground should be converted into a nursery or an infirmary. Should the shade of the man who received the "honor from Jackson" look down on some of our cricket fields of to-day, he would no doubt think that he was money in pocket that he was dead—and he would be about right. Yet we love to see children enjoy themselves in the open air—particularly after a wet day in the house. We have a boy. It delights us to see him in a hose, which makes a good time, extremely fond. We have also a girl, who sooths us to see her make a mud pie; but should the pie be erected on our favorite pitch, or the hose-squirt direct his aim at the back of our neck, we would object.

Shall the stumps that are now firmly planted be torn up before they have taken root? Not if we can help in staying the destroying hand.

COUNTY CRICKET.—Brooklyn, N. Y., Aug. 30th.—Editor Forest and Stream:—In answer to your request for information as to the formation of a Kings County eleven, I would state that earlier in the season I took considerable trouble to ascertain how such a project would be supported by resident cricketers of Kings County, and I am glad to say that my efforts met with considerable success. I am satisfied that a good team could be put together if any other county will do likewise, and thus make an opportunity for a county match. The object of the organization was simply to play matches with other counties or localities, so as to bring cricketers on the field in different combinations—playing against bowlers other than we are now in the habit of doing—thus helping to make more proficient cricketers. Such matches, I have no doubt, will be of great advantage to cricket. I hope you will stir up the cricketers to organize other county teams, and, if possible, play at least one match this season.

JOHN FILMER.

UNITED STATES VS. CANADA.—On Sept. 3d, the Executive Committee of the Cricketers' Association of the United States met and selected the following team to represent the United States: Messrs. George M., Charles, Daniel S. and Robert Newhall, Van Rensselaer and Clark, of the Young America C. C., of Philadelphia; Brewster, of the Germantown C. C.; Thayer and Law, of the Merion C. C.; of Ardmore; Holt, Hargrave, of the Girard C. C., of Philadelphia, and Kessler, of the Staten Island C. C., of this city. While it is undoubtedly the strongest team ever selected to do battle for the United States, we regret that it is not thoroughly American. In times gone by the United States eleven was composed of residents of the United States, irrespective of their nationality. But now that the American exponents of the game have reached a degree of perfection equal, if not superior, to that of the foreign cricketing element, we regret that a new departure was not made from the old-time custom, and none but Americans selected to represent this country. As it now stands, it is mixed team. It is not, however, too late to change, and we trust to see none but Americans take the field on Monday next. We cannot, however, but congratulate the committee for the tact they have shown in their selection, which has made everything work so smoothly. The system of choice has been an excellent one, and if the United States eleven does not win it will not be because it was handicapped by internal dissensions or unmanly jealousies.

From Canada we do not receive the same good accounts; in fact, we hear of one club that already talks of withdrawing from the association on account of its not being asked to send a representative to play in the trial match, West vs. East. As this neglect occurred in the face of the club's winning two association games, we admit it has grounds for complaint, but for the good of cricket we urge it not to act too hastily. There is no reason why the Ontario Association should not work as harmoniously as the one in the States. The Governor General has recently accepted the office of President, and it will be an everlasting reproach to the cricketers of Canada if the association does not send a representative eleven to meet their American cousins. The match, East vs. West, which was played Sept. 1st at Toronto, was a failure as far as its object in bringing together the best players of the Dominion was concerned, neither Hamilton, Ottawa or Montreal being represented. The following is the score:—

WEST.	
F. Blake (Wanderers), c. Vickers, b. Merritt	30

—We are obliged, on account of space, to defer the publication of the letter on "The origin of round-arm bowling" until after the international match.

GERMANTOWN JUNIORS VS. STATEN ISLAND JUNIORS.—This match was the first in the annals of American cricket, where a team of boys have left their home to play in another city. In bygone days it was considered the thing to revolve as much as possible and secure players fresh from the other side to fill the ranks of the clubs' elevens. A few organizations continue to advocate this suicidal system—the result in the long run is lamentable failure. The clubs that will be found in the future foremost in the race are those that have to-day established training schools, namely, junior membership elevens. Instill young blood in your clubs and teach the youngsters how to play the game, and, moreover, in a gentlemanly way, and it will not be long before the question will arise "who shall not play?" rather than "who can find to fill up our elevens?" Mr. Thos. McKean, the President of the G. C. C., came over to look after the boys, and Mr. F. W. Bissell, the Secretary, was on hand to score. In a conversation on the subject of junior membership, Mr. McKean stated that his club had recently been obliged to pass a law limiting the number of junior members to 100, that the club was in receipt of many new applications, and the junior list was now upwards of ninety names. The eleven was composed of the sons of many of Philadelphia's oldest cricketers; such names as Wister, Morgan, Welsh and McKean having been household words in cricketing circles for many years. The first two refreshed our memory of the past and brought back incidents of the cricket field long forgotten. These Philadelphia boys, too, have a mighty good notion of the game, and many of their remarks upon the play were pat. Both teams were composed of little gentlemen, and the play from first to last full of "pretty cricket;" may they keep it up for years to come. Among the chips of the old block were Mr. Haughton's two sons, who have been playing the game at Lenoxville, Canada. We take pleasure in giving space for full score:—

Umpires—Germantown, Bromhead; Staten Island, Lane.	

—The Australians have at last, chiefly through the help of Lord Harris, been able to arrange a match with the best English eleven. The match was begun on the Oval on Monday last, the following team playing for England: W. G., E. M. and G. F. Grace, Hon. A. Lyttonell, Steel, Penn, Lucas, Shaw, Morley and Barnes. England went first to bat, and at the end of the first day's play 8 wickets were down for 40 runs, of which W. G. Grace contributed 152, E. M. Grace 30.

On Tuesday the match was resumed, and the Oval is said to have never presented such a spectacle. Over 20,000 people witnessed the game the first day, and about 30,000 the second day. England's innings closed for 420. Australians followed for 149, of which Bannerman made 52. In the Australians' second, having been obliged to repeat 5 wickets were down for 170; Murdoch 72, and McDonnell 43. Unfortunately Spofforth, the demon bowler, who was injured, did not play. As we go to press the Australians are 101 behind to save a one innings defeat. Full score will be published later on.

NEW YORK ENGLISH TEAM VS. SCOTCH WANDERERS.—There was but a small attendance at Prospect Park on Monday last to witness the interesting match between the teams composed of English and Scotch residents of New York and vicinity. The game was had under the auspices of the Manhattan Cricket Club, who kindly offered their ground for the occasion. Shortly before the Scotchmen put in an appearance, headed by Bowman, the piper of the Caledonian Club, whose dulcet strains and appropriate selection of tunes during the different phases of the game apparently caused great satisfaction to those from the land of the thistle. At 12:30 p.m. the play began on a rather biting wicket, and though the day remained cloudy the light was excellent up to the time for drawing the stumps at 6:30 p.m. The Englishmen went first to the bat, and secured the good total of 127 in their innings, nearly every one of which being contributed by Morley, the M. C. C. professional. His score of 61, not out, was a remarkably sound exhibition of batting, made almost faultlessly. It was composed of six 1's, five 8's, five 2's and singles. The Scotchmen

led off excellently, 23 runs being up before the fall of the first wicket, but after the first three bats had been disposed of the remaining ones added but little to the total. This was due to the excellent bowling and fielding of Filmer, whose style was favored by the wicket. He also made three rattling catches. During this innings Morley, who had been allowed to play as a substitute, was put out to bowl, and very properly objected to by Mr. Lendrum, the captain of the Scotch team. This disturbed Mr. Jackson's equanimity so much that he left the ground in a childish pet, and his action was severely criticised by all present. Until a man learns to control his temper a cricket ground is no place for him. Hamilton bowled splendidly in the second innings. Score:—

## YACHTING NEWS.

A RACE PHOTOGRAPHED.—The recent union regatta of the Hull Y. C. will pass down to posterity with the full preservation of the life attending the event, for the racing was photographed in its various features by Black & Co., 351 Washington street, Boston. This is perhaps the first time a fleet of yachts underway has been transferred to paper by the "instantaneous process." The series includes a view of the craft getting ready for the start, the start as keenly not only as the racing, but also the regatta as a whole, and the fleet passing Quincy. Mr. Black will certainly receive the thanks of the yachting community for the energy he has displayed in supplying a want long felt.

THE LAKE FLEET.—A correspondent writes to the Toronto Mail as follows:—  
"We were in hope that this season a regular chain of regattas would have been instituted at the lake ports in succession, from bursts of sailing would have been once more witnessed, and genuine enthusiasm stirred within us as of yore. Still this has been, so far, a notable year for yachting; the amount of cruising has been very great—every kind of yacht, from the state schooner down to the nondescript, has been made to answer cruising purposes, and the rush to the Thousand Islands has been unprecedented. Of course the clear weather, which was very fine, has been once in two months, "hinds it very dull; yachting is not what it used to be. No, it is not what it used to be; it never was pursued as keenly nor loved so dearly as now it does, never was the daring and pluck now constantly to be seen; the R. C. Y. C. never was in such a splendid position; nor were there ever as many members as yachting now has rolled and the race for the first class yacht building as now. No, it is the weakened, effeminate, fostered and pampered by unmanly amusements ashore, that canoeing was the enjoyment that was put through that day. Next year, when the new season is occupied, say in June, we shall look forward to a grand opening, and to a regatta on a scale of great magnitude. With the growing strength of the club this

according to style and finish, and these, I think, are not high figures when compared with the cost of a good wooden canoe.

**C. H. GARD.**  
We believe Mr. Rushton has succeeded in building the lightest canoe on record—total weight, 13 pounds—from which we judge that on the question of weight there need be no material difference between canvas and wood. Our correspondent has overlooked the liability of canvas to cutting and ripping on sharp rocks. With the revival of canoeing there will be many improvements made in a few years, so that it is hard to decide in favor of any one kind as yet. Possibly both canvas and wood will flourish side by side.

Answers to Correspondents.

No notice taken of Anonymous Communications.

**G. F. A., Bath, Maine.**—1. The rifle is a first-class arm. 2. For run see our advertising columns.

**J. E., Montreal.**—The address you ask for is Lake George, N. Y. will, we think, reply to your request.

**T. R. M., Richmond.**—Write to Peck and Snyder, Nassau street, N. Y., for latest work on rowing and club rules.

**C. N. H., Lafayette, Ind.**—We do not keep track of pedestrians, and cannot tell you of their present whereabouts.

**S. L. S.**—Apply a little sulphur ointment to the scratch on your dog's ear, and, should that not heal it, write fully and we will reply at once.

**W. D. M., Fort Indiana, Ind.**—The arms you mention are both good ones. The last named is now on the market, but we believe it to be a reliable arm.

—The new arm, one leg cricketers have been at it again in England. In a match recently played at Kensal Green the former won with ease—109 to 59.

**"READER."**—If you will have the politeness to give us your name we shall take great pleasure in replying to your questions to the best of our ability.

**F. & Co., Buffalo.**—No new edition of Kemp's "Yacht Describing" published yet. For new edition of his "Yacht and Boat Sailing" send to Manning's, 53 Beaver street, N. Y.

**G. C. H., New York.**—We can send you the papers. 2. Dr. J. A. Henshall, of Cynthiana, Ky., is writing a book on the black labs. Read the late papers on the subject in the FOREST AND STREAM.

**G. R. S., New York City.**—Go to Easthampton, L. I., and look up Charles Homan; he will show you plenty of quail, grouse and a few woodcock. During the first part of the season you will find the best sport.

**ENGINEER, Poughkeepsie.**—The Perkins holler does not come up to the claims of Mr. Loftus Perkins. In England it is considered a failure, and only a hobby of an amateur. See recent issues of this paper.

**W. L. H., East Cambridge.**—Please inform me if there is a law in the State of Maine prohibiting the shooting of partridge from 1830 to 1833? Ans. No; but there is a law prohibiting the killing of quail before Sept. 1st, 1833.

**M. D. C., Asbury Park.**—Try for worms, areca nut, two grains for each pound weight of dog, administered after dog has fasted twenty-four hours, follow with castor oil. Give later on two grains of quinine three times a day and feed on good stimulating food.

**G. W. S.**—Much the best way to start yachts in a race is to give the boats "starting stars" of single gun, and not allow ten or fifteen minutes to cross the line in, unless you are sending off many boats as to make fouling a certainty. With this latter method the start is robbed of all skill and maneuvering, and becomes featureless.

**H. H., New York.**—If a man buys quail, puts them on his farm and lets them breed, can he shoot them out of season? Ans. If he keeps them confined, he can no doubt kill them at any time, just as he can his chickens; but if they are allowed to go at large, we do not think that he would be permitted to shoot them. Certainly he ought not to do so.

**JOHN STRECHER, Harrisburg, Pa.**—The bird which you send is *Macrorhamphus griseus*, known to shore gunners as dowitch, brown-back, gray-back, etc. An abundant shore bird along the New England coast. It occurs in large flocks during the spring and late summer, and affords good sport over stools. See articles on bay snipe shooting, now appearing in FOREST AND STREAM.

**G. S., New York.**—How far on Long Island would I have to go to find good woodcock shooting; also quail, when in season? 2. What kind of shooting would I find around Kingston, N. J. Ans. 1. There are some woodcock about Islip and Sayville; and in the season excellent quail shooting near East Hampton. 2. About Kingston is found quail, a few woodcock and some pulled grouse.

**WATER, Washington, D. C.**—Itub well the cat affected, twice a day, with the following ointment: Powdered bicarbonate of potash, one ounce; powdered white vitriol, one-quarter ounce; sub-sulphur, two ounces; lard, eight ounces. Feed no meat. Give three drops of Fowler's Solution of Arsenic twice a day in food. Persevere with this treatment and it will produce the right result.

**H., Concord, N. H.**—For worms, fast the dog for eighteen hours and give freely powdered areca nut, two grains for every pound of dog; to be followed six hours later by castor oil. We would suggest that you try same ointment as recommended to Flint in this column. Give no meat, and administer two drops of Fowler's Solution of Arsenic twice a day for food. Keep kennel and bedding clean.

**DALE HIGHLAND.**—Can you give me the pedigree of Mr. James Gordon Bennett's dog, Don, now dead? I have been informed that Don was imported by Judge Bedford and sold to Mr. H. for \$2,000. Ans. Mr. Bennett's dog Don was purchased for him in England, but no proper pedigree was ever secured. He belonged to the jet blacks of Lord Ossulston's, now Earl of Tankerville's breed, Chillingham Castle, Wooler, Northumberland.

**C. C., Rochester, N. Y.**—My black and tan, of the smallest kind, and now about ten weeks old, has had two very violent fits, frothing at the mouth, with violent convulsions. Is this a symptom of worms, or may it be the first stage of distemper? What can be done for him? Before he had the last fit he lay very drowsy and quiet. I have been feeding him with meat. What shall I do for him? Give no meat for a few weeks. Give a few doses of sulphur, and then a dose of castor oil.

**J. J. J., Winchester, Va.**—Please give me a recipe for glue to be used in making split bamboo rods and the kind of cane used, price, etc. Ans. The best white glue is used, "bone glue" as it is called. Norris used "Hilton's glue and cement," and found it good. The new fish glue, made of fish skins, by the Glue and Isinglass Company, of Gloucester, Mass., might be good, as it is one of the strongest glues we know of. Get the best Malacca cane; the rice can be obtained from dealers.

**E. W. K.**—For housing topmast, make the mast rope fast at one side of upper cap, reeve down through a sheave or dumb sheave in heel of topmast, then up through block on opposite side of cap and the end down on deck. Using by this mast rope in small boat. In larger one use a "bale sling" half way up mast head, or an ordinary rig to cockbill by a tripping line. See Kemp's "Yacht and Boat Sailing," or examine yachts in commission. Have stays and shrouds so that they can be "come up" with and set up again readily.

**PHILADELPHIA.**—Eleven sloops and two cutters started from Glen Cove for New London on the N. Y. C. Cruise. If the cutters are included among the sloops, as they often are, the twelve starters stipulated for in the bet took part in the run. In that case H. wins, as Mischief was the best boat to anchor in New London in her class. She was beaten by Regatta only, but Regatta belongs to the second class sloops. Mischief beat Regatta, the second boat of her class, on elapsed time as well as on actual time, without the time allowance due her.

**M. M., Ohio.**—My pug bitch puppy, five months old, has had two severe fits recently. She would commence running, all at once fall in a fit, yell terribly and froth at the mouth. In about ten minutes she would get over it and then would run around the lot as if she was frightened and blind. She would run against any and everything. What is the cause of it, and what will prevent these fits coming on again? Ans. Young dogs are very subject to fits, such as you describe. Give a few doses of sulphur, followed by castor oil. Feed properly and give plenty of exercise, and your dog will probably come round all right.

**C. T. L., Fryeburg, Maine.**—A puzzle-peg consists of a strong wood, such as ash or oak, attached to the neck by a leather collar, and to the jaw by a string tied just behind the tusks or canine teeth, so as to constitute a firm projection in continuation of the lower jaw; and as it extends from six to nine inches beyond it, the dog cannot put his nose nearer to the ground than that amount of projection will allow of. The young dog should be well accustomed to it in the kennel and in the field, before he is hunted in it. This, and working a dog on overworked meadows, may in time accustom him to work with his head up. Teaching him to retrieve from or find his food on high places will, of course, assist in teaching him to feel for the scent in the air.

**H. M. T., Ogdensburg, N. Y.**—My Irish setter pup, eight months old, is very weak on his legs and across his back, having scarcely any muscular control of himself, as if paralyzed. It is most apparent in his rear, his hind legs giving way under him when standing quiet, and when he attempts to run he falls down and rolls over. He has always seemed in health otherwise; is playful and full of high spirits, and, to my knowledge, has never been hurt. Any exertion renders him worse. Ans. Your puppy has chorea; of course, you cannot, from your description, give the cause. Treat him with tonics, such as quinine and iron, vitamin, and twice a week give a little sulphur. Counter irritation along the spine is also sometimes serviceable.

**TRAVEL.**—My setter puppy has been afflicted with a disease that I do not understand. Two weeks ago she had a large bunch gather on her neck, which broke and discharged for ten days. Other sores have broken out, and are still discharging; in the mean time she has grown so weak as to be unable to stand. She has spasms and fits for two days, but somehow seems to live. The stench from the sores is almost unbearable. Three other puppies from the same litter, I have learned, are afflicted the same way. One has died and the other two are expected to die. What is the cause? Ans. Probably due to septikemia, or blood poisoning, but the description you give is not sufficient for us to determine the character of the "sores," which are probably abscesses. Write more fully and we will advise treatment.

**J., Baltimore, Md.**—I have two pug puppies now in their sixth month, one of which, the bitch, is very nervous and excitable, and the other is generally the reverse of this. Recently the bitch had three fits—I call them this for want of a better name—and the dog has done. The fits are caused by a sudden opening or closing of doors; strange noises, as whistling, rapping on the gate,

etc. The fit consists in persistent running and barking, a disposition to get away from everybody and everything, and generally winds up by their creeping away in a corner. While the fit lasts there is more or less snapping of the jaws, and as it wears away there is considerable discharge of saliva. They appear perfectly healthy otherwise. Ans. The fits are probably due to a highly developed nervous system, possibly from too close in-breeding. Plenty of exercise in the open air in cases such as you describe, where the feeding is proper, is the best remedy.

**A. W. E., San Francisco, Cal.**—Does the cutting off of the last joint or joints of a dog's tail prevent distemper or other diseases? 2. What age should it be done? 3. What age must a puppy be before I should train him? 4. Why are double nose dogs considered better than single nose dogs? Ans. 1. No; although there is a superstitious belief to that effect. 2. Docking a dog's tail should be done after weaning. We don't believe in it. 3. A puppy should always be taught not to disobey. When he is six to eight months old you can house-break him, and two months later field-break him. See articles recently published on "Dog Breaking" in FOREST AND STREAM. They will give you the points. 4. Double nose dogs are not considered better than single nose dogs, any more than a man with a hair lip is considered better than one that is without one. The noses of double nose dogs are apt to become sore, as the dry grass is liable to draw through the division and cut them.

**G. C. W., Canada.**—On a certain cricket ground there is a tree which the umpire said that the ball was not dead until it touched the ground. I say it is dead if it touches the tree. Who is right? Ans. A ball caught from a tree, or glancing from a wall, or rebounding from a fence, a tent or anything that is above ground, can be legally caught. It is better, however, to have a local regulation against such catches, the striker being allowed so many runs instead, for in very few cases would such a catch have been made legitimately had the obstruction not facilitated it. This is only one of the absurdities of the laws of cricket.

**F. W. M., Summit, N. J.**—I purchased a gun about four years ago stamped "Walter Scott" (breach-loader). Has it any connection with the W. & C. Scott? What do you think of the same? In loading shells with Curtis & Harvey's English sporting powder, is the same quantity used as American powder? and what number is proper to use for ordinary shooting? Ans. 1. The gun you mention is not the same as W. & C. Scott. It is probably a cheap English gun, but may be good. 2. Use Curtis & Harvey—how much less depends on the size of the gun. If 10 or 12, half a drachm. For a breach-loader use a large size of powder.

**ATHLETE, Pittsburg, Pa.**—The fifth annual meeting of the National Amateur Athletic Association will be held at Mott Haven Sept. 25th. The best amateur records in England, at American championship games, to Aug. 1st, 1880, are as follows: 100 yards run, 10.1-5 sec., W. P. Phillips, London A. C., July 3d, '76; 200 yards run, 22.2-5 sec., W. P. Phillips, London A. C., Sept. 28th, '78; 400 yards run, 52.2-5 sec., J. Shearman, London A. C., June 7th, '77; half mile run, 1 min. 57.3 sec., F. T. Elborough, London A. C., Oct. 7th, '76; one mile run, 4 min. 24.3 sec., Walter Slade, London A. C., June 10th, '75; five mile run, 26 min. 24.1-5 sec., J. Gibb, London A. C., Nov. 2d, '77; 120 yards hurdle race, 16 sec., C. N. Jackson, Oxford University, Nov. 14th, '75; one mile walk, 6 min. 48.3 sec., T. Griffiths, South Essex A. C., Aug. 6th, '70; three mile walk, 22 min. 15.5 sec., W. J. Moran, Atlanta R. C., March 22d, '75; seven mile walk, 52 min. 34.3 sec., H. Webster, Knotty Ash, April 7th, '79; running high jump, 6 ft. 2.1 ins., P. Davis, July 5th, '80; running broad jump, 23 ft. 1.1 ins., J. Lane, Dublin U. A. C., June 11th, '74; pole jumping, 11 ft. 2.1 ins., T. Hay, Cliverstone, Sept. 19th, '79; putting the shot, 42 ft. 5 ins., E. J. Bor, London A. C., March 27th, '72; throwing the hammer, no record according to American rules; throwing 56 pound weight, no record according to American rules; bicycle race, 2 miles, 5 min. 39.3-5 sec., Keith-Falconer Cambridge U. A. C., May 21st, '79.

FOREST AND STREAM.

Published by FOREST AND STREAM PUBLISHING COMPANY, NOS. 39 AND 40 PARK ROW (Times Building), NEW YORK.

Terms: Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements. Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence. Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address. All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply FOREST AND STREAM PUBLISHING COMPANY, New York City, N. Y.

FOREST AND STREAM AT THE ANTIPODES.  
—It pays to advertise in the FOREST AND STREAM, because all American sportsmen read the paper. It pays to advertise in the FOREST AND STREAM, because sportsmen all the world over read the paper. It pays to advertise in the FOREST AND STREAM, because the advertisements are answered from all the four quarters of the globe. It pays to advertise in the FOREST AND STREAM, because the coin of every nation on the earth is exchanged for American money and put into the pockets of those who advertise. There is a sample letter to:—

DUNEDIN, OTAGO, N. Z., July 16th.  
Editor Forest and Stream:—

For the last six months I have been a subscriber to your valuable paper and by this mail send for two additional subscriptions through our agent. By lending my own copy about I may get a few more subscribers. I have taken the liberty of writing you, as I do not know any one else to whom to apply for the information I want. I should like to see the trout flies used on your waters. Might I ask you to send me, say two dozen assorted best patterns, dressed on small hooks and finest gut. If the above will not trespass too much on your time you will confer a favor. If you send a memorandum of cost I will send them remitting. J. W.

BLACK BASS IN CONNECTICUT.—The fishing for bass in some of our beautiful lakes is as good as can be found anywhere. There are no mosquitos or flies to trouble you, plenty of camping ground free to all, good boats and guides in the wilderness. The champion fish was taken by a Hartford gentleman camping here, which weighed 4 lbs. 84 oz. I have taken quite a number from 1 1/2 to 3 lbs. this month. MACK.

### The Kennel.

## FOR SALE.

THE following stock, to reduce my kennel. From the best pedigree stock in the United States. No trash advertised at any figures; but my stock is all from the most noted dogs in the country.

Llewellyn setter Bracket; color, lemon and white; 18 months old; he is a large, strong dog, house broken, and ought to make a rattler in the field; very obedient; his eye, on command, is the best Llewellyn setter in the United States, and his dam, champion Clip, who won in the Irish trials, Nashville, 1871; both sire and dam are prize winners in field trials and bench shows. Price \$50.

Black and imported red Irish setter, was imported March, 1878, from the kennels of J. S. Skidmore, of Nantwich, England. She is a large, strong bitch, four years old. She is a grand, keen, and ready runner. Head not to be equalled; ears hung beautifully low; she is fast at hunting, great dog nose, and no trace in her; was H. C. at the Crystal Palace when in best condition, and shown among the most noted dogs in the country the only time shown. Price \$20.

Mark, a deep mahogany red Irish setter, 18 months old; was in breaker's hands 6 months; is fast, good nose and stanch, and drops by motion of the hand. His sire is imported champion York and dam Floss, a prize winner, and imported from Ireland from the kennel of Alice Daly. Price \$20.

Gordon setter bitch; a beauty; color, black and tan; whelped Jan., 1878; hunted last fall on quail and grouse; is stanch, fast and good; keen; she has had one litter of pups. Price \$40.

Fannie, a red Irish setter; well feathered, good head, and all over; she is very fast, good nose and very stanch; will stand as long as you want by speaking to her; does not know what fish is. Price \$40.

Lulu, a lemon and white Llewellyn setter bitch, two years old; sire, the great Carlwirth, who was bred by and imported from the kennels of R. L. Purcell Llewellyn, England, and has a pedigree of 60 years; dam Hirt, Hirt is by Dash, who won first prize at Waterbury, 1875, and first at Centennial, 1876; has been hunted. Lulu is in whelp to the Llewellyn setter Zantzer, who is by the famous Gladstone No. 18, dam Mercy No. 44; American Kennel Stud Book, Jan. 2d Vol., American Stud Book. Her puppies are worth \$400 each and the amount of her. Price \$50. Address H. B. VONDERSMITH, Sep-13-12 Lancaster, Pa.

## CHARTER OAK KENNEL.

J. Stevens & Co.'s Celebrated Arms

WARREN, Conn. Sept. 17th, 1877.  
J. Stevens & Co.:—

In a trial here last Saturday on our 900 yard range I used it against the Wesson, Maynard, Henry, Sharp and Remington, and five of the Billies and four of the Williams muzzle loaders, and did not have to take the second place for any of them, although I was tied by one which has heretofore been the "boss." Yours truly,  
H. W. LYERLY

## Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning papers, namely: The Oil of Croseto, CHARLES E. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOOR and the injurious effects of the Oil of Croseto are completely neutralized or destroyed, and the paper made safe for use to prevent its becoming a source of danger to the smoker.

log or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Sold by all leading dealers.

Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK.

Dogs of Great Britain, America and Other Countries.

PRICE, \$2.00.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.  
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.  
Nos. 1 (coarse) to 5 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE.  
A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING,"  
FFG and FFFG. The FG for Long Range Rifle Shooting, the FFG and FFFG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

## THE HAZARD POWDER COMPANY

MANUFACTURERS OF

## GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

## FOREST & STREAM.

NEW YORK, THURSDAY, SEPTEMBER 16, 1880.

A GRAYLING DINNER.—It is not often that any one in this city has an opportunity to taste the grayling, one of the most delicate and delicious fish which American waters produce. *Thymallus* is found only in the waters of the Western British Possessions, in Michigan, and in the streams of Montana, and their appearance in the markets of the East is of very rare occurrence. In fact, it may be said that they are never on sale here, and are only known in New York when some enthusiastic angler brings or sends on a portion of his catch, safely packed in ice.

In delicacy of flavor, the grayling yields to no fresh water fish with which we are familiar, while for many qualities he is quite the equal of the much praised brook trout. We have caught in Montana, about the head waters of the Missouri River, many of these fish, and we have no hesitation in placing them in the very front rank of American game fish.

We had the pleasure last Friday of renewing our acquaintance, intermitted now for five years, with this beautiful fish. Messrs. Abbey and Imbrie, who had received from Michigan a number of grayling lately caught there by Mr. McMartin, invited a half a dozen veteran anglers to assist in demolishing the fish, and it was our good fortune to be present at the dinner. The grayling, which had been sent on packed in ice, were in superb condition, as fresh apparently as if they had been just drawn from their native waters. As to the company, no true angler but would have said to himself, "it is good to be here." We have caught in our day many fish in many waters, but the exciting stories that passed around the board of the capture of gigantic salmon, striped and black bass, and other finny monsters, made us feel that we were indeed but tyros with the rod and reel.

## BAY SNIPES SHOOTING.

### III.—BLINDS AND DECOYS.

IT depends very much upon the character of the place where you go, and the variety of birds which you intend to shoot, what kind of a blind or bough-house to build for your concealment. If on the edge of some large bay or broadwater, for general shooting a stand may be erected that will screen you while seated on a comfortable bench. But if you select some bar or beach where the birds come to feed at low water, or along which the willet fly, a box sunk in the sand is the most killing device. The box should be long enough to allow the gunner to lie in it comfortably, and its width should be several inches in excess of the breadth of his shoulders. From ten to fifteen inches will be of sufficient depth. It should be made of three-fourth inch stuff, calked and pitched on the outside and in, thus making it thoroughly water-tight. At one end, near the top, an iron staple should be clinched, to which a half-inch rope of about seven feet in length should be fastened. This will be found useful in towing the box behind a skiff, or for dragging it over the sand. A useful article will be found in an old spade. Should you find that large birds, such as curlew, marlin and willet, have a roosting place on one of the bald marshes, the box described above should be used, or if thoroughfares dissect the marsh, you can paddle your skiff, which should be painted green, up one of the drains toward the spot where the birds lower their flight, or circle over before alighting, and conceal it in the highest tuft of grass. Curlew, and especially the "jack," do not stool well where a blind has been erected. They are wary at best and wild when their favorite haunts have an unnatural look. Not so, however, with many of the other varieties. Willet almost invariably stool well, and both the marlins are unsuspecting. The large and small yellow-legs, dowitchers, robin snipe and lesser birds are readily called within reach, providing, of course, that the proper place has been selected. The bars and shoals are the favorite haunts of the black-breast plover, the willet and dowitchers, while the meadow pond-holes are the sure places to attract the yellow-legs, especially when the birds are traveling with the wind, or as baymen call it, a "free wind."

Blinds are easily constructed out of cedar boughs, cut about four feet in length, stuck in the sand or mud. They can also be made, when the wind is not blowing too hard, out of long reeds cut on the marsh. We have seen painted canvas screens, hinged so as to fold up, used, and one of Long Island's famous gunners once used an umbrella painted green, which served not only to hide his huge proportions, but kept off the fiery heat of the sun. The fact is, as we have said above, it depends very much upon the place, and, moreover, on the conditions of wind and weather where to stool. While a vast number of birds in their autumnal flight follow the irregularities of the coast, there are countless numbers who make their migration far to sea, or take short cuts over the mainland. Those passing to sea only touch at the projecting points, and are consequently tame, while those which have run the gauntlet of an even shore or beach are wild, and less likely to stool. All these things must be taken into account, and the wilder the birds the better you must be hid. Sometimes it is impossible or inconvenient to construct a box such as described, or find suitable stuff to build a blind; then a rubber blanket can be spread on the marsh, and a few sedge bushes or heaps of sea-weed placed around you.

The most favorable wind for bay snipe shooting in the summer and autumn is one that blows steadily from the southwest. The birds who are coming from the North, and flying against it, lower their flight and skirt the bars and meadows, and see the stools more plainly and decoy much better than when traveling with the wind in the clouds. A wet summer is also found to produce the best shooting, as the meadows afford plenty of feed, and should the birds arrive early in the season, they stop and make the large marshes their home, flying north in the morning and returning south toward even-

ing. The birds are then said by bay men to have established "a trade."

One great advantage in shooting in bays and broadwaters, where the tide rises and falls but a few feet or inches, is that the blind can be occupied by the gunner throughout the day, without the annoyance of being driven out at high water. Meadow ponds on this account are often selected, for although they do not afford the best shooting during the morning and evening flights, yet admit of a stationary blind being built from which more or less birds can be shot during the day, particularly when driven from the shoals at high water.

The decoys, or "stools," as they are called, are always to be set to the windward of the blind, and though twenty or thirty are generally used, we prefer to set out about fifty, as the greater the number the better the show to attract the flocks. The stools should be set in a crescent-shaped circle, with the heads of the decoys pointing to the wind. There are two reasons for arranging them in this way: First, all wild fowl light to the wind, as they need the resistance of the air; second, a flock of birds that intend to stool, drop down to leeward, where they circle and then draw in over the decoys. It is, therefore, not advisable, as a rule, to shoot at a flock passing over your head, as it will turn, and should it light it will do so at the head of the line of stools. It will thus be seen that as the birds check their flight to alight, they crowd and jostle together, affording the most killing results of a well directed volley into their ranks. There are various kinds of stools manufactured, such as both solid and sectional wooden ones, hollowed out; flat tin stools, cut out of sheet tin, and several years ago a patented tin stool was introduced on the market, that met with favor in the eyes of those sportsmen who cared little for expense. The latter are of very ingenious make, each half of the decoy being concave on the inside and convex on the out, thus representing one-half of a bird; the two parts are hinged together on the back, so that when shut they resemble a well formed snipe, and when open can be packed one in another after the manner of a nest of boxes, and occupy but little space. All these decoys are painted to resemble the different varieties of snipe, and are stuck up by means of sticks. Each set of stools should have sticks, or "legs," of two lengths—short ones when used on dry bars or very shoal water, and long ones when the water is deep. It should be borne in mind that stools set in the water are more readily seen, as their reflection and a watery background make them loom up and show to advantage. For wet stooing, the wooden ones are preferable, as the tin ones soon rust and become worthless. The objection, however, to the wooden stools is their weight and bulk. For plover shooting on the upland or dry ground, the tin ones are by far the best. It may here be said that shells, lumps of mud, etc., placed on sticks, often can be used when it is impossible to obtain the regular decoys.

It sometimes occurs, when snipe are making their flight late in the afternoon, that they are not inclined to stool well. They travel high, and often the decoys are so situated that the flocks run on to them without distinguishing them. In cases like these, a few scattering stools set away to the windward in the line of flight, even if they are stuck up in deep water, will draw the birds down in passing, and then, by judicious calling, the flocks can be worked up within shot.

THE CREEDMOOR MEETING.—With a promise of good weather the eighth annual fall meeting at Creedmoor is progressing at a rapid rate, and in our next issue a full report of all the matches will be given. The team entries were far beyond any previous year, and in the majority of the matches the contests promise to be very close without any breakdowns. In the All-Corners individual matches there are enough entries to make some close shooting necessary for the prize winners. When the regular entry list closed on Saturday evening last, leaving only post entries permissible, there were 213 entries in the Judd Match, with 152 in the All-Corners. The Champion's Match had 27, while there were 79 in that for the military championship of the United States. For the Wimbledon Cup there were 21 entries, including

such excellent long-range men as Adeb, Buraside, Buck, Todd, Farrow, Hubbard, Lauritzen, Cobb, Allen, David, Ratbone, Day, Fisher, Limb, Morse and Moimness.

The team matches are, however, the feature of the meeting, and here the effort put forth was the best.

In the International Military Match, in which regulars are pitted against militiamen for the Hilton trophy, there are six entries. They are from the States of New York, New Jersey and Pennsylvania, while the regular army is represented in each of its divisions of the Atlantic, Pacific and Missouri by teams.

The Inter-State match for militiamen only will be fought between the States of New York, New Jersey, Pennsylvania and Connecticut. The Inter-State long range for clubs will be fought out by six teams, the Lion Club, New York, the Massachusetts Rifle Association, the Empire Rifle Club, the Amateur Rifle Club, the Pennsylvania State Rifle Association and the Connecticut Association being represented. In the *Army and Navy Journal* match, which is purely military, there are eighteen teams entered, and from among the commands of this State fifteen teams have been gathered for the State match. The First Division match, which ought to yield a strong fight among the nine regiments of the Metropolis, has three entries, the Seventh, Eighth and Sixty-ninth regiments only coming forward. In the Second Division match, for Brooklyn regiments, the showing is even worse, for the Twenty-third and Fourteenth regiments are alone represented. The Washington Greys have learned that if they run away they may live to fight another day, and the Cavalry State match is left between the Oswego and Harlem teams. Every club thinks itself capable of good short range work, and there are accordingly fifteen entries for the short range team match, while in the off-hand military team match sixteen entries will make up a lively contest.

Special efforts have been made to have a gathering of notables during the meeting, and with such a wide area of selection for the teams, the interest in the meeting is very general. Col. John Bodine is the executive officer for the first time, and he is assisted in his work by Col. Story, to whom the credit of the present fall meeting system of squadding and time schedules should be given.

#### ALONG THE SHORE.

SUMMER is the time for visiting the seashore. When the country only a few miles from the ocean, sheltered by the woods or the intervening hills, lies baked and shimmering under the August sun, breezes fresh and crisp as those of October blow cool from the broad Atlantic, and temper the intense heat till it becomes merely a delicious, languorous warmth. And what wonderful sights one may behold upon the wet beaches, provided he who visits them be truly an observer, and can appreciate the many curious forms of life that are to be found scattered far and wide along the water's edge.

Far away to the eastward stretches the intensely blue sea, sometimes smooth and smiling, clear as the sky above it, or again sparkling with white-tipped waves. That flash merrily in the sunlight and invite one to push off his bark from the shore and sail away toward the blue water beyond, where sea and sky seem to meet. Not less inviting is the roaring surf off the wide beach, where the giant rollers come pouring in in regular succession, each one forcing the retreat of the busy groups of beach birds, which turn on its reflux and hastily follow back the retreating waters. Behind us, to the westward, is the bay, backed by several miles of low marshes, intersected by numerous inlets, and beyond these meadows appear the low hills of the mainland, crowned with feathery pines and dotted with white farm buildings.

We recently visited the eastern shore of Virginia, and during the few days which we were enabled to spend along this delightful coast, enjoyed to the full its many charms.

We left New York one Wednesday on the steamship Breakwater, Capt. Gibbs, of the Old Dominion Line; a new vessel of about 1,000 tons burden, fitted up in a most comfortable, not to say luxurious style. The sail down the coast in such a vessel—so fast, so well-managed and with such pleasant officers—is most delightful, and we are sure that were it generally known that so pleasant an excursion could be made so quickly and cheaply, the Breakwater's passenger list would be a large one each trip. The traveler can leave New York at 3 P.M., and reaching Lewes, Del., early next morning, can spend the day there until 3 o'clock, when the steamer starts again for New York, which is reached before daylight on the following morning. At Lewes there is good fishing, and weakfish, spots, croakers and blackfish are caught in considerable numbers. At certain seasons the salt meadows are alive with bay snipe, and there is said to be fair quail shooting back from the shore.

From Lewes we took the Junction and Breakwater Railroad to Franklin City, Md. From this point a small steamer takes us to Chincoteague—famous for its oysters, its crabs, its terrapin, its bay snipe and its ponies. Here it is that the somewhat famous pony penning takes place each year; a performance, however, which, owing to the gradually lessening size of the herd, is

much less interesting now than it used to be. At Chincoteague we spent a short time at the excellent Atlantic Hotel, kept by Messrs. S. E. Matthews & Co., while the preparations for our trip were being made, and then having secured a small yacht, with Capt. Claval as skipper and a four foot darkey as steward, weighed anchor to spend a few days along the shore. Our ostensible object was to shoot bay snipe, but the event proved that we were too early for the birds, and no very large bags were made. Willets, dowitchers, great and lesser yellow-legs fell to our guns in goodly numbers, and a few curlew and martin were killed, but there was no great flight, such as we had hoped for. The pleasures of the excursion, however, were such that we scarcely missed the shooting. With what lazy delight we dozed upon the deck in the warm sunlight while our lively little vessel skimmed over the waves. How interesting to watch the great schools of menhaden flashing at the surface of the water, while at intervals the triangular fin of a shark was to be seen at the edge of the mass, carrying terror to the crowded fish that were nearest to him.

During the middle of the day we sail from one point to another, the morning and the evening being employed in shooting. We set out our stools either along the beach, just out of reach of the surf, or else on the meadows at the edge of some little pond hole. It is better to shoot on rising water, as the birds, when they are driven off the flats by the tide, fly hither and thither seeking some feeding ground which is still uncovered. As a rule, large decoys are better than small ones, for the small birds are attracted by, and will alight to, large stools, but large snipe, such as curlew, martin and plover, will not come to small ones. We have, then, a lot of curlew, willet, yelper and black-breast stools, and we marshal them in the most imposing fashion, so that the flock of fifty or sixty mimic bay snipe make a very good show. A hollow scraped out of the sand, if we are on the surf, or a bunch of tall grass, or perhaps some boughs cut from the low sand bushes, if on the meadow, form our blind, and we are soon snugly concealed. Before long the soft, mellow and long drawn out whistle of a black-breast plover, the ringing call of a jack curlew, or the harsh scream of a willet falls upon the ear and is answered from the blind; the birds draw near, and, seeing the stools, change their course and rapidly approach us. How beautiful it is to watch the wary jacks or plover high in air swing over the stools to leeward, calling at frequent intervals to their supposed comrades below, and receiving deceptive answers from the blind. At last they set their wings and swing down close over the stools, their long legs dangling and their bodies crowding together as they prepare to alight. We rise from the blind, the four barrels stow in quick succession, and the dead and dying strew the ground, while the survivors, with hurried wing-beats, rise in the air and start to fly off. Again the delusive whistle sounds from the blind, and if the birds are willets or dowitchers they will very likely swing round again and again until their ranks are sadly thinned. Sometimes a little flock of oyster-catchers (*Haematopus palliatus*) flies along the beach, uttering at intervals their short, sharp cry, and when it is replied to from the blind noticing and turning in toward the stools. They are wonderfully tough birds, and it takes a great deal of shooting to bring them down. These birds are called, along the Virginia shore, sea crows; for what reason it would be hard to say. In their liveliest of white and sooty brown, with their red bills and long, flesh-colored legs, they are as little like crows as any bird that flies. The thin compressed beak of this species is curiously adapted for being introduced into partially opened bivalve shells, and the shore men relate that when the bird sees a clam or an oyster with its shell part way open it steals up to it and quickly thrusting in the knife-like mandibles "cuts its heart." It probably cuts the muscles which hold together the two valves, so that its victim is no longer able to close its shell, and is devoured at leisure.

When there comes a lull in the flight we are at liberty to rise and stretch our legs. We light our pipes and recline at full length on the beach in the warm sun. At a little distance from us is a throng of the smaller beach birds—peeps, oysters and the smaller plover. They run busily about, some following the retreating waters and snatching savory morsels from the very surf, and others probing the wet sand until it is honeycombed with the marks of their bills. Among them are several birds very pale in color, which we do not recognize at once. These, on closer inspection, prove to be the Wilson's plover (*Egialitis wilsonius*), dainty little birds which are seldom seen as far North as New York. Occasionally one or two willets join the group of smaller birds and feed with them. They, too, probe the sand for food, thrusting their bills in up to the nostrils with action much like that of the Wilson's snipe.

As we sit waiting for the bay birds to come in we are critically inspected by all the feathered multitude that get their living along the shore. An osprey, whose fishing we have been watching with interest for some time, having caught a good-sized "spot" (*Ligostomus obliquus*), passes close over us on his way home, and whistles shrilly as he eyes us. The black-headed gulls (*Larus atricilla*) sail slowly along the beach, and when they pass us take

a circle or two about our heads in order that they may have a good look at us. Of the little terns there are half a dozen species to be seen. They fly restlessly about and are ridiculously tame. Sea swallows, they are well called, and few birds equal them either in purity and beauty of plumage or grace of flight. But they are cross and peevish little birds, and evidently think there is something suspicious about us and our stools, for as they pass backward and forward over us they utter complaining grating cries and sweep so close to our heads that we are tempted to throw at them some of the shells with which the beach is strewn.

The shearwaters (*Rynchops nigra*) or, as they are here called, skimmers or flood gulls, are not less tame. They would fly in low wide circles about us, so close that they were almost within reach of our gun barrels, constantly uttering their smooth low croaking notes, and eyeing us with an appearance of the greatest curiosity. Sometimes, after a long inspection from above, they would alight on the sand within twenty or thirty feet of our blind and stand there croaking for a few moments, when, if no movement was made to disturb them, they would sit down on the sand and doze until frightened away by our whistling or our shots. On the ground they are grotesque objects, but while flying they are beautiful birds, the black and white of the plumage being very striking, and contrasting with the bright red of the bill. They are called flood gulls, from the supposed fact that on a rising water they fly over one, calling loudly, but are silent at other times. We frequently, however, during our stay, heard them calling on the ebb tide. The reason for their name of skimmer will be evident enough to any one who has ever seen them feed. They flap slowly along over the water, the mouth wide open, the lower mandible immersed, and seem to feed indifferently over the open waters, the pond-holes and the tidewater channels that intersect the marshes. One that we watched for a long time was observed to follow a school of small fish, and his stomach, when opened, was found to contain two small minnows and several shrimp, besides a quantity of partially digested matter which could not be identified. It is highly probable, however, that the food of the shearwater consists largely of small crustaceans. We often saw them feeding in the late dusk, and heard their cries at midnight.

In the surf on the outer beaches of this coast there is often fine fishing for drums (*Pogonias chromis*), which are caught by a squid thrown from the beach, the fish weighing from twenty to seventy pounds. In many places the beaches are thronged with small sea crabs, which excavate for themselves deep burrows near high water mark, to which, on the approach of man, they take themselves with great swiftness. They have short heavy bodies about the size of an egg, are yellowish in color, with short stout white "nippers." In many places the beach is covered with their tracks, which greatly remind one of some of the tracks on the Trinsic sandstones of the Connecticut Valley. The drum fish are said to feed to a considerable extent on these crabs, which, we are told, they dig out of the sand at high water.

There is so much of interest to be seen about such a shore, where earth, air and water swarm with different forms of animal life, that it cannot all be compressed into one brief note. We should like to tell of the weakfish in the inlets, the softshell crabs and oysters of the shallow bays, the meadow hens which throng the marshes, and the delicious fruits of the mainland. Our pen floating airily from one topic to another should touch, too, with its light point the gigantic mosquitoes of Wallop's Beach and the intense heat of one quiet moonlit night, which prevented sleep and made life for the time being a burden. There were of course a few drawbacks to the delights of our excursion, but on the whole it was full of pleasures, and its memories will long remain with us.

#### ANGLING CONTESTS.

THE angling clubs of London are much given to competitive angling of a sort which, we hope, will never be introduced in America, or, if so introduced, we sincerely hope they will be a short lived novelty. Nothing can be more foreign to the quiet and gentlemanly spirit of the angler than these contests. Imagine, if you can, the feelings of horror with which the "good old Izak," or our own Norris, would view a crowd of men intent upon catching the greatest number of fish in a given time, for a plated cup or teapot! Surely this is the very opposite of the contemplative man's recreation, and places it on the level of those highly intellectual games played at rural fairs, as sack races, catcoting the elegiac porker, climbing the greased pole, and grinning through horse collars, or to gambling pedestrian matches and the like.

We would not include the very good custom of a prize or a supper to the captor of the largest fish in the course of an angling season, as we believe to be the custom of some of our American clubs, among the kind of angling contests under consideration, but refer particularly to the practice which has, within a few years, obtained among our English cousins, of going out in a party for a

day and fishing for dear life for a prize to be given for the greatest number of fish, paying an entrance fee and going at it like a race-horse, a practice which seems to us to be so foreign to the true angling spirit that we think they should be called fish-killing contests in place of the present title. Let any think we may have exaggerated what we speak of, we quote the following from the *Fishing Gazette*, of London, headed "Another Great Angling Contest," which says:—

On Monday last another of those great angling contests, for which Sheffield is so noted, took place at Crowle, near Thorne, South Yorkshire. This was the tenth annual match got up by Mr. Jarvis Sanderson, the host of the Crown Inn, Scotland street, Sheffield, and the house of nativity for Sheffield angling clubs. On this occasion Mr. Sanderson offered fifty guineas and nearly one hundred other prizes, the gifts of his friends, and from other sources. Being Bank Holiday there was a vast influx of visitors to this quiet little village on the Keadby Canal, the battle-ground of so many fish affairs in days gone by, and the rendezvous, the South Yorkshire Hotel, was once more the center of an unexcelled scene in angling, as it is generally understood. Some 700 or 800 followers of the gentle art were gathered together, mostly from Sheffield, but there were also many from London, Birmingham, Manchester, Wakefield, Hull, Peterborough and distant towns, the bulk brought by special train from the north. Towards of 870 paid the necessary entrance, three shillings in order to compete, and the ground taken up extended nearly five miles from end to end. The weather, to begin with, was pretty favorable, but during the afternoon a heavy thunderstorm passed over the district and drenched the anglers not a little; but, like good followers of old task, they stuck to their work as a rule, and went gamely on. After fishing nearly four hours it was found most of the lakes were small. R. Brown, of Sheffield, outdid the others with five pounds and three fourths of an ounce; J. Rotherham, of the same place, being at his best with three pounds and thirteen ounces, and H. Barber also got three pounds and two ounces. The smallness of the takes, however, was accounted for as usual, by the fish not being on the feed; but it may be remarked that a wag suggested that enough "ground bait" had been thrown into the water about here to take the fish all the season to consume. Whether that is so or not, it is possible the fish have got so used to fishing contests that it is only the foolish ones that can now be lured by ground or any other bait. There prevails a very general opinion that the water contains ruch, bream, tench, chub, and minnow in abundance; but the knowledge that the place is also very plentiful causes one's hand to shake the head doubtfully. At all events, large or small "takes" are always welcome in a match at Crowle, and it matters little whether the aggregate is large or small.

We dislike fishing for count or brag in any shape; dislike to fish with a person who braggingly refers to his catch should it happen to be the largest in the party; dislike to have the question of beating come up in any shape to show that there is any spirit of rivalry in the company which, if composed of quiet, unobtrusive gentlemen (this in contradistinction to the noisy gentlemen), it should be, is entirely out of place, and it is questionable if it is good policy to publish the fishing score of a party when its only object appears to be to show who caught the most. There are conditions when a score appears to some advantage, as, when it shows that the fishing is good or bad in waters little known, or which have been recently stocked, but nothing can be in worse taste than to fish with a friend and then brag because you were either more skillful or fortunate than he, by the brag direct, speaking boastfully of it, or the brag indirect, publishing the score where your large figures make his small ones hide their heads, while you appear to be merely stating facts without the appearance of boasting.

Certainly the man who catches so many fish in a day that their number seems so great that one must apply his arithmetic to ascertain if it be possible, or to learn how many were taken in a minute, cannot have what an angler would call sport. The suspicion immediately arises that he used coarse tackle, and "yanked" or "snaked" them out, both these expressions are used by such people, and an angler would prefer an hour's fight with a salmon or a proportionate time with a trout, according to its weight, to the entire catch of the other, and we cry shame on the man who will kill his hundreds of fingerling trout or grayling just to brag of it "just to say that I killed them."

Lord Chesterfield's son appeared before him as black as a chimney sweep, and, in answer, said that he had been down in a coal mine. His astonished parent asked his reason for going into that dirty place. "Just to say I've been there," answered the son. "And couldn't you say so without befouling yourself by going?" was the next question. That is our idea; if it is necessary to say so, we would have just as much respect for Mr. Smallfuffer if we knew that he lied about it as we would if we knew that he had been criminally hogfish enough to actually kill hundreds of fingerlings which neither afforded sport nor food, for we have passed that age when we can believe it possible for a man to kill 200 fair trout in a working day of ten hours, and do it in a sportsman-like manner. Even if it were possible, what is the use? who wants to fish ten hours a day? Our idea of angling is recreation, and many a good day's enjoyment is remembered when the catch amounted to little or nothing, but the company and the surroundings were glorious, when the secrets of the untrod forest were in part opened, and the wild duck led her downy young almost upon the boat anchored just under the point, or the mink was frightened at the sight of the infrequent man in his path.

The literature of angling contains nothing on the subject of contests until within a few years, and all its tradi-

tions are opposed to them, and unless a man is fishing for market, we do not see wherein the size of his catch has anything to do with his legitimate pleasure, unless he should catch an extraordinarily large specimen, when it is perfectly regular to publicly announce it, thereby establishing a fact concerning the size which it is possible for a fish to attain in a certain locality, but deliver us from the angling contest gotten up to attract custom to the bar of a public house. Our gorge rises at it.

**GAME PROTECTION IN WYOMING.**—Advices from Wyoming Territory give us reason to hope that before long a stop will be put to the reckless slaughter of large game which has for years been going on there. Up to within a short time there has been every prospect that Wyoming would soon be as bare of large game as is a large part of Colorado. But the formation of a game protective association, with some energetic men at its head, now seems to promise better things.

We learn from one of the most prominent members of this association that no efforts will be spared to convict every man who can be found killing game for any other purpose than to procure necessary food. We hope that this will be done, and if it is, the slaughterers will have a bad time of it. It is true that some who are innocent of any wholesale killing may suffer with the guilty. But at all events such action will tend to keep those who kill simply for the sake of killing, and to boast of their large bags, out of the country. We understand that special efforts are being made to convict a certain alien now in the mountains, and if these attempts are successful, we shall be glad to announce the fact.

We have no doubt that special attention will be paid by the game protectors in Wyoming to the skin hunter, that curse of the frontier, that has depopulated so many of the finest hunting grounds of the West of its hoofed game. No punishment is severe enough for these scoundrels.

**THE GAME FISH OF TEXAS.**—We earnestly request our angling readers to read Dr. Henshall's letter with the above title and paste it in their memories. We have wept over the confusion of names of the fishes, and are prepared to weep again as soon as the onion crop is harvested, over the persistency of local error. Dr. Henshall deserves the thanks of all lovers of angling for his efforts to set the nomenclature in the right groove, and we hope that our readers will assist him by using these common names. No matter if you have called a bass a trout all your life and it comes awkward at first to call it anything else, you were wrong; the usage of the civilized world is against you and says that no trout has spinous rays in its fins. If we had not wept so much over this subject we would try and wring a few tears out of our handkerchief over the pike perch that is called a "salmon" in the Susquehanna, Mississippi, Ohio and other rivers, but alas! even the handkerchief has felt the effect of the drouth and we await the pungent onion.

**THE CANADIAN KENNEL CLUB.**—We are heartily glad to hear of the formation of the Canadian Kennel Club, and have no doubt that it will, though young, attain before long a stout and vigorous growth. Certainly there is no reason why it should not be in every way successful, supported as it is by some of the best sportsmen and most prominent kennel owners of the Province of Ontario. We expect before long to hear more of the Canadian Kennel Club.

**THE HABITS OF SALMON.**—We would call attention to the very interesting letter from Prof. Hind, on this subject, in another place. It is very evident that there are some people in the Dominion who dislike to have the habits of salmon discussed, unless by some one who is in entire accord with their own preconceived views. We do not include in this category our own correspondent, "Stanstead," who respectfully differs with Prof. Hind, and asks him for proof of the statements which the latter has made. This is of course perfectly right, but it seems that others have allowed themselves to indulge in the silly practice of calling names, and personally abusing a gentleman who dares to give his views upon the movements of salmon, a course which never fails to injure those who practice it. We have no opinion to express concerning the merits of this controversy, and are not only willing, but glad, to give both sides a fair chance to express their opinions; merely asking that they do it in a fair and gentlemanly manner. In fact, when a person loses temper in an argument, they not only lose the confidence of the community in the justness of their cause, but create a suspicion that they have an object in keeping the truth from the public.

Discussions on this subject tend to throw light upon obscure points, and advance our knowledge of the habits of our fishes, and no man has any right to take offense at the expression of an opinion which differs from his. We do not pretend to understand the reasons which make some of our neighbors over the line so jealous of a discussion of a perfectly legitimate subject.

## The Sportsman Tourist.

### ROUGH NOTES FROM THE WOODS.

CAMPS IN THE WILDERNESS—HOW THEY ARE ORGANIZED, OWNED AND MANAGED—HOW THE OWNERS LIVE AND WHAT THEY LIVE ON—GUIDES, GUIDING, BOATS AND BOATING—A WORD FURTHER OF HOTELS AND HOTEL KEEPERS.

THE camps of the wilderness deserve a special notice. Their name is legion and they are increasing at a rate that defies calculation.

Let us start at the very foot of the Fulton Chain, not at the Forge House, but below, at the huge dam, controlled by the State, and used to draw off the lakes for public use, i. e., to feed canals, reservoirs and other State works, as may seem good to those in power. Passing through the marshy pond at the foot of First Lake, you enter the channel proper, now one and a half miles, and pass Indian Rock, the spot where "Old Foster" shot his Indian after a quarrel at the Arnold Place four miles below. Rounding the rock you have on your right evidence of the effects of civilization and progress. Stretching away to the dense green timber of what is now the mainland, there is a desolate waste of dead, decaying trees, lifting their bare broken arms toward heaven in ghastly protest against the arboreal murderers who tortured them to death by slow drowning. Motionless in the fiercest storm they stand with their dead feet and legs in the dull sedgy marsh. Almost imperishable, they have stood there for more than a generation, and a generation yet unborn will see the same ghastly sight. The sight is such a picture of desolation that, paddling down the lake by moonlight, I am careful to be always looking the other way. On the Woodhull lakes, on the Beaver, on the Oswegatchie and a dozen other waters, the same desolate sight pains the eye of any tourist or lover of nature who may chance to pass these wearisome "drowned lands." But more of this anon.

The line of dead "hop-poles," as they put it here, extends for about a mile, with a trend to the southward as you pass into the clear water of First Lake. Rounding the bend of dead timber you see before you, across the lake, a high pine-clad sandy point with a flag flying above the top of a tall thick pine. Below are buildings of some pretension. Two well-appointed log houses, one for the guides, cooking and dining, and the other for the family, men, women and children, to occupy. There is an excellent boat-house; another building is a good store-room and ice-house: the whole affair is well appointed, pleasant, healthful and costly. When I first visited "Camp Stickney" Doctor Nichol's party were in possession. They were employing three of the most experienced guides at a cost of \$45 per week and board. They were not eager anglers or hunters, but took their sport in a reasonable, gentlemanly way, and their ice-house was never without a supply of trout and venison.

Rounding the point on which Camp Stickney stands, you see at your left, half way up Second Lake, a poplar-covered sandy bluff. Passing this you come in sight of the Eagle's Nest, the most noted landmark on the Fulton Chain. The oldest guides could not tell me how long the nest had been there. For several years the birds deserted it, owing to the fusillade kept up by the cockneys of the Muggins tribe, who usually considered it the "correct" thing to empty guns and revolvers at the eagle's nest, occasionally hitting a young eagle. The thing is better ordered now. With one exception, no one has fired at them this summer, and I saw them day after day as I was watching for deer, standing on the edge of the nest, flapping their callow wings and screaming for fish, which the parents brought them in quantities that made one a little curious to know just how many pounds of fish it took daily to supply that aerial camp.

Passing the Eagle's Nest, you have, on your right another of those dreary wastes of drowned lands and dead timber, of which the only good thing you can say is that the dreary spot is a good place to float for deer in summer, and affords duck shooting in autumn. Turn to the left, leave the dead trees astern, and Third Lake Camp, or "Buell's Camp," is before you, a mile distant. It is an old camp, known to the guide books as the "Grant Clearing." It has stood for many years, and is occupied by more parties than I care to name, and is, to my thinking, as pleasant a site as any on the Fulton Chain. I made the acquaintance of the present owner, A. G. Buell, at the Forge House. He had come in simply to look after his property and go out again as soon as he could make some business arrangements. He was alone, and lonely. He did not like to cook; thought of going out in a day or two under the clouds, and did it well, and I wanted a quiet place to lay off, paddle, fish, float and possess my soul in peace. Inference is obvious. I paddled up to the Third and became domiciled at Buell's Camp. It is one of the pleasant episodes I shall not forget. But this is digressing.

Every boat that passes up or down these lakes must of course go up or down by inlet or outlet, and they must pass directly in front of Buell's Camp. Passing up the inlet, it is about eighty rods from this camp to the foot of Fourth Lake, and passing along the northern shore of this lake, rounding a sandy point marked by a solitary dead pine, you come to the Snyder, or Cold Spring Camp. This is one of the high-toned camps, already mentioned, and to the southward, at the foot of the island opposite is the "Camp Chapin;" party consisting of two young men, one a doctor, and the other a hunter, and a guide. I stopped there several times, and found that their guide, Fred River, was faithful in the performance of his duties so far as the supply of trout and venison was concerned, but I did not detect any coughs or other evidence of pulmonary difficulty. The vitals of the party seemed, to an outsider, all right enough. But I noticed a decided consumption of victuals, with some drink. By the way, it is claimed that the trout, or salmon, are larger and of better flavor in the Fourth than in the other lakes. And I may mention that the Chapin Camp guide stands "high hook" on the Fourth, with a salmon weighing twelve pounds as his record.

But a word for the Little Moose Lake. The largest salmon caught in these waters was caught on Little Moose, by a Mr. Miller. The fish weighed, by scale, twenty-five and one-half pounds, and was of excellent flavor.

sketch is not a fancy one. It is all, substantially, fact, made out by actual, daily estimate, of the gentleman whose trip to the woods it outlines, and gives a rather favorable view of a successful tour for two weeks through the Northern Wilderness.

The gentleman went home a week since, and the guide passed the camp where I write, three days ago, rather proud of his achievement in making the Fort House from Beaver River in one day. Let me quote from the melancholy *Jacques* in "As You Like It": "A fool, a fool! As I do live by food, I met a fool! the forest. Oh, noble fool, motley's the only wear." NESSMUK.

## Natural History.

### BALD-HEADED MEN BEWARE.

IT is related of one of the South African crows—a large species of rook, with a white spot on his breast—that he will fly up in the air with a stone in his claws and drop it into a bird's nest to smash the eggs for food. Some naturalists have doubted this, but it is perfectly true, and ostrich eggs are frequently demolished in this way. Not only will this bird destroy eggs in this manner, but he obtains his livelihood chiefly by killing tortoises in the same way.

The bird deliberately selects a stone, mounts high in the air with it in his claws, and poised over the tortoise a moment, with an accuracy of aim simply astonishing considering his great height, the circumstances of breeze, and the movement of the animal below, lets it drop. The tortoise, poor creature, goes along in his humble unobtrusive way, not meddling with anybody, when crack! and there is a great ghastly opening in the top of his shell. Down comes the ravenous rook, cleans all the meat out of the shell, and leaves it to dry in the sun. In some places these hollow shells may be counted in the hundreds. E. B. B.

One can readily see how a stone might be dropped from even a great height with sufficient accuracy to strike among twenty or thirty large objects like ostrich eggs, lying close together, but it is hard to believe that a bird could take such exact aim as to strike a tortoise, which is scarcely larger than a single ostrich egg. If, in addition to the conditions stated, the tortoise should be moving, and a breeze blowing, the feat becomes still more astounding. It must be remembered that the crow mentioned is not a very large bird, and would probably be unable to rise with a large stone in its claws, and therefore to break the tough shell of a tortoise, the pebble must be dropped from a great height.

Our valued South African correspondent, while, as he tells us, has never seen this particular feat performed, thoroughly believes in it, having been informed by reliable people that they had seen it done, and has seen hundreds of tortoise shells fractured as if in this way.

We may imagine that the young of the bird has to practice a good deal before it attains the accuracy required to kill its food, though it is fair to suppose that in accordance with certain now generally accepted laws of heredity the lesson is more easily learned by each succeeding generation of crows.

There is a story long current about a certain bald-headed man who went into a menagerie, and after spending some time in examining and admiring the animals, feeling tired laid down in a retired corner and went to sleep. Presently the ostrich belonging to the show came along, and taking his bare and shining head for one of her own eggs, sat down upon it to the great embarrassment and annoyance of the bald-headed man. We should imagine that in South Africa, where the crows referred to by our correspondent abound, bald-headed men would be at a decided discount, unless they wore wigs or had their hats tied firmly on.

Our readers will remember the story of the venerable Greek philosopher who is said to have lost his life because a crow mistook his naked head for a stone and tried to break a quagham clam by dropping the latter on it. *Hec fabula docet.*

### THE LAMENT OF THE FRUIT GROWER.

NASHUA, N. H., Sept. 6th.

Editor Forest and Stream—

The season of birds is about over, and I beg you to allow me to give the results, as footed up by a fruit raiser. Like most of the good folks, we are the friends of birds. We have made them at home on our premises, protected them from cats and small boys, have offered them inducements in the shape of new tenements, and have generously shown ourselves well disposed toward them. Like many of those to whom we show a kindness, they prove ungrateful, and I am now in favor of repealing the law which protects those which are the most mischievous and destructive, at least until they become less of a nuisance than they now are.

First and foremost on the list stands cock robin, the red breast; he claims your protection to a certain extent, by nesting in the hedge, in the bush beside your window, on the lowest limbs of the tree, in fact, just where the cat can most conveniently gobble the whole family, or the small boy steal the eggs. And how does the bloody-breasted villain repay us for the care we lavish on him. First by taking the best (and most) of our strawberries; we submit with good grace on account of the young ones in the nest. All we can do is to go into his ravenous jaws; crows are too cheap and plenty for us to offer any objections to his taking his fill, but when raspberries come and go, we protest. Early peaches ripen and the robins are on hand; they can't carry them off, so they just perch on

a twig and take a mouthful from this, then from that, until they have spoiled most of the fruit. Blueberry time comes, and you may expect a rest if you live in the country, but as soon as the early apples begin to ripen, "presto" our friends (?) are back as thick and hungry as ever, and as destructive. Early harvest and Porter apples seem to be just to their taste, and the largest and fairest fall to the ground partially devoured; we find no fault, for we have apples in abundance, and only wish that the robins would confine themselves to strictly apple diet, to help us to dispose of the crop. But this is not enough. Our luscious golden apricot, which in this latitude requires more than ordinary care, and which is the crown jewel of our fruit garden, now attracts these ravenous rascals. My wife has succeeded, by dint of "shooting" and shoeing, in securing the best part of the crop. The contest has been a hot one, as the mass of empty cans, old shoes, firewood, etc., which surround the tree attest. Peaches we have, and when the birds commence on them I swear (or hire a bad boy to do so for me), and take down the gun and make the feathers fly. Grapes are their particular fancy; cluster after cluster is destroyed, and the vineyard which has given such promise during the summer is now only an eye-sore, and a resort of our friend the robin.

But he is not alone; the oriole, or golden robin, has been his constant companion during the season, only he has branched out on his own hook, and made sad havoc with the green peas, picking open a pod and taking a pea or two, then opening another, and so on, kicking up a pretty mess (of peas). Still another, the much abused (?) English sparrow, is as fond of grapes and is as big a thief as the other two. The catbird is, I think, the slyest thief, but I have never detected him destroying the larger fruits. The cedar bird, or cherry bird, is nearly as destructive as the robin, but he confines himself more to the smaller fruits. Robins eat grub, insects and worms, to be sure, but it is in the early part of the season, before the fruit is ripe, and when they are obliged to. I like birds so well that if they would not come to me I would go to them, but I am beginning to think that perhaps we are having too much of a good thing; that we have protected them until they have increased so as to be a nuisance which must be abated. What is the remedy? Please don't say stuff, cat-skins, money, whips, rods, etc., etc., I favor, don't want to convert our fruit garden into a junk yard, and we have tried them all. The stuffed cat-skins were good, but there is a short market on cat-skins in this vicinity. Small boy and pot metal to the front, for a season, at least.

**CAPTIVE CATS.**—The following contribution to the Archives of Comparative Medicine and Surgery is from the pen of Mr. W. A. Conklin, and the observations are of so much interest that they deserve as wide a currency as possible. Mr. Conklin says:—

As the feline family comprises some of the most valuable and interesting animals to be found in the zoological gardens and menageries, their treatment in captivity is of great importance. It is impossible to give details of their confinement and consequently limited opportunities of exercise, for them to have all the conditions of life favorable to health. Constipation is one of the serious difficulties we have to contend with. To guard against this, liver is fed them once a week: when this proves ineffectual castor oil is administered with their meat. Their food is either beef or horse flesh, the latter being used as cheaper in the Zoological Garden of Philadelphia, and in the principal European gardens, as a measure of economy. Old and worn-out horses are taken to the gardens, where a veterinary surgeon examines them to ascertain if they are free from disease. In some gardens, the mode of killing these horses is by a blow on the head, as this retains the blood through the meat. Regularity as to time of feeding is of importance. We feed once on week days only, and fast on Sunday, in order to avoid overfeeding, and to give the stomach a rest. The animals understand this perfectly: for while at the approach of the feeding hour during the week, they pace their cage, impatiently watching for the keeper, on Sunday they give no sign of expectation, but remain quiet in their cage. I have had instances of animals voluntarily abstaining from food for a period of ten days without suffering apparent inconvenience. In cases of this kind, I try to tempt their appetite with a live rabbit, or chicken, cooked and cut into small pieces, and I give them a pound or one meal twelve to fifteen pounds of meat, including bone; the smaller animals less, in proportion to their size. When the meal is finished, water is given them, after which they pace the cage for awhile, and then sleep. They are all very fond of catnip, and when it is placed in their cage, enjoy rolling in it, thus resembling the domestic cat. It is advisable to place logs of wood in the cage, so that the animal may scratch with its claws; otherwise, the nails will grow into the flesh and fester, causing much pain, and will have to be cut from time to time. The feline live in captivity from fifteen to sixteen years, showing signs of decay at about the age of twelve. The lion seems to breed more freely than any other species of the feline; and, strange to say, that in traveling menageries they breed as freely as in gardens where the cages are more spacious. This may be attributed to the change of air and scene in their arduous life. The jaguar and leopard have been crossed, also the tiger and lion. Specimens of the latter were exhibited last year in this city by Mr. Forepaugh in his traveling menagerie. Period of gestation in lion, tiger and hyena, sixteen weeks; leopard, fifteen weeks; panther, thirteen weeks. The number at a birth is usually from two to four, in the case of the lion, an hour or two intervening between the delivery of each cub. The last time a hyena at the menagerie gave birth to young, there were an unusual twenty-four cubs, including one male and one female.

Weight of lion cubs when born, four to six pounds; hyena, three and a quarter pounds. Eyes open after from four to seven days, and in three weeks teeth all cut. The young of the spotted hyena are born without spots, while those of the self-colored animals, lion and panther, are born with spots which disappear in from three to four months. The young of the tiger and leopard are marked like the adult, but of course the markings are not so distinct. It frequently happens that the mother will devour her young, but after the cubs are three or four weeks old there is no further danger. The tiger cubs are generally taken from their mother as soon as born, and given to a bitch to bring up. Our cubs

at the menagerie suffer chiefly from rickets, which affects them when about six or eight months old. As a remedy for this we give lime, and have used calcis phosphorus precipitate with good result. We have a lioness at the park menagerie that has bred twenty-seven cubs in seven years, and raised but one. Mr. Bartlett, in a paper read before the London Zoological Society, says: "A very extraordinary malformation or defect has frequently occurred among lions produced during the last twenty years in the Regent's Park. This imperfection consists in the roof of the mouth being opened, the palatal bones do not meet; the animal therefore, is unable to suck, and consequently dies. This abnormal condition has not been confined to any one pair of lions, but many lions that have bred in the garden, and not in any way related to each other, have from time to time produced these malformed young, the cause of which appears to me quite unaccountable."

**THE BEAVER IN IOWA.**—In a recent number of *FOREST AND STREAM*, "Nessmuk," in "Rough Notes from the Woods," states that "the beaver is the first wild animal of importance to disappear before the white man." This conclusion is directly opposed to the experience of an Iowa correspondent, who sent us an interesting note on the subject. It is to be hoped that the praiseworthy efforts of "E. B. B." to protect the beaver may continue to be successful. The few dollars that the skins might bring would be a very small matter compared with the interest which the town at large and all strangers visiting it, would feel in the presence of a colony of beavers living in the midst of a settlement. Our correspondent says:—

We have, within eighty rods of town, three beaver dams; two of them are within ten rods of the railroad track. They have been there for about three years, and have been kept in good repair by the beaver family. The backwater is used by the boys in the winter for skating pond, and in summer for a fishing pond. I never heard of but one being caught, and discourage the idea as much as possible. E. B. B.

**A PARTRIDGE FLY.**—Boonsboro, Sept. 10th.—*Editor Forest and Stream.*—I send, inclosed, one of the *Hippoboscidae*, or partridge fly; at least I wish your judgment on the parasite, as I have never seen one before.

A few mornings ago, as I was returning from a squirrel hunt, I observed a blue-tailed hawk looking after his usual breakfast of quail, flying low and searching the fields carefully. On flying near a cluster of young trees he was attacked by some crows. I thought at once that the crows would prove his destruction, and so hastened to slip into my gun a long-range shell, loaded and carried for such occasions.

While the hawk tarried to fuss with the crows, I quickly made my way to a cluster of brush, a long shot from him, but the No. 4 brought him down. On going to pick him up, I found him standing up erect, wings outspread and apparently ready for flight. While looking at him in admiration, as it was a beautiful specimen, large and full feathered, I observed something like a flash of light come down from above, dart over the back of the bird, alight on the outspread feathers, and, by a side movement, disappear under them. I gave him a crack over the head and began at once a search for the hidden object. I could find nothing on the back of the bird, but on turning it over and lifting the feathers of the breast, out it came and flew for my neck. I grabbed for it and fortunately caught it. It was hard to kill, seemed tough and very tenacious of life. This is the only one that has ever been observed in this locality. W. B. W.

The specimen sent is a partridge fly (*Olfersia americana*), on which we have stated before, they are frequently found on hawks, herons, ruffed grouse, quail, etc. They are, however, so quick in their movements and usually keep themselves so well hidden among the feathers that they are not often seen, unless they are specially looked for.

**INTELLENCE OF THE HONEY BIRD.**—The honey bird of South Africa has long been known to travelers. Its most striking characteristic is exhibited in the way it discovers to some passer by the whereabouts of a nest of wild bees. An old resident of Kaffaria told me several incidents of this bird, showing how it will wait near a roadside or Kafir path, and when any one comes along will make a great to do by fluttering and chirruping about till his attention is attracted, and the bird leads him to the nest, where, after it is robbed, he comes in for a share of the spoils. One anecdote he related shows a power of mind in this bird nearly analogous to reason. A bird once met him and was leading him on by wing, by hop and jump toward some nest, when another honey bird came along. On the approach of the other bird the shrewd pilot stopped, hopped off in another direction, and refused to show him further on the way till the other bird had gone. E. B. B.

**MIGRATING NIGHTHAWK.**—Fort Wayne, Ind., Aug. 31st.—*Editor Forest and Stream.*—I wish to state what to me was a phenomenon. As I was riding in my carriage, last week, in this city, my attention was called by an acquaintance to an immense number of birds that were flying in every direction, near the ground, very much like swallows—I mean their flight was like swallows, though the birds were very much larger. My neighbor asked me what I called them. I told him they were night hawks; but another gentleman, who happened to be along as we were watching them, said they were whippoorwills. I thought he was mistaken, and, after I went home, I consulted "Wilson's Ornithology," and found that I was right, as a perfect description of these birds is given in his works, and the distinguishing marks, especially in the plumage—there being a large white spot on the upper surface of the wings of the night hawk, which does not exist with the whippoorwill. Wilson says they migrate South in August, and probably this was the general muster of "the Grand Army of the Republic," preparing to move South; at any rate I have not seen any since. I never saw, except pigeons, so many birds together in my life. DR. C. S. W.

It is not uncommon to see these great flights of night hawks at this season of the year. The whippoorwill never migrates in a similar manner, we think.

## ABOUT THE EUROPEAN CUCKOO.

THE method by which the female cuckoo (*Cuculus canorus*) managed to introduce her egg into the nest of the small birds, to which the duty of rearing the nursing is entrusted, was for a long time very doubtful, and the question was debated at great length among naturalists. The first hint as to the solution of the problem was accidentally made by Le Vaillant, who discovered on opening the mouth of a female cuckoo, which he had killed, an egg lying within the throat. A correspondent of the *Leisure Hour*, in a recent contribution to that magazine, gives the details of some observations made some years ago, which confirm the conclusions drawn from Le Vaillant's discovery, and which are in themselves very interesting. He says:—

The following occurrence, which I witnessed, will explain how at last one cuckoo's egg was conveyed to the nest: In the month of June, 1861, I spent a few weeks at Farnham Royal, Buckinghamshire. Farnham Royal, which lies about four miles from Windsor, at that time consisted of a few scattered cottages, in the near vicinity of the well-known Burnham Beeches, and between the Beeches and the picturesque hamlet (by the way a favorite haunt of landscape painters) lies a stretch of scrubby, healthy common, through which several paths lead in different directions.

Strutting along the edge of the common one bright sunny morning I stepped aside to have a look at a stonechat's nest which I had discovered three days previously, when it contained but one egg. This nest was placed in a thick plant of heath, about ten or twelve inches from the ground, well concealed by the heather, except one little open space through which the bird passed to and from her nest, and through this open space the contents were visible. On my approach the hen bird flew off the nest, and I observed that four eggs were deposited. Two cuckoos were flying about in a most peculiar manner and one of them uttering peculiar sounds. Both of them seemed to be in a wild state of excitement, and my first impression was that they might have a young bird in some nest near by and that danger threatened it in the shape of a hawk or a predatory cat. I cautiously approached nearer them. I found that they were being mobbed by the two little stonechats. Sometimes both cuckoos would skim rapidly close by the nest, the stonechats darting at them open-beaked, and uttering piteous cries the while; again they would fly off rapidly to the edge of a wood at a little distance, pursued by the male stonechat, the female always hovering near her nest and occasionally alighting on a bush close to it.

Could it be possible that the cuckoo had deposited her egg in the stonechat's nest, and was this the manner in which the owners expressed their resentment at the intrusion? Taking advantage of a longer flight than had yet been made, I ran toward the nest and saw at a glance that it contained the four stonechat eggs and no more. Presently back came the cuckoos, the one which I took to be the male (on account of the slightly richer color of its plumage) "cuckooing" in a wonderful manner, uttering the note much more rapidly than is usual, and the female swooped down very close to the nest, paused for a moment in her flight, and being vigorously attacked by the stonechats, glided past, but I saw that her bill was partially open, as though she carried something within her gape. Evidently her object was to reach the nest, and it was truly marvelous to behold the determination and courage of the little males of birds in their efforts to prevent her reaching it. It would be difficult to describe in mere words the wonderfully graceful action of both male birds during their aerial encounters, and indeed the flight of the cuckoo at times much resembled that of a small falcon.

It was about half past 10 o'clock when I had first come on the scene of action, and I watched till the forenoon was well nigh past, the two males meeting and expending in the scaring the cuckoo away, when the female flew up quickly and came down on the ground very near the nest, but on the farther side of the heather clump in which it was placed. At the same time the male cuckoo made a hasty swoop toward the nest, was driven off by the stonechats, and while they were thus engaged the female cuckoo, with rapid action, darted forward, alighted on the heather, thrust her head into a crack, through the small opening into the nest, in an instant withdrew and soared aloft, uttering for the first time a cry—not "Cuckoo!" cuckoo!" but a gurgling, water-bubble kind of note. Her mate immediately joined her, and the two soared away to the wood, he joining in the shout of triumph with fond "Cuckoo." In a few moments I had run forward to the nest, and behold lying beside the four pretty little stonechat's eggs was a beautifully marked cuckoo's egg, still wet with the saliva of the mother bird.

The stonechats reared their young in peace and safety, but that cuckoo's egg lies before me as I write, and the sight of it recalls one of the most interesting episodes I ever met in bird life.

OWA LAKES.—Capt. J. K. Powers, Register of the State Land Office, gives the size of the Iowa lakes as taken from the office plats:—

Swift Lake covers.....	5,591 acres
East Okonjib Lake covers.....	1,231 acres
West Okonjib Lake covers.....	4,490 acres
Clear Lake covers.....	3,610 acres
Spirit Lake has a shore line of.....	31 miles

MARKED SALMON.—There are many instances of marked fishes, and especially of salmon, being caught, but for singularity of marking we think the following, which has been running the rounds of the English press, is fully equal to anything which we remember to have seen. It is headed "Marked salmon at Berriedale, Caithness," and relates that recently the salmon fishers at Berriedale found in one of the bag nets, among other fish, a fourteen pound salmon bearing the following marks: On the flat, smooth part of the head, behind the eye, and immediately over the gills, a brand mark comprising the letters B. F. and a line drawn around these letters in the form of a square border. Immediately under this was a mark which rudely resembled the outline of a salmon's head, filled with dots and streaks.

## Fish Culture.

DOCTOR GARLICK'S BOOK.

WE have just received the second edition of Dr. Garlick's work on fish culture and angling.\* A handsome octavo of 128 pages, illustrated with cuts of manipulating a spawning fish, ponds and a series representing the development of the embryo from impregnation to hatching, printed in clear type on excellent paper.

Our fish cultural readers who are conversant with the art from its infancy know the venerable Doctor as the original American fish culturist, now in his seventy-fifth year, who has been infirm in all but his mind for years, and will welcome his new edition as an addition to our fish cultural literature, the first edition (published in 1857) being now out of the market. It is very interesting to read the early trials of the Doctor and his friend, Prof. E. A. Ackley in 1853, twenty-seven years ago, stimulated by the success of Remy and Gehin in France, and by the translation of W. H. Fry, of what had been done in the Vosges. The first attempt was naturally made with the brook trout, happening on the 21st of November, and was a success, and the delight of the experimenters may be imagined when they placed some of the eggs under a microscope on the 9th of January and found them to contain embryos far advanced.

Figures of different modes of hatching on a small scale are given, and one (page 28) of an arrangement whereby a cheap experimental hatchery can be arranged in a house or office. Being mainly a reprint of his older work, the Doctor cites instances of hatching and transporting eggs and fry, as done in France in that elder day before the great work was begun here by the Government and State Commissions, as well as our private fish culturists, but in the new chapters which have been added he has a good word to say for the plebeian catfish, and also for the German carp, introduced by the United States Fish Commission, devoting a chapter to the latter, which he concludes by saying: "I will close this chapter on the carp by saying that from a careful perusal of Prof. Baird's Fishery Reports, I am entirely satisfied that I may say of this fish as Horace Greeley said of Concord grapes—it is the fish for the million."

The angling portion of the book gives no notice of the black bass, white bass, and other fresh water favorites, and in conclusion he says under date of Bedford, Ohio, Aug. 10th, 1877: "In concluding the second edition, I will only add, that since publishing the first edition of this work, I have lived to see my hopes in relation to fish culture nearly, if not quite, realized. I am now over seventy-two years of age, and probably this is the last that I shall ever have to say to the public on this subject. I have spent much valuable time, and some thousands of dollars to promote this branch of industries. If I have in any way promoted the object, I am satisfied, as I never wished nor hoped for any pecuniary reward."

A treatise on the Artificial Propagation of Fish [with description and habits of such kinds as are suitable for domestic culture.]—By Theodorus Garlick, M. D., Member of the Kirtland Society of Natural Sciences; member of the American Microscopical Society of the city of New York; and of the Western Reserve Historical Society. [Second Edition.] (enlarged.)—[The laws of Nature are the thoughts of God.]—Glorified by the Society of Natural Sciences, Cleveland, Ohio. [Cleveland, Ohio.] J. B. Savage, Printer, Franklin street, 1880.

## HOW THE FIRST SHAD WERE HATCHED.

ROCHESTER, Sept. 6th.

Editor *Forest and Stream*.:—In your issue of Aug. 28th I notice a communication from a correspondent on "Shad Hatching and Shad Laws." There are a few points on which he has been misinformed in connection with my early experience in shad hatching which I wish to correct. He states as follows: "Mr. Seth Green was employed, I believe, by both National and State authority to make the experiment. After exhausting his fund of experience and other knowledge in connection with the experiment, Mr. Green made a failure of the attempt, and packed his boxes, intending to return home next day. In the meantime he had been a fisherman, well known at the falls, besought Mr. Green to let him make a trial. The boxes were unpacked, and the fisherman placed them in a tributary of the river and the experiment was an immediate success. I believe Mr. Green received the credit. The locally accepted reasons for Mr. Green's failure and the fisherman's success were that Mr. Green's experiment was made in the warm water of the river, which was very low at the time, while the fisherman's experiment was made in the cooler water of the tributary."

The facts of the case are that I went to South Hadley Falls at the solicitation of the New England Fish Commissioners and at my own expense, with the understanding that I should be remunerated if I made a success, and if I did not they were to hear no more from me. As is well known I did make a success, but the New England States never paid me within \$15.54 of my actual expenses, to say nothing of my loss of time, and it is admitted that my discoveries have been and are worth many thousands to them annually.

In regard to the old fisherman, of whom I have never before heard, making the success, your correspondent is mistaken. All any of the fishermen ever did for me while I was experimenting was to destroy my experiments, break my boxes, boot at me, and, in fact, do everything they could to discourage and drive me away, and when I hit upon a plan which I felt sure would, and which did prove a success, I was obliged to watch it day and night to protect it from the ravages of the fishermen.

In regard to the stream mentioned, I tried the experiment of hatching shad in it, but was unsuccessful, the change of temperature being too great from the river water, and the only shad that were hatched successfully were hatched in the river and not in the stream. I should be pleased to learn the name and address of the old fisherman, and hope I may be favored with it.

Your correspondent is right in regard to the place for hatching shad. It should be done in the upper waters. I do not think that any attempts to hatch them at the mouths of rivers will ever prove a success. There should be close season of the river in each week to allow the shad to get up to their spawning grounds.

The fishing could not be equalized in the way mentioned, as the lower river fishermen are about through when the upper river fishermen commence. The fishermen at the mouth will always catch the most, because they have the first chance, and the upper river fishermen can only expect to catch those which escape their nets.

SETH GREEN.

## MR. THOMPSON'S TROUT PONDS ON LONG ISLAND.

THE Brooklyn *Eagle* gives the following account of the trout preserves and ponds on Long Island:—

On the 1st of September the trout season of 1880 on Long Island ended, and until March, 1881, the speckled beauties of the lake and stream are to be left undisturbed in their cool retreats, while the anglers will enjoy relating their experiences of the past season, and the trout breeders will begin to prepare for their approaching hatching season of the year. And just here comes the query, "Have you ever visited a trout-breeder's fish farm?" If you have not, do so before the cold weather sets in, and you will see something worth a day's journey to witness. Of all fresh water fish, trout are the gamiest, pluckiest and finest fish that swim. They are the delight of the angler, as they give him the greatest sport he has with his rod and line. Then, too, they make the delectable dish of fish that can be set upon the table. Hence, trout are in great demand, alike by the angler and the epicure.

Long Island abounds in trout. The Island lakelets, ponds and running streams have been the resort and the home of trout since time unknown. Of late years trout breeding has become quite an important occupation on Long Island, and now the culture of trout, from the ocean point of view, is carried on to a quite a considerable extent, from one end of the Island to the other, beginning with Furman's Trout Breeding Establishment, at Newtown, and ending with Thompson's model trout farm at Noyac, near Sag Harbor. The business is carried on very successfully, and the result is the growth of thousands of fish not only suited to replenish exhausted streams or to supply private trout ponds, but to answer the great market demand for Long Island trout, which now have the preference over the product of every other fish-breeding establishment in the country. Probably the most successful cultivator of the speckled beauties on the Island is Mr. Furman, of Newtown; but he bids fair to be rivalled by his friend, Mr. George Thompson, whose most picturesque trout farm, located at the head of Elder's Bay, near the old Indian village of Noyac, N. L., about four miles from Sag Harbor, is beyond question the most beautiful locality of the kind in the State. Mr. Thompson is an old California pioneer, one of those choice spirits of the gold-mined coast who know no such word as fail in anything they undertake to accomplish.

From slash, sloughish streamlets passing through an almost impenetrable undergrowth of wild shrubs and tough brush has come a series of pretty little lakelets and clear running streams, in the midst of which stands his cottage homestead, around which are beautifully laid out flower gardens. Beyond these are located the hatching houses and rearing boxes of his trout farm, the whole forming a place for the cultivation of trout from the germ of the fish to the lively young trout, ready either for the angler's rod, or for the epicure's feast at the table. The front view, looking from the garden lawn near the cottage, presents a very picturesque landscape, the pretty sheet of water forming the mill pond being ended by a background of the waters of Noyac Bay. The whole farm is shaded by the familiar "tall oaks from little acorns grow," and brightened by the "music of the water," and the dainty running streams in which the trout revel and delight. In fact, Mr. Thompson, with rare taste for gardening, has made the place a perfect picture.

Let us examine a little into the details of the various processes employed in raising young trout, from the germ, to the full grown fish. We will suppose the trout spawn to be placed in the nest assigned to it in the hatching house, and the young fish have been developed from the egg to the young fish swimming about with its sac of food attached to it, on which it lives for a time, looking somewhat like a young tadpole, though not so fully developed, in each nest at the long row in the trough of the hatching houses at the farm there are from two to three thousand trout, all alive and swimming about in a running stream of cold spring water, one begins to rise, and the water over a white sandy bottom. From this time the trout swims to the period the trout begins to look out for itself forty-five days elapse. In the interim the young fish is fed from its yolk sac, which is, during this time, a part of itself. When this is removed by its falling from the body of the fish—at this time not more than half an inch in length—the young trout begins to work for food in the water, and from the water. By this time they have grown to about three-quarters of an inch in length. These youngsters are very tenacious of life. They have been known to have survived in a deep well for over a year without other food than the well water alone supplied. Trout are a very voracious fish, and even in early trouthead develop cannibalistic propensities, large trout living upon small trout, while the parent fish frequently fancy for their offspring the male trout having quite a fancy for the young fish when very hungry. From the hatching troughs the young trout are transferred to the rearing boxes, and it is in these that their artificial training begins. One would imagine that the young trout under the incentive of the process of regular feeding on a fish

farm, would, "like weeds, grow apace," but the young rascals take their time, and plenty of it, in growing to the years of discretion; yearling trout average from twenty and a half to four inches in length and it is three years before they reach the size suitable for the angler's purpose. All this time constant care in feeding, watching and caring for them generally is necessary, and, consequently, time becomes so much money to the trout breeder, as much so as it is to the city merchant. Hence, the breeder's stock of fish becomes expensive to him in proportion to each year's growth. Seventy-five days of time for the hatching process; forty-five days for the fish to enter upon the period when it looks out for itself in the watery world, and then a year's growth added before it reaches a length of five inches, shows very plainly how time enters into the process of trout breeding. From the rearing boxes the young trout and trout are let into the little lakellets of the farm, and there are collected according to their age. From these in time they go to the larger ponds or reservoirs, where they are held for use as occasion may require.

CARP GROW RAPIDLY IN FLORIDA.—*Record, Fla. Aug. 6th.—Prof. Baird.*—Dear Sir: It was a pleasure to you to learn that the carps you furnished me with last November are doing finely. I ascertained on my return from Savannah with them, that my pond was not ready for their reception, owing to the fact that there were many more black bass in it than I had supposed. I accordingly confined the carp in a pen at the side of the pond, giving them water through holes in the side covered with wire netting. A few weeks since I discovered that some of the young had been misplaced and some of them escaped into the pond. I had nearly all the bass out of them all into it, as I had heard all the bass out. The growth since that time has been simply marvelous. Many of them are ten or eleven inches long, and I feel certain they will spawn this fall. Will it be too much trouble for you to acquaint me with their habits? Do they bed; like some other varieties when they spawn? I will add that they seem quite tame and come to the place where I feed them, and that a drove of pigs would come for corn, whenever they find it. I am confident that they will prove a great addition to the food of the South, and I shall take pleasure in distributing them as soon as they propagate. Very truly, yours,

GEO. C. RINFORD.

Mr. Rixford also writes us as follows:—

It may interest some of your readers to learn that the German carp are thriving splendidly in our waters. Last November I received a lot from Prof. Baird, which I think were then from three to four inches in length. They are now from ten to twelve inches, and appear to make a visible growth from day to day. I think they are the greatest addition to our food fishes that has ever been made.

**SALMON CULTURE IN MAINE.**—We learn that there are four hundred fine breeding salmon in the breeding pens of the United States Fish Commission at Bucksport, Maine, which is under the care of Mr. Charles G. Atkins. They are the so-called Penobscot salmon, *S. salar*, and are said to be in fine condition for yielding a fair crop of eggs.

## HABITS OF AN OREGON SUCKER.

ASTORIA, OREGON, *July 6th*

**T**HINKING you might like to receive an account of a very curious fish found in these waters I send you the following, being the substance of a report made to the U. S. Fish Commission, at whose request I was observing its habits and collecting specimens. The fish in question has a length of eight to ten inches, is of rather slender form, has a long and pointed head, large eyes, large scales, and deeply forked tail. Its mouth, when shut, is small, less than a half inch in length, but when open it is large, extending a round sucker-like mouth, bent slightly downward. The sides are dark brown on the back, with the under parts of a pale white. The sides are striped with black and pale silvery lines, with a single narrow stripe of bright orange running from the lips to tail. A line of orange also runs around the edges of the gill covers. Altogether, there is nothing very strange in its appearance, and economically it has no value. It is not known whether it comes from the Gulf of Mexico or the muddy sloughs of the tide lands at the mouth of the Colorado, although the latter is thought to be the case. It comes into the streams early in July for the purpose of spawning, and is here more than a half mile above tidewater, and its visit is limited to two weeks in duration. I do not know its scientific name, and it is quite possible that it has never received one. Locally, it is known as the "sucker." I had found

a few in a visit made a week previous to the one of which this account is given. They were found on this trip on the north fork of the Kanab, a quarter of a mile higher than a week ago. The first sign of their presence was the sight of several dead and partially eaten fish on the bottom of the stream, the work, doubtless, of some hungry minck or otter; then at some distance above we saw them leaping from a large pool, so many of them that there would be a dozen in the air all the time. The pool was about thirty feet by twelve, and in the middle five or six feet deep, its upper end terminating in a long ripple; across it, near the middle, lay, just level with the surface, a long, narrow, cold, grass-green log. Walking on this to where I could look down into the water, I saw such a sight as I had never seen before. I will not say that the pool was solid full of suckers, for that would be more than the truth. To say that there was a half a dozen for every cubic foot of water in the pool would probably be less than the truth. Making my way to the head of the ripple I baited my hook and allowed the current to drift it under the log. It was taken instantly, and with a rush and vim that I knew a ten inch sucker could not make. For the usual contest I had the pleasure of landing a fine specimen, a foot and a half upwards of a foot in length. Looking now to the opposite side of the ripple, where the water was shallow, I saw a mass of suckers entirely covering a space of six or eight square yards. Dropping the hook among them, after a few minutes I succeeded in catching one, and so continued until I had taken a dozen, when finding this method too slow, I allowed the hook to sink among them. When, by giving a sharp twitch, I would generally succeed in bringing one in the body. In this way I got some forty or fifty, as many as I thought would be wanted for specimens.

I now started up stream, intending to spend the rest of the day in trout fishing, but found I was not so near alone with the suckers as I had thought. They had preempted the stream for a quarter of a mile. In one place, where the water spreads out forming a large shallow basin with gravelly sides and bottom, they had collected on one side for twenty yards by one of the broad, piled upon each other so that they could not pass. On the other side, the water—entirely out—a solid, quivering, quivering mass of fishes. Stepping down beside them, I began with both hands to throw them upon the bank, and had I wished I could have thrown out bushels. In the quarter of a mile that they had possession of the stream I saw several such masses, and supposed that they were crowding above the shoals, and in the heat of the sun, which now shone bright, but found on the heat of the shoals, where the sun was below the tree tops and the air quite cold, that even more of them were in this position.

I found one place where the presence of several partly eaten fishes showed that even an otter had failed to drive them away. I am informed that large numbers of these fishes—less than half of the season's run, but a great many—crowd themselves ashore after spawning and die there, and I have no doubt these were performing the last act of their tragedy; the only instance, so far as I know, of suicide among fishes.

It must not be supposed that these fishes were sick or weak, or in any way incapable of continuing the struggle for existence. On the contrary, they were plump and strong, and apparently as capable of supporting the ills of their existence as any of their relatives in the deeper waters.

It is a singular fact that so many of the fish of this coast should die immediately after spawning. The smelt (*Osmerus pacificus*) and the quinnat salmon are cases in point. The fact in the case of the salmon can be accounted for by natural causes, the immense distance he has to go to the spawning waters. The smelt, however, suffers from the hardships of many kinds he must undergo, and all without food, for the *oncorynchus* do not feed in fresh water, must tell fearfully upon his vitality. But the sucker does not travel a hundred miles inland, and the sucker dies not half a mile from tidewater.

C. J. SMITH.

## THE GAME FISH OF TEXAS.

*Editor Forest and Stream :—*

In your issue of July 19th I notice a communication from "Bexar," of Corpus Christi, on the game fish of Texas. "Bexar" is correct as to the black bass, croppie and wide-mouthed perch, all of which are very abundant in Texas waters, but whether the rock bass is an inhabitant of that State I cannot say. It has been taken in Louisiana, but I know of no instance of its being found so far Southward. There are two species of *Pomoxys*, both called "croppie" or "rock bass" in certain sections, but I think but one species (*P. pomum*) exists in Texas. I will give brief descriptions of these several species for the information of any who may be in doubt as to the identity of any or all of them.

LARGE-MOUTHED BLACK BASS.—*M. pallidus* (Raf.). Gill & Jordan. This is, as all know, the so-called "trout" of Southern waters. It is the game fish *par excellence* of the Southwest, and a further description at this time is unnecessary.

WAR-MOUTH PERCH.—*Chanobrythius gulosus* (C. & V.). Gill. "This is the fish alluded to by the Brev. as the "wide-mouth perch," and which is a very good name for it, the etymology of its generic name being *chamo*, to yawn or gape; *brutus*, sunfish, and its specific name, *gulosus*, big-mouthed; literally, "wide-mouthed gaping sunfish." It has a mouth very similar to the black bass, and also close to the black bass, in which the radial formula is 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818,

CALICO BASS.—*Pomoxys nigromaculatus* (L. S.), Girard. This fish is also known in various sections as "grass bass," "silver bass," "strawberry perch," "goggle-eyed perch," "razor-back," "croppie," "chinkapin perch," etc., all of which are more or less expressive, though I think the latter the most distinctive and ex-

pressive of its specific name (black spotted), provided every one knew what a "chinkapin" was.

Body nearly oval, half as deep as long, much compressed, arched, thin both at the back and belly; snout projecting, forming an angle; mouth moderately large, but smaller and tougher than the next species (*P. annularis*); fins very large, anal fin larger than dorsal. Blackish, or bluish green on back; sides and belly silvery; marked with dusky blotches, as if made with the ends of one's fingers.

CRAPPIE.—*Pomoxys annularis* (Raf.). Also known as "bachelor perch," "new light," "Campbellite," "tinmouth," "silver perch," "speckled perch," etc. It is very similar to the last-named species, though is scarcely so robust, and not so deep; has a larger mouth, which is quite thin, white and transparent, hence the name "tinmouth"; it is more silvery, or white, in appearance, and the dark spots on back and sides are smaller, and the fins are not so variegated as in the other species.

This, I think, is the species so abundant in Texas. Both species are handsome fishes, though not very "gamy."

ROCK BASS. *Anabloplites rupestris* (Raf.). GILL. A well-known species, very generally distributed west of the Alleghenies, and also known as "red-eye" and "roze-eye-ey." It is a good pan-fish and quite "gamy." Body yellow or orange above, "coppies," brown red below. Head and mouth large; eye very large, iris red; front, or face, convex; color, brassy-olive, with golden green and dusky markings; a dark spot at base of each scale, giving a somewhat faintly striped appearance, which is very conspicuous after death. Dorsal fin larger than anal.

The above-named species all belong to the family *Centrarchidae*, which is composed of percoid fishes with a single dorsal fin, either continuous or deeply divided into from five to thirteen spines, or thorny rays; anal fin with five to thirteen spines; ventral fins thoracic, with one spine; body oblong, compressed, sometimes with a more or less prolonged flap at the end of gill-cover (opercle), and nearly all with a black spot, larger or smaller, on the side of the body; the snout is more or less pointed, and the tongue villiform, or velvet-like, with or without teeth on jawbones and on tongue, present in some, but absent in other genera.

The "war-mouth" is especially distinguished by its large mouth and robust appearance; and the "croppies" by the very large anal fins, being larger than the dorsal.

As the species above described are readily distinguished by the number of spines and rays in the dorsal and anal

Ans. I submit the following formulae, with the remark that all of the spines must be counted, no matter how short or rudimentary the first ones may be, and that the first spine may be branched or forked it is to be counted only as one. The number of spines on the sides may vary one or two in different localities; thus, in the extreme South or Southwest the number of spines in the dorsal fin of the black bass may be often found to be nine, or even eight, instead of ten. In the table the spines are given in Arabic numerals and the first says by Arabic numerals; thus, X, 12, means ten spines and twelve soft rays.

Species.	Dorsal.	Anal.
Black bass ( <i>M. pallidus</i> ),	X, 12,	III, 10.
Rock bass ( <i>A. rupestris</i> ),	XI, 11,	VI, 10.
War-mouth ( <i>C. gulosus</i> ),	X, 10,	III, 9.
Calico bass ( <i>P. nigromaculatus</i> ),	VII, 15,	VI, 18.
Crappie ( <i>P. annularis</i> ),	VII, 15,	VI, 17.

"Bexar" seems to be in doubt as to the use of the name "goggle-eye." It is a poor name at best, and is applied to several different species. He states that "Hallock's Gazetteer" gives rock bass, croppie and goggle eye to the same fish, which is unfortunately the case on page 323; but this is an error. It is almost impossible to compile a work of the character and extent of this without some errors creeping in.

In the instance referred to it was no doubt the intention of the compiler to include both the rock bass and the croppie among the "Fishes of the West," but somehow they got them mixed. If "Bexar" will erase entirely the paragraph referred to, and write, in the margin, "rock bass," page 373; "croppie," page 378, and then refer to the former as "Bass" and the latter as "Croppie," the present technical name *Ambloplites rupestris* (Raf.), Gilg., and refer to page 378, and add the name *Pomoxys nigromaculatus* (L. S.) Girard (its present name) to the description of the croppie at the top of the page, he will have it correct—though this "croppie" is the calico bass. At the bottom of page 378 (under the croppie) is described as "sand perch" and "the mouth." In the next page, under the name of "mouth-mouth perch" referred to under the name of "maw-mouth," or "goggle-eye."

While "Bexar" is about it, let him erase *Roccus chrysops* (on page 379), for it has nothing to do with "sunfish;" but, turning to page 273, add it to the "white lake bass," for it is the present name of that fish.

J. A. HENSILL.

*Cynthiana, Ky., Aug. 27th.*

THE BASSES OF TENNESSEE.—*Savannah, Tenn., Aug., 30th.*—I have just returned from a short fishing excursion to a stream some six miles away. Notwithstanding the low water and hot weather, we had fair sport, taking some game bass and perch, the largest, a bass, weighing three pounds. The mode of angling, most killing in the present state of the water and weather, is to fish on the bottom, with a small hook and worm, and a minnow, and late, and resorting to the blue and black trout, a few hours of the day. One can do no good in these streams by casting, either with minnow or fly. We have here three varieties of bass, *M. salmoides*, *M. pallidus*, and a striped bass, yet our local anglers who distinguish fish by their color alone, make many more kinds. The three varieties are *M. salmoides* and *M. pallidus* we know as "black trout," and "green trout," and trout, and "black trout," and "black trout." The "black or green trout" outnumber the other varieties, and is more highly esteemed. In addition to the other fishes named, we have here the rock bass, known in these waters as black perch. Both they and *M. salmoides*, show great diversity of color, some being very pale, and others very dark, and you may take others of almost any shade of gray, green, or black. The pike, *Esox lucius*, salmon, were formerly abundant, but have recently become scarce, not a dozen having been taken this season. In

the "good old past" many large ones have been captured. The largest on record weighed seventeen pounds, and was ensnared by the president of the "Klaw Hammer Angling Association," the veteran angler of this portion of the State. The above mentioned "Klub" owes its name to the style of coat worn by its presiding officer on high day, and holidays. WILL.

#### THE REVISION OF THE SALMONIDÆ.

THIS work is progressing slowly but surely; it is interesting, and has been as long needed, that we hail with joy everything concerning it from our ichthyologists. It has been such a relief to have the formidable list of thirty or forty species, recorded in the olden works, boiled down to about half a dozen. That the work is not yet complete is true, but the labors of Bean and Jordan show that they are not idle, and there is no doubt that the tangle into which Suckley got the Pacific coast salmon will eventually be straightened out. Suckley's work was perhaps as good as could be done with the material at his command, much of which was in such a state that it is a question whether it would have been a loss to science if it was entirely lost. He describes species from dried skins, and from specimens partly destroyed by alcohol, as well as made new species of male and female, old and young, as they differed in their characters. His limited number of specimens must, however, be his apology, as he did not have the advantages of the splendid collection of the National Museum at his command. On the subject of these Western salmon Prof. Jordan writes us as follows:—

BLOOMINGTON, Ind., Sept. 6th.

Editor Forest and Stream.

In reference to Dr. Bean's notes on the redfish in your paper of Sept. 2d, I have to say:—

1. I have now no doubt that the "Idaho redfish," the "redfish" par excellence, is *Oncorhynchus kenerlyi*. In my visit to Oregon and Washington I obtained considerable evidence which supports Dr. Bean's view of the case, which moreover is clinched by his positive examination of the specimens sent by Prof. Baird.

2. It is probably true that there are a number of different species also known as "redfish" in different localities, and of these "redfish," *O. nerka* is certainly sometimes one.

3. The determination of these species, made three years ago by Gill and Jordan, were based on very insufficient material; "the best we had," but still very poor. Since then, I have been able to examine them in their native waters, and my assistant, Mr. Charles H. Gilbert, is still after them. We have thus far failed to find any evidence of the existence of more than five species of salmon on our Western coast, although we are ready to enlarge our notions if any more actually turn up.

These are the following:—  
1. *O. kenerlyi* (Suckley). The redfish known by its peculiar form, compressed and deep, the long compressed head, with the very large, oblique mouth. The vomerine teeth, as stated by Dr. Bean, are more than usually developed. Scales in a series alongside, 130-135. Branchiostegals, fourteen to fifteen. Anal rays (developed), fifteen. Back and tail, with black spots. Weight, usually less than five pounds. We know this to be Suckley's *Salmo kenerlyi*, hence its specific name is probably fixed.

2. *O. ginnat* (Richardson). The quinnat salmon, the largest and by far the most abundant and valuable species. Scales, 135-135. Branchiostegals, fifteen to nineteen, usually one more on one side than the other. Gill rakers about fourteen, below the angle about twenty-four in all. Pyloric caeca, about 160. Anal rays, about sixteen. Back and tail, with black spots. Weight, fifteen to seventy pounds. We know this to be the original *Salmo ginnat* of Richardson, and its specific name is not likely to be ever changed.

3. *O. tshawytsch* (Richardson). The "hooped" salmon. The smallest salmon yet known on our West coast. Scales, 137-130. Branchiostegals, thirteen to fourteen. Gill rakers, about thirteen below, twenty-three in all. Pyloric caeca, about sixty-three. Anal rays, thirteen. Back, spotted; tail always plain, except the uppermost ray which is sometimes spotted. This species reaches a length of about eighteen inches, and a weight of four to five pounds. It is probably, but not certainly, the *Salmo tshawytsch* of Richardson. There were no specimens of this species in the museum when our first studies of the *Oncorhynchus* were made, and the name *tshawytsch* was adopted by Gill and Jordan for a different fish, which turns out to be the same as *Salmo Clacki*.

4. *O. nerka* (Walbaum). The blue back, or Fraser River salmon.

This species is found from Oregon to Alaska (fide specimen from Aleutian Island). It runs in small numbers in the Columbia with the quinnat salmon, and in much larger numbers further North. Scales, 130-135. Branchiostegals, thirteen to fifteen. Gill rakers, twenty-three below, thirty-five to forty in all. Pyloric caeca seventy-five to one hundred. Anal rays, fourteen. Weight, eight to ten pounds. A remarkably graceful fish, the back deep blue, and the black spots anywhere. This is certainly the *Oncorhynchus hyemalis* of Günther, and probably the *Salmo nerka* of Walbaum. Its name cannot however be considered as definitely fixed.

5. *O. gorbuscha* (Walbaum). The hump-back salmon. Scales, 215-240. Branchiostegals, twelve. Gill rakers, twenty-eight. Anal rays, fourteen. Weight, six to eight pounds. There is little doubt that this is the *Oncorhynchus gorbuscha* of Walbaum, and if so, its present name is permanent. DAVID S. JORDAN.

FISHING AT MARTHA'S VINEYARD.—Cottage City, Martha's Vineyard, Mass., Aug. 16th.—Several of your subscribers have been sojourning here for a couple of weeks. Among the number are Mr. J. J. McGee, and Mr. M. W. Emmons Jr., of your city. Maj. Geo. Gifford, of Philadelphia, accompanied them on their fishing excursion to Cape Cod, during the present week, catching blue-crabs to the number of twenty-seven one day, and thirty-four another, and still another, and hooked forty-two, losing nine, and parting one line, and snapping another. Capt. Cleveland and his handsome craft have been chartered for two weeks. The Island of Martha's

Vineyard now teems with human beings, and all with one accord pronounce the Vineyard fishing equal, if not superior to any on the coast of Massachusetts. The 28th of August our city of cottages was illuminated, and \$300 worth of fireworks were exploded. G. G.

STRIPED BASS IN THE PISCATAQUA.—Dover, N.H., Aug. 26th.—Within a short time quite a number of striped bass have been caught at Piscataqua Bridge, a place on the Piscataqua River, some five miles from here, and eight from the sea. On Wednesday last, Mr. A. Clement succeeded in landing one that tipped the scales at forty-five pounds. He was brought to this city and placed on exhibition in one of our markets. Quite a little army of fishers are preparing to make a descent on the above named place, in hopes they may bring to the surface, if no further, some of these beauties of the deep. W. A. G.

#### HABITS OF SALMON—THE USE OF THE HOOK, ETC.

FOREST AND STREAM, Nova Scotia, Aug. 30th. A courteous note of inquiry from Mr. C. A. Smith, respecting the use of the hook on the lower jaw of the male salmon, also notes by "Stanstead" in which the writer asserts that he has "taken considerable pains to get the opinions of many of the north shore fishermen regarding some of the theories advanced by him (Hind), that salmon are biennial spawners, and often enter rivers for salutary purposes, not for the purpose of spawning." The replies "Stanstead" forwarded to me received were not favorable according to the fishermen's views.

In your issue of the 19th you reproduce Mr. Mowat's interesting letter, in which he takes exception to the view I have advanced regarding the scarcity of salmon this year. Finally, a St. John, N. B., paper of the 16th August, contains a rhapsody from the pen of "Salmo Winoluit," according to local contemporaries, in which I am rather roughly handled for venturing to doubt the efficacy of the work of "Salmo Winoluit," as now carried on.

If you can allow me space I would like to glance at all of these communications, beginning with the last first.

The author of *Salmo winoluit* begins by calling names. This is unscientific and suspicious, but as it appears to be an acquired local habit let it pass. Referring me over to Prof. Baird, which you thought worthy of publication, this author says: "He (Hind) delivers himself of a stupid opinion respecting the reasons why the salmon are backward this year in their navigation inland," and in argument against my view the author of *Salmo winoluit* urges the following luminous reason: "Everybody will agree that last winter was not a severe winter." In reply, I say that I did not consult everybody, or anybody about the winter. I referred to the comprehensive series of meteorological observations classified in the War Department of the United States, under the supervision of the late Gen. Meyer. I supplemented my inquiries with a review of the meteorological observations classified at Toronto, under Prof. Kingston, and recently under Supt. Carmichael. I did not encounter my letter to Prof. Baird with a reference to these authorities, because I knew that he perfect and perfect, and how I had obtained my meteorological information.

And here, before referring to any other subject, let me linger for a moment to write a word in grateful respect to the memory of Gen. Meyer, as to one who has done much for humanity, and has left us in his prime. For four years, Gen. Meyer did me the honor to cause to be sent to me with unvarying regularity, the *Monthly Weather Review*, from the office of the chief signal officer, and this without any charge whatever. I was indebted to Prof. Baird, in the first instance, for this courtesy, who suggested it, and while I have pleasure in acknowledging my indebtedness to the one, it is fitting that I should record a respectful appreciation of the life-work of the other. Gen. Meyer initiated and guided to marked success a scheme of coöperative observation, which will enroll his name among the benefactors of mankind.

I observe that Mr. Mowat states in the letter you have reprinted, "our weather here last fall was not colder than usual." In answer to these generalizations, I submit the following observations taken from the authorities already named.

#### MEAN TEMPERATURE LOWER IN 1879 THAN THE CORRESPONDING MONTH IN 1878.

	October.	November.	December.
Fredericton, N. B.	1.33	2.43	6.90
St. John, N. B.	2.51	3.58	5.40
Halifax, N. S.	3.16	2.20	1.93
Sydney, C. B. Is.	5.10	5.20	0.33

#### MINIMUM TEMPERATURES.

	October.	November.	December.
Fredericton, N. B.	17.3	3.0	Below zero.
St. John, N. B.	25.0	8.0	16.0
Halifax, N. S.	23.4	15.7	9.4
Sydney, C. B. Is.	27.	19.6	8.0

From these observations it appears that, in all cases, the mean temperature from the October, November and December, 1879, fell very considerably below the mean temperature of the corresponding months in 1878.

In Gen. Meyer's comments on December, 1879, in relation to low temperature, he says: "The following notes are of interest, as indicating the excessive cold (sic) of the month in various sections," etc., etc.

So much, then, for the "stupid opinion" which I gleaned from the results of very many independent observers, and which the author of *Salmo winoluit* has courage to contradict by quoting "everybody."

Now, let me reply to "Stanstead" S. W., and Mr. Mowat, all in one, respecting the point that salmon enter rivers for sanitary purposes, and not necessarily after spawning, and enter different rivers to those in which they were born. "Stanstead" wants proof; the other gentlemen don't believe in the prophecies of the proprietors of the Erne River (Ireland), published in the official reports on the Irish Salmon Fisheries for 1875 and 1876. Oct. 19th, 1875: Male fish, caught in the Erne, weighing 10 lbs. Red, that is, in spawning condition, marked with medal No. 15. This fish was captured by angling in the Bandrows River on the 30th March, 1876, and weighed 12 lbs. Aug. 29th, 1876: Male fish, fresh, weighing 12 lbs.,

caught in the Erne, and marked with medal No. 20. Released, and subsequently found killed in the Lough-Leader River on the 28th November, 1876.

Here you have positive proof of identity, and of visiting a parent river to spawn, of leaving that river, and of being taken in a neighboring river some months afterward. What did these fish ascend the neighboring rivers for? It was not for spawning purposes—it was too early; and the rivers in which they were found were some miles distant from their native rivers. It was not for food, for the adult sea salmon does not feed in rivers.

Again, salmon are frequently reported by the watchful water-bailiffs in Ireland "about the mouths of rivers," waiting, it is supposed, for "a rise or fresher." They suddenly disappear, but not up the river; they go out to sea, or it may be to try other rivers. This is a constant observation.

#### SPRING SPAWNING SALMON.

Mr. Mowat incidentally acknowledges this habit, in describing the "spring kelts." I first saw the nests of spring spawning salmon on the 24th July, 1864, at the head waters of the northwest branch of the Southwest Miramichi. I was at the time making a geological survey of New Brunswick for the government. My canoe men were both excellent salmon poachers, and spoke of the spring nests as by no means uncommon. The nests are made in March or April, according to the season. I examined two of the nests I saw. The eggs were there, transparent, and consequently alive. If they had been nests of the fall schools, the eggs would not be there; there would have been no eggs in May, or, if they had, they would have been decomposed by July.

I wanted to get a salmon, and said to my canoe men: "Catch me a salmon." "To-night," was the reply. They constructed a negog, or Indian spear, making it out of a large mail, the tyne of birch. An hour after nightfall I had two salmon and three grise, and could have obtained five times that number, if I had been so disposed.

The bright salmon caught in the Moisie River, on the spawning grounds in October, are spring spawners, coming up the river in the fall. Mr. Mowat's "spring kelts" coming from the sea late in November, with the ova at the same stage as the June fish, are spring spawners. I have mentioned spring spawners in Newfoundland, under my article on "Spring Spawning," published in FOREST AND STREAM in January, 1880.

#### BIENNIAL SPAWNERS.

This habit, to which some gentlemen take exception, is perfectly well known in Europe. The London market in January is supplied from the biennial spawners which congregate in the rivers in Ireland during the winter season, and which are known as fat winter salmon; also, from the fat tidal salmon caught, until 1878, on the 1st of January and subsequently, in the Sligo District, in Ireland, and to a less extent in the Dublin District.

The chief spawning season in the Sligo District is the last fortnight of December. The fish enter in the tidal waters the moment the close time ceases, at midnight on the 31st of December, were fat biennial spawners of the finest quality." This salmon was caught by hundreds the moment the church bells in Sligo District announced the opening of the new year, up to 1878. Then the proprietors of the upper portions of the rivers exerted themselves to have the close time extended to the 10th of January, and now tidal salmon fishing begins there at midnight on the 15th.

In brief, the gentlemen who contend against the idea of biennial salmon spawners, should read, with care, Barfurth's article on the food of the salmon, translated by Dr. Theodore Gunther, and printed in Prof. Baird's Report for 1873 to 1875. They should read Dr. Frie's account of the Bohmian salmon. They should look beyond their own rivers, and see what the rest of the world has done and is doing.

#### THE HOOK ON THE LOWER JAW OF THE MALE SALMON.

It must not be supposed that the hook is a constant development on the full grown male. During his off seasons he does not develop a hook. During his spawning seasons his lower jaw alone protrudes and curves upwards. This is a very important fact in relation to the habits of the salmon and its instincts. It is very wonderful, and opens a new and I believe an untrodden field of inquiry in relation to the movements of many species of fish, particularly the anomalous species in connection with temperature and food supply. The principle it involves probably extends to various genera of the cold water fishes, and greatly affects their movements.

But, while during their barren seasons the old males are almost hookless, the young males, developing milt, always show the hook. I think that the old males congregate together in the sea during the barren years. That they visit the mouths and lower reaches of rivers in schools is certain (vide Barfurth). As a guide to the proper understanding of the use of the hook, we may glance at another of the salmonids, the caplin. As June approaches, two fleshy ridges develop themselves on the back of the male caplin, running from head to tail. The female has no such ridges developed during the spawning season. In July, when the caplin spawn, two males inclose a female between them, the developed ridges on their backs preventing the female from rising or slipping upwards. The trio then swim vigorously up a gently sloping beach, either tidal or subterranean, to a depth of thirty fathoms, the condition being that the beach must be gently sloping. The pressure of the water, with the male between them, against the sandy beach compels the spawn from the female, the milt is discharged at the same moment, and the trio complete the process, apparently in a single rush, but of this I am not sure. The ridges are absorbed subsequently, and the backs of the males become nearly smooth, like those of the female.

I observed the first hint of the use of the hook on the male salmon's lower jaw from an Abenakis half-breed Indian, who was one of my canoe men when I was exploring the interior of the Labrador Peninsula in 1861. At the first falls of the Moisie River, where salmon in great numbers were crowded together, this half Indian, "Pierre," told me what he had seen when watching. I then fished the salmon springing. As this occurs only at night, or on evening, and perhaps in gloomy days, in the afternoon, it is rarely that the observer has the chance

to see the male salmon make his charge and grip. I saw it fairly on the fly, but had no idea of its object. I still I saw the caplin spaw in Trinity Bay, Newfoundland, in 1876, and afterward found dead male caplin on the Northern Labrador, with the ridges nearly gone from their backs.

The explanation of the seizure of the female by the male dawned upon me when reading Barfurth's, Siebold's and Block's statements about the disappearance of the hook in the fat biennial spawning male, during his barren year.

As to the structure. If Mr. Atkins will refer to the same volume of the Commissioner of Fisheries Report, which contains his own excellent paper on "The Atlantic Salmon," he will find, on page 719, a translation of a lecture on the organs of reproduction in fishes, etc.; and on page 721 he will see a diagrammatic illustration of the ovaries and oviduct of the majority of osseous fishes. I have searched in vain for anything like this structure in the anonymous salmon. I have utterly failed to discover even similarity in the anonymous salmon with the representation of the organs and their relation to the genital orifice. But I am not an anatomist, nor a physiologist, and should be sorry to find myself attempting to describe structural differences or affinities. This is the work of specialists nowadays. Were I to do so, I should probably discover *Salmo wilmuti*, No. 3, in five minutes. Hence my cautious statement, "I think you will find," etc., to which Mr. Atkins calls attention. But I long since found in the salmon (and have before me in alcohol at the present moment) a structure which led me to the conclusion that the eggs of the salmon were contained in closed sacs, separated from the oviduct by a membrane which serves the purpose of a hymen, and that it is the function of the hook on the lower jaw of the male fish to break this membrane when the proper hour arrives.

If Mr. Atkins will open a female salmon well advanced in spawn, *under water*, so as not to loosen the eggs from the oviduct by handling in different medium, he will, I think, satisfy himself that the conclusion I have advanced is not hypothetical.

Your correspondents have touched upon one or two other points, which the space I have already occupied prevents me from noticing now. But with your permission I will advert to them in a future communication. Discussions on these subjects, if temperately conducted, must be productive of good, for while they lead to exposure of errors and vain notions, they bring out important facts, as in Mr. Mowat's letter, which tend to the diffusion of knowledge and to public utility.

HENRY YOULE HIND.

#### A FISHING TRIP ON LAKE SUPERIOR.

DULUTH, Minn., Aug. 21st.

ABOUT three weeks ago a party of seven, including your correspondent, went down the north shore of Lake Superior, on a trout fishing trip. We had such good luck and such a pleasant time, that I thought your readers might like to hear of it.

The personnel of our party was, first and chiefly, the "Pegán," then the "Buffalo Bull," whom the Pegán was supposed to drive, next, a nameless gentleman, then the "Freshman," and last, three boys. We left Duluth in the wee small hours of the 5th of last month and rowed down the lake six miles to a small stream, where one of the party caught a fair sized trout; here we found a gridiron, and as our party were eminently respectable so, to speak, we captured it. After rowing about three miles further, a tug took us in tow and landed us at Sucker Bay, eighteen miles from the head of the lake. As we lay down on the ground with nothing over us but our blankets, we promised ourselves good sport on the morrow. Early the next morning, after a breakfast in which bread predominated, the whole party started off for the trout streams. We followed a deer trail for two weary hours, during which time all the party, with the exception of the Pegán and myself, turned back. We pushed on, and at noon were five miles from camp, with about eight miles to go. At 1 p. m. the party was well advanced, we walked a mile and a half further up the brook and then fished down. At 7:30 we came into camp with 160 good trout and true. The rest of the party had twelve fish. After a good night's rest we sailed on to Encampment Beach, thirty-five miles from Duluth, where we intended to spend the Sabbath. We selected as beautiful a spot as one often sees for our Sunday rest. Imagine a deep bay, with a sandy beach, perhaps thirty feet wide, running around it a distance of fully two miles, a rocky inlet rising perceptibly from the cold, sky-tinted water, as if in sharp contrast to the mainland, and crowned with foliage of the deepest green. Behind us rose "The hills, rock-ribbed and ancient as the sun," holding their store of precious metals for the use of man, while before us stretched out as far as the eye could reach the beautiful waters of grand old Lake Superior. As we stood there gazing over its boundless expanse, the sun sank behind the hills, and a starry glow over the sea and sky that I never expect to see surpassed.

Early Monday morning we started on, but the north-east wind blowing very hard we made but fifteen miles, and camped that night at Split-rock River. The next morning we put out early, bound for "Baptism or bust." At noon we rowed into Beaver Bay, a town of about one hundred people, and where we replenished our commissary department. The morning was rather low. While there we met a party of three, fresh from Baptism, who informed us very coolly that they "didn't think we would catch many there, they'd just taken out a hundred pounds." This rather knocked our calculations in a heap, but we went on and reached our Mecca at 4 o'clock, in time for the evening fish. The "lone fisherman" went up the river abut a mile, to the falls, and got only some dozen fish. He came back quite discouraged with the outlook. The next morning all the party but one went up the stream and brought down at noon about thirty fish, weighing on an average three-quarters of a pound each. They reported seeing a monster trout laying under a stone up the river, and so in the afternoon the boss fisherman and myself went after him. We saw him under the stone and grappled for him, hooked him, and pulled; he did not come, so I waded into the water for him and got him. He weighed, which was quite a surprise, 15 lbs. 10 oz. At 10:30 a. m. as he touched the ground the hook broke from his mouth and he and I fought for some moments, but the right won the day, and we put on our

string a speckled trout that beat anything I ever saw; he was *twenty-one and a half inches* over all, five inches deep two and a half inches in thickness and weighed when dressed four and a half pounds. Talk about your brook trout that weigh about a pound or two! You should have seen us after we had got him! My companion in arms made some remarks about the "Great horned spoon." I spoke of the "Devil trace river," and we made the woods resound. That was our gala day. Our bill of fare, too, on that day was style. Here it is: Breakfast: fried trout, flapjack, coffee and bread and butter, etc. Dinner: flapjacks, coffee, fried trout, bean soup, crackers, etc. Supper: fried trout, baked trout, coffee, etc. That night we slept the sleep of the just, as it were.

About 4 o'clock the next morning one of the party went up the river and caught nothing except a duck. He found out, too, the reason for the name "Baptism"—he was thoroughly immersed. That morning we started for home, and of the trials and triumphs, the joys and sorrows of that homeward voyage I will speak in my next.

FRESHMAN.

BIG BASS.—Putnam, Aug. 29th.—Some eight miles from here lies the famous Webster Pond, which is very large, covering some 2,000 acres or more, and abounds in black bass, some very large, yet we do not know just how to catch them. Dobson and worms are principally used, but while we can see hundreds of great fellows swim past our hooks, they scarcely notice our bait. Once in a while one will notice, and perhaps bite, and while we catch only from five to twenty in a day's fishing, it seems, if we only knew the proper bait, we might catch hundreds where we catch but one now. Will some one let us know through the FOREST AND STREAM, or the best bait, or indeed tell us how to catch some of these big fellows. There seems to be an abundance of food for fish in this pond, for shiners, perch and pickerel also abound. This lake, or pond, is of an average of say twelve feet deep.

G. F. W.

#### Answers to Correspondents.

No notice taken of Anonymous Communications.

N. A. E., Bangor, Maine.—The wild hogs of Florida are simply domestic hogs (*Sus scrofa*) run wild.

MEDICINE II.—We publish in this issue the information you ask for regarding cocker spaniels.

A. C. S., Savannah.—Can furnish any back numbers you wish. Much valuable information on yachting.

W. J. A., Denton, Texas.—In field trials, if a dog points a lark, turtle dove, or a rabbit, is it counted against him? Ans. No.

FOUR, Boston, Mass.—Thanks for sending newspaper abstract of Prof. Mayer's lecture, but the author has promised us the full text of his article, which we shall publish shortly.

H. C. B., Warsaw, N. Y.—Write to A. E. Goddard, Guyanar, Orange County, N. Y. He can put you in the way of getting the dog you want.

J. E. S., Attica, Ohio.—Deer may be killed in the Upper Peninsula between Aug. 1st and Nov. 15th, and in the Lower Peninsula between Sept. 15th and Dec. 15th.

A. A. S., Milford, Mass.—Please inform me open season for game in Iowa—ducks, prairie chickens, etc. Ans. From Aug. 15th to Dec. 1st for pinnated grouse; Aug. 15th to May 1st for ducks.

G. W. R., Moodus, Conn.—What would be the fare from New York city to some good trout fishing in Pennsylvania, and what route is the cheapest? Ans. Trout fishing is closed for this year.

J. W., Iowa.—Dues "The Birds of the Colorado Valley," by Dr. Elliot Coues, give a specific and generic description of all the birds treated upon, or is it in these respects the same as the "Birds of the Northwest," by the same author. Ans. "Birds of the Colorado Valley" does contain full descriptions of the birds treated differing in this respect from "Birds of the Northwest."

J. C. New York, N. Y.—Will you please inform me whether quail, rabbits and partridge may be shot in Connecticut after Oct. 1st? Also what may be shot. Ans. Quail, woodcock, ruffed grouse, rabbits, ducks and geese may be shot after Oct. 1st, except duck, geese and brant in the mouth of the Housatonic river.

MACF.—Pointer Mack, winner of prize at Centennial dog show, 1876, was by Dan out of Cuts; Dan by Rap; Rap the son of old shot, of Easthampton, and imported by Mr. Buell, his owner; Cuts by imported Fanny. She was bred by Squire Challoner, Warechester, England. Mack was owned by Mr. James Warburton, New Britain, Conn.

H. B. V., Bradford, Pa.—For internal canker the ear should be syringed with lukewarm water, and thoroughly cleaned. Take Goulard's extract of lead one ounce, glycerine and carbolic acid one-quarter ounce, best olive oil four and a half ounces. Mix the two first-named, and add the oil gently, rubbing together in a mortar. The bottle must be well shaken before the infusion is dropped in the ear. Feed lightly; give no meat; the food should consist of boiled green vegetables.

READER, New York.—I. We cannot distinguish between makers. Those advertised in our columns are all good. 2. Their guns are good. 3. Shot gun. 4. Yes, all smooth bore can be so used, but we do not recommend it. 5. There are several good places. Cannape is highly recommended. Take H. R. R. to Kingston, thence Uster and Delaware to E. to Shokan. G. Bookwell will give information and guide. 6. There is no dog that will hunt all the game you mention. A pointer or setter is best for birds, and a bound or common cur for the four-footed "varmints."

CHICAGO.—We would certainly not advise you to try the Perkins boiler. It is complicated and not any more economical than the common tubular boiler. Do not believe the statements put forth by interested bucksters in "rights" for America. Examine the trials in England and convince yourself. The boiler has now been in the market for ten years, and only half a dozen are in use, while many have been thrown out as worthless humbugs. With your soft coals the Perkins boiler would be an absolute nuisance and wasteful in fuel. See back files.

W. C., East Saginaw.—Taking boat at twenty-five foot water line, eight and a half feet beam, and four feet n/mo inches d. ap she will need three and a half to four tons ballast. Of this put say 1,575 pounds in the keel. Latter about fifteen inches below garboards amidships, eight inches on top and five inches on bottom, tapering at ends. Round up well forward and a little aft. The iron outside will be ten feet long and two inches deep; average thickness, six inches. The keelson can be cast-iron if desired, and rest stowed between the frames under the floor or cast to it. See that it is secured and cannot shift. Cut away the keel for the outside iron, and bolt up through all. The midship section you send will make a very roomy craft. Giro sides of house a slight "tumble home." Mast for compromise cutter about nine feet six inches from forward end of water line. Forestay sets up at stem head; jibstay through bowsprit end and down to outwater. Use fixed bowsprit and standing jib. Hoist of mainsail, twenty feet boom twenty-seven and a half feet, gaff fifteen feet, bowsprit outward twelve feet. Peak gaff with jibstay, or nearly so. Topmast fourteen feet above cap, fitted to house. Exact sail plan depends upon immersed fore and aft section. Center of sails about six inches forward of center of lateral resistance. Several such boats in our waters, giving much more satisfaction than the pancake variety.

T. E. K., Bradford, Pa.—I have a Sussex cocker puppy three or four weeks old. About two weeks ago he showed signs of being out of order. His hair appeared to be dead and dry; sores showed themselves on different parts of his body and his eyes ran badly. I gave him two drops of Fowler's solution daily, and also gave him an occasional dose of sulphur in his milk. Do not think it came from overfeeding or high living. He did not seem to improve under this treatment, and last Sunday he showed indications of what I supposed was distemper, though I never saw a case and have had no experience with the disease. He had spasms, during which he threw a frothy sline from his mouth. I have been giving a mixture of cream of tartar, sulphur and gunpowder, one teaspoonful once or twice a day and two drops tincture tux vomica. On Friday, his symptoms were more alarming. He would run around in his room and bite things that came in his way, and I feared he might have signs of being rabid and intended having him killed; but this morning he does not show these wild signs and recognizes his friends. He eats heartily. We feed him on boiled milk and bread, with some cooked meat. He has an almost constant twitching of the muscles, but I do not think his eyes are running so much now. Ans. The dog requires to be very closely watched. The symptoms given point very strongly to rabies, although it is not certain that the disease appears in one so young, unless bitten by a rabid animal. Write again.

#### PUBLISHERS' DEPARTMENT.

A REMARKABLE CIRCUMSTANCE.—Mr. W. E. Sanford, of Holley, N. Y., became afflicted a few years since with a most terrible inflammation in the lower portion of his body. He did all that thought could suggest to remove it, even submitting to a most painful surgical operation. At last, when death was longed for and seemed near, he began (against the wishes of his friends) taking Warner's Safe Kidney and Liver Cure, and is to-day a strong man and in perfect health. Any readers who may question this remarkable assertion can address him at Holley, N. Y., and ascertain for themselves.

CATALOGUE OF HAMMERLESS GUNS.—Messrs. J. Palmer O'Neil & Co. have recently forwarded to us a copy of their new catalogue of Hammerless Guns, a publication which is devoted to showing the character of the sportsman's goods now for sale by them. It is profusely illustrated with fine woodcuts, and seems to mention every article that the shooting man can require. In addition to the pages devoted purely to business are several which include in their contents the game laws of Pennsylvania, abstracts of those of most of the States and Territories, and a number of useful hints to sportsmen.

THE WILSON ADJUSTABLE CHAIR.—The attention of every one of our readers, be he bachelor or family man, is particularly directed to the advertisement on another page of this paper of the Wilson Adjustable Chair. This is an article of real merit. Through its wonderful adaptability it really takes the place of from \$300 to \$100 worth of inflexible beds, chairs and lounges. It is a clever addition to the parlor or library. There are chairs and chairs, but this is the chair. Many cash-chair-makers have done excellently, but the Wilson has excelled them all.

McClintock's Holabird Shooting and Fishing Suits. Uppertroves & McClellan's manufacturers, Valparaiso, Ind. Send for circular. "The 'Holabird Shooting Coat' is the best in the world."

Try Diving Decoys and Improved Explosive Target Balls See advertisement.

Our readers will do well to notice the new advertisement of E. Remington & Sons.

The American Arms Company, as explained by their new advertisement, will reduce the prices on their guns for a short time. Send in your order if you want to get a good Fox gun cheap.

#### AMERICAN CHAMPIONSHIP RECORDS.

Recorded championship games, to Aug. 31, 1880, are: 100 yards, 10 wcs, W. C. Wilmer, Short Hills A. C., Oct. 12th, '78; and R. La. La. Montana, New York A. C., Sept. 25th, '78; 230 yards, 22½ sec, L. E. Myers, Manhattan A. C., Sept. 20th, '78; 410 yards 49½ sec, L. E. Myers, Manhattan A. C., Sept. 20th, '78; half mile, 1 min. 56½ sec, L. E. Myers, Manhattan A. C., July 17th, '80; one mile run, 4 min. 29½ sec, L. E. Myers, Manhattan A. C., May 31st, '80; five mile run, 27 min. 55½ sec. W. H. Robertson, Brooklyn A. C., June 5th, '80; 120 yards hurdle race, 17½ sec, H. Edwards Ficken, New York A. C., Oct. 12th, '78; one mile walk, 8 min. 55 sec, E. E. Merrill, Union A. C., July 5th, '80; three mile walk, 21 min. 42 sec, T. H. Armstrong, Jr., Harlem A. C., Sept. 14th, '78; seven mile walk, 53 min. 36½ sec, W. H. Purdy, Greenvoort A. C., Sept. 20th, '78; running high jump, 5 ft. 8½ ins., J. P. Conover, Col. Coll. A. A., May 9th, '79; running broad jump, 21 ft. 8 ins., J. S. Voorhees, Brooklyn A. C., June 5th, '80; pole leaping, 10 ft. 7½ ins., B. F. Richardson, Scottish American A. C., July 17th, '80; putting the shot, 38 ft. 2½ ins., J. A. Bullerton, Montreal Lacrosse Club A. C., June 5th, '80; throwing the hammer, 87 ft. 1 in., F. Larkin, Princeton Coll. A. A., May 9th, '79; throwing the discus, 22 ft. 1½ ins., Wm. H. Curtis, New York A. C., Sept. 20th, '78; bicycle race, 2 miles, 6 min. 27 sec, W. B. Clark, N. Y. Bicycle Club, Feb. 14th, '80.

FIXTURES.

TORONTO DOG SHOW.

No. 4.—For best puppy under 12 months, dog or bitch, in class 23 to 36 inclusive, silver cup, presented by Mr. Henry Hogben, Mrs. A. D. Stewart's colley Heather.

No. 1.—For best dog or bitch in classes 1 to 22 inclusive, silver medal, value \$20, presented by the Toronto Industrial Exhibition Association. Dr. J. S. Niren's Gordon setter Blossom.

No. 2.—For best dog or bitch in classes 23 to 30 inclusive, silver medal, value \$30, presented by Toronto Industrial Exhibition Association. J. Gibson's greyhound.

No. 3.—For best puppy under twelve months, dog or bitch, in classes 1 to 22 inclusive, silver cup, presented by J. E. Ellis & Co.

No. 4.—For best puppy under twelve months, dog or bitch, in classes 23 to 30 inclusive, silver cup, presented by Mr. Henry Hogben.

Mrs. A. D. Stewart's colley Heather.

No. 5.—For best collie, dog or bitch, silver medal, presented by Sheriff Javis, R. B. Brown's Bob.  
No. 6.—For best fox terrier, dog or bitch, silver cup, presented by Mark T. Irish, R. G. Brown's Tip.  
No. 7.—For best cocker, dog or bitch, \$10, presented by C. A. Brough, Esq., E. Tinsley's Husky.

**THE ST. LOUIS DOG SHOW.**—Persons intending to exhibit at the coming dog show at St. Louis are reminded that the date at which the entries close is Monday next, 20th inst. There is every prospect that the show will be very successful, the entries being already large. The express companies have promised, on prepayment of the usual rates, to return all dogs free of charge.

**NEBRASKA FIELD TRIALS.**—*Lincoln, Neb., Sept. 16th.*—*Editor Forest and Stream.*—The date of closing entries is Sept. 20th, instead of Aug. 31st, as printed in official programme by mistake. We are receiving entries from New York, Pennsylvania and the Eastern States, and the prospects are most encouraging for splendid trials.  
J. H. HARLEY, Recording Secretary.

**DOG FLAAS.**—*Utica, N. Y., Sept. 14th.*—*Editor Forest and Stream.*—I notice many articles in your paper about "dog flaes," how to prevent them, etc. I will give your readers my experience. Last November, my dog Duke was covered with them, in spite of flea powder. I gave him a bed of yellow cedar shavings under the carpet in his kennel. In a week's time there was not a flea left on him, and has not been from that time to date. He would catch one or two occasionally from other dogs, but they would disappear in twenty-four hours of their own accord. Probably red cedar, or Spanish cedar, or sandal wood would answer the same purpose, but I have not tried either, as yellow cedar is more convenient and answers sufficiently. By publishing this you will doubtless confer favor on many dogs.  
J. D. C.

**SMALL POINTER STOCK.**—It has been our intention, ever since the New York Dog Show, to call the attention of our readers, and particularly those interested in the small pointer breed, to the wonderfully beautiful and healthy stock owned by Mr. Van Wagenen, of this city. There is nothing superior in this country to the race of champion Dutchess, by Mr. Edmund Orgill's champion Rush. Dutchess is too well known and has been exhibited too often to need any extended eulogy in these columns, but the same may be said of Rush. She is a bitch, with an exceedingly handsome head and of beautiful proportion combined with great power of body; and in the field exhibits a go-ahead-iveness that could hardly be expected to be seen in a dog so finely bred. She is as plucky as she can be, and no bunch of green briars is she afraid to face. Full of energy and life, as anyone knows who has seen her on the bench, seldom lying down, and always ready for a romp. The secret of this is, that when at home on the farm of her master, at Pomona, Rockland County, N. Y., she is allowed absolute liberty to roam over the grounds where she will. Her puppies are never sick and are ever free from mange, the bane of so many kennel establishments. Plain, wholesome food, clear pure water and a bed that is constantly being changed, have produced this result. Mr. Orgill's Rush is acknowledged by winners to be one of the most representative small pointers in the country, and a rare stud animal.

**F. S. P., of Pottsville, N. Y.,** has an intelligent poodle which he has taught to scratch while standing up. The dog performs the act at word of command, and the proud and happy owner exhibits him with proudest pride.

#### KENNEL NOTES.

**SALES.**—*Maud S.*—Messrs. Hollis and Fellows, Hornell Cocker Kennel Club, Hornellsville, N. Y., sold, Sept. 16th, the black cocker bitch puppy Maud S., whelped Aug. 1st, 1890, to Mr. Robert Walker, Franklin, Delaware County, N. Y. Dash—Mr. F. E. Steel has sold his Irish setter dog Dash to Mr. Geo. W. Bolson, of this city. *Bullerup-Wildard*, whelp—Messrs. Hollis and Fellows have sold to party unknown black cocker bitch puppy Butter cup-Wildard, whelped May 20th, 1890.

**BRED.**—*Doll-Prince of Orange*—Mr. John Davidson's (Monroe, Mich.) imported Llewellyn bitch Doll to his imported Laverack Prince of Orange, whelped April 1st, at the Alexandra Palace whelp. *Edith-Benedict*, Mr. J. J. Jordan's English setter bitch Talu (Belton-Pora) to his Benedict (Dash III.-Opal).

**WHELPS.**—*Bosla*—Mr. E. A. Herzberg's English setter bitch Boska, whelped Sept. 11th, four bitches and two dog pups, by his pure Laverack Aldershot—none for sale. *Bell*—Mr. L. W. Gunn's (Greenfield, Mass.) Irish setter bitch Bell, thirteen months old, whelped fifteen puppies on Sept. 7th, seven dogs and eight bitches, by owner's Jack.

#### RANGE AND GALLERY.

**OTTAWA, Canada, Sept. 11th.**—The Canadian Wimbledon for 1890 has had a most successful week of it for the past six days. What Creedmoor and Wimbledon are to larger woods, Ottawa has become to the land of the beaver. Founded in 1888, and holding its early meetings, before the birth of the capital, elsewhere, the association has now finally and firmly planted itself by the banks of the Rideau and close to the arms of its nursing mother—the government. In accordance with the time-honored custom of civilized and barbaric nations alike, the opening day was rendered duly formal, and at the same time cheery, by a well-served luncheon, given under the appropriate covering of a big marquee, whereat all the notables in town and the leading visitors were present. Col. Gzowski, the President, being the host. Here, in a very classic dinner hour, the usual complimentary and congratulatory speeches were made by Mr. J. M. Luard, the new commanding officer of the Canadian militia, was for the first time heard by a Canadian audience.

The range itself presents a very picturesque appearance. Perched on a high slope, which overlooks a valley some 500 yards broad, are clusters of white tents gleaming under a hot September sun—tents of the various officers of the association, tents of

refreshments, living tents of visitors duly labelled; here Nova Scotia, there Ontario, New Brunswick, Quebec and even Manitoba British Columbia has not put in an appearance, the 2,000 miles of the "iron road" acting presumably a deterrent. Then there is a charming nest of tents, big and little, devoted to the use of Col. and Mrs. Gzowski, tastefully ditted up with flower beds in front and guarded by a fence of ropes and pickets. Here plays the band and Mrs. Gzowski receives visitors, though unfortunately the world which visits is still at the seaside and lakeside winding up its summer season.

The programme of the meeting has been a very heavy one, and the Snider-Enfield rifle has been tested to its best. Among the prizes of special interest are those presented by His Excellency the Governor General and Her Royal Highness the Princess Louise, to be competed for with Snider-Enfield rifles, at 200, 500 and 600 yards—10 rounds at each range—by the fifty competitors making the highest aggregate scores in the preceding matches, provided they are members of the active militia force of Canada, members of the staff, or officers who have retired retaining their rank. First prize, a special badge and \$250; second prize, a badge and \$150; third prize, a badge and \$100.

On the first day the range was not largely attended, first days being probably suggestive of immaturity of arrangement, and consequently those present were chiefly men particularly interested in the contest, watching through glasses the twenty targets which constantly rose and fell behind the markers' lines, or eagerly discussing some ingenious device for sighting or getting at the windage. There was nothing, however, of the rehearsal character in the proceedings. The association has secured as its executive officer this year Capt. Costin, a man of great experience in all matters of the range and rifle, an experience gained by a long course at Wimbledon, and all ran smoothly. The system seemed to be admirable, and the precautions taken will effectively guard against any repetition here of those ugly instances of false marking which proved so startling this year at the English meeting.

A center of envy to some was Lieut. Col. Gibson, whose 5 decorations showed him to have been present at Wimbledon 3 times, and to have been the happy winner of the Prince of Wales prize last year, a prize which carried with it £100. He also won the Kolapore Cup badge when the Canadian team shot against the English for that trophy. His, though, was only the badge of '79, whereas the present was that of '75, on which appeared the magic letters "Won." Indeed there were several who wore evidences of honors gained on both sides of the Atlantic, the heroes of the day.

Without going into details of the matches, the meeting may be summed up by saying: The gathering will not be remembered for good shooting, although that considerably improved latterly, but it will be remembered because of the generally satisfactory nature of the arrangements made, and the good feeling which prevailed throughout. No complaints have been made, and all the competitors appear to be satisfied that the fairest justice has been done them. The weather has been favorable in most respects, but the wind at times proved very trying on account of its varying character, especially in the early part of the week.

The conclusion of the military matches enabled the statistical officer, Col. Ince, to make up the squad from which the Wimbledon team of 1891 will be chosen. They are as follows:—

1. Sergt. T. Mitchell, Tenth Royals.	402
2. Major Macpherson, G. G. F. G.	389
3. Private K. M. Mitchell, Tenth Royals.	385
4. Capt. Thomas, Fifty-fourth.	379
5. Capt. Balfour, Eighth Royals.	379
6. Lieut. Ewan, Thirty-sixth.	379
7. Sergt. M. Smith, Thirtieth.	379
8. Lieut. W. Mitchell, Thirty-second.	379
9. Private A. Wilson, Thirty-third.	375
10. Capt. Sergt. Walter, G. R. E.	375
11. Private Anderson, G. G. F. G.	373
12. Lieut. Crowe, W. B.	373
13. Sergt. Weyman, Eighth Cavalry.	371
14. Capt. Weston, Sixty-sixth.	369
15. Color-Sergt. Hancock, Thirtieth.	368
16. Lieut. Bishop, Fifty-fourth.	366
17. Sergt. Sutherland, G. G. F. G.	366
18. Private Walters, Wakefield Infantry Company.	363
19. Color-Sergt. Satter, Fifty-fourth.	361
20. Sergt. Paine, Thirtieth.	361
21. Quartermaster Corbin, Sixty-third.	361
22. Private Bisset, Fifty-fourth.	361
23. Sergt. J. Ross, Fifteenth.	359
24. Wheeler Osgood, W. B.	359
25. Private M. Smith, Thirtieth.	359
26. Corp. Brady, Queen's Own.	356
27. Private O'Grady, G. G. F. G.	356
28. Lieut. Hunter, Fifty-fourth.	355
29. Private C. Bent, Cumberland Provisionals.	355
30. Sergt. Richard, Seventeenth.	353

**BOSTON, Mass., Sept. 11th.**—The meet of the Massachusetts Rifle Association at Walnut Hill to-day was very full of interest, and excellent records were made. Capt. W. H. Jackson, of the American rifle team, was on the ground during the afternoon, being his first appearance since his return from Europe. Subjoined are the best scores:—

CREEDMOOR MATCH.										
E. F. Richardson	5	4	4	5	5	5	4	5	5	47
O. M. Jewell	5	5	4	5	6	4	4	5	5	46

#### ORIGIN OF ROUND-ARM BOWLING.

BROOKLYN, N. Y., Aug. 25th.

*Editor Forest and Stream.*—

Not long since I noticed in an article on cricket, published in the New York World, a reference to the origin of round-arm bowling which was inaccurate. Having been born and bred in the New York of England (Kent) where the new style of bowling was first introduced, and also personally acquainted with the originator of it, I thought, perhaps, it might be interesting to your readers to have the few and simple facts of the matter from me (perhaps the only one now living) who was, as it were, an eyewitness of the birth of round-arm bowling, and intimately acquainted with cricket and the cricketers of Kent of that period.

Mr. John Wills, familiarly known by his neighbors as Squire Wills, was born near Canterbury, possibly as early as 1755, certainly not later than 1760, and, therefore, was about thirty or thirty-five years of age when he originated round-arm bowling at his residence at Sutton, about two miles from Maidstone, Kent. He was then in his prime as a cricketer, playing for his county against all England and other counties, as well as in all the best local matches. He was, of course, an enthusiastic cricketer, always ready for a game, and upon one occasion, wanting some practice and having no one to bowl to him he got his sister (not his daughter, as some accounts say, for he never was married) to throw to him, and every cricketer, if he ever saw a female throw a ball, must have noticed that the motion is very similar to the motion of the delivery. No doubt Miss Wills threw some well-pitched and good length balls, which Wills found difficult to play, and this set him to thinking it might be well to try and bowl in the same way. This was in about 1820, and the records of the Marylebone Club show that Mr. Wills attempted to introduce his new style in a match, Kent vs. All-England, on Lords in 1822, but his effort was not with bowls of derision and the new style was interdicted by the M. C. C., upon which he left the field and did not play in the match, his place being filled by consent. Although I did not witness this match I perfectly well remember the excitement it created among cricketers. From what I have said it will be seen that Lillywhite's story was wrong, as published in his "Cricketer's Companion" for 1871. Wills did play whenever the weather permitted, but not when the snow was on the ground, and it could not have been his daughter, because he never was married, and the motion did not originate from the girl's effort to keep her hand away from her skirts, as Wills would not have been satisfied with a young girl's "toss." He wanted force which could only be had out of a throw. Lillywhite did not take up round-arm bowling until after the refusal of the All-England eleven at Lords to allow Wills to bowl in the new style, and when he heard of the circumstances, he doubt considerable romance had become attached to the story (and he took the black cross). Wills never played in a first-class match after this occurrence, so my knowledge, contenting himself with playing for his own club, at Maiden (he did not live in the parish), against other local clubs. At one time Maiden felt strong enough with Wills and Gordon to challenge the County of Sussex, but I do not think the match ever came off. Notwithstanding the effort of those in authority to prevent round-arm bowling, it was taken up by bowlers, and it soon worked its way into general play. I remember one of our village bowlers, Tom White, and I immediately; in fact, he was the first I ever saw who bowled with round arm in a match.

Wills was a thorough English squire of the period. He enjoyed £100,000 on coming of age, but being of a generous disposition, lending when asked to, but never asking for his own gain, and always living in an expensive way, his fortune in time slipped through his fingers. He was a thorough sportsman, and kept a fine pack of hounds, which he bred himself, crossing the fox-hound with the black and tan terrier and then crossing back again with the foxhound. This he did because the full blooded fox-hound was too large and not as well adapted as the smaller breed he produced were to a country so well wooded and with such steep hills as that part of Kent. The time came when his resources were impaired, that he had to give up his pack, and hunted that of someone else. Still later finding that he could no longer live on an equality with those who had for so many years associated with, he left his native county in about 1840, settled in Gloucestershire and ended his days there.

Among other old-time cricketers I recollect Mr. Budd, very well known, living in knee-breeches and silk stockings, and Lord Frederick Beauclerk, Lord (Tom) Norridge we used to call him! Ashley, a carpenter, who, when his employer left Chatham for London, followed him, and when his employer left Surrey, played for Surrey. Then there was Jimmy Joules, a shipwright, employed in Chatham Dockyard, who I recollect seeing play a single wicket match at Sutton, his opponents being his father, son, and George Wilson his son-in-law, who did not succeed in getting him out, although they were all three good cricketers. Later, the Myrns (there were four brothers), Alfred the youngest and most famous cricketer. Walter used always to long-stop Alfred's fast bowling, always stopping the ball with hands or body, but not taking it as clear as he ought to have done. Then Wenman, Donington, Hillyer and Adams were of this date, the last named, by many of his contemporaries being considered as good a cricketer as any in England. But I remember while the match, Leeds Park vs. M. C. C. was being played at Leeds Park, I was staying at my friend John Roper's house, at Hollingbourne, where Wenman, Hillyer and others were also staying for the day's play, and they said, "They'd not care to play with Adams on the ground eleven, as he was of no use, if the match was 'up hill,' if bowling, he could not stand being

hit, and, if a score was needed, he never got one." The match between England and Kent, at Town Malling, in 1839, I remember, as I drove down from London purposely to see the match. No doubt many other scenes would come to mind again, if by any chance I should see any of the participants in them, but most, if not all of them, have passed away, and, in the order of events, I too, must soon follow; but, before that time comes, I hope to see a few more good games of cricket. WILLIAM FALMER.

LONGWOOD vs. STATEN ISLAND.—Played at Boston, Aug. 28th. George Wright writes us: "This was the first game played at Beacon Park, on the grounds of the Boston Athletic Association, and considering the grounds are now the wicket played very well. There was a good crowd present, who took quite an interest in the game. The batting was lively on both sides, and kept the fielders on the go. The game was called at 4:30 P.M., to allow the visitors to take the evening boat for home, which caused the game to be settled by the scores of the first innings."

STATEN ISLANDS, NEWARK.—Played at Newark, N. J., Sept. 2d. The Staten Island Club sent nine of its cranks to Newark, to play the club of that place, whose eleven had been strengthened by Mart, of Trenton, Makin, of the Manhattan, and Armstrong, of the St. Georges. The game was one sided, and resulted in the victory of the visiting club. The fielding of both teams was first-class. Lane, the professional of the Staten Islands, played a very fine innings of 59, the best stand we have ever seen him make. It was effected without giving a chance. Highway Moore came out as a bowler in the second innings and astonished the natives. Score—

### SOME NEW FITTINGS.

WE are very often in receipt of inquiries as to where the iron and brass work fitted on boats and canoes can be had, and it may not therefore come amiss to many engaged in building their own boats to put down a few notes on some of the latest patterns of such fittings. We believe they are all the result of personal effort on the part of Mr. G. W. Repton, 70 West street, Brooklyn, who has given a long time to brass work of all kinds for boats and yachts, and has been successful in uniting with a very fair amount of elegance in the samples before us. A new catalogue has just been issued for the convenience of the trade and amateurs, who can order direct, by simple reference to the number of the illustration, saving themselves a great deal of correspondence, and enabling them to plan at the outset for the use of fittings of specified character and dimensions. We have selected the following articles at random as examples of the many little useful innovations and improvements Repton has made. We may add that all of the articles are made of tough

use among sportsmen, which are too wide for regular outriggers after the shell boat pattern, and yet too narrow to row from the gunwale, the special rowlock represented in the second cut will not doubt supply a demand felt as it is a new and unshipped work to a change from ours to public.

But should the boat be supplied with wooden outriggers, as is often the case in lapstrake and home-made craft, over the usual style consists in having a lip or screw down in the wood, affording greater security and preventing the rowlock from working in.

The fourth and fifth figures represent Watson's eagle rowlock well adapted to boats liable to a change in rowing when light and loaded. The difficulty of rowing from the low gunwale of a sporting boat when returning from camp and down to within an inch or two of the water is an experience common enough. The eagle rowlock, besides being strong and compact, enables one to pull at

ease and to good effect, for it can be raised or lowered to suit the trim of the boat, and is secured by a screw which is turned by the hand of the rower. To canoeists and the owners of

THE BURSTING OF DR. NASH'S GUN.

MOUNT HEBRON, Ala., Aug. 30th.

Editor Forest and Stream:—

The explosion of Dr. P.'s gun, reported by R. W. H., was caused by an overcharge of mud, and not by any fault of the powder or gun, and why he should report such a case, I cannot see. If my gun had been filled with mud when I fired it, I would have expected an explosion, and if I had reported the case at all it would have been to warn others against shooting mud from their guns. As the letter of E. L. H. proves nothing more than that "For several years it (the Dittmar powder) was not uniform in quality"—a point in my favor—I will pay no further notice to it.

Another correspondent, on commenting upon another account with black powder, says: "As far as so far as ascertained, the gun was loaded with three drachms of Hazard powder and one ounce of shot?" Pray, how was this fact ascertained? Did your correspondent's friend use graduated measures in loading his gun? and load it in the presence of at least half a dozen gentlemen and sportsmen, and I did mine? (two facts which I can establish) or was the judging of the size of the load done by that poor hunter's feeling, seeing how many fingers the ramrod would stick above the muzzle of the gun, after the load was in? or did he judge by the amount of noise the gun made when it was fired?

It was only the way in which I supported my gun, that saved me from a more terrible accident than befell me. Had I extended my arm to support the gun, as is the usual custom, instead of supporting it, by resting my left hand just under the guard, I firmly believe that it would have torn my left arm entirely away. Still, one of your correspondents thinks the case should not be reported, because the accident of his neighbor with black powder was not. I suppose that if there were a new drug put upon the market, and I were to come near losing my life from getting poisoned with it, I should not report the case, because some of your correspondent's neighbors may have been poisoned worse with arsenic than the case not reported. There would be just as much reason in one case as the other.

Through the kindness of Mr. T. J. Darryberry, of Gainesville (this State), I have had the privilege of examining the Aug. 5th number of FOREST AND STREAM, and I notice Mr. Von Lengerke's report upon what he calls the Nash powder, viz., the Dittmar powder that exploded my gun. I have not yet had time to examine this report enough to thoroughly understand it. I see, however, that the report of this powder has shown it to be far below the strength of the standard Dittmar powder, that it is terrible to think what the powder in full strength would do were it to get into one of its crazy fits, as did the powder when it burst my gun. There is something very strange that this powder should show such little strength, and act so mildly at all times, except when it was used by me, and then a small charge of the powder caused such a terrific explosion as to completely tear to pieces a gun that has so successfully withstood many hundreds of charges that contained a great deal more of black powder, and that, too, when the black powder is shown to be so much the stronger. I am compelled to repeat the question asked by the Dittmar Powder Company, and ask "what caused the accident?" Is this powder liable to get into crazy fits, or what can be the cause? I am not prepared to believe that the fault was in the gun. If so, why could not a much greater quantity of black powder be put in the gun? If there had been nothing more than a load of powder in the barrel of my gun, and the edges from which the piece came had shown blackening or rust, I would have believed that the barrel had been previously cracked with black powder, but such could not have been the case. The edges from which the piece was burst were perfectly fresh and new, and showed that the burst could not have been caused from a previous crack. The bursting of the barrels of my gun, from breach to muzzle, and with such force as to bend them considerably and throw them forty yards apart, shows considerable power, especially so, when upon after examination the barrels seem to have been well soldered throughout, except a very small spot about three inches from the muzzle of the gun, not enough to be noticeable only by very close examination. The scattering of springs, lock-plates, lugs, fore end, barrels, rib, and, in fact, almost every part of the gun, done in such a manner, and indicates so much force that it caused many persons to express themselves as believing that three times the amount of black powder could not have produced the same results. Then, what has caused the trouble? How is it that this weak explosive did, at this particular time, produce such a terrible explosion, if it will at other times, and under dif-

ferent circumstances, produce different results? If this is the case, it is more dangerous than if it would show this gigantic strength at all times, for then we would be upon our guard, but as it is, we are liable to be torn to pieces at a time we least expect it. I am forced to believe that the powder manufactured by the old Dittmar Powder Company is dangerous, and would be unwilling to ever use it again.

The Dittmar Powder Manufacturing Company say: "We positively declare that the Nash Powder was not of our manufacture, was not sold by us, and was never in our possession." If this is the case it is wrong for me to censure the present company for the damages which I received from the powder put up by the old company. I am anxious to learn the names of all the members of both the old and new Dittmar Powder Companies, and whether there was a complete change of hands when the old company sold out to the new company about a year ago. I have in some way received the impression that both the old and new companies have been entirely under the direction of Mr. Carl Dittmar. If this is the case, it seems to me that the Dittmar Powder Company are bringing about a confusion when they say that they are disinterested parties, for at least one of them is, or at one time was, interested in the manufacture of this old powder.

In bringing my sad experience with the "old Dittmar powder" to the notice of my brother sportsmen, I did it with the kindest feelings for them, hoping that I might, by reporting the accident, prevent some of them from losing their lives, or having to bear the dreadful suffering which I have had to bear, and be made cripples for life as I have been. The many letters which I have received from sportsmen throughout the United States express the kindest sympathy for me at a time that it was most needed, and have shown their gratitude for my good intentions. To such I wish, through FOREST AND STREAM, to return many thanks. S. P. NASH.

Forest and Stream Publishing Company:—

I certainly feel myself under very many obligations to you for the kindness you have manifested toward me in the Dittmar powder case. I think that I have noticed on the part of the Dittmar Powder Company a desire to bias you in their favor, but to no purpose. You have shown yourselves to be men that form your opinions from the evidence produced, and willing to give each one a fair and impartial hearing. Your fairness will secure for FOREST AND STREAM many friends, for kind fair dealing is not without its reward. S. P. N.

RAIL SHOOTING AT STRATFORD.—The largest flight of rail known for years took place at Stratford, Conn., recently. Up to now I have killed 737. The largest bags on any one tide were 67, 93, 112, 130, 180. The ground shot over is not extensive, but the high tides enabled the pusher to drive them out of the cat-tails. The day I bagged 180 I scored but one miss.

F. B.

SHERBROOK, P. Q., Sept. 11th.—Our party returned from Spider Lake on the 6th inst. Shot one bear, about 400 pounds weight, one deer, and caught plenty of bass. Too early for trout, and streams very low. Bear, moose, cariboo and deer tracks plentiful in the "burnt ground," about four miles from Upper Spider. Shall try again early in November. Boat from here to Lake Mégantic, about seventy miles. Boat twelve miles through the lake and portage of one mile to Spider Lake. Team to carry traps across portage. Good guides \$2.

D. THOMAS.

BEARS ABUNDANT.—Rome, N. Y., Sept. 10th.—Bears are reported to be at work at Point Rock, a place twelve miles from Rome, and are doing considerable damage to cornfields in that vicinity. One man driving in the road saw a bear come out of the woods and walk leisurely along the road about twelve rods in front of the team, and so continued to walk about four or five rods. The bear then turned into the woods, where he waited till the team passed, and then came out and went back on the road. A young cub was killed by two dogs who were hunting on their own hook at Point Rock last week. Their owners hearing a noise went into the woods the next day and there laid the cub, torn to pieces, at the foot of a tree. The tree was well scratched, which Mr. Bear had tried to climb, but was pulled down by the dogs every time he started to go up.

TEXAS.—Indianola, Sept. 2d.—Game unusually scarce in this immediate vicinity this season. Usually at this time of year you can kill all the "papabotes" you care about carrying home, but this year there are compara-

tively none. The best gunners cannot get half a dozen a day, and I never saw the prairie in finer condition for game, and I cannot account for its scarcity. Have had one or two very violent gales of wind, one of which very nearly submerged our little town, and a great portion of the prairie, which may probably be the cause. To make up for the loss of gunning, a great quantity of fish have been caught, especially since the storm. G. A.

SPORTSMEN LEAVING BY THE C. AND N. W. R. R.—Chicago, Sept. 13th.—The hunting car City of Worcester, of Worcester, Mass., left Chicago via Chicago and Northwestern Railroad, Thursday noon, 9th inst., with Mr. Jerome Marble and party on board, bound for Ida, Iowa, where they will remain three weeks, chicken shooting, and then go to Wisner, Northeast Nebraska, on the Sioux City and Pacific Railroad.

Mr. R. P. Flower, of New York city, with a party of eight friends, left Chicago by the Chicago and Northwestern Railroad in a special car for Northern Minnesota for a hunting trip. Mr. H. S. Turrill and son were among the honored ones, and we trust all the birds will be shot on the wing.

Mr. Wm. Bliss, President of the Boston and Albany Railroad, and George Darling, General Manager of White Star Line Transit Company, with six friends, left Chicago via Chicago and Northwestern Railroad, in a special car, on Friday evening, 9th inst., for Sleepy-eye Lake, on a hunting trip.

Edgar H. Kellogg, Superintendent of Agents of Home Life Insurance Company, with A. W. Kellogg, of Naples, Iowa, and H. D. Fisher, of Maunase, Wis., left by the same road on Monday, 13th inst., for chicken shooting. The shooting in the Northwest is splendid this season, and hundreds of sportsmen from the East are enjoying a feast of game.

A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 33 and 40 PARK ROW (Times Building), NEW YORK.

Terms:

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive new advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention.

Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address.

All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed to the

Keep Manufacturing Co.,

631, 633, 635, and 637 BROADWAY, N. Y.

J. & W. TOLLEY, MAKERS OF FINE GUNS ONLY.

BIRMINGHAM, ENGLAND, Lists Mailed on Application.

Terms, cash with the order, which can be shipped in six weeks from receipt of the order.

The above prices are for guns at the Works. The extra cost for delivery in New York will be: On guns costing at Works less than \$100, \$8.50; those costing \$100 and upwards, \$11.50. The gun at \$150 is fully equal to the finest guns imported.

THE PERFECTION HAMMER, OR—

HAMMERLESS GUN.

PRICES: \$80; \$100; \$125 and \$150.

The side stud shown in the above illustration is thrown out on the left lock plate in opening the gun, and which projection of the stud shows that the automatic bolt has interposed itself between the hammer and the plunger. (The only perfectly safe mode of loading the gun to prevent a premature discharge.) When about to fire press the stud on the left lock plate home, which unloads the gun.

A BEAST OF A SALMON.—Mr Buckland tells the following story: "A very nervous man went out fishing on Loch Tay. An immense salmon took the fly and ran the reel out in the most violent manner, the rod shaking and bending with the weight of the fish. The angler—we cannot call him sportsman—turned pale with fright. At last, as the line had not been fastened to the spindle of the reel, of course the fish ran it all out and escaped. With that the angler exclaimed: 'Thank heaven! the brute's gone; let's go ashore.'"

"In Tuckerton Bay, and generally in the thoroughfares along the New Jersey coast, the genuine man-eating shark makes its appearance about the 1st of August. It attains a length in these waters of sixteen feet—at least an old fisherman informs us that he has seen them there of that length—and they would not hesitate to seize and carry off any bather within reach. Lately Mr. David Shuster, of this city, and some friends captured near Atlantic City a shark weighing 350 pounds and measuring nine feet in length. It was taken in Grassy Bay, and required the united strength of seven men to land."

If we had some evidence that these were "man-eaters," such items as this, going the rounds, might be useful in some other way than simply giving evidence of the popular misconception on this subject.

### Miscellaneous Advertisements.

## Experienced Sportsmen

Buy their Shooting Suits of G. W. Simmons & Son, (Oak Hall, Boston), who are the makers of the Prize medal "Boston Shooting Suit," which is the very best that is made; never tears, or rips—has its seams sewed with silk and linen—and its buttons so securely fastened they never come off. # **Old Judge Smoking Tobacco.**

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely, The Oil of Crocus. CHEASLEY G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco, invented and patented a process, March 5th, 1875, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Crocus are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.  
Sold by all leading dealers. Try them and you will use no others.  
**Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK.**

**Dogs of Great Britain, America and Other Countries.**  
**PRICE, \$2 00.**

## DUPONT'S

Rifle, Sporting and Blasting Powder.

The most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1805, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.  
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.  
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clear; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

DUPONT'S EAGLE RIFLE.  
A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

DUPONT'S RIFLE FG, "SEA SHOOTING,"  
FFG and FFGG. The FG for Long Range Rifle Shooting, the FFG and FFGG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting  
Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

THE HAZARD POWDER COMPANY  
MANUFACTURERS OF  
GUNPOWDER.

## Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unpacked in point of strength and cleanliness. Passed in square canisters of one pound only.

## Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

## Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 4 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

## Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFG is also packed in 1 and 4 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, SEPTEMBER 23, 1880.

**A GENEROUS GIFT.**—We owe to the kindness of one of our oldest and most valued subscribers, whose modesty forbids our mentioning his name, but who is well known to the sportsmen of this State, a complete file of **FOREST AND STREAM**. The gentleman to whom we are indebted for this gift has taken the paper from its first number. Complete files of the **FOREST AND STREAM** are of great value, and we cannot too heartily express our gratitude for this gift. Our friend, speaking of his volumes of the paper, says: "It is too bad to think that they may not be used by me in the future, and I desire to present them to somebody that they may be used. Do not think that I do not prize every number, for, as a sportsman, I do; but as I grow older I have not time to re-read them. Your paper I value, and until I die I shall remit annually, for I welcome its arrival and go through it with care."

**A COMPLIMENT TO OUR KENNEL EDITOR.**—We learn by the public prints that the kennel editor of **FOREST AND STREAM** has been nominated by the Executive Committee of the Nebraska State Sportsmen's Association. While desiring to express his high appreciation of the compliment thus paid him, the kennel editor feels obliged to decline it. Owing to his absence from New York no mention of this was received until the 20th instant, or his opinion in the matter would have been earlier defined. It is manifestly improper for the representative of a publication to criticise an exhibition of this kind to the public, and the kennel editor of this paper has expressed our views on the subject.

**RECORD.**—The unprecedented score of 224 out of 225, made by Mr. William Gerrish, at Walworth long range practice very close up to the point of perfection. There is no reason to doubt the score; it was made in a regular match, and on a day which, from the report, invited and almost provoked such a record. Mr. Gerrish is a young man who has given much time and careful endeavor to long-range work, and being in a coterie of marksmen where abundance of leisure gives ample opportunity for the most exact and careful study of the minutiae of rifle shooting, it is not wonderful that such a result should have been attained. Nevertheless, with so many chances against his performance Mr. Gerrish is to be congratulated on his feat, and it will doubtless be a long time before he finds himself dispossessed of the "best on record."

## THE "DITTMAR SPORTING POWDER."

We shall show in this article:—

1st, That the so-called "Dittmar Sporting Powder" is a highly dangerous compound when used in fire-arms.

2d, That Mr. Carl Dittmar thoroughly understands this.

3d, That for the past five years, from the date of its first manufacture until the present, he has strenuously denied the dangerous nature of the powder.

In doing this we shall advance no theories, but shall confine ourselves strictly to what are, to the best of our knowledge and belief, facts.

The public may expect from Mr. Carl Dittmar, or from those interested with him, a denial of these facts.

No denial can alter facts.

We may, in justice to ourselves, premise something of the circumstances. The "Dittmar Sporting Powder" has been on the market since the winter of 1874-5. The first notice of it in the **FOREST AND STREAM** will be found in Vol. III., page 26, Feb. 4th, 1875, and a notice in the **ROD AND GUN** at about the same date. From that time until the present, before and since the consolidation of the two papers, our columns have always been open for full and free reports of the use of the powder by sportsmen. They have also been open, up to a fortnight ago, to Mr. Carl Dittmar and those associated with him in the manufacture and sale of the powder. Accidents with the compound have been numerous and serious. It has been our custom to publish, together with commendations of the powder, such reports of accidents as came to us. The Dittmar powder manufacturers have always been accorded a fair chance to explain away these accidents. How well they made use of it is shown by the fact that the product is still in the market.

There has come a change; affairs are altered. Why is this?

Previous to June 10th, of this year, we had published several letters from Dr. S. P. Nash, of Philadelphia, Miss. His communications showed him to be a man well acquainted with the use of fire-arms and a practical sportsman. On that date was published a communication from Dr. Nash recording "A Disastrous Experience with Dittmar Powder." The writer alleged that he had loaded a Parker gun with 34drs. "Dittmar Powder," FFF, that the gun was by this charge shattered, blowing off one of his thumbs, subjecting him to many weeks of suffering and confinement, with a prospect of many more, making him a cripple for life, and probably debarring him from the further practice of his profession of dentistry.

In the issue of June 17th following, the Dittmar Powder Manufacturing Company published a reply, professing to discredit the statements of the Nash letter, and calling for proof.

In response the can containing the remainder of the powder was sent to us, and a portion of this powder handed over to the Dittmar Powder Manufacturing Company.

In our issue of July 15th, following, we published letters from Dr. Nash and others, proving conclusively the truth of his previous report, and showing the injury to his hand to have been more serious than he had before anticipated.

The Dittmar Powder Manufacturing Company sent us, and we published, a disclaimer of responsibility, it being substantially a denial that the powder was of theirs (the present Company's) make, or that it was strong enough—as tested by them—to have produced the alleged accident. Then, having demonstrated that the old powder was of a much weaker grade than that now manufactured and could not be dangerous, they gravely warned the public against buying it.

This explanation by the Company was unsatisfactory and inadequate.

It was the old story—the repudiation by Mr. Carl Dittmar of powder manufactured by himself. The files of the **FOREST AND STREAM**, of the **ROD AND GUN**, and of the paper since its consolidation, tell this story. Our readers are invited to refer to their files to see that our quotations are correct, are not garbled, and are fair.

Mr. Dittmar professed to be able to make his powder uniform so far back as the summer of 1875.

**FOREST AND STREAM**, Vol. IV., page 300. Letter from Carl Dittmar, dated at Neponset, Mass., June 5th, 1875:—

"I am now making a much slower powder, as many consider it too quick, and I will stick to it and make it always uniform as soon as I find that the sporting community like the latest issue best. The method of manufacture involves absolute evenness of strength, and if your correspondent, Mr. D. C. Allison, decides which kind he likes best I can give it to him always the same." (Italics ours.)

**Reputation No. 1.**—Mr. Dittmar having thus put himself on record, we should hardly look for the following when he came to change his business relations:—

**FOREST AND STREAM**, Vol. V., page 124, Sept. 30th, 1875. Advertisement of the "Dittmar Powder Manufacturing Company, manufacturers of Carl Dittmar's Patent Sporting Powder, Blast- ing Powders, etc., Neponset, Mass. I have succeeded in overcoming all objections that may have been raised to the kind of Sporting Powder previously manufactured by me. By an entirely new process, and with the assistance of new machinery, I am now able to make the grains as hard as those of black powder, thus avoiding the great compressibility of the kind first introduced, and allowing an even loading every time. In addition to the greater density of the new powder, I have also obviated the great rapidity of ignition. There is now no fear of overloading. No necessity for any special directions for use; simply use it like black powder and use the same quantity in bulk."

"The powder can now be used from an ordinary powder flask. The same kind of powder can be used for both shot guns and rifles. The sizes and numbers for the grain are the same as those for black powder. The medium size is best adapted for general purposes, the largest size for small bores, and the finest size for large bores."

"Every package of the new powder bears my signature. None genuine without it."

"I manufacture none of the old kind, and all connection with my former agency, the so-called Dittmar Powder Company, is at an end. Please address all orders to me. Any letters unanswered or orders not filled since Sept. 1st will be immediately attended to if parties will please re-write to me. I will exchange, when requested, any of my powder bought before that date for the new kind."

"My best thanks to the friends of my new powder, who have by their suggestions helped me to make it perfect, so that I now have no doubt of its complete success. CARL DITTMAR."

He also advertised this in the **ROD AND GUN**, see issue of Oct. 2d, 1875, page 13:—

"Every package of the new powder bears my own signature on top of cover; without it, do not consider it genuine. I do not manufacture any more of the old kind, and all my connections with my former agency (the so-called Dittmar Powder Company) are ended."

The manufacture, be it understood, was all this time at Neponset, Mass., and Mr. Dittmar was the man who made, or superintended the making of, all the powder. The Dittmar Powder Manufacturing Company (No. 1) then also adopted the tactics afterward repeated by the Dittmar Powder Manufacturing Company (No. 2). They attempted to turn the responsibility of the working of the powder away from themselves and upon "the old company":—

**ROD AND GUN**, May 27th, 1876, Vol. VIII., page 135. Letter from Carl Dittmar, Neponset, Mass., May 20th:—

"There are two kinds of my powder in the market; the new kind, which I am manufacturing now for the last eight months, which comes in regular powder flasks with my signature on each. The I warrant, and my former advertisements and all circulars say that I only consider that genuine which bears my signature on the can. . . . Now, a few days ago, I learned through a communication from Chicago, that a large amount of old powder is still kept by Chicago dealers, of which a great deal is not fit for use, not having gone through the last stage of manufacture. All this powder has been sold without my knowledge and consent by the company I have been connected with last summer. . . . Since manufacturing the new kind no accidents have come to my knowledge, and I sincerely believe that the powder in its present state is safe, even safer than black powder, and I am ready to prove it at any time. If your correspondent, Abe Dacotah, from Iowa, will send what he has of that 'worthless and miserable stuff,' as he calls it [I will load some and send it back and try some in the presence of others], and if I fail to prove with that condemned kind that it is at least equal to any black powder, then I will say Abe Dacotah is right."

The Dittmar Powder Company in Boston sold the powder made at Neponset, and turned over to them by Mr. Dittmar, the manufacturer of it. Does any one suppose that Mr. Dittmar, at this stage of his enterprise, would let powder go from Neponset which was not ready for the market? His letter, like his advertisements, can be made to mean nothing but a repudiation of his own powder.

But the powder made by him, under the new firm name, was all right, for he himself says:—

R. & G., Dec. 4th, 1875, page 157.—I have succeeded in perfecting my rifle powder, as well as I did lately with my shot gun powder. I warrant its safety, cleanliness, strength, little recoil, smoke, report, and its regularity in shooting, both for rifle and shot gun. Try and see. Use it like black powder; no need of any more instructions.

R. & G., March 11th, 1876, page 333.—Dittmar powder. Warranted for its absolute regularity in shooting, both for rifle and shot gun.

Mr. Dittmar had no opportunity to repudiate this powder, for the formation of his third (3) company was too remote to allow of this. The "Dittmar Powder Manufacturing Company" (No. 1), followed the "Dittmar Powder Company" (No. 1), into dissolution, and for a time the manufacture of the powder was nominally suspended. In the *FOREST AND STREAM*, of March 21st, 1878, appeared an advertisement of the Dittmar Powder Company (No. 2), which informed the public that the powder was at that time uniform and of Mr. Dittmar's own manufacture:—

"By new process of waterproofing this powder is now made absolutely uniform. Mr. Carl Dittmar will give his whole time and skill to its manufacture."

Further he tells us that the powder is tested:—

R. & S., Nov. 7th, 1878, Vol. XI., page 290.—Letter from Carl Dittmar, dated Binghamton, N. Y., the location of the manufactory:—"Every batch of my powder is tested thoroughly, before it is sent out."

Moreover, he alleges it to be safe:—

R. & S., Nov. 21st, 1878, Vol. XI., page 331.—Letter from Carl Dittmar:—"In answer, . . . I have to say, that my powder is absolutely safe when used according to instructions."

The advertisement of the Dittmar Powder Company (No. 2), also asserts it to be "efficient, uniform and safe."

Two days after his letter of Nov. 2d, 1878, it appears the test by the pressure gauge was adopted, for he tells us:—

*FOREST AND STREAM*, March 6th, 1879, Vol. XII., page 65. Letter from Carl Dittmar, dated at Binghamton, N. Y., Feb. 23d, 1879:—

"Since November 5th last, all I have manufactured has been tested with the Government pressure gauge, and is perfectly reliable and safe with heavy charges. As I expect our own pressure gauge in a few days from the Springfield armory, I shall not let a single pound of powder go out without having it tested thoroughly for strain.

"The kind I made last year up to Nov. 5th is also perfectly safe if used according to directions and with no heavier charges than recommended in the circulars."

Again Dittmar indorses the powder made subsequently to Nov. 5th, 1878:—

*FOREST AND STREAM*, June 19th, 1879, Vol. XII., page 393, commenting on an accident with his powder, Carl Dittmar says:—

"I think the powder must have been purchased before the 5th of November last year, from which time I made the new and slower kind. Of this kind, which is marked as tested with heavy loads, there has not been a single complaint yet. The powder referred to in 'Penn's' letter was of the kind Capt. Bogardus recommended and has used in all his exhibitions. I myself should not like to use it in heavy charges, but I think it is impossible that 31 dr. could do any harm. I think there must have been an accidental overcharge, the measure being wrong, or something of the kind. If he will send me a sample in a glass bottle I will test it in the Government pressure gauge and give honestly the result; if it is unsafe for safety I will admit the fact. The powder now made is all tested by the pressure gauge. A case of overloading cannot happen with the new powder, and I do not give any extra instruction. The powder will work no matter how it is loaded."

Just here we may explain that the date, Nov. 5th, 1878, shows that the test by Government pressure gauge was employed nine months before the "Dittmar Powder Manufacturing Company" (No. 2), succeeded the Dittmar Powder Company (No. 2). It was the practice to take samples of the powder to the Springfield Armory and test them there. And further, that this thing may be clearly understood, the gauge made for the Dittmar manufactory was exactly like the Government pressure gauge, and was shipped to Binghamton from the Springfield Armory March 13th, 1879, five months before the present Dittmar Powder Manufacturing Company (No. 2) succeeded the Dittmar Powder Company (No. 2). We are thus particular about this to show that the old Company possessed the same instruments for testing the powder that the present Company have.

Having come safely through this tortuous course, we must not be surprised by his

**Repudiation No. 2**, which came in the form of a letter from the business manager of the Dittmar Powder Manufacturing Company (No. 2).

"Mr. Von Lengerke sends me the inclosed letter, which I have thought proper to send you for your perusal, which done, please return."

"He is now engaged in testing shells loaded by Squires, and expresses the opinion that S. is engaged in gathering up all the old condemned powder and sealing and loading it."

"A. J. PARKER."

In due time we received and published the report of their employé, Mr. J. Von Lengerke, who was "glad to say that the powder had no excessive strength, and that the accident reported cannot have been the fault of the powder." The report of their employé was accompanied by a letter which contained the extraordinary sentences quoted below:—

*FOREST AND STREAM*, Aug. 5th, 1880, Vol. XV., page 10. Letter from Dittmar Powder Manufacturing Company (No. 2).

"We positively declare that the Nash powder was not of our manufacture, and was not sold by us, and was never in our possession. So far as that is concerned, we are disinterested parties, except inasmuch as it bears the name of Dittmar powder, and we think that our tests have abundantly proved that even that was not dangerous, but fell below the powder which we put forward as our standard."

"Mr. Nash's suggestion that the can of powder may have been tampered with is something with which we have nothing to do. If it was, it was not our powder that was tampered with."

"We shall, following your suggestion, advertise more fully to the world that we have never sold, nor will we ever sell without due notice to the public, any powder whatever, either unsealed, unstamped, or without all proper directions for its use; and we hereby caution the public against buying any unsealed so-called Dittmar powder."

The powder, thus it is seen, has been made and sold, within the short space of four years, under no less than five firm titles, namely—Carl Dittmar, Dittmar Powder Company, Dittmar Powder Manufacturing Company, Dittmar Powder Company (No. 2), and Dittmar Powder Manufacturing Company (No. 2).

Now, remembering that all the "Dittmar Sporting Powder" ever manufactured was made by Mr. Dittmar personally,\* or under his supervision, or by his wife personally, or under her supervision, or, at least, was made and sold by firms of which he was the principal, or of which he and his wife were the principals—how shall we suitably characterize this action of a man engaged in the manufacture of a commercial product, time and time again warning the public against his own product?

What warrant had we that by and bye, Mr. Dittmar having formed a Dittmar Powder Company (No. 3), they would not in turn repudiate the powder of the present Dittmar Powder Manufacturing Company, and warn against its use, because the cans had no label on the bottom, and so on to thirteenthly? Or could the purchaser of the powder now sold by the "Dittmar Powder Manufacturing Company" (No. 2) afford to keep it six months to find out whether it was the "condemned" and dangerous kind or not?

Clearly, while the "old condemned powder" bosh might satisfy the manufacturers, it was no explanation to offer to a man who had had his thumb blown off and his business ruined, nor to other men who, by the use of this powder, were running the risk of a like calamity.

We refused to publish the letter of Aug. 5th without a protest that it dodged the question at issue. We set to work to determine the true character of the powder. Our duty to ourselves demanded this investigation. Much more did our responsibility to our readers imperatively call for it.

We accordingly began the investigation of the nature of the powder, and said so in our issue of Aug. 5th, Cognizant of the fact that we were studying the powder, and after their agent had been informed that we were about to publish the results of our investigation, the Dittmar Powder Manufacturing Company, upon the trumped up pretext that our refusal to publish what we thought to be a libelous letter proffered by them was unfair, judiciously withdrew their advertisement Aug. 31st.

Writing this letter was a characteristic attempt to turn the affair into a personal controversy, in the heat of which the real question of the safety of the "Dittmar Sporting Powder" should be lost sight of.

So much for the circumstances, which, fortunately for ourselves, fortunately for our readers and fortunately for the public, led us to determine the true character of the "Dittmar Sporting Powder."

Right here, and once for all, we may say that while the *FOREST AND STREAM* has in times past been duped by Mr. Dittmar's seeming honesty of purpose into serving his end, yet the present management has never been committed to an editorial indorsement of the powder. That we did not realize the true nature of the compound is our only excuse for having even passively permitted our columns to be used in any way by him.

To clearly comprehend the different natures of different explosive agents, some knowledge of chemistry is requisite. When Mr. Dittmar is asked as to the composition of his powder, his favorite way of responding to or evading the question is to retort, "You are not a chemist; therefore, I cannot explain it to you." It will not be necessary hereafter for the readers of this journal to go to Mr. Dittmar for their knowledge of the composition of his powder, nor for a sufficient understanding of the principles of chemistry to fully comprehend the true nature of that compound. They will find all that in this paper.

\* As to the past, the quotations sufficiently prove this. In the present concern Mr. Dittmar and his wife own, or did own, a \$5-100 interest. An employé of the Dittmar Powder Manufacturing Company told us, when we went there for some powder, the other day, that the stock was small, because Mr. Dittmar was in the Catskill Mountains, and in his absence no powder could be manufactured. We had reason to believe, at that time, that Mr. Dittmar was in Europe, but this lack of geographical knowledge on the part of the employé does not alter what we are trying to show, namely, that Mr. Carl Dittmar is now, as he has always been, the responsible party in the manufacture and sale of "Dittmar Sporting Powder."

The present Dittmar Powder Manufacturing Company was formed on, or about, Aug. 4th, 1879. Their manufactory is at Binghamton, N. Y.

United States Circuit Court, Southern District of New York, Nov. 13th, 1879, Carl Dittmar, being duly sworn, doth depose and say: "Everything at Binghamton is attended to by myself and wife in person."

This is not the place for a treatise on chemistry. None is necessary. We shall, however, attempt to put this whole thing so clearly and as concisely as possible, that whether chemist or not, no man who reads it need be baffled longer by Mr. Dittmar's chemistry bluff.

I.

#### THE CHEMISTRY OF EXPLOSIVES.

Various explosive agents are associated in our minds with different degrees of explosive power and effect. Thus, black gunpowder is a material with which we are all familiar; we know it to possess great explosive power, yet with certain precautions we do not hesitate to handle and employ it.

Nitro-glycerine, on the contrary, is known in a vague way at least to be in its explosion vastly different from gunpowder. Its might is so tremendous, its effects so terrific, that the very name of the compound is significant of uncontrollable force; we hesitate to handle it, and its presence inspires us with dread.

At the beginning of our study of explosives then the question meets us, Are all explosive compounds of the same inherent nature? Do they differ only in their manifestations of power according as that exhibition of power is made by the conditions of the explosion more or less complete, or may one form of explosion be radically different in its nature from another? Evidently we must determine this before going further.

The teachings of chemistry on this point are beautifully simple, clear and conclusive. To make them plain we need but to outline some of the fundamental and familiar principles of that science. We begin at the beginning, with the molecule.

**Molecule.**—A molecule is the smallest mass into which any substance, solid, liquid or gas, can be divided by physical or mechanical processes. The text-books tell us that the limit of the measurement of molecules is reached at about the one-five hundred millionth of an inch. A molecule is infinitesimally small, and it is important that we have a clear appreciation of this, for small as it is, in the molecule we shall find the key to this whole inquiry.

**Molecular energy.**—Molecules have constant motion, most free in gas, less free in a liquid, least in a solid. It has been estimated that the mean velocity of the molecular motion of hydrogen gas, under a certain given pressure, is 6,007 feet per second. Molecules have weight; they have motion; motion and weight give energy. The movement, and therefore the energy, of molecules vary as the temperature of the mass. Therefore, to increase the temperature, is to increase the molecular energy.

**Pressure.**—In gases the movement of the molecules is in straight lines, and the movement of their aggregation is, therefore, in every direction to the surface of the mass. The surfaces of the containing body are constantly bombarded by these molecules. The aggregation of this bombardment—millions of molecules moving at the rate of thousands of feet per second—is what we call pressure.

Pressure, it will be readily understood, varies with the molecular energy; this, in turn, varies with the heat. To increase the heat, then, is to increase pressure. Increased pressure demands increased resistance by the containing body, or else yielding, and an increased volume. Also, to convert a solid mass into a gas, is to increase, or to release, its molecular energy.

**Atoms.**—Mechanical subdivision stops with the molecule. Chemistry goes beyond this, and conceives each molecule to contain atoms. It does more than this; it actually breaks up the molecules, and combining the atoms of one with the atoms of others, forms new molecules, which are wholly different from the old.

**Chemical reaction.**—Such a change is termed a chemical reaction. It differs from a mechanical process. For instance, water is a liquid mass made up of molecules. Each molecule of water, it has been determined, is made up of three atoms, two of hydrogen and one of oxygen. Now, a drop of water may be, by mechanical processes, divided and subdivided into the smallest mass attainable by the most delicate known means, and yet the ultimate molecules possible to obtain, would consist of two atoms of hydrogen and one atom of oxygen. But by a chemical reaction those same molecules may be changed into another substance, the hydrogen atoms uniting to form molecules of hydrogen gas, and the oxygen atoms uniting to form molecules of oxygen gas. For a chemical reaction (or the union of the atoms of different molecules) it is requisite that the molecules come in contact; there must then be molecular energy; where a sufficient degree of this is lacking it may be stimulated by heat.

**Combustion.**—The atmosphere in which we live contains a certain proportion of oxygen. The ordinary process of combustion is simply this: By the application of heat the molecular energy of the combustible substance is stimulated to such a degree that the molecules are released or separated from the mass and are brought into contact with the molecules of the air, when the oxygen atoms of each, by a chemical reaction, unite to form oxygen gas.

But there are certain substances which have a large supply of oxygen stored up in them. Their molecules

then, may furnish oxygen to the combustible just as readily as the molecules of the atmosphere do, and in a more concentrated form. Hence, by placing the oxygen containing substances with the combustibles we may shut them in from the air, and by sufficiently stimulating their molecular energy, by the application of heat, produce combustion.

**Gunpowder.**—Niter or saltpeter is a substance rich in oxygen. Charcoal or carbon is a combustible. Now, if niter be brought into contact with charcoal and some sulphur be added to facilitate ignition, we have all the conditions necessary to combustion. This is the common black gunpowder. If, now, a certain quantity of this compound be confined, as in a gun, away from the air, and ignited, the result will be a combustion. The oxygen which is stored in the niter is so concentrated that it allows a very rapid combustion. This is termed an explosion.

**Nitro-glycerine.**—In place of the charcoal, another combustible substance, glycerine, may be employed, and instead of the niter, nitric-acid may be used to secure the requisite supply of oxygen. This is the compound known as nitro-glycerine. If a mass of nitro-glycerine be confined and ignited the result will also be an explosion.

Now, how shall we explain the tremendous difference of the two explosives? In each compound we have simply combined the conditions necessary to combustion, and the result in each case is simply the production, by a chemical reaction, of a large volume of gas and the consequent liberation of molecular energy in the gas. What is the difference?

Simply this: Whereas, in the gunpowder the union is of the atoms of different molecules; in the nitro-glycerine it is of atoms *within the same molecule*. Before the atoms of the gunpowder oxygen molecules and niter molecules can unite, they must each pass out from their molecules; in nitro-glycerine they are already in the same molecule.

**Explosion of gunpowder.**—Let us go back. Gunpowder is manufactured by mechanical processes. The charcoal, sulphur and niter are each ground into dust and then intimately mixed. But by no mechanical treatment can the molecules of the sulphur, niter and charcoal be changed into molecules of any other substance, and hence in the mass of gunpowder, which consists of grains, each individual grain is made up of countless molecules of sulphur, niter and carbon. The generation of gases can be produced only by the union of the atoms of one molecule with the atoms of other molecules, and the process of combustion beginning at one side of one molecule of one grain must extend first through this molecule to the next, and so on to the center of the grain, and through to the other side, then to and through the next grain, and so on through all the grains to the center of the mass and then through to the other side. The process is one requiring a certain definite interval of time. The generation of gas being progressive the pressure must also be cumulative.

**Explosion of Nitro-glycerine.**—Beginning with the manufacture, we find a radical difference between the mixture of the ingredients of gunpowder and the union of the ingredients of nitro-glycerine. The first was a *mechanical mixture*; the second is a *chemical reaction*. The atoms of the nitric-acid molecule unite with the atoms of the glycerine molecules and form new molecules, which are different substances from the old. Hence, nitro-glycerine is not nitric-acid and glycerine; it is nitro-glycerine.

Again, it has been demonstrated by chemical analysis that each molecule of this new substance, nitro-glycerine, contains, yrapped up within itself, the different atoms, which, under the conditions of explosives, may combine with each other to form new molecules of gas. Hence, in an explosion of nitro-glycerine, it is not necessary for the atoms of one molecule to be set free from that molecule, and to pass out from it to the atoms of other molecules. The element of time is thus eliminated, and the process is instantaneous. The conditions which will explode one molecule of nitro-glycerine are sufficient to explode the millions of millions of molecules of the entire mass. The explosion of every part of the entire mass is then simultaneous. This is termed detonation.

The different exhibitions of force by slow and quick explosions are too familiar to need rehearsal here. Our study of the subject thus far enables us to understand the principles underlying these different effects.

The molecules of gas move in straight lines in all directions. Thus, when a solid or liquid substance is converted into gas, the pressure of the gas must be exerted in every direction at once. If an interval of time be allowed, this pressure concentrates itself in the line of least resistance. If no interval of time be allowed, it cannot so concentrate itself, but must be everywhere alike on every part of the surface of the containing body. The difference between the two explosions is just the difference between a push and a blow. The molecule of gas, in the one case, is like a leaden bullet thrown from the hand against a board and rebounding; in the other case it becomes the same leaden bullet driven with frightful velocity from the muzzle of a gun through the board.

In the discharge of a fire-arm, the pressure of the volume of gas generated by the slow form of explosion increases in force and exerts itself in every direction against the surfaces of the gun-chamber and the ball, until it attains a degree of strength sufficient to overcome the resistance of the ball. At that point the ball yields, and the pressure at once concentrates itself in the line of this yielding.

On the other hand, the generation of gas, in the explosion of a charge of nitro-glycerine in a gun-chamber, would be instantaneous throughout the whole charge. It would exert itself in every direction at once, and there would be no yielding of the least resistant body to admit of the pressure concentrating itself in the line of least resistance. For to yield requires motion; motion requires time; but there is no time; consequently, no motion. The ball, it is true, would be blown out of the gun, but not before every side of the chamber alike had received the same blow, by which also would the gun be shattered.\*

## II.

### THE ORDERS OF EXPLOSIVES.

An explosive compound we have seen to be a mixture of substances capable of rapid conversion into gases by the operation of heat.

An explosion may be defined as "a chemical reaction causing the sudden or extremely rapid formation of a very great volume of highly expanded gas."

The effect of the explosion, we have also learned, depends upon the rapidly with which it is generated. Measured by this effect, explosives are now divided into two general orders, the first and the second—quick and slow, high and low. It will be more convenient for us to first consider

#### EXPLOSIVES OF THE SECOND ORDER.

1. In an explosive of the second order the explosion, or freeing of the gases, is brought about by simple ignition.
2. The process is gradual, from one side of the molecule through to the other, from one side of the grain through to the other, and from one side of the mass to the other.
3. This requires time.
4. Up to a certain point the explosive force grows more powerful as the explosion progresses; it is cumulative.
5. It concentrates itself in the line of the least resistance, and is never greater upon any other part of the containing body than upon the part which yields; i. e., "it can never be greater than the resistance of the least resistant part."
6. Confined in a gun this class of explosives are projectile, or ballistic; they are therefore adapted for use in ordnance and fire-arms.
7. The distinctive type of this class is gunpowder.

#### EXPLOSIVES OF THE FIRST ORDER.

1. In an explosive of the first order the explosion, or freeing of the gases, is by detonation.
2. It is *en masse*.
3. It is instantaneous. A ton explodes just as quickly as an ounce.
4. It is not cumulative.
5. The force is exerted upon every part of the containing body alike.
6. It is shattering; and therefore explosives of the first order cannot be used in guns. The smallest charge would burst the gun.
7. The distinctive type of this class is nitro-glycerine.

## III.

### DETONATION.

Before going further we must consider more fully the mechanical nature of the form of explosion called detonation.

Detonation is the instantaneous conversion of the whole mass of a body into gas. Those who have studied it the most thoroughly, in theory and by experiment, as exhibited by the typical detonating explosive, nitro-glycerine and its compounds, have determined that:—

1. Three agencies combine to produce the action, namely, heat, pressure and motion, the last being either shock, jar or vibration. No one of these alone will produce detonation.
2. Heat alone will not produce detonation. A match will ignite unconfined nitro-glycerine, but the liquid ceases to burn when the heat of the match is removed. Nitro-glycerine may be heated with a wick the same as whale oil; a rag saturated with it burns slowly. Thrown upon the fire or upon a red-hot stove, it burns but does not explode.
3. Simple pressure alone will not produce detonation. This is shown by the fact that the liquid may be stored in such a shape that the pressure of the mass upon the layers next to the bottom must be immense, yet no explosion is caused thereby.
4. Motion (vibration or jar) does not produce detonation. When the nitro-glycerine is spread out on an an-

\*For an elucidation of the foregoing subject the reader is referred to Prof. J. P. Cooke's "The New Chemistry" (Appleton & Co. '82). This volume contains the most admirable epitome of the science of chemistry that we have ever seen. We have not hesitated to make use of Prof. Cooke's illustrations and in some cases of his language, and we here make a general acknowledgement to him.

vil and struck with a hammer, although the whole surface is jarred thereby, only that portion of it which is between the face of the hammer and the face of the anvil will explode.

5. Again, the pressure of a greater degree of any one of these three agencies admits of a less proportion of the other two. Thus the greater the degree of heat the less may be the pressure and jar; the greater the pressure the less the heat and jar; the greater the jar the less the heat and pressure.

Now let us consider the conditions of the detonation of nitro-glycerine and its compounds when confined, for instance, in a bore-hole. Just here we must keep in mind that confinement is not pressure, although it may be an aid to secure pressure.

6. If a mass of nitro-glycerine be closely confined in a bore-hole, and be simply ignited at one end, the expansion of the volume of gases formed by the combustion of a part of the charge, creates pressure upon the remainder of the mass, until, at a certain point, this pressure becomes powerful enough, in conjunction with the attendant heat and jar, to detonate the rest of the charge. This is a partial detonation of the charge. The action is best shown by an experiment with dynamite, which is a combination of nitro-glycerine with a solid substance: A charge of dynamite closely confined in a gas-pipe and simply ignited at one end, will burn through a certain length of the charge, and the rest will, by the pressure, heat and jar, be detonated. The interior of the tube thus burst will be marked so plainly by the two processes that it is possible to determine just where simple combustion ended and detonation began. It will be readily understood that the greater the pressure by the confining body the less ignition is necessary, and *vice versa*.

7. Again, when the confinement, and consequently the pressure, is less, the detonation may be produced by giving the charge a greater shock. This may be done by means of a strong percussion cap. In the present practice with high explosives the method of confinement and ignition is not employed; the approved mode is that of Nobel's invention, the use of a strong cap.

A clear understanding of these different conditions of detonation will enable us to intelligently study a third order of explosive compounds.

## IV.

### EXPLOSIVES OF A TWO-FOLD CONSTITUTION.

These partake of the nature of low explosives and also of the nature of high explosives; that is to say, according to the adjustment of the conditions of their explosion, they may be exploded either by ignition, gradually; or by detonation, *en masse*; or partially by ignition and partially by detonation. To this class belong the nitro-cellulose combinations; i. e., the combinations of nitric-acid and cellulose. Cellulose is the vegetable fiber of wood, cotton, etc.—the skeleton of vegetation.

The prominent type of this class of explosives is

#### GUN-COTTON.

Gun-cotton is the fiber of cotton treated with nitric-acid.

2. It is, as an explosive agent, analogous to gunpowder in that it is a porous solid; is when dry highly inflammable, and when ignited without confinement it burns like gunpowder by ignition.

3. It is, as an explosive, analogous to nitro-glycerine. It is made in essentially the same way, by a *chemical reaction*, the principal difference being that the nitro-cellulose, a porous solid, is not so sensitive as the nitro-glycerine, a solid.

4. This is a difference of degree only, not of kind.

5. It is a difference which may be easily removed by mechanical means, i. e., by bringing the molecules of the mass into closer contact.

6. This may be done by pressure.

7. Under pressure gun cotton is analogous to nitro-glycerine in its explosion. It detonates.

8. The explosion of gun-cotton ignited unconfined is analogous to that of gunpowder; confined, to that of nitro-glycerine.

It took a long time for men to learn this. The history of the use of the material is curious; for us it is also instructive.

First manufactured in 1833, it was, as its name implies, thought to be a suitable material to supply the place of black powder as a projectile explosive. It was employed in ordnance and in fire-arms. Sometimes it went all right. Sometimes it went all wrong; exploded with terrific power, burst the cannon, shattered the fire-arms, blew men's thumbs off. The manufacturers claimed that they could make it uniform. For all that we know to the contrary they sent for some of the cotton, contended that it must have been the manufacture of the old company, that it did not have the seal of the new company on the tops of the cans; and then—in due form, as in such cases made and provided—proclaimed in the papers that their pressure gauge at Bigtown proved conclusively not only that this cotton was weaker than that of their own make, but also that the fault must have been wholly with the thumbs. But, at all events, the gun cotton burst the guns and blew off the thumbs.

After Nobel's invention of the method of detonating

nitro-glycerine with a strong cap, it occurred to Brown, an Englishman, that gun-cotton, being a nitrated product, like nitro-glycerine, might also be detonated. He tested it. It detonated. The gun-cotton accidents were explained to the full satisfaction of the scientific world—and, let us hope, also to that of the manufacturers. Gun-cotton is now employed for blasting purposes, and as detonating charges in bomb-shells and torpedoes. After the most elaborate series of experiments by the Austrian government, its use as a projectile agent was abandoned as unsafe. Gun-cotton's, therefore, no longer used as a projectile force in gunnery.

#### THE DETONATION OF GUN-COTTON.

1. The conditions of the detonation of gun cotton are analogous to the conditions of the detonation of nitro-glycerine. The three agencies of heat, pressure and motion must be present; and in proportion as any one of these is stronger the others may be weaker.

2. If the gun-cotton in a gun, for example, be not only confined, but also pressed down, so that it is compact, it will now be understood from what has already been said, a comparatively small amount of heat and jar, or shock, need be present.

3. If the gun-cotton be closely confined, but without pressure, and ignited at one end, the volume of the gas generated by the combustion of a part of the mass will supply the pressure, and, with the accompanying heat and motion, detonate the rest of the charge.

One of these two things is just what happened when the cannon and guns burst, and the thumbs were blown off.

Now, recapitulating and tabulating, for it is essential that this be clear in our minds, we have found that gun-cotton, an explosive, combining in itself the natures of both low and high explosives, may at any time in its explosion manifest the nature of one or of the other, according as the adjustment of the conditions under which it explodes favor such manifestations:—

#### V.

#### "DITTMAR SPORTING POWDER."

Now, where does "Dittmar Sporting Powder," so-called, belong?

As an explosive agent it can properly be classed only in the order which we have described as possessing a two-fold constitution.

1. In so far as it is a nitro-cellulose product, it is strictly analogous in composition to gun-cotton. It is cellulose treated with nitric acid, or nitric and sulphuric acids. A chemist's analysis fails to discover any essential difference in the explosive properties of cotton-cellulose and wood-cellulose. The wood-cellulose—for palpable reasons—is cheaper than the cotton-cellulose. That is a difference which appeals only to the manufacturer's pocket.

Mr. Dittmar nitrates cellulose. He does more than this. He mixes his cellulose with starch and sugar and then nitrates the mixture. Therefore, depending altogether upon the care with which this mixture of the ingredients—cellulose, sugar and starch—is made, any given sample of "Dittmar Sporting Powder" may contain more or less of nitro-cellulose, nitro-starch and nitro-sugar.

Why does he add these higher explosives? We shall see that he does consider nitro-starch and nitro-sugar higher explosives than nitro-cellulose.

2. Like gun-cotton, "Dittmar Sporting Powder" is, as an explosive agent, analogous to gunpowder, in that it is a porous solid. Its mechanical manufacture—graining—makes it still more analogous in form. When dry and ignited in the open air, or without much confinement, it burns like gunpowder, by ignition.

3. Like gun-cotton, also, it is an explosive agent, analogous to nitro-glycerine in its manufacture. It is made in the same way, by a chemical reaction, the essential difference being that the nitro-cellulose, a solid, does not by its molecular construction form so sensitive a combination as does the nitro-glycerine, a liquid.

4. This is a difference of degree only, not of kind.

5. This difference may be easily removed by mechanical means, i. e., by bringing the molecules of the mass into closer contact and increasing their energy.

This may be done by pressure, and then

7. Under sufficient pressure "Dittmar Sporting Powder" is, in its explosion, analogous to nitro-glycerine.

8. Unconfined, it explodes by ignition; confined sufficiently, by detonation.

#### DITTMAR SPORTING POWDER.

Grain to Grain.	En masse.
Cumulative.	Not Cumulative.
Projectile.	Shattering.

NOT TO BE USED IN FIRE-ARMS.

That explains everything. That it does explain everything, and that without it many things are inexplicable, is a proof of its correctness.

We have now come to a point where we are ready to consider the action of the powder in the gun. This is just the point where Mr. Dittmar has always insisted that we must begin. Remembering that this action is precisely the action of gun-cotton, complete ignition, almost complete ignition and slight detonation, and so on to complete detonation, we think the intelligent reader will be able to account for almost any action of his "Dittmar Sporting Powder," even the "crazy fits."

Our task would now be completed were it not a moral certainty that, did we stop here, Mr. Carl Dittmar, or some of those interested with him, would flatly deny or evade the correctness of this classification of his powder. He has done this three times before.

We do not intend that he shall do it now.

We therefore prove it.

The proof is five-fold. First, the patent specification; second, the account of the process of manufacture caused to be printed by Mr. Dittmar; third, the report of a competent chemist; fourth, by inference from the "directions," fifth, Mr. Dittmar's own sworn statements. Hereafter we shall add to these five, a sixth, namely, our own corroborative tests.

#### THE FIVE PROOFS.

##### First Proof—The Patent Specifications.

##### UNITED STATES PATENT OFFICE.

CARL DITTMAR, OF BOSTON, MASSACHUSETTS.

##### Improvement in Explosive Compound.

Specification forming part of Letters Patent No. 445,403, dated December 9, 1873; application filed August 30, 1873.

To all whom it may concern:—

BE it known that I, CARL DITTMAR, of Boston, Massachusetts, have invented a Preparation of Vegetable Fiber, in a new and distinguished manner, for the manufacture of Explosive Compounds, of which the following is a specification:—

I use vegetable fiber of any kind, raw or manufactured (as old linen or cotton rags, etc.), which I render to a fine pulp in the same manner as it is done in the manufacture of paper, with similar machinery, by open fire common steam or superheated steam and chemicals. The greatest care must be taken to render the fiber chemically pure by bleaching it and treating it with acids and alkalis, and outwashing these chemicals; after that I prepare this chemically pure pulp in different ways.

1. I press it in sheets of about one-sixteenth part of an inch in thickness. This thickness may be lessened or increased to suit the grains to the purposes to which the powder shall be used. These plates or sheets are first dried thoroughly, and then passed under a punching machine with punches the same diameter as the thickness of the sheets. The cylinders received in this manner I use for the best kind of powder. The remainder or whole sheets of the pulp pass through rollers, with cutters around the periphery—one pair of cutters cutting it in one direction, another pair cutting it across in a line at a right angle to the former, so as to give grains of a square form; or the pulp may be formed into grains by any other method. The grains I treat now with a mixture of nitric and sulphuric acid, in the same manner as it is done in the manufacture of gun-cotton.

[2. The same process except that the dried pulp is ground to the finest dust and treated as above.]

3. The pulp is soaked in a solution of sugar, or mannite, or inulin, or similar substances, pressed in sheets and cut as above, or formed into grains by any other method, or ground to dust after it has been dried, and then treated with the mixture of nitric and sulphuric acid, as above. The greatest care has to be taken then to wash the superfluous acid out again, which is more difficult than by the former two processes. After this has been done, it is soaked in a solution of soda, pressed out and then soaked in a solution of nitrate of potash, or chloride of potash, or similar substances, and then carefully dried. It is then ready for use; or it can be soaked after that for blasting purposes only with nitro-glycerine, etc. The combination of the vegetable fiber with sugar, etc., gives a very powerful explosive, and overcomes the difficulty in preparing the sugar, etc., alone with acids.

[4a. A combination with nitro-glycerine for blasting purposes only.]

[4b. Pulp pressed into cylindrical form, soaked in nitric-gum, for blasting purposes. 5. Pulp rolled up tight for drill hole cartridges.]

All the within-mentioned compounds, formed without the use of nitro-glycerine, can be used for the manufacture of fireworks, as being better adapted for these purposes than common powder in giving out neither smoke nor smell, and also for gunning or artillery purposes in leaving no residuum and requiring no cleaning while in use.

The different explosive compounds manufactured in the different ways above described may be mixed together in different proportions, so as to give different strength, as may be required. The different compounds may be mixed with prepared or unprepared charcoal.

In preparing the vegetable fiber in the manner above described, I make a very powerful explosive, combined with the greatest safety, as the fineness to which the vegetable fiber is reduced by the destruction of the vegetable texture before the treatment with chemicals allows a more thorough action of the chemicals.

Every one of the above described compounds can be fired by means of a percussion cap, or like common powder, with a fuse, when well confined.

I claim as my invention:—

1. The herein-described process of treatment of vegetable fiber, the same consisting in reducing the fiber to a pulp, then compressing the pulp into a sheet or other compact form, and then reducing said sheet to a granulated or powdered condition, and treating the same in this condition with an acid or acids for the purpose of rendering it explosive, substantially as described.

2. Vegetable fiber prepared with a solution of sugar, mannite, or any other, or inulin, or other substances, substantially as herein described, and rendered explosive by nitric acid.

CARL DITTMAR.

Witnesses:  
Albert Brown,  
Edwin A. Brown.

#### PATENT FOR "PARCHMENTING."

The specification of patent No. 479,638, dated July 10th, 1870, is for the dipping of the pulp, mixed with sugar and/or, after having reduced it to grains, or the compact form as already described, in a bath of sulphuric acid, and then subjecting it to a washing process, with water, to remove the acid. "In this way the pulp becomes like parchment, or has characteristics thereof. Next dry the material and subject it to a bath of nitric and sulphuric acids, as cotton is usually treated for being converted into what is termed 'gun-cotton.'"

By "parchmenting," as explained, the grains or masses of pulp before treating the same with the mixture of nitric and sulphuric acids, an explosive compound is produced with grains or masses that are very smooth and not adhesive to one another—much better in use than one made without the parchmenting process.

#### Second Proof—Description of the Manufacture.

In the FOREST AND STREAM of June 6th, 1878, Vol. X., page 18, is to be found a description of the process of manufacture as witnessed at Binghamton, N. Y., the previous Friday, by a then representative of this paper. The account was prepared with the direct verbal assistance of Mr. Dittmar, and the correctness of the description was never questioned by him after publication. It was as follows:—

Now as to the details of the process. The basis of the composition is cellulose. Cellulose is nothing more than pure wood fiber. Formerly Mr. Dittmar used paper as the base, but finds it more advantageous to purchase from paper manufacturers popular pulp. This pulp is taken and washed thoroughly, until it is nearly chemically pure. It is pressed, then dried, then ground into a uniformly fibrous form, all the lengths of fiber being destroyed. It is now mixed with sugar and starch, then again dried. Now it goes through what is called "the parchment process." When paper, under certain circumstances, is treated with sulphuric acid, it takes a peculiar dense form resembling parchment. The material is now again washed and dried, and served. It is now subjected to a mixture of sulphuric and nitric acids, again washed and dried, to be treated further with an alkaline base, sulphur being employed. Now, after again being cleaned and dried, the last process is to treat the grains of Dittmar powder with a coating of soluble glass. This last substance not only protects the powder from absorbing moisture, making it harder and denser, but diminishes very much any rapid explosiveness. A final very gradual drying completes this process. Of course there are a good many bits of practical work in the manufacture of the powder, in order to make it perfect, which depend on the chemical skill of the superintendent, Mr. Dittmar.

Mr. Dittmar at this time also explained to the visitors that not being chemists they could not fully understand the nature of the different processes.

#### Third Proof—A Chemist's Report.

A can of "Dittmar Sporting Powder," C brand, was received by us, sealed, Aug. 31st, and with other samples handed to Prof. Henry Morton, President of Stevens Institute. We gave it to Prof. Morton because we knew of no chemist who was more competent, or who stood higher than he in this special field, nor of anyone whose report would be more readily received as conclusive and sufficient. We simply asked from him, without explanation as to our purposes, a report upon the character and composition of the powder. Following is his reply:—

STEVENS INSTITUTE OF TECHNOLOGY,  
J. HOBOKEN, N. J., Sept. 22d, 1880.

#### Editor Forest and Stream:—

At your request, having made some examination of various samples of Dittmar powder sent me by you in sealed packages, I now proceed, as you desire, to make a general explanation of the destructive character of this powder as compared with ordinary gunpowder, the nature of explosion as concerned in such substances, and other related matters inquired into by you.

In the first place, explosion in its general sense may be defined as rapid chemical combination resulting in the development of large volumes of gas and an intense degree of heat. The rapidity of this act of combination may vary within wide limits, and when it is extreme, as in the case of nitro-glycerine for example, it is generally called detonation.

Between bodies which explode like gunpowder, and those which detonate like nitro-glycerine, there is, as a rule, this characteristic distinction.

Gunpowder and like explosives are simply mechanical mixtures of the substances whose sudden combination constitutes the explosion. In the most carefully made gunpowder, anyone with a microscope, could easily pick out the distinct particles of nitre, sulphur and charcoal, which constitute it, and whose combination is to produce its explosion.

A certain amount of time will therefore be needed for their union with each other in the act of explosion on account of their previous separation in space from each other.

In nitro-glycerine, gun-cotton and other detonating bodies, on the other hand, the ultimate molecules of the substance are united in the most intimate manner, and the most powerful microscope would be unable to distinguish the elements whose union is to constitute the explosion of the substance.

It is therefore evidently possible for these to unite with each other with far greater rapidity on account of their preëxistent nearness, and thus to produce a vastly more rapid, or sudden explosion, or detonation.

It is true that in both classes of bodies other conditions may very largely modify these tendencies.

Thus nitro-glycerine may be made to burn like kerosene if ignited in an open vessel, and gunpowder, if tightly inclosed and fired by a violent fulminating fuse, may be made to detonate in some sense; but nevertheless these distinctions exist and have a marked influence on the character of the two classes of explosives.

From this it follows, for example, that gunpowder, when made in the best manner, has its highest explosive power, which can only be increased by such extraordinary conditions of solid inclosure, or violent fulminating ignition, as could never be present in its use with a rifle or shot gun.

Moreover, any fault in its manufacture could only diminish its efficiency by its inadequate proportion of parts, or incompleteness of mixing, and could by no possibility raise it into the rank of a detonating explosive.

With a detonating explosive, on the other hand, there will be a vast range of possible violence in the explosion of the very same material, depending upon its degree of compactness and the na-

ture of the means of firing, even within the limits of such variations as might occur in the use of an ordinary fowling piece.

We thus see that with the second class of explosives there is an element of uncertainty and possible risk, resulting from their constitution.

Considering, now, the Dittmar Powder in this connection, I find it to consist essentially of two varieties of nitro-cellulose, one being the nona-nitro-cellulose, essentially identical with ordinary explosive gun-cotton, and the other the hepta and octo-nitro-cellulose, \* essentially identical with the so-called "negative cotton," used to make collodion for photographers. There are also present some portions of other varieties of nitro-compounds, in some cases, as nitro-starch, nitro-sugar, etc., but these do not essentially effect the general character of the material.

It also contains a portion of water. The mode of manufacture is essentially that used in the preparation of the ordinary gun-cotton.

From this it will appear that it belongs to both the above-named classes of explosives, or rather possesses many of the characteristics of both. In so far as it is a mixture of two nitro-celluloses and water, it tends to explode with moderate rapidity when properly ignited; and inasmuch as it contains a large amount of nona-nitro-cellulose it is liable under certain conditions to undergo a detonative explosion.

The problem of manufacturing gun-cotton of uniform quality, and not liable to change by keeping, and of the use of the same in gunnery, has engaged the attention of Baron Dittmar, of Austria, and Prof. Abell, in England, as all know, for more than a dozen years, and yet, as a practical outcome, I believe that except for destructive explosions, such as in mines, shells and torpedoes, it is not to-day even recommended.

This indicates that extraordinary difficulties have been encountered and that great care is required in its manufacture.

In the Dittmar powder we have, in the first place, a mixture of two kinds of nitro-cellulose, one of which is identical with explosive gun-cotton, and this, if used alone, would be evidently open to all the objections which have restricted the use of ordinary gun-cotton, but the process of manufacture is conducted as to produce not only this highly explosive nitro-cellulose, but also a portion of the non-explosive variety. This will, of course, dilute or restrain the violence of the other, but as it would also by itself fall to burn up entirely, some niter is added to supply the needed oxygen. This is essentially the theory of its action. Now, of course, if it is difficult to make with certainty a definite nitro-cellulose like ordinary gun-cotton, it must be yet more difficult to produce a definite mixture of two or more varieties of nitro-cellulose which shall be uniform in successive batches, and hence the greatest care is required, and each lot should be carefully tested and other precautions taken to secure this end.

That a powder safe under all ordinary conditions can be and is not made in this way, I by no means intend to deny; but only to point out the fact that the burden of proof lies on the side of those who maintain the affirmative, since the "a priori" considerations lean the other way.

In comparison with ordinary gunpowder this consideration is worthy of attention. In ordinary powder no accident in manufacture or subsequent change can make it more explosive than it is intended to be, while in any such material as the Dittmar powder it is quite possible that in its first production it should be made much more violently explosive than is intended, and by keeping it might undergo a change tending to increase its sensibility or even cause a spontaneous explosion. The latter, I admit, is not probable, but yet has occurred in the case of gun-cotton on many occasions.

In conclusion, I would say that where there was an advantage in the use of such a powder as the Dittmar, warranting the acceptance of a little risk, its use would be judicious, but that abundant evidence of its safety should be adduced before we could fairly regard it as involving no more risk than the ordinary gunpowder.

HENRY MORTON.

#### Fourth Proof.—Inference from the Directions.

We shall permit the reader to draw his own inferences from these sentences from the directions. The italics and capitals are not ours, but theirs, and the directions are those which came to us with a can of sealed powder from the Dittmar Powder Manufacturing Company (No. 2), Sept. 1st, 1880:—

#### "DIRECTIONS FOR LOADING DITTMAR POWDER.

"BREECH-LOADING SHOT GUNS.—Grain: B (course) (fine):—

"Use half in weight of black powder, or the same quantity by measure. Tap the powder measure a few times to pack and settle the powder down evenly. Put on 3 pink or black edge wads, for paper shells one size larger than bore, and for metallic shells two sizes larger, and ram the same tight down with either hand or light mallet. If not confined by large wads and well rammed, the powder acts too slow. The more it is pressed and confined by wads, the stronger the results will be, and recoil and report increase correspondingly. If pounded too hard it will produce wild shots.

"MUZZLE-LOADING SHOT GUNS.—Grains: FFF (very fine):—

"Use same quantity by measure as black powder. Put on a couple of large pink or black edge wads, or some large pasteboard wads, and ram the same well down. If paper wadding be used, take some more than is used for black powder and ram down hard. The head of rammer should be broad and fit the bore as near as possible, to be able to put the wads down evenly and solidly. Load the shot as usual. Use only FFF for muzzle-loading.

"BREECH-LOADING RIFLES.—Grain: F (medium):—

"In loading rifle-shells, care must be taken that each charge is evenly packed, which can easily be done by tapping the powder measure alike at each load. Use precisely the same measure, or to it in weight of black powder. Use as large and tight-fitting bullets as possible. Should your bullets not fit tightly, or the shell expand too much after shooting, so that the bullet goes in loosely, use a large wad or several thin wads, but always so that the powder is not pressed so hard that it should be shaken and settled down. If pressed, the powder will not work accurately, as it needs confinement, BUT NOT PRESSURE, in breech-loading rifles.

"NOTICE! All Canisters are sealed, and only warranted when the seal is unbroken."

Is that "Notice!" simply ridiculous, or, in view of what we have now learned, is it not significant as well?

Fifth Proof.—Mr. Carl Dittmar's Own Sworn Statements.

We shall now show from his own statements, made

\* In these terms meant that in several cases nine, eight and seven molecules of nitryle, the base of nitric acid, are combined with one cellulose base.

under oath, not only the fact that the so-called "Dittmar Sporting Powder" is, as we have said, analogous to gun-cotton and nitro-glycerine, but also the fact that Mr. Dittmar was, and is, fully informed of the true and exceedingly dangerous character of his powder.

If we may credit his declaration, Mr. Dittmar has been engaged in the manufacture of explosive compounds almost twenty years.

CIRCUIT COURT OF THE UNITED STATES.—New York, Feb. 11th, 1880.—Before John A. Shields, United States Commissioner for the Southern District of New York. Deposition of Carl Dittmar, who, being first duly sworn, deposes and states, in reply to

Direct Question 13. And from where [the army?] where?

Answer. From there I went to Spandau, and became technical director of the Royal Prussian Powder Manufactory.

Q. 14. In what year was that?

A. 1861.

Q. 15. State at large what species of powder you were there occupied in making.

A. It was the common gunpowder. Besides that, I had charge of the gun-cotton manufacture.

Q. 16. What was the method of preparing gun-cotton at that time by you?

A. That was purified cotton immersed in a bath of nitric and sulphuric acids.

Q. 17. I started there till about 1862. A. 23. Then I became a director of the alum works in Harburg.

Q. 28. State your occupation there in respect to explosive powders, or any experiments you may have made at that time in respect thereto.

A. I manufactured powder made out of sawdust and acids.

Q. 29. State your preparations and methods of manufacture.

A. That was in the same way that gun-cotton was made, only I used sawdust instead of cotton.

Q. 32. I cleaned the sawdust—purified it. A. 33. I treated it with diluted acids and alkalis to get the impurities out.

Q. 34. Then subjected it to what?

A. To a bath of the mixed acids.

Q. 35. In the same manner as gun-cotton?

A. In the same manner as gun-cotton.

But this was powder alleged to have been made by him in Europe. The testimony is introduced here only to show that Mr. Dittmar claims to have been long engaged in his work; and also to show that according to his own testimony he has been working at the manufacture long enough to have made his nitro-cellulose product uniform, if it could be made uniform.

Mr. Dittmar thinks that he knows more about the subject of high explosives than anyone else. In the same deposition we find this:—

Cross Q. 907. Do you consider yourself an expert as to the characteristics, manufacture and use of high explosives?

A. Yes, sir, I consider myself an expert. I think I know more than anyone else about high explosives. My knowledge in high explosives was known by the Prussian Government and foreign governments, and I had offers from the Turkish and Roumanian governments as early as 1863. I have made the best examinations in chemistry that ever have been made in the Royal Prussian Artillery and Engineer School. I have manufactured high explosives since about the year 1861, and have continued and improved a great many powders up to the latest date.

Coming now to the "sporting powder" made by him in this country, he says, same deposition, Feb. 19th:—

Cross Q. 789. What is Titan powder?

A. I made direct kinds of Titan powder; some was my sporting powder, which is composed of, or at that time was composed of cellulose, sugar and starch, treated with acids, and this compound was mixed with nitro-glycerine.

And the following day, in the same deposition, in answer to Cross Q. 1,838, he says:—

Sometimes I made a nitro-glycerine powder that was nitro-glycerine mixed with my sporting powder. That powder is not the common black powder; it is [Feb. 20th, 1880] one of my inventions, consisting of cellulose, starch and sugar treated with acids.

Cross Q. 897. Is nitro-cellulose, made as directed in the duatin patent, itself an explosive?

A. Yes.

Cross Q. 898. Is it strictly analogous to gun-cotton?

A. Nitro-cellulose described in process No. 2 is analogous to gun-cotton before it is mixed with nitro-glycerine.

So much to show that Mr. Dittmar himself, on his oath, declares that his sporting powder is (Feb. 20th, 1880) made as we have said it is made, and that he knows it to be analogous to gun-cotton, as we have said it is. Let us now see how he confirms us in regard to our statement of his views of the relative explosive power of nitro-cellulose, nitro-starch and nitro-sugar, etc.—

Re-direct Q. 1,412. What is nitro-cellulose as to its explosive qualities?

A. It is a compound worked in the same way as nitro-glycerine. It is detonated by a percussion cap. It is not necessary to use a percussion cap.

Re-direct Q. 1,413. But in the use of the percussion cap?

A. It will detonate\* the same as nitro-glycerine.

CIRCUIT COURT OF THE UNITED STATES, DISTRICT OF CALIFORNIA. In Equity.—Before N. Austin Parks, Notary Public and Special Examiner, Boston, Dec. 10th, 1874. Deposition of Carl Dittmar, who having been duly sworn, doth depose and say as follows, in answer to

Direct Q. 134. You mention in your cross-examination gun-cotton: are or are not nitro-compounds, such as nitro-manite, nitro-sugar and dextrine and gum treated with nitric acid, as well as gun-cotton, in their nature similar to nitro-glycerine? Will they, as a rule, explode by the same means and under the same conditions as nitro-glycerine?

A. They are, and will so explode.

Cross Q. 350. What is detonation?

A. Detonation as now generally understood with reference to blasting materials is substantially the instantaneous and simultaneous decomposition of the explosive.

Cross Q. 350. How is it produced?

A. By a shock, a strong percussion cap or striking on an anvil; and by setting the high explosive on fire under strong and close confinement.

\* Mr. Dittmar understands what detonation means. Deposition Feb. 18th, 1880.

Direct Q. 135. Is the explosion of these substances produced substantially the same way as the explosion of nitro-glycerine? A. Yes.

#### DEPOSITION BEFORE SHERIFFS.

Re-cross Q. 1,610. (repetition of Re-cross Q. 1,510). Is not the explosion of pure nitro-glycerine much quicker than the explosion of ordinary nitrated compounds?

A. No; it is not. I think some nitrated compounds are still quicker than nitro-glycerine.

Re-cross Q. 1,645. Do you mean by quicker, more easy to explode, or more quick in explosion when made to explode?

A. Quicker; in explosion, and easier, so far as they would explode by both means, fuse and cap.

Re-cross Q. 1,646. In what respect, according to your theory, are nitrated compounds more quick in their explosion than nitro-glycerine?

A. They have a quicker detonation and a quicker decomposition in the elements.

A. To Re-cross Q. 1,686. For instance, I consider nitrate-sugar\* a quicker explosive than nitro-glycerine.

A. To Re-cross 1,687. Nitro-nitrate exploded by means of a strong percussion cap may be just as quick as nitro-glycerine; I consider that the slowest; it may be just the same; it may be no much different; the nitro-cellulose may be slower, but it would not be much; it would be nearly the same, because I consider nitrate sugar quicker.

Re-direct Q. 1,715. You have stated that nitrate sugar was quicker than nitro-glycerine. Is nitrate starch quicker than nitro-glycerine?

A. I am not so sure as to nitrate starch.

Re-direct Q. 1,716. If not quicker, is it of the same quickness?

A. About the same.

Re-direct Q. 1,717. Is the nitrate starch mentioned in your duatin patent, of the same quickness of explosion as nitro-glycerine?

A. It is either quicker, or just the same.

A. To Cross Q. 2,398. It [the strength of the blasting powder] does not depend on the nitro-glycerine; but I can make it just as strong, if I introduce more or less of the nitro-cellulose, or nitro-starch, which are about as strong as nitro-glycerine itself if exploded with a strong cap.

Mr. Dittmar may stickle on the duatin patent starch, sugar and cellulose; but how will he stickle on this?

#### UNITED STATES CIRCUIT COURT.

New York, Feb. 19th, 1880.—Before John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N. Y., who, being first duly sworn, deposes and states, in answer to Cross Question 836:—

"My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was JUST THE SAME as if I WOULD USE NITRO-GLYCERINE POWDER. I have it now so that it is tamed down, and don't burst any more guns."

We hardly think that Mr. Carl Dittmar, or the Dittmar Powder Manufacturing Company (No. 2), will try to dodge that.

There it is bare and bald. Comment could not make it mean more than it says. It says all.

Mr. Dittmar thinks that he can write the English language better than he can speak it. We will compare some of his written language with this verbal declaration.

CARL DITTMAR SAYS.

#### Writing to Sportsmen.

"I pledge my word of honor that I have never sent, and never will send, powder for sporting purposes which should have the slightest trace of nitro-glycerine in its composition."—Letter in ROD AND GUN, Aug. 14th, 1875, Vol. VI., page 269.

"If some gentlemen have damaged their guns it would only be by negligence, and by not following my directions. It is absolutely impossible to damage a gun, weak or strong, breech or muzzle-loading, if my powder is used according to my instructions."—Letter in ROD AND GUN, Aug. 7th, 1875, Vol. VI., No. 18.

"When I first commenced making this new powder I had no more experience than your cat has in catching mice. I had a single accident, although I have fired more than twenty thousand times in a variety of guns."—Letter same as below.

"In conclusion I would say that sportsmen and riflemen are and have been experimenting with my new powder all over the country, and the testimonials thus far received are in the highest degree satisfactory."—Letter in FOREST AND STREAM, June 21st, 1875, Vol. IV., page 315.

Mr. Dittmar's written statements, already quoted in the first part of this article, are also interesting reading just here. Next week we shall publish a further exhibit of like affirmations, when we come to show how Mr. Dittmar evaded the charge that his powder might detonate.

This will be of the past. A word as to the present. The "Dittmar Sporting Powder" was never a fit material to put into the hands of sportsmen ignorant of its true nature. It is not now. It never will be. The manufacturers of it may "tame it down" for a century. We believe that they cannot make it, according to the patent specifications, so that when used in a gun it will give uniform results. To remove from it the over-present potentiality of working disaster, maiming and death, they must abolish the laws of nature, and remove from the universe the molecule and the atom.

The Dittmar Powder Manufacturing Company (No. 2) cannot change the laws of nature.

\*Nitrate sugar is only another expression for nitro-sugar.

The FOREST AND STREAM dislikes personalities; it never drops to calling names. But when the truth is to be spoken, that responsibility may be fixed, it will never fear to speak the truth.

If in the course of this article we have at times failed to separate the question of the safety of the powder from the course pursued by its manufacturers, it is because we have been reluctantly compelled to do so. From the very nature of the case the two are so connected that a discussion of the one could not avoid a reference to the other.

### THE CREEDMOOR MEETING.

THE extended report which we offer of the work done and the results accomplished at the recent Fall Prize Meeting at Creedmoor, warrant careful scrutiny. These long lines of figures are not mere accidental arrangement of digits, but represent careful, intelligent application of the accomplishment of a result. The "Wood-chuck Hunters," as they were jocularly called, who took the State Prize, did not blunder into it, but reached that honor by persistent endeavor on their home range. At that place they became accustomed to baffling winds and disadvantageous conditions. They became trained in the judgment of wind and its effect on the flying bullet; they gained the knack of steady holding, and then when they found a bad day at Creedmoor, they were in a measure at home, of course. There may have been other teams who were the victims of bad luck. The most skillful shot may miss, but the novice does not roll up a fine total. *Falma non sine putre* is the rule of the range, from which there is no escape. Every prize winner of last week earned his trophy and its honor by hard work. Not one of them blundered into his good fortune, and those who failed of their ambition have at least the satisfaction of knowing that their leaders did not win by a fluke; that they have not been compelled to take a place behind "duffers." The popularity of off-hand shooting is indicated by the large number of entries in the short range matches, and this will probably continue to be the case so long as marksmen do not care to unite acrobatics with their target practice and reach the bullseye only through a fine grape-vine twist of the arms and legs over the green sward. The success of the regulars, while it should be looked for as a matter of course, is none the less an agreeable surprise. The army has taken a very sensible view of its position in the matter of rifle practice. There is no doubt that when the movement for an intelligent drill in target shooting was begun by the militia of the States, and of New York in particular, that the regulars were lamentably behind-hand. By a sort of general neglect the Springfield rifles in the hands of the troops were allowed to have a very quiet time of it, except when they were aimed so wildly and with so little effect against the Indian malcontents on our frontier. When rifle practice had become pretty well established among the volunteers, the deficiency of the regulars became so apparent that something had to be done. Then it was that the officers of the regular army came out frankly and acknowledged that their men were far in the rear, and joining hands with the militia the result has been of great advantage to both. Friction has developed effort, and the keen rivalry has spurred on the soldier and citizen alike to their best endeavors. Personally there is little choice between the make-up of the teams, but the failure of New York State to appear in the International team match opens up a fruitful topic of official negligence, and is a strong confession by men competent to make it, that New York State is armed officially with an antiquated arm, and the name of "gas-pipe," with which it has been dubbed by the men carrying it, is a singularly expressive one. The result of the Wimbledon Cup match may rouse the cry of professionalism, but as there was room enough and to spare above it, which the non-professional might have occupied, there does not seem to be so much room for complaint. On the whole the meeting was a success, though it does seem that after so many years' experience a more clock-work movement of the competitions should have been reached. As it is, the experience gained on many points at one meeting seems to have entirely evaporated ere the date of the next gathering.

### THE TILESTON FUND.

[NEW YORK, Sept. 18th.]

Editor Forest and Stream:

I have to acknowledge the receipt to date of further subscriptions to the "Tilston Memorial Fund," as follows:

Previously acknowledged, \$690 00	H. W. Livingston,.....	\$5 00
Elmer Smith,.....	60 00	C. W. Hutchinson,.....
W. L. Fore, \$2, E. F. Tabor, \$2, J. Van Hook, \$2, Wm. E. Jones, \$2, Percy C. Olt, \$10, through P. C. Olt,.....	18 00	FOREST AND STREAM,.....
		W. A. Cooper,.....
		Total,.....

FRED. N. HALL, Secretary.

THE INTERNATIONAL CRICKET MATCH.—We publish this week the most full and comprehensive report of the United States-Canada Match, at Philadelphia, that has appeared in the public prints. It is from the pen of our cricket editor, who witnessed every ball bowled in the match, and every phase of the game has been faithfully detailed. Our going to press at an early hour last week prevented its appearance in last issue.

## Natural History.

### BEAVERS PARTIALLY DOMESTICATED.

THE interesting note from E. B. B., which we published last week on beavers in Iowa, makes the accompanying extract particularly interesting just at present. The beavers referred to were introduced into the Isle of Buto, by the Marquis of that Isle in 1874, and seem to have done very well. The succeeding remarks are taken from the *Journal of Forestry*, and are from the pen of Joseph Stuart Black, keeper on the Bute estate:—

Their food in winter consists wholly of the barks of trees; had they a choice I have no hesitation in saying they would prefer the willow and poplar. These not growing in the enclosure they had just to adapt themselves to circumstances, and take a share of what trees they could get. Consisting of oak, plane tree, elm, thorn, hazel, Scotch fir and larch. Of the hard wood, they seem to prefer elm to plane tree, then oak, of which they eat sparingly. Of the first, the Scotch has the preference; as for the larch, they did not touch it till early in 1878, since which time they have taken to it very well. As for the alder and spruce fir, they eat almost nothing of them. Along with all these we have always given them a supply of willow. In summer they eat freely of the common bracken, likewise grass, and young shoots of every description growing in the place. In autumn they grub up and feed upon roots, chief among which is the Tormentil (*Potentilla tormentilla*), known to Scotch people as "tormentil root," and the young tender shoots of the common spurs before they appear above ground, at the same time cutting down a tree now and again and feeding on the bark.

As to the tree felling it is all done at night; the number which they have cut down amount now to 137 trees from five feet in circumference downward. These are all forest trees, besides many smaller bushes. Before cutting down a tree, they mark it all round at the height they wish to cut it. They begin to cut at the opposite side to which they intend the tree should fall, invariably making it fall with the top to the water. Where they grow near enough, they make them fall across the stream or dam, and so place them as to suppose that they are so placed to form a bridge, whereby they may cross from one side of the water to another. They do not require a bridge, they can swim, and rather than cross over a prostrate tree they dive under it. My impression is, they are so placed to break the current of the water when the stream is flooded; also if convenient they take advantage of building a dam where some of the trees lie across the water. Those lying across in their principal dam are utilised in storing up their winter food, these stores being built on the upper side of the trees, so that they cannot be swept away with the winter floods.

When cutting the trees they use their teeth, on the same principle that a forester does an axe, always keeping plenty of open space, so that they can cut past the centre of the tree on one side before beginning on the other. It is in the latter end of autumn they commence to cut down trees for winter food. Having cut them down, they speedily strip off the branches, cutting them into lengths to suit their strength for dragging them away to the dam, where they store them in different places near their house, so that they may have sufficient food although the dam may be frozen over, or the ground covered with snow. What is left of the trunks of the trees that they cannot drag away, they feed on at leisure, eating the bark.

Besides the work above ground, which I tried to describe, they have done a great amount of underground work, such as cutting channels in their dams, and making burrows. These burrows they make by cutting a road from the middle of the dam for several yards into the dry ground, where they scoop out a dome-shaped burrow from eight to ten inches above the level of the road, then cut a hole through the surface and cover it over with sticks and grass so as to act as a ventilator. Here they live and feed in security and contentment. Some of the roads to these burrows, are from fifteen to twenty yards long, and so level that the water follows them in the whole length.

As to the time they bring forth their young, from my own knowledge I cannot say. I have seen it stated to be January, and also the beginning of May. I can say nothing against that, judging from the size of the young when I first saw them in the second week of June, the oldest litter being about the size of a full-grown rabbit, and the youngest not half that size.

From careful observation I have good reasons for believing that they have only one at a birth. One thing I am certain of: they have two litters in the season. Beavers are a class of animals that are very timid, their sight, scent, and hearing very keen, so much so that it is with great caution they can be approached near enough to see them at their work. They are under cover all day from seven o'clock in the morning till seven in the evening. When one comes out, it floats on the surface of the water, carefully surveying the whole scene around, sniffing the air, and if no danger is apprehended it dives and disappears. In two or three minutes a number of the colony begin to appear and disperse themselves, some to swim and sport about in the dam, while others go in quest of food. If one of them espies danger it strikes upon the water with its tail, when all of them that are out, come tumbling into the dam and disappear.

I have seen them wrestle in playfulness and fight in anger, and also when the mother was feeding and the young one sporting about in the dam, I have seen it go and begin to tease her, when, if she did not wish to be troubled with it, she would strike and drive it, and pitch it from her in the dam. They will allow of no laziness in any member of the colony; if any such there be, they are beaten and driven out to live as best they may. These so driven out generally roam about, making a burrow here and there, where they live for a few months, and die.

ON THE GEOGRAPHICAL DISTRIBUTION OF SHELLS.—A correspondent, N., who writes from North Vernon, Ind., sent us an interesting though brief account of a goose

which was caught by a fresh water mussel (*Unio*). Similar instances have before been noted, both in FOREST AND STREAM and elsewhere, and are always interesting, because they show so plainly the method by which shells of one kind or another may be transported for long distances over the land, and may thus be introduced to waters far from their real homes and which they could scarcely reach in any other manner. This point was first brought out by Dr. C. Darwin and afterwards elaborated by Alfred Russell Wallace in his magnificent work on the Geographical Distribution of Animals. Our correspondent's note is as follows:—

Some weeks ago, in company with others, I saw a goose limping along more clumsily than is usual, and on examination found that her foot had been caught in the shell of a live mussel. She was relieved, but at the expense of a toe.

METROPOLITAN BLACKBIRDS.—Many years ago the crow blackbirds (*Quiscalus eximius*) roosted in the White River bottom, a few miles below our city. Their feeding ground was north of Indianapolis, so that morning and evening there was an immense flight of these noisy fellows. They finally began to be familiar with the noise and bustle of city life, and would nest in our shade trees. Then they became more bold and began roosting in the lawns of Calvin Fletcher and Judge A. Le Roy. Their next move was to take possession of the shade trees on North Pennsylvania and Meridian streets.

I suppose the cause of these birds deserting their former roosting place in the lowlands along the river, and coming to the city shade trees is the fear of owls and "vannins."

Four years ago I noticed among the blackbirds roosting in front of my house several cow bunticks, or cow pen birds (*Icterus pecorae*). The next year the latter came in distinct flocks, and have remained separate each year since. This year there are not less than ten thousand occupying the soft maples in front of my yard. They arrive from their feeding grounds before sundown, and after a short rest in the trees surrounding my fountain, they descend and drink. Sometimes they catch the squirrel in the act of drinking, and kill it, but generally go to the ground at once and surround the fountain, some flying onto the "rockery," and drink in flocks of hundreds.

Should the evening gun, at the arsenal, be discharged while they are thus engaged, every bird is silenced, and at once flies to the tree-tops. The arsenal is over a mile and a half distant.

These little fellows have become quite tame, so that now the carriages and foot passengers do not disturb them. They even fearlessly drink while my children are playing within a few feet of them.

In the morning they fly from the maples into my fruit trees, and there "plume" themselves ere they go to their feeding grounds among the herds of milch cows west and north of the city.

During the night these birds keep up a chirping sound. Should a bass and a couple of young men were leaning over the railing of a bridge thrown across a small run below town, they noticed a commotion in the water, and their attention was attracted to the struggles of a large "sucker," at least five inches in length, that was held in the jaws of a water-snake. The fish was too large to be easily quoted by his snakeship and did not take kindly to the proceedings. At every leap on the part of the fish the snake would draw it out to its mouth, but it would manage to keep its hold and was patiently waiting until the strength of the fish would be exhausted, when it would have made off with its prey. But at this juncture the young gentleman interposed for the weaker contestant, and the fish was liberated from the hungry jaws of the reptile. May not the snakes have more to do with the depopulation of our streams than the pot-fishermen? The smaller streams are generally polluted with water snakes—the species to which the one I refer to belonged.

As to other interesting characteristics of this bunting, I refer your readers to Audubon and Wilson. Indianapolis, Ind., Sept. 14th.

VEN. SNAKES EATING FISH.—New Bloomfield, Pa., Aug. 17th. I have noticed several communications, pro and con, on the question of snakes eating fish. I think I can be able to throw a little light on this important question.

Several Sundays ago, as two of Bloomfield's most reliable as well as handsome, young men were leaning over the railing of a bridge thrown across a small run below town, they noticed a commotion in the water, and their attention was attracted to the struggles of a large "sucker," at least five inches in length, that was held in the jaws of a water-snake. The fish was too large to be easily quoted by his snakeship and did not take kindly to the proceedings. At every leap on the part of the fish the snake would draw it out to its mouth, but it would manage to keep its hold and was patiently waiting until the strength of the fish would be exhausted, when it would have made off with its prey. But at this juncture the young gentleman interposed for the weaker contestant, and the fish was liberated from the hungry jaws of the reptile. May not the snakes have more to do with the depopulation of our streams than the pot-fishermen? The smaller streams are generally polluted with water snakes—the species to which the one I refer to belonged.

WAYNE.

A QUESTION ABOUT QUAIL.—Wacayanda, Sept. 5th.—Editor Forest and Stream.—Thinking the following worthy of note, I take the liberty of sending it to you. A quail's nest, thirty-six eggs, was found on a gentleman's farm at Warwick, N. Y., all of which hatched but one. What is the largest number ever found in one nest? The old female had a narrow escape during her incubation, from a scoundrel out shooting. Having flushed her from the nest, he levelled his gun at her and was just pressing the trigger when the farmer saw him and drove him away. This, I should say, was pot hunting extraordinary.

WALKILL.

ANOTHER CAPTIVE COCK.—Neverstink Lodge, Guyard, Orange County, Sept. 10th.—Editor Forest and Stream.—Having noticed the interest taken by you in woodcock in captivity, I think it may interest my brother sportsmen to know that I also have had one in my possession for a fortnight. My keeper went out a few weeks ago, and crossing a field where corn was being cut, saw that a man had just caught a healthy and lively cock in a bunch of corn. The captor presented him to Philip, who feeds him according to your rules, and the bird is doing well. Can you tell me what I can do in the winter with Mr. Timberdoodle? Now worms are plenty, but in winter I wouldn't know what to feed him.

A. E. GODEFFROY.

Probably the best way would be to store up a lot of worms for him. A barrel partially filled with earth and placed where it would not freeze, would hold worms enough to last even a woodcock through the winter.

# Fish Culture.

## SALMON OF THE PACIFIC COAST—HOW THE SHAD HAVE MIGRATED.

ASTORIA, Oregon, July 10th.

SOME time ago, a year or more, a communication appeared in Forest and Stream on the subject of fly fishing for salmon in the Columbia River. The writer, C. C. R. (Capt. Rockwell, United States Coast Survey), asserted that the reason the salmon did not take the fly during the spring and summer months was that owing to the discolored condition of the water during the spring and summer freshets it was impossible for the fly or spoon to be seen. The reason was quite plausible, and, in the presence of a better, would have been accepted as conclusive. At the time of reading the article referred to, I had been fishing for salmon with trolling spoons for two years, and I had observed that whenever a salmon was hooked, it had always been below the line of fresh water. In the fall, when the freshet has subsided and the water is low and clear and the tides are high, the salt water reaches a point abreast of the city front; and that is the highest point at which a salmon has ever been taken with a hook and line. One day last fall, to test the matter fully, I rowed to Tongue Point, four miles above the city, where the water is fresh, and, though the fish were leaping all around me, I could not get a bite; then, stopping on the river, I sailed for a mile below the city, and, taking a bait, fly or spoon only on its feeding grounds; that is, in salt water only.

While writing of salmon, I wish to take exception to some of the statements of "Movitch" in his article on Frazier River fish. He says, "I believe salmon return to the river of their nativity . . . to spawn. Each river has its own kind of salmon. These are peculiar to itself alone. *Salmo gairdneri* has never been seen in Frazier, nor a 'suckeye' in the Columbia," etc. I am willing to admit the general truth of the first of these statements; the other I believe to be entirely untrue. It is true, that the opinions of "Movitch" have been long held by Sacramento and Columbia canners, and they have generally been accompanied by the assertion that the salmon of the northern rivers were not only a different, but that they were an inferior fish; and this assertion is true to a certain extent, as will appear presently. But the opinion is now held by some of the best observers that every member of the salmon family found in any river, from the Sacramento to the Yukon, in Alaska, will be found to be a greater or less extent in the rivers of corresponding size. The spring salmon of the Columbia (*Oncorhynchus gairdneri*) is known to be identical with the spring salmon of the Sacramento, and constitutes the bulk of the season's "run" in both, though in the Columbia they average a little larger and are just a trifle faster. The spring salmon of the Frazier is the same fish, but considerably less in size and fatness. The *Oncorhynchus nerka*, the "suckeye" of the Frazier, the "blue-back" of the Columbia, and, changed in color by proximity to the spawning season, the "red" of the Idaho lakes, constitute the bulk of the "run" in Frazier, but is much less abundant in the other streams.

As a canning fish it is inferior to the quinnat; so much so that canners here, having regard to the reputation of their brands, refuse to use them at all. As a fresh or salted fish they are nearly, if not quite equal, to the quinnat. The *Salmo mykiss*, "steelhead" of the Columbia and Sacramento, and "trout" and "salmon trout" of Frazier, is also found northward to the Yukon. Eaten fresh, of quality good; for salted, it is inferior; for canning it is worthless. In closing I wish to say that I am indebted for many of the facts in this article to Prof. D. S. Jordan, of the United States Fish Commission, who has personally examined the salmon of every considerable fishing station as far north as the Frazier, and received specimens from an assistant, who has spent the present season in Alaska.

I cannot close without saying that the conclusions reached by Prof. Jordan are not only undoubtedly correct, but in view of what we know of ocean currents, are no more than what a thoughtful man might have anticipated. There are two ocean currents on the Pacific Coast of North America. One, a narrow current, one to two miles wide off the capes and headlands, and ten to twenty along the bays, runs northward, close to the shore. The other, an immense ocean river, of which the first is only the eddy, turned from its course by the Aleutian Islands and Alaska, sweeps along the coast, downward to the tropics. A salmon from the Sacramento has only to drift in the inner current to find himself in a few months, and without effort of his own, at the mouth of Frazier or the Yukon; and one from the Yukon at the Frazier, in the outer current, would soon reach the mouth of the Columbia or the Sacramento. I do not pretend or suppose that any considerable part of the salmon of any river are so drifted about by ocean currents; but I do believe that enough are so drifted for purposes of colonization. I think, if the truth could be known, it would be found that enough are drifted in this way to make those who have given no thought to the subject. The history of the shad introduced a few years since into the Sacramento is a case in point. They had scarcely attained a length of eleven inches, before specimens began to be taken in the Columbia; and when we think how small is the setting ground on which these shad are caught, it is safe to estimate that there are hundreds, and perhaps thousands, in the river for every one taken; and were it not that the water of the northern rivers is too cold for their successful propagation, we might look to see the whole Pacific Coast stocked before many years from the one importation to the Sacramento.

C. J. SMITH.

THE PRIZES AT THE GERMAN EXHIBITION.—The *Fischerzeitung* says that the honorary prizes (diplomas,

awarded at the Berlin Fishery Exhibition are completed and ready for transmission. The medals (with diplomas) will be ready early in autumn. The Wurtzburg prizes are finished and ready to be sent to their owners.

**SAILING EGGS—PROPER CREDIT.**—One of our German correspondents writes as follows: "In your issue of July 29th it is said that the German government has presented a lot of eggs of the sailing, *Salmo salvelinus*, to Mr. Livingston Stone. The error is slight, yet as it is a question of placing the credit in the proper place, it is only fair to say that the government had nothing to do with the matter, as the eggs were sent entirely at the cost of Mr. von dem Borne, the celebrated fish culturist of Berneuchen, who packed them in snow, in which they arrived in America in good order."

Our correspondent also writes that some eggs of brook trout, sent from this country to Germany last winter, arrived in very bad order; in fact were warm and rotten.

**SOLES IN AMERICA.**—We have received a communication on this subject, from an anonymous correspondent, with only his alleged initials signed. His statements have no value whatever when given in this way, and if he will send in his address to this office we will consider the propriety of publishing his letter. If he does not care to have his name appear it will not, but we must be satisfied regarding his competency to speak on this subject before we print his letter. Again and again we have said that it is useless to write to us anonymously, and if correspondents would only remember it, it would save both trouble. We require the name as a guarantee of good faith merely in most cases, but in the present case we have grave doubts if the writer is competent to identify a sole, a doubt which he can easily dispel if he is familiar with them.

**WORK OF THE FISH HAWK.**—The new fish-hatching steamer, in the absence of fish eggs to hatch, is engaged in the investigations of the fish commission at Newport, and made a most remarkable day's work about a fortnight ago, in which over 120 species, vertebrate and invertebrate, were added to the fauna of Southern New England, by traveling in 200 fathoms, sixty miles south of No Man's Land. Our informant, who was on the spot last week, writes that Prof. Gooden had just finished a paper, describing seven new species of fish, which are included in four new genera, from that day's work.

Bonito, *Sarda sarda*.  
Kingfish, *Menticirrhus nebulosus*.

### THE FLY IN NORTH ELBA.

AU SABLE FORKS, N. Y., Aug. 2d.

ON last Thursday morning at 7 o'clock, my wife and I left our pleasant home in this village, for a short trip among the trout streams. We drove across the Flume, along the banks of the Au Sable River, through Wilmington Notch, past the foot of Whiteface Mountain, and feasted ourselves upon some of the wildest and grandest scenery in the Adirondacks. This feast of the eye and mind, however, did not spoil our appetites for the pleasant lunch we took on the banks of the river, just before we reached the bridge of North Elba.

We arrived at Cameron's, the place of our destination, a little before 9 o'clock, having enjoyed one of the most delightful drives of our remembrance. The sky, which until now had been almost perfectly clear, began to cloud over, and before we got our things fixed and ready for fishing, the rain was falling furiously. I unpacked my Orvis rod, attached my reel, and arranged three flies upon my new "mist-colored" leader, and waited for a lull in the storm, which soon came, though the rain did not entirely cease falling. I slipped on my light waterproof, while Mr. Cameron, who offered to accompany me, got himself into one of the heaviest of black overcoats, and we started for the pond, which lay about a quarter of a mile below us in a lonely meadow. This pond is made by a dam across Ray Brook, and will perhaps average twenty-five feet in width, and is somewhere about half a mile in length, though it is hard to tell where the pond ends, and the brook commences.

When we reached the pond, we found that the old flat-bottom boat we were to use was on the opposite side, but Mr. Cameron was equal to the emergency, and taking off his clothes (including the black overcoat), he waded over and returned with the boat, in the meantime whipping the stream, but either Mr. Cameron (without his clothes and overcoat), had frightened the fish, or else there were not many just at that place, for I only caught

two little fellows. We got into the boat, and started slowly down stream until we came in reach of a famous hole, from which I had taken many a fine fish in years gone by. We pushed one end of the boat upon the opposite bank, and waited for a few minutes until the trout had time to recover from any uneasiness that our approach may have caused them. In a short time they were jumping all around us; fine fellows, over a foot long would spring clear out of the water, and show their rainbow tinted sides as they tumbled back again. I stood up in my end of the boat, pulled out about fifteen feet of line, made a cast close to the shore, in the shallow water, to get my line out, and to see if everything was all right, and then swinging my line behind me, I brought my flies forward until they fell close to the opposite shore, in the deepest water, and where the current was the strongest. I had just time to see that they had fallen straight and lightly, when the water splashed and I gave a jerk. My reel started as my line led down stream. This went on for some seventy feet, when a turn in the stream was about to bring my line into the brush, so I put my finger on the reel, and turned the butt of my light pole toward the fish, the graceful rod bent until the tip had passed my hands, when it began to straighten, and I knew my game had been stopped. My line ran up stream, only to run down again, and I knew that there was something strong and plucky on my hook. It then occurred to me that I had forgotten my landing net. It must have been some twenty minutes before resistance ceased, and my fish were slowly led upon the mud, where they lay quietly until Mr. Cameron lifted them with his hands into the boat. On the first fly we found a trout weighing about three-quarters of a pound, a smaller fellow on the next hook, and a noble fellow which afterward weighed one pound and fifteen ounces, on the end hook. This last proved to be the largest trout I had ever taken upon a fly. The sport was continued until we had eight trout, I having taken two upon another cast, and three upon another, the smallest of which weighed a little over half a pound.

With a little excusable pride, Mr. Cameron was anxious that we should get home, so as to display our fish as the mail stage passed, but we were too late for the stage. As we were hurrying for the stage, Mr. Cameron, who a short time before had been fearing a frost, remarked upon the sudden change in the weather, and looked a little blank when I told him that it was cold enough outside of his overcoat.

As soon as some of our fish could be cooked, supper was announced, and we were ready for the supper. The supper was all that could be desired, and by no means its least recommendation, was the neatness and cleanliness of everything about the dining room and table. Mr. Cameron has a large new house, with accommodations for some forty guests; the rooms are moderately furnished with fur cottage furniture, and spring beds, hair mattresses, and sheets as clean, white and pure as a politician's record painted by his own organ.

We went to bed early, and slept soundly. Friday morning foretold a splendid day. After a good breakfast and a smoke, my wife and I started for the stream, with young Byron Cameron as guide, and Jenny Cameron as company and guest. Byron is a bright boy of some thirteen summers, and Jenny is a sweet, pretty child, some two years younger.

When we reached the brook the sun was very bright, the water clear, and not a breath of air to make a ripple upon its surface, consequently the trout rose to the fly slowly, but since we did not need the fish, we were not disappointed. Byron made suggestions which indicated that he was getting a little suspicious of my skill as a fisherman, but by following his advice with no better results, he was silenced if not satisfied. We soon, however, had twelve, the number agreed upon before we left the house, and on two occasions I took two at one cast. These twelve weighed eight pounds, and two ounces. While fishing, we saw a hawk strike a bird, which fell perfectly dead on the bank near us, we went and got the dead bird and found it to be a night hawk. My wife was greatly interested in the sport, and handled the landing net so dexterously, that Byron and I decided to trust her with the pole for a short time. I reeled up to six feet of line, cut a nice bait out of the breast of our dead night hawk, which I put on the end fly and handed her the pole.

She made a cast, the pole struck the water and the line fell in a lump at the end of the pole, but since the pole did not break, I felt easy. A three-quarter pounder took the hook, but the reel would not play, because her hand was over the line. Byron held the landing net, while I trembled for my pole, but finally the fish was landed safely. We gave a lecture upon the management of the reel, and she made another cast; this time she held the pole out over the stream, and I tossed the hook in, a trout took the bait and the reel started, and while the flies were dragging through the water, another trout took one of them, and I was then certain that my pole was gone, but fortunately it got off again, when my wife heroically snatched the remaining fish clear out of the water into the boat. I am now convinced that simply because a woman possesses all of the christian virtues, it is no reason why she should be trusted with an Orvis rod.

We went to the house and talked until dinner was announced, and after we finished eating, we ordered our team and drove over to pay a short visit to our old friend Mr. Dan'l Ames. Mr. Ames is one of the old settlers in North Elba, rather a hard man to get acquainted with, but he has a kind, warm heart, a good deal of humor, and a great deal of sound sense, with an unusual attachment to his friends. After our visit, we drove back to the hotel, when I took my rod and went down to where we had left the boat. The sky was a little cloudy, a light wind made a slight ripple upon the water, and the trout bit with the avidity of a New Jersey negro. I sat in the end of the boat, and watched the fish jump, and whenever one a little larger than his fellows showed himself, I dropped a fly as nearly as possible where he went down.

Having an excess of time, I humored every fish until it was willing to be landed without a struggle, and too soon had my complement of twelve. These twelve weighed five pounds and seven ounces. While playing with a three-quarters of pound fellow, I noticed a piece of a line attached, and when I landed him I found a fish in my mouth, fast to a fork, and containing three flies. With this leader and hooks attached, the fish had risen to the surface and taken my fly. Mr. Cameron told me that that leader was lost on a trout on the 15th

of dog breeding in the case of the terriers, and when it comes to the St. Bernard he states as facts things which have not the slightest foundation in truth. He says the bitch's brother took first prize at Birmingham in 1875. This is false, as no dog or bitch by Russ, out of Mont Blanc ever won a first, second, or third prize at Birmingham, nor for that did one of that pedigree ever win at a show registered in the Kennel Club Stud Book. It is a matter of very great doubt, indeed, whether the bitch shown at Montreal was by Russ out of Mont Blanc, because she has not a single characteristic of a St. Bernard about her. Small in size, black and white in color, and with a snipy head, she certainly looks like a cross-bred dog, with a touch of colley in shape and size, and of Landseer Newfoundland in color. Such a letter as the above should never have found its way into print, but since it has, it is only right its inconsistencies and falsehoods should be exposed.

DOG BREAKING.

FROM VERO SHAW'S ILLUSTRATED BOOK OF THE DOG.

[Reprinted from advanced sheets forwarded to the FOREST AND STREAM, by the author, through the courtesy of Messrs Cassell, Potter, Galpin & Co., Publishers.]

CHAPTER XXXVIII.

Breaking Sporting Dogs.

From almost time immemorial dogs have been the chosen companions of mankind in their pursuit of game. Under any circumstances, it was necessary to educate the dogs in the duties they were required to fill, and it is with this subject that we have now to deal.

It is of course impossible to conjecture how the capacity of each breed for working game came to be displayed in the first instance, but the fact remains that from very early times indeed many breeds had each their respective duties in the field, as they have in the present day.

One of the earliest evidences of the fact that the art of training dogs is by no means a modern one, will be found in the following curious agreement:—

*Ribbesford, Oct. 7th, 1685.*

"I, John Harris, of Wildon, in the Parish of Hastebury, in the County of Worcester, yeoman, for and in consideration of ten shillings of lawful English money this day received of Henry Herbert of Ribbesford, in the said County, esquire, and of thirty shillings more of like money by him promised to be hereafter pay'd me, do hereby covenant and promise to and with the said Henry Herbert, his executors and administrators, that I will from the day of this date hereof, until the first day of March next, well and sufficiently mayntayne and keepe a Spanish bitch named Quaud, this day delivered into my custody by the said Henry Herbert, and will before the said first day of March next fully and effectually trayne up and teach the said bitch to sitt partridges, pheasants and other game, as well and exactly as the best sitting dogges usually sett the same. And the said bitch so trayned and taught, shall and will deliver to the said Henry Herbert, or whom he shall appoint to receive her, at his house in Ribbesford aforesaid, on the first day of March next. And if at any time after the said bitch shall for want of use or practise, or otherwise, forgett to sett game as aforesaid, I will at my costes and charges mayntayne her for a month or longer, as often as need shall require, to trayne up and teach her to sett game as aforesaid, and shall and will fully and effectually teach her to sett game as well and exactly as it is above mention'd."

"Witness my hand and seale the day and year first above written.

"JOHN HARRIS, his X mark.

"Sealed and delivered in presence of

"H. PAYNE, his X mark."

Gervase Markham, however, previously to this, had alluded in his work, "Hunger's Prevention, or the Art of Fowling," to the taking of partridges with the setting dog, in the following words:—

"The fourth and last way for the taking of partridges (and which indeed excelleth all the other for the excellency of the sport and the nerenesse of the art which is contained therein) is the taking of them with the setting dogge, for in it there is a twofold pleasure, and a twofold art to be discovered, as first the pleasure and the art proceeding from the dogge, and is contained in this manner of ranging, hunting and setting, and then the pleasure and art in the bird hunted. Being come into the fields or haunts where partridges doe frequent you shall there cast off your dogge, and by crying 'Hoy-ter' or 'Hey-whir,' or such like words of encouragement, according to the custome of his own nature or education, give him leave to range or hunt, which as soon as hee beginneth to doe, you shall then cease from any more words, except any fault or mistaking enforce you, and then you shall use the words of correction or reprehension due for that purpose, and in all his hunting and labour you shall have great and speciall heede that hee never range too farre from you, but beate his ground justly and even, without casting about or flying now here and now there, and skipping many places, which the beate and mettall of many good dogges will make them do if they be not reprehended, and therefore when any such fault shall happen you shall call him in, and with the terror of your countenance so threaten him, that he shall not dare all that day after to doe the like.

Now if in this ranging and hunting you chanc'd to see your dogge to make a sudden stop, or to stand still, you shall then presently make in to him (for he hath set the partridge), and as soon as you come to him you shall bid him goe nearer, which if he doe you shall still say to him, 'Go nearer, go nearer,' but if you find he is unwilling to goe or creepe nearer, but either lies still, or stands shaking of his taile, as who should say they are under my nose, and with all, now and then looks backe upon you, as if he would say you how near they are, then presently you shall cease from further urging of him, and say, 'When you see how the covey lyeth, you shall then first charge the dogge to lye still, and then, drawing forth your net as you walke, having prick'd downe one end to the ground, do."

The above quotations prove that the breaking of field dogs was carried on in very much the same manner 200 years ago as it is in the present day, though the tactics of sportsmen are materially altered. As will be seen from Gervase Markham, the birds were surrounded by a net, and the object of the hunter was to prevent their rising, but the duties of the setter is by no means greatly changed by the march of civilization.

Upwards of a hundred years before the date of Gervase Markham's work, Dr. Caius refers in his book to the taking of birds in the net in the field, and distinctly alludes to the trained setting dogs used in the sport which he classes with the spaniel, and notices, under the name of Indles.

Having thus shown that the art of training sporting dogs is not entirely due to its modern exponents, though it has naturally been reduced to a science by them, we propose laying before our readers some hints from the pen of Mr. James Fletcher, of Glenmarkie Lodge, Huntley, Aberdeenshire, N.B., whose experience in breaking operations is both practical and extensive.

(To be Continued.)

DOG BREAKING.—We publish this week the first of the chapters of Mr. Vero Shaw's "Book of the Dog" on this subject. Advance sheets have been forwarded by Mr. Shaw exclusively to the FOREST AND STREAM, and others will follow. For this high compliment to ourselves and courtesy to our readers we take the first opportunity to express our appreciation and indebtedness.

ACCIDENT TO REX.—All lovers of a good dog will learn with regret of the misfortune which has come to the champion pointer dog Rex, the property of Mr. Fisher Howe, Jr., of this city. Through the gross carelessness of a well-known handler Rex was struck by the locomotive of an express train, the result being a badly broken shoulder and a compound fracture of the left fore-leg. The circumstances of the case, are extremely distressing, as Mr. Howe was about entering Rex for competition at the St. Louis Bench Show, and supposed that his famous dog was in his best show form. It appears, however, that Mr. Howe was kept in ignorance of the fact, and the broken leg allowed to knit without the proper surgical care. Let this misfortune to this splendid dog act as a warning to all sportsmen to whom they intrust their dogs.

From this brief mention of the occurrence, sent by Mr. Howe, we judge that the dog will never again be fit for either field work or the show bench. Rex has been so frequently mentioned in our columns and has centered so much attention upon himself at the bench shows in this and other cities that further mention of him seems superfluous.

Reference to our files and to the catalogues shows that Rex has been repeatedly placed in the front rank by the votes of such critical judges as Messrs. Davidson, Saltus, Hammond, Colburn, Wise, Dr. Jarvis, Mr. Chas. H. Raymond, Mr. Hugh Dalziel and others. It is to be hoped that the injuries will not result fatally, for as a stud dog his superior breeding, fine form and field quality, should make Rex still one of the most valuable heavy pointers in the East.

CANADIAN KENNEL CLUB.—The formation of a Canadian Kennel Club, similar in all respects to the National American Kennel Club in this country, is an event worthy of the attention of all sportsmen on both sides of the line. It points to the large increase of dog men in the Dominion, and the consequent necessity of establishing an association that will be looked up to as a power in the land. The initial meeting took place at the Rossin House, Toronto, Ont., last week, when the following well-known gentlemen were present: Messrs. L. H. Smith, Stratbrough; Dr. Niven, London; R. Tanning Jr., John Maughan, J. Spooner, C. A. Brough, J. B. Bormer, Bruce Macdonald, A. J. Robertson and Leslie, Toronto. On motion, Mr. Smith took the chair, and Mr. Bormer acted as secretary pro tem. After an important discussion as to the advisability of forming a club, it was moved by Mr. Leslie, and seconded by Dr. Niven, that the club be called "The Canadian Kennel Club," which was adopted. The election of officers was then proceeded with, with the following result: President, Mr. Christopher Robinson, Q. C., Toronto; Vice-President, Mr. L. H. Smith, Stratbrough; Secretary, Mr. A. D. Stewart, Toronto; Treasurer, Mr. J. Maughan, Toronto. Committee, Dr. Niven, London; Mr. Wm. B. Wells, Jr., Chatham; Mr. R. A. Lucas, Hamilton; Mr. J. Spooner, Toronto, and Mr. F. Austin, Ottawa. Mr. Spooner was appointed chairman of the committee. The President, Secretary and Treasurer were appointed a committee to fill any vacancies which may occur in the officers selected.

PENNSYLVANIA FIELD TRIALS.—Mr. J. R. Stayton, Secretary of the Pennsylvania State Field Trials Association, has notified us that the dates of the meeting will be changed from Nov. 9th to the 26th, 27th, 28th and 29th of October, thus bringing the event two weeks earlier.

NEBRASKA FIELD TRIALS.—The executive committee of the Nebraska State Sportsmen's Association, have nominated the following gentlemen for judges of the field trials to be held at Millford, September 30th, October 1st and 2nd, 1880. All Age Stakes.—C. F. Lewis, Hon. Geo. B. Lake, of the Supreme Court, and Hon. B. E. B. Kennedy, Omaha. Puppy Stakes.—F. Satterthwaite, Hon. Charles P. Mathewson, Speaker of the House of Representatives, and Hon. S. M. Chapman, of Plattsmouth. Brace Stakes.—Henry Miller, Esq. of Corning, Iowa; Nathan Dosey, Esq., of Geneseo, Ill., and Capt. E. S. Hawley, of Nebraska City, Nebraska.

The committee desire to assure the owners of dogs that the gentlemen named for judges are thorough sportsmen, and fully competent to act in the capacity

assigned them, and no one need fear anything but justice and fair play at their hands. Entries will be received up to the evening of Sept. 29th, and not to Aug. 31st, as stated in the programme. Game is abundant in the vicinity where the trials are to be held, and a good attendance is already assured.

J. C. McBRIDE, President,  
J. H. HARLEY, Secretary,  
GEORGE M. MILLS,  
Executive Committee.

Both Mr. Satterthwaite and Mr. Lewis declined.

THE COLLEY TRIALS.—The international sheep dog trials, held under the auspices of the Pennsylvania State Agricultural Society, at Philadelphia, were begun on Tuesday of this week, the management being under the personal direction of Dr. L. A. Twaddell. In our next issue we will give a full description of the trials, as our kennel editor is at present in Philadelphia attending them. The entries, with the name of the owner, as well as that of the dog, are as follows: John Bickney, Philadelphia, dog Joe; George Aitkin, Northport, Suffolk County, N. Y., Shepherd Lass and Clyde; George Taylor, Philadelphia, dog Lad; W. H. Blackhurst, Philadelphia, dog Shep; Charles Pugh, Philadelphia, dog Tom; S. Sharpless, Philadelphia, Gipse; T. S. Cooper, Coopersburg, Pa., dog Oscar; Dr. J. W. Downey, New Market, Md., Lady Scotland and dog Tweed Second; John McAnally, West Philadelphia, dog Shep. In the puppy class T. S. Cooper enters Fannie; George Aitkin, Young Carlisle, and Dr. J. W. Downey, Lady Scotland.

ESSEX COUNTY HUNT.—Meets for September, 1880: Saturday, Sept. 25th, at 5 P.M., at cross roads, Orange, near St. Mark's Church. Wednesday, Sept. 29th, at 5 P.M., Wright's Hotel, Montclair. F. M. WHEELER, M. E. H.

GORDON SETTER PUPPIES.—A gentleman advertises a litter of Gordon setters by Glen out of Belle for sale. Belle is an imported bitch, the winner of two firsts in Ireland, and Glen won in the Brace Stakes of the Eastern Field Trials last year. The puppies are a promising lot, so far as looks go, and they can hardly fail to be good in the field.

KANSAS FIELD TRIALS.—Mr. A. C. Waddell, of Topeka, Kansas, writes us that nothing has been arranged about the Kansas Field Trials.

KENNEL NOTES.

WHEELS.—Ruby 11.—Mr. H. B. Richmond's (Lakeville), Mass. pointer bitch Ruby 11, whelped, Aug. 26th, twelve puppies, seven dogs and five bitches, by his Snipe-Sensation, Colburn's Belle. HESSIE.—Mr. H. B. Richmond's English setter bitch Bessie whelped, Aug. 31st, nine puppies, six dogs and three bitches, by Oakes' Dash 111-Daisy Dale. DELL.—Mr. J. J. Jumelle's (Dequoin, Ill.) Dell-Champion, Bob-Champion Buck, whelped eight puppies, three dogs and five bitches, to owner's Elcho 11, all solid deep red color. QUEEN OF SCOTS.—Mr. A. M. Waddell's (Louisville Ky.) bitch, Queen o' Scots, Gladstone-Mersey, whelped, Aug. 18th, eight puppies, four dogs and four bitches, color white, and white and black, to Lincoln's Gratitude.—Mr. A. M. Waddell's foxhound bitch Gratitude whelped, Aug. 2d, three puppies, two bitches and one dog, color white, black and tan, to Chorister. Gratitude was bred in England.

SALLES.—Queen Mab and Gleno.—Mr. Arnold Burges has sold his champion Queen Mab to his brother, Tristan Burges, of San Francisco; also Gleno, by champion Rob Roy, out of Davidson's Doll (sister to Druid), to Dr. Sullivan of Kalamazoo, Mich.

DEATH.—Duke.—Brooklyn, N. Y., Sept. 13th, 1880.—On Friday last I lost, by distemper, my Gordon setter Duke, out of the late Mr. Tilston's Lou, by Jerome Marble's Grouse. When seven months old he took first prize at Westminster Kennel Club show, 1878, and again was awarded H. C. at the many shows, where many of the other and older prize winners were unmentioned. Duke was the fastest dog in the field that I ever knew, and that quality, combined with a very keen nose and beauty of form, rendered him a very valuable animal. I had anticipated having royal sport with him this fall, but his death leaves me now without any dog whatever, and I know I shall have great difficulty in replacing him, as dogs like him, combining exceptional field and bench qualities, are not to be found easily. W. H. HUNTINGTON.

THE CREEDMOOR FALL MEETING.

CREEDMOOR during last week was a busy place in the conduct of the Eighth Annual Fall Prize Meeting. In general it passed off very successfully, though there was the usual amount of growling in cases where the good of the many seemed to trample on the rights of the few. "There were not pool targets enough" is the verdict of so many that it would seem well founded, and it does certainly look a little like bad management where a contest such as the champion's has its stages two days apart on the programme. There was good shooting weather from the start, and no delays were chargeable to the elements. Col. Bodine, while nominally the executive officer, had much aid from Col. J. G. Story, who was the virtual controlling spirit of the meeting. The matches were in general well distributed, and the almost entire absence of protests bears testimony to the fairness of the contests. The rule about the order of shots should be a definite one, and to change it from one day of a meeting to another is very embarrassing to contestants. Without the right of challenge the markers in the butts are the real arbiters of the meeting, and unless a very sharp eye is kept upon their carelessness must creep in. The checks against reckless challenging are abundant, and there is no reason why a practice which gives general satisfaction at the regular monthly matches of the association should not hold during a fall meeting. The management ascribed some of the want of harmony in the details of the meeting to the large number of post entries, but by a proper separation of the military and all-come's contests there seems no good reason why ample accommodation should not be found for all who wish to enter the matches. All through the meeting the rivalry between the regulars and the militia men was very keen, and the honors were very evenly distributed. New York State comes out of the

The third day brought the important military team matches to the fore. It was a lovely day of the early fall, a day for big scores, and the team men felt that they could do themselves justice. The Inter-State team match had taken the closing hours of the day previous; this permitted teams from any State or Territory of the Union. In the bad light and unstable wind of that time the scores were not extra fine, but New York State received a defeat of a very emphatic sort. This is encouraging, and shows

that throughout the Union rifle shooting is spreading, and that outside of and beyond the Regular Army, some 250,000 men are

for defense, or, it may be, for offense. This important question is rising again, and it is not probable that the answer will be long in coming. It runs back to 1875, when the ranges were 200 and 400 yards, but it runs back that time they have been as now 200 and 500 yards. What the teams have done is shown in the following summary of past seasons' contests:—

	200 yards.	500 yards.	Total.
1875..... New York	446	415	861
1876..... Connecticut	473	407	880
1876..... Connecticut	473	386	859
1876..... New York	451	382	833

1878.....Rhode Island.....	451	372	823
1878.....Massachusetts.....	448	725	863
1879.....New York.....	491	519	1,010
1879.....New Jersey.....	430	519	1,049
1879.....Pennsylvania.....	483	561	1,044
1879.....Massachusetts.....	484	448	932

The New York State team of this year was a mere pick-up team, shooting with the blunderbusses which make up the State armament, and they went into the fight feeling certain of defeat, and it came. Pennsylvania should have done much better, but in her case this was a foregone conclusion. It is the tail of a team that decides

bunched success is impossible. The scores of the match stood :—

With this warning, and knowing that the regulars had made a most thorough study of rifle practice for the past 12 months, the volunteers out of the New York team concluded to remain out of the international military team match for the Hilton trophy, and the match narrowed itself down to a contest between 3 teams of regulars for first place. New York, New

between 8 teams, 17 regiments for first place. New Jersey, Connecticut and Pennsylvania took part in the race, but were left far

benefit by the superior system and opportunities for practice of the regulars. The men from the Division of the Missouri under Major Geo. Shorkley secured such an advantage on the leading ranges that they were assured of success, even though the Atlantic team did lead by a few points in the 600 yards shooting.

This match dates back to 1878, when Judge Henry Hilton, having offered a very handsome trophy, the match was instituted. The conditions have not been changed, and the record of the match stood:—

The match for the military championship of the United States, with its 2 stages and 6 ranges to be shot over, was scattered through the whole meeting and resulted in a general victory for the regulars. It is the belief of the Queen's Prize of Wimbledon and in proportion to numbers engaged will compare favorably with it. This, too, is a contest dating back to 1878, and in that year C. H. Earle, of the Seventh regiment N. G. S. N. Y., took the first stage with 29 at 200 yards, 29 at 500 yards and 29 at 600 yards, total 87, while Corp. J. S. Barton, of the Forty-eighth regiment N. G. S. N. Y., took the second stage with scores of 31 at 800 yards, 31 at 900 yards and 18 at 1,000 yards, total 78. 1879 was a favorable time for regulars, and at the first stage E. P. Wells, of the Second Infantry U. S. A., took the first stage with 39 at 200 yards, 30 at 500 yards and 35 at 600 yards, total 104. The second stage went to Lieut. G. N. Whistler, of the Fifth Artillery, with 23 at 800 yards, 23 at 900 yards and 24 at 1,000 yards, total 70. The scores in full of the year stood as follows:

	200 Yards.	500 Yards.	600 Yards.	Total.
C. Bernard	444445-27	454444-23	344545-30	84
B. Otten	454444-28	454444-23	344545-30	84

L. H. Groves	454444-28	454444-23	344545-30	84

At the taking of the second stage for S. H. Day as he fired first at 1,000 yards and then came back to be lower ranges. At the time the match was fired at long range he was firing with the division of the Atlantic team at the mid ranges, and it looks very hard to expect him to shoot at two places at one and the same time as laid down in the schedules of matches. The scores of the match stood:

	800 yards.	900 yards.	1,000 yards.	Total.
S. A. Day	454445-29	454445-29	344545-30	84

A. B. Van Heusen	454444-28	454444-23	344545-30	84

During the day a supplementary match had been carried on and met with a liberal support. It was open to everybody; 500 yards, any military rifle (an allowance of one point on each entry to military rifles of 50 caliber); rounds 7, position, any within the rules. The highest aggregate score of any two entries to count in determining the prize winners, but no competitor to take more than one prize. The scores for the match stood:

D. H. Ozden	454445-29	454445-29	344545-30	84
B. Blue	454444-28	454444-23	344545-30	84

In order not to make the Running

Answers to Correspondents.

No notice taken of Anonymous Communications.

G. C. P., Rye, N. Y.—See our advertising columns. All dealers have second-hand guns.

L. B., Brooklyn, E. D.—Robins may be shot in this State during the months of October, November and December.

HUNT.—Mr. F. M. Wheeler is master of the Essex County Hunt. You can address him at Montclair, Essex County, N. J.

G. A. F., Canandaigua, N. Y.—Inclosed please find sample of grain which we suppose to be wild rice. Can you tell us if it is such? Ans. Yes.

G. F. H., White Sulphur Springs.—Letter mailed to you at the Springs. Address—"Gordon," this office, and your letter will be forwarded to advertiser.

Subscribers, Cincinnati, Ohio.—1. Does the new "Greener" Trap or Club Gun have rebounding locks or not? 2. Can either metal or paper shells be used in it? Ans. 1. Rebounding locks. 2. Either.

W. P. B., Lynn, Mass.—For close shooting at forty yards which gun will prove best, a .32in. 16-gauge, or a 30in. 10-gauge. Both guns to be open (not choked) and use one ounce of shot (No. 5 or 8). Ans. The 16-bore gun will shoot closest if everything is equal.

E. F. H., Jersey City, N. J.—1. What weight bore and length of barrels would you advise for a general gun? 2. Do you consider the .410 a good one? 3. What is the lowest figure I can get for a gun for that will do good work? Ans. 1. Eight pounds, 10-gauge, 30in. 2. Yes. 3. About fifty dollars will procure you a safe gun.

Hall, Syracuse, N. Y.—What size of a gun would you advise one purchasing for general shooting—10, or 12-bore. I want a gun that I can shoot in trap and field and duck? Some say a 10 and others 12. Please advise. Ans. It is much a matter of fancy. We would recommend No. 10. The firm you mention stand well with the trade.

C. Kent County, N. Y.—I wish to send a dozen live quail to England. Will you kindly inform me how I am to proceed, and what the probable cost will be? If you cannot give the desired information, could you instruct me who to write to that could do so? Ans. Write to E. B. Goldsmith, 33 Wall Street, New York. He will give you all information desired.

S. L. A., Second.—The worms you described are pin worms. Injections of salt and water will do good, but we suggest that you give injections of turpentine, small desertspsoonful mixed with warm milk. This will rid her of the worms, which probably cause a sympathetic irritation of the bladder, and will prevent the trouble of her frequent desire to pass water.

T. J. D., Alabama.—I have a mare that is gun-shy and as she is almost perfect in every other respect, can you suggest a remedy for her fault? Ans. In some cavalry regiments the feeding time is denoted by the firing of a pistol. This soon changes a young horse's dread of the report into eager, joyous expectation. It is the visible animation of the old horses that so quickly reconciles the cavalry colt to the sound of the "feeding pistol." Fear and joy are feelings get more contagious in animals than in man. We can suggest no better mode of training.

C. M. S., Dunbarton, N.H.—1. Can you tell me where I can get a pair of 8-bore barrels? I wish to get the barrels, locks and action fitted together, but not finished. I can get 12 and 16-bore in Boston, but cannot find a pair of 8's. Would not an 8-bore give better pattern at long range than a 10, both being choked alike? Ans. 1. It is doubtful if you can get a pair without ordering them. We do not know of a pair in the city. 2. No better pattern.

J. K., New York City.—I have a pointer that has been sick for a long time; not knowing his disease until I discovered he had passed a part of a tape worm. Please advise a remedy. Ans. As the age of your dog is not given it is impossible to prescribe exact quantity, but if you will starve your dog twenty-four hours, then give from ten to thirty drops of oil of male fern, repeat dose half hour later, and follow with castor oil, you will, in all probability, produce the desired result.

J. W., Pittsburg, Pa.—I have an Irish setter dog, one year old. He is strong, lively and has a moderate appetite, none cool and moist and pulse good. Have fed cooked meat with some vegetables. At times he draws himself in about the kidneys and seems in pain, so much so that he howls; has had diarrhoea, but is over it and is somewhat costive now. Please prescribe for him. Ans. Your dog has occasional fits of colic. When the symptoms appear give desertspsoonful of castor oil with half teaspoonful of laudanum. Exercise in moderation and the food you have been feeding will bring your dog around in time.

Many answers deferred until next week.

FOREST AND STREAM, A WEEKLY JOURNAL,

DEVOTED TO SHOOTING, THE KENNEL, THE RIFLE, ANGLING AND OTHER FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUTDOOR RECREATION AND STUDY.

Published by FOREST AND STREAM PUBLISHING COMPANY, Nos. 39 and 40 PARK ROW (Times Building), NEW YORK.

Terms:

Four dollars per year, in advance; two dollars for six months; one dollar for three months. Trade supplied by the American News Company.

Advertisements.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Reading notices on editorial pages, 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted. We cannot receive non-advertisements, nor alter standing advertisements later than Tuesday morning.

Correspondence.

Communications intended for publication must be accompanied with the name of the writer, not necessarily for publication, but as a guaranty of good faith. Anonymous letters will receive no attention. Secretaries of Clubs and Associations are invited to favor us with reports of their movements and transactions, and sportsmen and naturalists are urged to contribute to our columns their experiences and observations.

Address.

All communications, of whatever nature, relating to the business or editorial departments of this paper must be directed simply

Fire-Arms, Ammunition, and all Articles connected with the same, and sole Agent for

J. Stevens & Co.'s Celebrated Arms.

WARREN, Conn. Sept. 17th, 1897.

GENTLEMEN:—The little 38 caliber rifle you sent me on the 5th inst. is all right in every respect. In a trial here last Saturday on our 500 yard range I used it against the Wesson, Maynard, Henry, Sharp and Remington, and five of the Billings and four of the Williams muzzle loaders, and did not have to take the second place for any of them, although I was tied by one which has heretofore been the "boss." Yours truly, H.W. LYPHER.

# Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS

are perhaps not aware, that in

smoking Cigarettes made of the

ordinary pure rice paper, they have been

inhalant THE MOST DEADLY OF POI-

SONS, known of by all burning paper,

namely: The Oil of Cresote, CHARLES

G. B. Bickel, of the firm of GOODWIN &

CO., manufacturers of "OLD JUDGE"

Cigarettes and Smoking Tobacco in-

vented and patented a process, March

5th, 1875, by which the Rice Paper used

as wrappers for "OLD JUDGE" Ciga-

rettes has been so prepared that the un-

pleasant odor and the injurious effects

of the Oil of Cresote are completely

neutralized or destroyed, and the paper

made saliva proof to prevent its break-

ing or melting in the mouth. The unprecedented popularity of

"OLD JUDGE" Cigarettes is owing

to the fact that this process has been used exclusively in their manufacture, no one else having the

right to use it. The great advantage and importance of this invention will at once be recognized by

all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke.

Sold by all leading dealers.

Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st.,

NEW YORK

## GUNPOWDER.

## DUPONT'S

Rifle, Sporting and Blasting Powder.

*The most Popular Powder in Use.*

DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

**DUPONT'S DIAMOND GRAIN.**  
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

**DUPONT'S EAGLE DUCKING.**  
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck and other shooting.

**DUPONT'S RIFLE RIFLE.**  
A quick, strong, and clean Powder, of very fine grain, for Pistol Shooting.

**DUPONT'S RIFLE FG, "SEA SHOOTING,"**  
FFG and FFGG. The FG for Long Range Rifle Shooting, the FFG and FFGG for general use, burning strong and moist.

Sporting, Mining, Shipping and Blasting Powders.

Of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the United States. Represented by

**P. L. KNEELAND, 70 Wall Street, N. Y.**  
N. B.—Use none but DUPONT'S FG or FFG Powder for Long Range Shooting.

## THE HAZARD POWDER COMPANY

MANUFACTURERS OF

## GUNPOWDER.

## Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

## Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.

## Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

## Hazard's "Kentucky Rifle."

FFG, FFGG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lb. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFGG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

**Superior Mining And Blasting Powder.**

GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

## FOREST AND STREAM.

NEW YORK, THURSDAY, SEPTEMBER 30, 1880.

**HUNTING CARS.**—During a recent visit to Chicago we were kindly allowed to make a thorough inspection of the hunting car Davy Crockett, owned by the Pullman Palace Car Company. The car is a full-sized palace car, with a kitchen on one end, with refrigerator, a large range and supplied with all the paraphernalia a first-class cook would need; next to the kitchen is a room for the stewards, with carving tables, etc., and so arranged that when the table is folded up two good berths are made for the occupants. Next are four full sections, two on either side of the car, then comes the sitting-room in the center of the car, with extension dining-table, which can also be used as a card-table for evening amusement. There are a dozen large easy chairs, all well arranged for comfort. Next are four more sections, which, with four berths that can be made up in the sitting room, gives good sleeping accommodation for twelve persons. In the other end of the car are kennels for eighteen dogs, nicely carpeted and in good order. A gun room, private locker, wash-room, etc. The car is well equipped with buckets for watering dogs, washing guns, minnow pails, and in fact every requisite for hunting or fishing. There are large refrigerators of the most approved pattern for keeping game, underneath the car, and it may well be called a sportsman's club-house on wheels. The price for using the car is \$85 a day, equipped with a cook and two stewards. The car had just come in from a Western trip, and the companion car, "Isaac Walton," is now on the road. Special rates can be made for hauling the car over any road.

### GAME AND FISH PROTECTORS OF NEW YORK.

A FEW weeks ago we noticed the passage of a bill by the New York Legislature authorizing the Governor to appoint eight persons, to be known as game and fish protectors; whose duty it should be to enforce the statutes for the preservation of the objects named, and to bring action against all persons found violating the laws relating thereto. These protectors were to hold office for the period of three years, and were to receive a salary of \$500, and traveling expenses not to exceed \$250. This bill was approved by the Governor, and was favorably commented upon by the press generally as the possible beginning of a new order of things creating paid officers, who had no share in the fines or interest further than to do their duties, which, if done conscientiously and without fear, would be a stride in advance of anything yet proposed to advance the ends aimed at.

In our opinion, one fault in the bill, otherwise so carefully framed by Mr. John E. Develin, was that it did not provide for the proper distribution of these officers throughout the State, but left them to be selected at large, which might probably have resulted in their all being appointed from one county had there been political pressure enough in one direction; and as the salary is not large enough to enable a man of the right sort to devote his whole time to it, it is evident that his location becomes a matter of primary importance. The following are the persons appointed and their places of residence, or address:—

S. V. R. Brayton, 59 Division street, Albany, N. Y.  
John Jessup, Hudson, Columbia County.  
Sylvester J. Palmer, Indian Lake, Hamilton County.  
John Liberty, Elizabethtown, Essex County.  
Daniel B. Horton, Ithaca, Tompkins County.  
G. M. Schwartz, Rochester, Monroe County.  
William P. Dodge, Prospect, Oneida County.  
John I. Collett, Cobleskill, Schoharie County.

This distribution will strike the student of game protection as a very poor one, leaving the markets of New York and the whole of Long Island, the home of the poacher and trout thief, wholly alone, with no nearer protector than Hudson, Columbia County. Albany and Schoharie counties, adjoining each other, each have a protector, and there are not two counties in the State which are as poor in game and fish. Hamilton and Essex, two adjoining counties in the wilderness, have each one, and while there is game and fish in plenty in them, the prospect of accomplishing much in the way of protecting by this means is not great while the market is open. We believe in closing the market, and the poacher's occupation is gone. The few trout or deer killed out of season by persons living in the woods amount to nothing besides those slaughtered by the market shooter who forestalls the season, if indeed it is desirable to prosecute the guide or woodsman who kills merely for his own wants. Destroy the market, and the inducement to violate the law is destroyed. New York City is the great market, and if two protectors had been stationed in it they would have accomplished as much as it is possible for the other six to do; their known presence would be a check upon dealers disposed to turn a dollar by an illegal sale.

Few people in the interior of the State have an idea of the great amount of shooting done on Long Island, or of its fishing interests, while all who are conversant with the markets are aware that the new ten inch lobster and half pound striped bass laws need constant supervision as well as trout, woodcock, snipe, etc., with which the island abounds; but it is the curse of the service that all appointments "with money in" are made by politicians for political ends, and the man with the best backing, politically, gets the place. We know nothing of the character of those appointed, and hope they may be made of the proper stuff to do their duties without fear or favor, but, as we have said, their geographical distribution is about as bad as it could be, Rochester being the only market of any importance which needs watching, that point being one of importance, as well as the fisheries near by; but Buffalo is also an important district,

with Rochester as the nearest station of a protector.

We will watch closely the result of the new law, and hope to find much in it to approve, as under the old system the clause giving half the fines to the informer laid the latter under the suspicion of mercenary motives, a thing most distasteful to many, who will now have no hesitation in calling the attention of the nearest protector to any violations of the law which he, as a salaried officer, is bound to take cognizance of and prosecute.

### WORK ON THE SUSPENSION BRIDGE.

ONE of the most wonderful structures of mechanism has recently been accomplished on the Suspension Bridge at Niagara Falls, which was opened for traffic in 1855, having a span 821 feet 4 inches from center to center of the tower on either side of the river. It was at that time considered a marvelous piece of work, and many doubts were entertained as to the durability or permanence of the structure. During its immense length it had a railway for trains, bound West or East, on the top of the structure, and a good roadway for carriages, wagons, etc., underneath. The bridge was a suspension bridge, and the truss system was purely a combination of wood and iron, and has been in constant use for the past twenty-five years without any accident or breakage of consequence. In March, of 1877, there was an inspection of the four cables, each measuring 10 inches in diameter and containing 3,640 wires, the diameter of each wire being a scant No. 9 gauge. The inspection first made was at the strands where they join the anchor chains, which were imbedded in masonry at either end, and a few of the outside wires were found to be corroded. The corroded wires were cut out at once, and new wires supplied in their places. The portion of the cables where they passed over the towers were found intact.

The commission of engineers making this examination reported that the cables were sound, but that in their opinion the anchor chains were not as strong as the cables, and advised the reinforcement of anchorages and chains. The following fall the work of the reinforcement was commenced, and finished the following year. The new chains were connected to the cable and a permanent stress of 1,000 tons applied to each end of the bridge, relieving the old anchorage of that amount. The Board of Directors, in March, 1879, decided to renew the truss system with iron and steel. The contract was let to the Pittsburg Bridge Co. to furnish the metal upon the plans offered and adopted by Mr. L. L. Buck, of Washington, D. C., who has the entire charge of the work. The delivery of the material began in September, 1879, and ended in April, 1880. The erection of the works began on the 29th of May, 1880, and will be completed by Sept. 15th, 1880. Thanks to skillful engineering on Mr. Buck's part of the programme, the work has gone on very successfully, without any obstruction to passenger trains, and hardly a vestige of the old woodwork of the bridge remains. No one who has crossed the bridge knows of the changes, but they have been made quietly and systematically.

The woodwork removed relieves the bridge of at least 100 tons in weight; aside from that, it largely increases the carrying capacity, as well as the safety of the bridge, by giving a uniform strength unsurpassed, as well as a structure that can be viewed with pride by any American citizen. The bridge, when completed, will be painted a pure white, and look more like a cobweb than a structure that will carry thousands of tons.

**DR. HENSHALL.**—Dr. J. A. Henshall has removed from Cynthia, Ky., to Cincinnati, Ohio, where his address hereafter will be, No. 100 West Seventh street.

**PHILADELPHIA KENNEL CLUB.**—Early in the season of next year the Philadelphia Kennel Club proposes to hold its second Bench Show of dogs. The exhibition will be held in the Permanent Exhibition Building, at West Philadelphia, and, in connection with the show, colley and water trials are being talked of.

## EVADING DETONATION.

UNITED STATES CIRCUIT COURT.—New York, Feb. 19th, 1880.—Before John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Birmingham, N. Y., who, being first duly sworn, deposes and states, in answer to Cross-Question 838:—

"My gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was just the same as if I would use nitro-glycerine powder. *There it now is that it is tamed down, and don't burst any more guns.*"

THE "Dittmar Sporting Powder" is a nitro-cellulose product. As such it may explode in either one of two ways, by simple ignition, like gunpowder, or by detonation, like nitro-glycerine. It has been on the market for five years. During that period, in addition to continuously advertising it to be safer than the ordinary black gunpowder, the manufacturers have concealed its true character, and when others alleged that it did possess this nature, they have flatly denied or evaded the assertion.

In the course of our exhaustive discussion of this subject last week, after having shown that the product could properly be classed only among those explosives which may under certain conditions detonate, we said that the correctness of this classification had previously been three times evaded. We should have said ten times; and we might have added further that some of these evasions in the form of advertisements were repeated week after week.

That the readers of the *FOREST AND STREAM* may fully appreciate that our statements in respect to this are well founded, we have been at some pains to review the history of the powder with reference to this particular point, and we add to-day another chapter to that full discussion of this subject which we proposed to ourselves at the outset of our task. In the present paper we shall attempt only to show how the charge that the "Dittmar Sporting Powder" should properly be classed among the detonating compounds, was evaded and denied.

The first suggestion that the Dittmar powder should be classed among the detonating compounds was made as early as 1875:—

*FOREST AND STREAM*, Vol. IV., page 235, June 10th, 1875. "A Subscriber" says: "The proper name for this powder is gunwood, it being in its nature the same as gun-cotton, prepared in the same manner, only reduced to some extent by washing with alcohol, which has the effect, if left long enough to soak, of totally destroying its effective force. The gun-wood, as prepared and sold to consumers, is highly dangerous to life and limb," etc., etc.

The reply to this consisted of both denial and evasion:—*FOREST AND STREAM*, Vol. IV., page 315, June 24th, 1875. Letter from Carl Dittmar says (italics his own):—

"The statements of 'Subscriber' in your issue of 10th of June in regard to my new powder are erroneous. I do not make such powder as he describes. He must have confused my new article with the English 'wood powder,' from which mine differs essentially. I do not use alcohol in its manufacture. If he will burn some of it he will find that it is very different from gun-cotton, and that it burns very much slower than black powder. It works in the gun about the same as black powder."

He might have added, for that matter, that nitro-glycerine burns slower than black gunpowder and slower than his own compound. It would not follow, however, that nitro-glycerine would "work in the gun about the same as black powder;" nor was it true that the Dittmar nitro-cellulose worked as black gunpowder.

*FOREST AND STREAM*, Vol. V., page 72, Sept. 9th, 1875. A letter is republished, written by "Gloan," which asserts that the Dittmar powder probably belongs among the explosives, which are rending and shattering. To this an appended note says that Mr. Dittmar has replied:—

"With regard to the composition of the powder, he declares most positively that no substance such as chlorate of potash or nitro-glycerine enters into its composition, nor will he use any picric acid combination, or any kind of fulminate. This can be ascertained by analysis. It contains all the ingredients of Schultze powder, with the addition of starch, and he argues that his powder is absolutely safer than that preparation. If there is any danger in using his powder not inherent in the black, he desires to know it, and will be most grateful to any gentleman who will convince him of the fact."

The proffered gratitude was never exercised. The manufacturer of the powder, already knowing full well and better than anyone else the peculiar danger of his nitro-cellulose product, could not be "convinced" of it by another.

*FOREST AND STREAM*, Vol. VI., page 91, March 16th, 1876.—Letter from Carl Dittmar says: "I never have used, and never shall use for my sporting powder, such dangerous materials as nitro-glycerine, chlorate of potash, picric acid, etc. If my powder is put on an anvil and struck with a hammer it does not explode, which shows that it cannot contain nitro-glycerine or chlorate of potash."

Of the action of the 1876 powder on an anvil we make no assertions. But the "Dittmar Sporting Powder" delivered in sealed cans from the office of the Dittmar Powder Manufacturing Company (No. 2), when put on an anvil and struck with a hammer does explode.

*FOREST AND STREAM*, Vol. XII., page 93, March 6th, 1876.—Letter from Carl Dittmar says: "I must again say that my powder is not a 'wood powder,' as it is entirely different in its composition. I use partly paper pulp, which may not be of wood at all; but use so many other ingredients besides that the pulp is but a small portion of the whole, and it is not only different in composition, but also in properties, from the real 'wood powders.' I was contented with the manufacture of Schultze powder sixteen years

ago, and I could see at that time that it would never supersede the old powder, and I have worked ever since to invent an entirely new powder which will do what Schultze powder never can."

Turning now to the files of the *ROD AND GUN* we shall find the same story there:—

*ROD AND GUN*, Vol. VI., page 274, Aug. 14th, 1875. "Ex-Gun-maker" says: "The ingredients of which this powder is composed are generally understood by experts to consist of an infinitesimal amount of nitro-glycerine and gun-cotton, toned down with sugar, etc."

The reply to this contained the "pledge" already quoted:—

*ROD AND GUN*, Vol. VI., page 280, Aug. 14th, 1875. "I pledge my word of honor that I never sent, and never will send, powder for sporting purposes which should have the slightest trace of nitro-glycerine in its composition."

On page 358 of the same volume will be found a letter from Mr. J. W. Long, suggesting that in very many respects Dittmar's powder is strikingly similar to gun-cotton. The reply evades the charge in the same manner as already quoted from the *FOREST AND STREAM*, namely, by diverting attention away from the explosion of the two compounds under confinement and to their combustion in the open air:—

*ROD AND GUN*, Vol. VI., page 387, Sept. 23th, 1875. Letter from Carl Dittmar:—"He compares my powder with gun-cotton, but he will find a great difference between both when he burns them outside the gun, when my powder will burn very slow, with much residuum, while gun-cotton will flash like lightning and leave no residuum."

"Medicus," writing from Boston in the interest of the powder, winds up a long article by piously observing that our immunity from accident is due more "to the merciful interposition of Providence and the strength of our guns than to any care of our own;" the inference clearly being that it is just as easy for Providence to protect us from a detonating, nitro-cellulose compound as from the common black powder.

But Mr. Long's letters show that he knew what he was talking about, and he reiterated his charge (Vol. VII., page 73, Oct. 30th, 1875) that the Dittmar powder was analogous to gun-cotton, and said that he would fear to stand near a man shooting it. To this, one form of reply was a letter (Vol. VII., page 93, Nov. 13th, 1875) from Dittmar, Jr., a boy twelve years old, who thinks that if Mr. Long fears to stand near a man shooting the powder, perhaps he will not fear to stand near a boy shooting it, etc.

The other mode of reply was what is aptly termed "mud-throwing." There are two varieties of mud-throwing. One is intended, like the ink of the cuttlefish, to blind, the other to defile. Both were employed here. "Medicus" being closely pursued by the clear and logical writing of Mr. Long, had already written whole columns of blind and meaningless chemistry vaporing, and then finding that ineffectual, he adopted the other line, and judiciously turned the discussion into a personal controversy. This kind of mud-throwing, which smirches a man's character, is usually efficient to divert attention from the real merits of any discussion. It was efficient in this case, and afterwards it was adopted with another.

Mr. A. G. Dole, in the course of a long communication about the powder, said:—

*ROD AND GUN*, Vol. IX., page 239, Feb. 10th, 1877. "I will designate these modern powders as acid powders, and here are the names of several of them, viz., Duallin, Giant, Bend-rock, Vulcan, Dynamite, Gun-cotton, etc., and I here take the liberty to suggest whether the Dittmar may not properly be included in the same category."

*ROD AND GUN*, Vol. IX., page 375, Feb. 11th, 1877.—Letter from Carl Dittmar in reply to A. G. Dole: "My Sporting Powder has nothing familiar with Giant Powder, Bend-rock, Duallin, Vulcan, etc., which powders are only used for blasting purposes. If your correspondent had only looked at your advertising columns, or procured one of my circulars, he would have found that I warrant my powder not to contain ingredients like nitro-glycerine, chlorate of potash, etc. If he does not believe it, he can have it analyzed. I hope his comparing my Sporting Powder with Giant Powder, etc., is only from ignorance, not from a wish to frighten our brother sportsmen."

The advertisement, in the same issue, contained these words:—

"It is much safer than black powder, as it only explodes when well confined."

"The manufacturers guarantee that there are no ingredients like nitro-glycerine, chlorate of potash, or picric acid, or wood in its composition as some suppose. It cannot be exploded by concussion."

We have no inclination to conduct the reader further into the unsavory record of the controversy respecting the "Dittmar Sporting Powder." That record, is one of repeated and successful attempts, practiced for five years, to put the product upon the market, to induce men to use it and to keep them, while using it, in ignorance of its true nature.

That record ought now to be closed. Our discussion of the "Dittmar Sporting Powder" last week was simple, clear, complete and conclusive.

It is unanswerable.

Next week we shall discuss further some of the peculiar properties of this dangerous compound as determined by our own experiments with it.

It is due to those concerned that we should here state our belief that some of the parties who have been prominently associated in the manufacture and sale of the "Dittmar Sporting Powder" were as wholly ignorant of what they were selling as the purchasers were of what

they were buying. We know that some of these gentlemen gained their first knowledge of the real character of the powder from the article in the last issue of this paper.

It is unnecessary to publish the letters of complaint received by some of the former firms engaged in the sale of this product.

The letters received by one company, we have been assured, were so numerous, so frequent and of so grave a nature that the recipients were filled with alarm by them, and actually passed sleepless hours of suspense lest the next morning's mail should bring reports of fatal accidents with the powder.

The standing explanations of these accidents given to the sellers and buyers alike were either that the gun was a poor one or that the "directions" had not been followed. Whether or not these explanations sufficed, in cases like the following, we are not informed:—

UTICA, N. Y., June 23th, 1879.

H. C. Squires, Esq., New York:—

Dear Sir: We have in our hands for collection a claim against you and the Dittmar Powder Co. for damages done to two guns owned by Mr. Jay C. Smith, of this city.

The injury consists in tearing to pieces a 10 gauge 12 gauge Ferris breech-loading shot gun of the value of \$160.

For seriously damaging a 10 pound 6 ounce Nichols & Lefever 12 L. shot gun, 10 gauge, to the extent of \$50. This happened in April last while safe shooting.

The powder was bought of you about August, 1878, a five pound lot, you can find by reference to Mr. Smith's account on your books. The loading was done precisely as directed by you, except the powder was not tamped in the measure, hence the charge was not so large as you permit. The shells which did the mischief were loaded in October, 1878, and a number of the shells were used in the fall with safety. The remainder were laid away until April, when Mr. Smith, in company with a friend, went safe shooting. The friend carried the 10 gauge and Mr. Smith the 12. The first shell that rose was fired at by Mr. Smith, and immediately afterwards the friend fired both barrels from the 10 gauge. Mr. Smith's gun came from his shoulder, barrels in one hand, stock in the other. The right barrel was torn open at the breech a distance of three or four inches, and the shell went out the opening. The barrels were torn apart quite a distance from the breech. The breech piece was cracked and bent and both upper and lower fastenings broken off. The gun has left one barrel and two locks; everything else is ruined. The other gun had the fastenings broken and is strained.

Both these guns had previously held larger charges of both black and Dittmar powder newly loaded, and both have shot shells out of the same lot newly loaded.

You can give such attention to this as you deem advisable. We will begin suit on the 15th July unless the matter is arranged. Yours respectfully,

SUTTON & MOREHOUSE.

NOTE.—The foot note second column of page 147, last week, should have included the cross-questions and answers 550 and 551. In the last line of A. J. Parker's letter, page 144, for *sealing*, read *selling*.

DEVIL FISHES.—The great cephalopod, or giant-squid, which was caught on the Banks of Newfoundland in 1870 and sold to the New York Aquarium, is now traveling with W. C. Coup's circus through the Southern States, and letters have been received asking if it really is a genuine animal, if it ever was alive, etc. This scepticism, no doubt, arises from not only the extreme rarity of this giant species, but also to a lack of familiarity of the family to which it belongs.

The squids are used for bait for many fishes along the Atlantic coast, but are small, seldom exceeding ten inches in length, while the body of Coup's animal in life, before being shrunken with alcohol, was ten feet long, and its arms were thirty more, making an extreme length of forty feet, the largest one known to be found entire. Portions of arms have been thrown up by the sperm whale in its death flurry, which must have belonged to much larger individuals, thus proving that the greater depths of the ocean are inhabited by larger monsters of this sort than man has ever seen. We can assure our friends in the rural districts that Coup's "devil fish" is all that it claims to be, and is not made of rubber, leather or other material, but like "Topsy," it "grooved."

SHOOTING FOR A STAKE.—A cheaply printed dodger, thrust into the doorway of our office, announces that the Marion Rifle Club, of Marion, N. J., are to have a "grand rifle match" with the Greenville Schuetzen Corps, of Greenville, N. J., for \$500. Knowing nothing about these clubs, and caring to know less about organizations who would degrade rifle practice into a mere scramble for stakes, we should say that there was something bogus about the affair, and the closing announcement on the cheap dodger that tickets of admission could be had at the gate shows what might have been expected, that somebody is keeping a keen eye for the dimes and dollars of the gullible ones. There certainly was a misapprehension when the scribe of the cheap dodger said that "Creedmoor targets and rules to govern the match." The whole purpose and effort of the National Rifle Association rules has been to keep rifle practice clear of the slightest tinge of gambling, and had these speculative shots followed the Creedmoor rule they would have stricken out the "stake."

DEEP SEA DREDGING.—It is only within a very few years that deep sea dredging has been carried on to any very considerable extent, but in this short time it has given us some idea as to how wonderfully numerous and varied are the forms of life which inhabit these depths

where the temperature is arctic, and to which scarcely the faintest glimmer of light can penetrate. The operations of the Challenger, of our own Fish Commission, and of Prof. Alex Agassiz, have been most productive, and the results have been of such very great interest that the completed reports of the various expeditions are awaited with extreme anxiety.

A brief report from the French vessel Travailleur from which a series of dredgings were made last summer in the Bay of Biscay, has been made by Prof. A. Milne Edwards. He states that during the last two weeks of July the weather was very good, so much so that they were able to dredge twenty-four times, sometimes using two dredges at once. The greatest depth reached was 2,700 metres, about 1,500 fathoms, and the least was over 300 metres, or more than 166 fathoms. The collections made were large, and included most of the species already described by the naturalists of Norway, Sweden and England, besides many others hitherto unknown. It is stated that the fishes, nemertians and sponges will be reported upon by Mr. Naillat; the molluscs by M. Fischer; annelids, echinoderms and other zoöphytes by M. Marion; foraminifera by M. de Folin, and crustacea by M. A. Milne Edwards. M. Perier has made numerous thermometric observations, and will make analyses of the sea bottom.

## The Sportsman Tourist.

### TIM POND.

EUSTIS, Maine, Sept. 2d.  
IN my note of last week I spoke of improvements made by Kennedy Smith since my first visit here, which was in 1878. There then was one log camp; now there are four log cabins and one kitchen cabin, well provided with comforts. Then one boat was in use; now seven of different sizes and patterns invite the attention of young and old to a most festive trout. Then, perhaps a dozen persons found their way to these waters for the year. But those who went then go each year now. During August the camp register shows that fifty-five gentlemen and five ladies sought this charming resort, to feast not alone upon the toothsome trout and game, but the almost matchless scenery and the health-giving ozone of the forest and mountain air. C. W. Smith and sons, with a friend, have been here for their second visit. Gentleman all, whether chasing the fly, seeking wary game, or if in the cabin or at the parlor of taste and refinement. And just here let me say that such men—call them sportsmen, or hard-worked business men seeking recreation—help the proprietor to establish a most desirable "public sentiment." The feeling that prevents persons from taking more trout or game than wanted for the table, prevents slaughter and returns to their watery home the small speckled unfortunates that are accidentally hooked. Kennedy Smith does not command this, but he recovers the idea that he feels it, and it is strange how general is the sympathy and compliance. Not more fish are taken in the "season" than are spawned each year, for they seem as plenty as ever. But the question is, Can they be protected when the "law is on," and poachers "most do congregate" on the ice to fill their gaping sacks? The Fish Warden will see they are protected! And the law-breaker will be called on to pay "smart money" to the State. Not only this, but we are told the Fish Commissioners will supply large numbers of young trout to inhabit this pond of wonderful clear water, and trout of a flavor having no equal in the Dead River region. A good work. A new era in fishing has become a place for "fish culture." Thanks to the man for the pioneer example. The man eager to care for sportsmen and the right regard for game is the one for the period. This one is enthusiastic, and promises more and larger fish in years to come. I notice a correspondent speaks of taking trout in Maine in October. The trout is the best in the world. Not only this, but I have my love for these sporty winter waters and this region. Some have been here even more times than I have, and say, like me, they shall continue to come. Mount Pisgah, Abraham, Saddleback and Kennebec look just as lofty and grand as the first time we beheld them. The pure "medicine spring" is just as sweet and healing.

Post Master Pillsbury, Dr. Hills and ex-Mayor Pierce, of Biddeford, with a large company of friends, have engaged cabins to occupy about the 14th instant. They were here last year. I met some of them, enjoying the new-made friendship much. The Gaughy brothers, of Watlin, Mass., head a party of fine sportsmen. Of the number, James Beatty, George H. Casman, and S. Adams have just been sent here to "spy out the land" and see if "reports be true." Beatty is said to do fine work on watches. He has fine tackle. I had the honor to inform him where to locate his boat for his first time on the coast. Soon he found the trout meat business, the same as the common-colored one, with those enchanting fins of dark and light shade, had captured his "Montreal," and in due time was neatly landed. Shortly two were testing the merits of his rod, and Beatty shouted, "I will give five thousand dollars for this sheet of water!" Again, as he made a most skillful cast, all of his four flies on his leader were occupied by enamored trout. It was sport to see the antics at either end of the rod. The exploiters from the reel end were numerous and comic. When at length the four were landed, I think, by the balance, weighed about a pound each. B. belowed, "I will give ten thousand dollars for this house of the festive fishermen!" He went ashore in about two hours with twenty-seven as fine fish as one would wish to see. At once he sent back to the rest of their "brethren," "Come, for we have found the Promised Land." This must serve as a sample of the constant "good times" we had. Wish I could tell of one time, just at sunset, when the water fairly boiled with the swirl of frolicking fish for quite a distance around. Believe me, then and there was fun, as well as frolic. Such a sight I never saw before.

Mr. Abbott, the popular principal of the Little Blue

School, at Farmington, with his wife, two sons and some of their pupils, found rest and recreation here during the summer vacation. This is getting to be a home-like place. Mr. Smith has a game warden and his lady assist in cooking, etc. The table is laid from well-cooked game, in cooking, etc. Partridges never were so plenty, and during the last two days have been brought to bag in large numbers. Yes, to us, certainly it is home-like; and there is a feeling of sadness as to-night we unstring our rods and prepare to leave to-morrow. We have traps set for bears that give plenty of evidence they are numerous. Others must take charge of these steel bear catchers. Their favorite places are thickly marked by the footprints of deer and caribou. But the "call" is home, and we leave them to the tender mercies of venison steak lovers. Till next year all these sports, all this grand scenery, good-bye.

### MEAD'S HOTEL, KINGFIELD, Sept. 3d.

I must add a word of two surprises. First, I am surprised to find here one of the best hotels for sportsmen and seekers for recreation I have ever seen. The proprietor, Mr. W. Mead, is from Boston, and both he and his excellent and efficient wife know how to keep a hotel, and they do it personally. About thirty guests can be accommodated at one time. Paper, paint and furniture are neat and fresh; beds are clean and soft, and every attention is freely given. The kitchen and table are in charge of Mr. and Mrs. Mead, and would afford credit to a first-class city hotel. My second surprise here is to meet my friend Jared Goodrich, of Plainville, Conn., with a company of his "boys," on their way to Tim Pond. We voted the breakfast, including fresh trout and really juicy, tender steak, with other "fixin's," the best we had eaten in Maine. I write this in the interest of travelers like myself, not the hotel. Mr. Goodrich left Boston yesterday morning, arriving at Farmington about 5 P.M., and took the stage to this hotel last evening. This morning the stage takes him and his company to the farm house of Kennedy Smith, and I proceed to Farmington and Boston.

J. WARREN TUCK.

### ALL AROUND NOTES.

#### ZANESVILLE, OHIO, Sept. 13th.

##### Editor Forest and Stream:—

A few notes of observation during the close season from a sportsman who has been moving around in different localities may interest some of your readers. Game of all kinds in Virginia and North Carolina is unusually abundant. In fact, everywhere throughout my travels I have observed that it has been an exceptionally good breeding season. During the summer, while over my old hunting ground in Virginia, I saw more coveys of young quail than ever before; more, in fact, than one would suppose could subsist on the amount of ground. They could be seen in almost every dooryard and garden, and "Bob White" was heard in different parts of every field throughout the land, seemingly happy that dog and gun had for a time at least ceased to wage war upon them. To the confidence that poor persecuted birds place in human nature during their breeding season can but reach the heart of the most obdurate pot hunter. Wild turkeys have also had a favorable season, and many flocks of young ones may be seen feeding in the grain fields in the early morning or in the evening. I succeeded in catching one with the assistance of my dog, but the dog squeaked a little too hard, and so weakened its constitution that it only lived a few days. "Ole ears" are very abundant, but a wise provision of Providence has balanced matters by an equal plenty of their enemies, foxes and little "niggers." Some friends of mine being anxious "to shoot something," we went down to Shinnecock Bay for snipe the latter part of August. I always had an idea that Lane's was the only place worth going to on the bay, but discovered my mistake. We found his place full; could not even feed us and lodge us out. Hungry and tired as we were we had to seek other food and shelter, which we at last found at the Foster House at Pond Quogue, where we were introduced to a family of five brothers, all snipers and gunners. "You pay your money and take your choice." The time and service of these worthy gentlemen, with their boat, decoys, etc., is valued at \$3 per day, but is very cheap at that. I assure you. Most of them, in the quietest and most noncommittal way in the world, will cheer you, and keep up your flagging hopes with an earnest belief that there will certainly be a "sou'wester" to-morrow. I never assert nor even hint such a thing, but they quietly insist upon such a belief, and thus make you happy. After looking upon these amiable brothers for some time with my usual amount of suspicion of all professional guides, we engaged one, A. C. but I won't mention his name in full, as it might shock his modesty. I will only say that of all his class I have ever met he is the one that comes nearest my heart and fancy; quiet and unassuming, very good company and knowing enough, but not overpowering you with the weight of his knowledge. We did not have such shooting as we desired, and wished for "sou'wester" did not come until possibly a day or two after we left. We killed a few dowitchers and small yellow-legs. However, our trip was one of considerable pleasure, notwithstanding our bad luck. We kept our eyes and ears open, and like true philosophers learned all we could.

We were quite entertained one evening by a couple of lovers, young and proportionately sappy. I don't believe they were lovers of field sport, but of that beautiful sentiment that makes two hearts beat as one, when "in singleness of vision, beauty reigns supreme." They unconsciously seated themselves very close to us, and after the usual formula and several salutes customary on such occasions, she said, in the softest little whisper:—

"George, don't you want another cigar?"

He.—"No, my dear; I have smoked two."

She.—"But, George, I do love to do things for you. I'll go get one for you."

Presently her hand somehow touched his, when she exclaimed:—

"Why! George, how cold your hand is. Are you cold, dear? Let me warm your hand."

After warming his hand, and not being able to warm him up to the right degree, she asked him for the other hand to warm and put in somewhere in the lace on her breast, holding it tightly and securely in its warm nest with both of hers. George thawed, his disengaged arm

went round her waist, and he commenced to compliment her "points" individually and collectively, especially her "sweet and beautiful neck," when she exclaimed, "Why, George, do you know when we came out from bathing, that horrid Miss— wanted to kiss me on the neck? But I told her she shouldn't do it, as that was private property. Only for you, George, dear, and no one else." A suspicious cough interrupted further billing and cooing, and next morning "private property" was an expression which seemed very apt on several occasions, much to the mystification of all the guests but two. Now all this sort of thing seemed quite funny to us poor, lone gunners. We don't exactly understand it, as we take the liberty of asking your advice: How would you like to be in George's place, and what should we do if we ever get in such a fix?

To those who don't know of other places than Lane's, I would say, there is lots of accommodation at various houses at Pond Quogue, and I believe just as good ground. Plenty of shooting, if the wind is sou'west.

BEDFORD.

## Natural History.

—Address all communications to "Forest and Stream Publishing Company, New York."

FOOD OF OWLS AND GARPIKE.—Our friend Mr. R. O. Sweeny, of St. Paul, writes us that he has recently made some discoveries in regard to the food of the animals above mentioned—or, as Mr. Sweeny puts it, has made two discoveries in fish lore. One is that owls will eat fruit, and the other that garpike are fond of wasps. The food spoken of is eaten with relish by both bird and fish, and not especially because they are hungry, but because it is enjoyed.

Our correspondent has both owls and garpike in confinement, and has thus been able to study their tastes.

CALIFORNIA FISHES.—We have received advance sheets of proceedings of the United States National Museum containing "Notes on a collection of fishes from San Diego, California, by David S. Jordan, and Charles H. Gilbert." The authors spent the greater part of the month of January, 1880, in the collection and study of fishes at the point named, in the interests of the United States Fish Commission and obtained some specimens new to science as well as established the fact that many known species are found there. Fifty-seven nominal species are given, all from salt water, four of which are new. Also in the same is "a description of a new flounder (*Xystreus liolepis*) from Santa Catalina Island, California, by the same." Also, "description of a new ray (*Platyphina triseriata*) from the coast of California." "Description of a new species of 'rock cod' (*Sebastes serripes*) from the coast of California." "On the occurrence of *Cephaloscyllium latipes* (Dumeril) Gill, on the coast of California." "On the oil-shark of Southern California (*Galeorhinus galeus*)," all by Jordan and Gilbert. "The surf smelt of the Northwest coast, and the method of taking them by the Quilchute Indians, west coast of Washington Territory," by James G. Swan. "Notes on sharks from the coast of California," and "on the generic relations of *Platyphina exasperata*," by Jordan and Gilbert. "Remarks on the species of the genus *Chirus* found in San Francisco market, including one hitherto undescribed;" a "description of a new fish from Alaska (*Uranidea microstoma*)," a "description of a new species of *Agonide* (*Brachyopsis verrucosus*), from its coast of California," and a "description of a new genus and some new species of California fishes (*Icosteus enigmaticus* and *Osmerus attenuatus*)," all by W. N. Lockington. Mr. C. A. White gives a "description of a very large fossil gastropod from the State of Puebla, Mexico," and Jordan and Gilbert give a "description of a new species of ray (*Gaia stellata*), from Monterey, California;" "descriptions of a new species of *Xiphister* and *Apodichthys* from Monterey, California;" "description of a new *Agonoid* fish (*Brachyopsis agosterus*), from Monterey, California," and a "description of a new flounder (*Hippoglossoides exilis*), from the coast of California."

THE HEARING OF FISHES.—A letter from the late Prof. Agassiz, on the subject of the hearing of fishes, dated Nahant, Aug. 8th, 1855, containing the following: "I hold it would be a blessing—I mean fortunate—for many an individual to hear as distinctly as most fishes do. That they do hear is not only to be inferred from the very complicated pair of ears they possess, but may be directly ascertained, as I have often done, by frightening them by noises under circumstances when they cannot at the same time see. What may mislead us with reference to fishes having that organ of sense is the fact that, though the external ear is very perfect, they have no tympanum nor external auditive conch. But, as hearing consists in the perception of sonorous vibrations, these may strike the head and produce the sensation of a sound without passing through the auditive conch, as in the case of deafness, when people open the mouth to perceive sounds through an internal canal leading to the ear. This is a rough diagram of the ear of most fishes (a sketch): a b c, the semi-circular canals, very similar to those of man; d, labyrinth; e, sac containing the ear-bone, which, set vibrating by the sonorous motions of any body producing the sensation of hearing, transmits the motion to the nervous fibers f f f, where it produces that sensation of hearing. The whole is in the back part of the skull."

"So much for the hearing of fishes. You may see the apparatus very readily, by cracking open the skull of any fish."

## BREEDING QUAIL IN CONFINEMENT.

READINGTON, HUNTERDON COUNTY, N. J., Sept. 7th.  
*Editor Forest and Stream.*—

I have been thoroughly interested in acquainting myself with the successful attempts of Mr. Benbrook, of Raritan, Somerset County, N. J., in raising quails in confinement. I have noticed in several papers, *FOREST AND STREAM* included, a brief notice of the fact; but I think the matter of sufficient interest to warrant more extended notice. I called yesterday to see Mr. Benbrook, and found him busy in constructing a house for their confinement and security. And just here I would like to offer a suggestion and also to state a fact. First, the fact. Mr. Benbrook labors against great odds in his attempt to prove the feasibility of rearing quails; for the following reasons: he is a person of very limited means and cannot at all afford such an expenditure as is required in order to secure the birds against accident. He has not lost a single bird from disease, but all he has lost has been from exposure to the numerous enemies with which they are surrounded, but which could be successfully overcome by proper protection; but this demands what Mr. B. cannot afford. If there was any profit in it, the matter would be very different; but it is all outlay and no income and were he not thoroughly interested in and devoted to the accomplishment of his purpose, I think that birds can be (so to speak) artificially propagated and our country stocked with them, just as our streams are stocked by artificial means, he would no doubt have abandoned the attempt before this time, requiring, as it has, such unceasing care and constant watchfulness and no inconsiderable expense. And now let me offer a hint which my readers have already no doubt anticipated. Is there not, among the many wealthy sportsmen of our country, some one who, in the interests of the experiment, will come to the relief of Mr. B., and furnish him with such an outfit as is really necessary in order to complete success? I suggest this upon my own responsibility and without Mr. B.'s knowledge. If I had the means I would freely assist him, and give him a fair opportunity to prove the practicability of his scheme. I am heartily in sympathy with the efforts, of late years especially, to improve the various strains of bird dogs, Dog shows, field trials, etc., are all in order; but if, with the increased excellence of dogs and the multiplication of sportsmen, the birds should become so scarce, as they have already, in a great many localities where they formerly abounded, of what practical utility is the keenest pointer or setter. The value of the dog depends upon the abundance of the game.

But I have suggested for my purpose almost entirely, which was to state the present facts with reference to Mr. Benbrook's quail hatchery. He has learned from an experience of between two and three years how to care for the birds with reference to diet, mating, nesting, hatching, etc., and I venture to suggest that his experience is worth more than any one's else in our country, at least in these respects. Among other things perfect quiet on the part of strangers in the vicinity of the birds is a matter which he considers positively essential, and yet he will go among them himself without creating any alarm. It is really wonderful, knowing this natural shyness of the birds, to see him take them up in his hands when only a week or more old. From one pair he has now, after two summers' laying, twenty-eight birds and more eggs in process of incubation. There seems to be no difficulty in getting the hens to lay. I think he told me that they had laid this summer about 200 eggs, and they are laying very fast and seem inclined to set. So he has been compelled to provide an unnatural mother in the diminutive bantam. But here we have altogether too much weight upon the eggs, and after such of tender eggs as have survived this pressure have freed the chicks, the little fellows have to run the gauntlet of a fussy, noisy, scratching foster-mother, who flies at every living thing that comes near her almost, at the great danger of trampling the birds, and who is, moreover, so anxious to display the virtues of an incubator, but I have none and Mr. Benbrook has none. Who has? and who will provide one in the interest of the experiment?

But I must close. Will any one of the Westminster Kennel Club, or any other club, take the trouble to run up to Raritan, on the C. R. R. of N. J., and take a look and convince themselves?

If an incubator will hatch the eggs, I believe Mr. B. can with his present stock, manage to raise 1,000 fully grown, acclimated birds, and then after that he can supply, in the following spring, all clubs desiring to stock such localities as they may prefer. Any one who will devote a few hours to a run up to Raritan, on the C. R. R. of N. J., can see for themselves, and I have no doubt will return with the conviction that our lively little game bird can be so successfully propagated as to revive the good old times when a covey could be flushed in any stubble.

P. ARVUS.

CLEVELAND, Ohio, Sept. 18th.

In July, 1879, I purchased a pair of common quails for the purpose of breeding, which was a failure, the birds not mating. During the winter and spring months they exhibited signs of mating. July the mating was complete, the female laying twenty-three eggs. After the seventh egg-laying, two eggs a day for four consecutive days. After twenty-seven days of incubation (six days overtime was due to dry floor, which might have been prevented by the sprinkling of warm water upon eggs and nest on the twentieth or twenty-second day), seven chicken chicks were hatched out. The chicks are now one week old, and are now doing finely. The quails are confined in an aviary, associated with other birds (song) in a room on third floor of building. The aviary is six feet square, thirteen inches high. Have placed four inches of fine sand upon floor for dusting purposes. Twice a week I renew coarse gravel for digestion. The gravel is kept wet by spattering of water from the other birds bathing. Quails will use dry grave. Before, and during the laying periods, I fed the female houseflies, beetles, grasshoppers, mealworms and ants' eggs, the male reserving all to the female. Seeds I fed kemp, Canary, rape, millet, wheat and buckwheat. Lettuce, grated carrot, sweet apple, and cabbage chopped fine, for green food, which is an important item, preventing the female from becoming egg-bound, a fatal condition. Also plenty of fresh water. Quails are immense drinkers. would suggest to those having failed in having their

eggs hatch out chicks, to separate males and females one month or more previous to breeding month—July—the male will then be more ardent. I may add, that the male assisted during the nest-making process, after which, taking very little interest, however. On the twenty-first day he commenced to take an active interest, visiting the nest often. On the twenty-seventh I noticed that he had entire charge of the hatching, the female taking charge of the drying of chicks as soon as hatched. During the progress of hatching, both male and female remained on nest and still continued to do the same. Our feeding young quail have boiled eggs chopped fine, mixed with rolled crackers, mealworms and houseflies. They also have access to prepared food for soft-billed birds. BRADLEY HULL, M. D. D. D. S.

DURBQUE, Iowa, Sept. 15th.

Mr. S. Root, a photographer of this city and an ardent sportsman, purchased a pair of quail last winter that had been trapped, and this spring he made a wire screen and placed it against a stone wall at an angle of about forty-five degrees from the ground, so as to make a place of about fifteen feet long and three feet wide, and then put his quail inside. About three weeks ago the female made a rough nest and laid two eggs (one was unfortunately broken) and a few days ago five young ones were hatched. Mr. Root informs me that after laying the hen deserted the nest, and the male took full charge and sat on the eggs and hatched them out, and even now takes all the care of them, and at the first note of alarm from him they all run under his wings and hide. Mr. Root also states that when he first commenced to set on the eggs he appeared frightened whenever any person came near, but after a few days he got very angry and ruffled up his feathers, but would not get off as formerly. Mr. Root is very fond of his pets, and next year is going to have a larger place, and put in a number of pair in separate apartments, as his idea is that they will not breed if all put in together. I shall watch his experiment with a great deal of interest. JULIEN.

## FISHWAYS, AND NEW YORK LAWS THEREON.

ROME, N. Y., Sept. 9th.

*Editor Forest and Stream.*—  
 There is a story told of a man residing in Paris, during the past and frequent changes of administration of government in France, who made an agreement with his landlord, to pay a certain sum per week for lodging, and an extra sum to awaken him every morning and tell him what form of government he was under for that day. Any one who has been trying to keep track of the game laws and the amendments that have been going on for the last few years, will appreciate the need of just such a landlord. As all sportsmen are assured who are acquainted with the characteristics of trout, know that in a lake these trout in the fall of the year go up the inlet and down the outlets into the stream to spawn, and to return again to the lake in the spring. By building a dam on an outlet of a lake, the trout in the fall pass easily over the dam into the stream and spawn, but are unable in the spring to return up to the lake on account of the dam.

In a few years, a lake which before the erection of such a dam abounded in trout, would be almost entirely destitute of them. I have just such a lake in mind. The legislature tried to obviate this difficulty by enacting in 1871 (Laws 1871, chapter 721, p. 30): "Every person building or maintaining a dam upon any of the fluvial waters of this State, which dam is higher than two feet, shall likewise build and maintain during the months of March, April, May, September, October and November, for the purpose of the passage of fish, a sluiceway in said channel, at least one foot in depth, at the edge of the dam and of proper width, with four inch square cross pieces upon the bottom of the sluiceway three feet apart, which sluiceway shall be placed at an angle of not more than seven degrees, and extend entirely to the running water below the dam, and which sluiceway shall be protected on each side by a 'pila' at least one foot in height, to confine the water therein," and making it a penalty of \$25 for each month's violations of the above.

Section 40, of the act of 1879, is deemed to have repealed laws of 1871, chapters 721 and 831, and the other laws following thereafter, which brings us down to game laws, of 1880, which say nothing regarding sluiceways in dams. Hence we are without a very valuable law, and I think too one that the compilers of the game laws had no intention of removing, but had occasion to remove it, matter up, intending to have a certain owner of a dam comply with the statute, but I find that until the statute is again amended, he can erect a dam without a sluiceway, without fear or molestation of the law.

## THE POUND-NET LAW.

At a meeting of the Board of Supervisors of Suffolk County, N. Y., on Sept. 20th, Mr. Halsey presented a numerously signed petition of inhabitants of Sag Harbor for the passage of a law forbidding the setting of pounds, fykes, gill, or fish or eels in the Otter Pond and Cove, or within one mile of North Haven Bridge leading thereto. On invitation, Wm. White, of Sag Harbor, was heard in advocacy of the law asked for. On motion, petitions were referred to the Committee on Resolutions, and Mr. Reeves, from the committee, reported favorably the following resolution, stating that its passage was petitioned for by 160 citizens of Sag Harbor, that the committee had considered the subject and unanimously agreed to its passage. The resolution was then put on its passage and adopted, all the members present voting in the affirmative:—

RESOLUTION NO. 24.

AN ACT to prevent the taking of fish and eels in the Otter Pond and Cove at Sag Harbor and the waters of the bay near the North Haven Bridge in the town of Southampton. Chapter 423 of the laws of 1875. It was passed Sept. 21st, 1880, by a vote of two-thirds of all the members elected thereto.

The Board of Supervisors of the County of Suffolk do enact as follows:—

SECTION 1. No person shall fish, nor set or draw any pound, fyke, or net in any of the waters of the Otter Pond or the Cove at Sag Harbor, in the town of Southampton, nor in the waters of Sag Harbor Bay within one-half mile of North Haven Bridge, except between the 1st of February and the 15th of April, in any year, and then only for the purpose of catching frost fish and alewives.

SEC. 2. Any person may in his own name before any justice of the peace of the town of Southampton prosecute for and recover the penalty specified in this act, and on recovery shall receive the penalty after deducting the expenses.

SEC. 3. This act shall take effect immediately.

T. H. CONWIS, Clerk. JOHN S. HAVENS, Chairman.

Mr. Reeves, from the same committee, reported adversely upon the petition of residents of North Sea and vicinity for a law to forbid the setting of seines, fykes, or set nets in North Sea Harbor and the channel thereto, during March, April and May. The report was adopted, and the committee discharged from further consideration of the subject.

DR. GARLICK'S BOOK.—We learn that while the book, which we noticed in our issue of 16th inst., was in the hands of the printer, some one stole out all the portion relating to the famous Bachman controversy, and the letters of Prof. Baird on this subject, and the author being an invalid did not discover it until the whole edition was bound and he had received a copy, which necessitated his re-writing it, and having the entire edition rebound in order to get it in its place.

Comment upon such an act is unnecessary, and we think the man who did it, capable of stealing acorns from a blind sow. The Doctor merely wished this to appear as an act of justice, and to show that there was no longer any misunderstanding between persons who in the search for truth had taken other paths. A slip of the pen in the notice made us say, "The angling portion of the book gives no notice of the black bass, white bass," etc., when we meant to say that it did give some account of them.

HOW THE FIRST SHAD WERE HATCHED.—"Aquadale Pond," Wenonah, N. J., Sept. 17th.—I noticed in your issue of the 16th inst., the communication of Mr. Sedgwick, referring to an "Shad hatching and Shad Laws," and expressing a desire to be informed of the name and address of the "old fisherman" who first hatched the shad at South Hadley Falls. For the information of Mr. Green and others interested, I will make the following statement. During the latter part of last May I visited South Hadley Falls to make an examination of the fishway attached to the Holyoke dam, and to obtain such general information as would be required in regard to fish matters at that point and vicinity. While making some investigations in the city of Holyoke, I referred to what I supposed was the fact, that Mr. Green hatched the first shad at that point. I was surprised upon being informed that an old shad fisherman at the Falls was the man who first succeeded in the attempt. I asked his name, and was informed that it was "Smith." (I presume Mr. Green may have heard of this name before.) There appeared to be two or three gentlemen in the group, conversant with the facts, but I know none of them. I had in my pocket, however, a letter from E. A. Bracket, Esq., one of the Massachusetts Fish Commission, which contains the following paragraph: "C. C. Smith of South Hadley Falls, is as well informed in regard to fish in the river as any one I am acquainted with." Having learned from others that the shad fishing at the Falls was in the hands of "Capt. Smith," I concluded he was the man referred to by the different parties, and having occasion to call upon him the same day, I referred casually to Mr. Green's success in hatching shad there. He at once replied that Mr. Green's attempt was a failure, and then repeated what I had already heard at Holyoke, and substantially what I said in your issue of Aug. 20th, the father of Capt. Smith being the old fisherman referred to. I believe he has been dead some years.

In the letter in my former article, viz: "I believe Mr. Green received the credit," should have been further qualified, and Mr. Smith with the idea of the proper location. Mr. Green claims that the hatching was done in the river, but either himself or Capt. Smith and the others there have forgotten the location, and possibly other facts.

MILTON P. FINE.

THE FIRST DECADE OF THE UNITED STATES FISH COMMISSION.—In our report of the paper read by Prof. C. Brown Goode before the American Association for the Advancement of Science, Boston, Aug. 28th, in our issue of Sept. 2d, there occurred an error which we now take pleasure in correcting. What Prof. Goode said was as follows: "I am indebted to Prof. Verrell for the following estimate of the number of species added within the past ten years to the fauna of New England, mainly by the agency of the Commission:—"

Formerly Known.	Additions.	Now Known.
Crustacea.....	105	133
Pneconid.....	5	298
Annelida.....	28	228
Vermet.....	39	100
Mollusca.....	317	429
Gastropoda.....	20	41
Anthozoa or Polyps.....	20	35
Hydrozoa or Acleopora.....	102	78
Algae.....	21	51
Polysia.....	56	91
Brachiopoda.....	5	17
Sponges.....	10	80
Total.....	800	1,600

MACKEREL FAR SOUTH.—The Charleston, S. C., News says: "On Saturday last, while the crew of the fishing smack *John A. Thompson* were fishing on Black Fish Banks, off the bar, they struck a school of genuine down East mackerel, and succeeded in taking one of them. None of them have ever been seen south of Cape Lookout. It is possible that the confusion, which seems to agitate the State of Maine, may have driven these fish to seek the seclusive and quiet waters of the South Atlantic. The specimen taken is a perfect beauty, about 12 inches in length. The same fishermen also caught an unusually large sea-robin or flying fish."

# Sea and River Fishing.

THE ALEWIFE IN FRESH WATER.

ROCHESTER N.Y., Sept. 10th.

Editor Forest and Stream:—

During recent visits to several of our inland lakes, I have made discoveries which may be of interest as well as beneficial. I have discovered that the alewife, commonly called "saw-bellies," breed in our inland lakes. I made this discovery while drawing a small minnow net for bait, and drew in the young fry of this and last spring's hatch. This discovery I consider very valuable, as there is no better food for all kinds of fish, and especially the salmon trout. I would advise all parties interested in any inland lake to procure them and stock their waters. They are a more valuable food fish than the fresh water herring or young whitefish, because they are a spring spawning fish and breed much faster. Their spawn is not more than three or four days in hatching, whereas the fresh water herring and whitefish are fall spawning fish, and their spawn is all winter in hatching, and the fact of their being so much longer exposed makes the percentage which hatch very small. As all kinds of fish feed on them, and unless they happen to be cast in a spot where they will receive the proper circulation and keep free from sediments, they will not hatch. The alewife hatches at least one thousand young for every one of the fresh water herring or whitefish, and their value as a food fish is inestimable. In Lake Kenka the "saw-bellies" were put in eight years ago and there is an abundance of them, and has been for the past few years.

To show that all kinds of fish feed on them, I have caught, with them for bait, salmon trout, black bass, rock bass, perch, pickerel and bullheads.

I have also learned in what depth of water salmon trout have been found at the different seasons of the year, and also the time of day they feed. During the months of April, May and June they are found out in deep water, at depths; in April and May mostly at the top; through July and August, and first of September they are hardly ever caught, except within a few feet of the bottom, and when the atmosphere and water begin to cool off in the latter part of September they commence to rise to the surface again, and in October and November are on the shoals and reefs, casting their spawn. During the spring they may be caught from sunrise to sunset; during June from sunrise until about noon, and during July, August and 1st of September, from sunrise until about 10 o'clock, and one hour before sunset. On a recent trip to one of our inland lakes, "saw-bellies" being very hard to procure, I was obliged to open every trout caught in order to obtain bait. The trout—as, in fact, do most all fish—swallow their food whole, and the "saw-bellies" were not so badly mangled but what I could put them on my hooks. This is the first time I have learned when the trout feed during July, August and 1st of September. In their stomach was found the food which had been taken for three days, in three different stages of decomposition. The trout which were caught from daylight until 7 o'clock had no fresh food in them, while those caught after that time and until they stopped biting at about 10 o'clock contained from one to four fresh "saw-bellies." I found in but few, food which had been taken before sunset the evening previous, which shows they do most all of their feeding in the evening, and do not feed at night.

I found no young trout in any of them, which shows that they do not feed on the young of their own kind.

SETH GREEN.

BLACK BASS IN FLORIDA.—*Risford, Fla., Aug. 11th.*—Tell St. Clair if he will visit me I will allow him to take bass from ponds that I have stocked, that I do not think he will call anything else but "large-mouth black bass" and if not satisfied with that, he can capture in the Old Suwanee River, the small mouth species. Now that river does not empty into the Atlantic, but the St. Mary's does and there he can capture as fine ones as were ever hooked. If still he doubts he can go to lake Santa Fe and take them there till he is tired of the sport. In the Neuse river, North Carolina, they are plenty, and the fishermen call them Weismen. In every other place South where they are taken, they are called "trout," and they bear to a casual observer in their general resemblance to the speckled beauties in our Northern streams, as their motions in the water. Of course the illusion is at once dispelled when they are landed.

GEO C. RIXFORD.

DON'T CARE MUCH ABOUT FISHING.—Last Sunday one of our Sunday school superintendents, on his way to church met, a boy with a fishing-pole. "Where are you going with that pole?" asked the superintendent. He had not seen the boy since the last time he filled up at a Sunday school picnic. "Please, sir, I've got a wicked father, who sends me out to fish every Sunday morning; but as soon as I get out of sight of the house I am going to play hockey, and come to Sunday school."

VERMONT FISHING.—*Poulinville, Vt., Sept. 15th.*—I promised to write when I left Ula and Delaware counties last May. I started in fishing at this place for trout, and found them small and hard to get, not catching more than 100 in five different times I went fishing. After doing so well in New York State, I concluded that this kind of fishing would not suit me, so I gave it up in disgust.

Bass and pickerel fishing is good, and has been all summer. The bass can be caught from sunrise to sunset. I have caught 200 in five hours fishing—others have done a great deal better. This is a very pretty lake, and is fed altogether with springs, and a desirable place for lake trout. This could be made one of the finest fishing lakes in the United States. All that is necessary is to stock it, and make a heavier penalty than there is for netting or spearing them, which I have no doubt is carried on extensively at certain times. Mr. B., of Philadelphia, caught a 5-pound pickerel that had the marks of where he had been speared. The authorities look into this matter, and stop it before it is too late. I hope also to see the Fish Commissioners of Vermont take interest in stocking this beautiful lake, and making it second to none in the northern county. Squirrel shooting is excellent, partridges and woodcock quite plenty, and we are having plenty of sport. Any one desirous of coming here

can leave Grand Central Depot at 11 A.M., ticket to Poulinville, drive three miles to lake, and stop at Lake View House, Mr. P. J. Griffith proprietor, and I will guarantee a cheap trip, good time and plenty of sport.

H. C. WEST.

MAINE NOTES.—*Eustis, Maine, Sept. 20th.*—Here I am again at mine host Hutchins', where I can enjoy myself much and at less expense than at any place in Maine I have ever visited. Have returned to-day from a two weeks' sojourn at Alder Stream Pond, and such nice, deep-red fleshed trout, and in such abundance, I never before saw. A good, nice camp and boats, a beautiful lake set in the valley of the "Five Round Mountains," like a "jewel set in the bosom of Hebe."

My host Hutchins has just completed a road from his place to the famous Spencer Lake, a region entirely new to sportsmen, and the route embraces twelve lakes and ponds, all full of the nicest salmon trout, while moose, cariboo, ducks, deer and partridge abound all along the route. Should any of your patrons wish for rare sport, a letter of inquiry to friend Hutchins will tell them all the particulars and just as they will find them. Address O. A. Hutchins, Eustis, Franklin County, Maine. More when I arrive at Boston. J. M. FITCH.

BUCKTAILING FOR BLACK BASS.—*Warsaw, Ind., Sept. 20th.*—In reply to "G. F. W., in FOREST AND STREAM of Sept. 16th," I would suggest "bucktailing" for the larger species of black bass in Webster Pond. I have found this allure effectual when all else has failed, at the same time offering the most pleasurable and scientific mode of modern angling. The construction of the bucktail or buckly is as follows: Tie three bass hooks at right angles from another. Tie the hair of a deer tail around and completely covering the hooks, allow the hair to extend an inch below the hooks. Use by casting same as with any other bass fly. This in the hands of an experienced and persevering follower of "Old Ike," success is certain. H. A. Z.

Bass fishing at the St. Clair Flats has been uncommonly fruitful this season, and from this time until the middle of October the punter natives of the region will be in high feather. The bass are extra large, many that I have seen scoring from four to six pounds. Two that were shown me to-day weighed each six and a half pounds. They were caught by J. V. D. Eldridge, of this city, whose achievements with both rod and gun in former years are matters with which many of your readers are well acquainted. All fishermen here who have observed the flats yield say that no such season as this has been known since 1870. Parties from Louisville, Cincinnati, Atlanta, Cleveland and elsewhere have been enjoying the glorious sport for a week past, and Detroit has turned out every fisherman who could spare a day or two, bent on the same fascinating sport. Col. Valentine C. Hanna returned yesterday from a three days' excursion to the flats, during which time he caught over two hundred pounds of the finest bass seen in one jump in a generation. Seventy-five to one hundred pounds a day is not an unusual catch for industrious workers. A. C. McGraw, a well known Detroit, who carries his seventy-six years as lightly as a boy, went up for a half holiday on Thursday last, and caught twenty large bass, every one of which was a legitimate capture. We hope to see an invasion by New Yorkers before the middle of October.

A BIG BASS FOR A SNAKE TO EAT.—A correspondent writing from South Vernon, Ind., tells us that while fishing he killed a large water moccasin which had a suspiciously large bunch inside it, which on opening proved to be caused by a bass of fully half a pound in weight, certainly a large fish to swallow, and a prickly one, too, which ought to cause a fit of indigestion, but it is more than doubtful if it did.

WEAKFISHING ON THE COAST OF NEW JERSEY.—*River-side House, Forked River, Sept. 24th.*—Weakfishing still continues good, a daily catch of fifty per boar for the past week. A party from the lighthouse caught yesterday, fishing outside, 262 weakfish, some of which would weigh nearly 4 lbs. Several gentlemen still linger here enjoying the sport, among whom are Wm. H. Hewitt, Wm. Henry Brown and Jas. R. Townsend, of New York. No bluefish yet.

AN EIGHT AND A QUARTER POUND TROUT.—The following letter from Messrs. A. B. Shipley & Son, fishing-tackle dealers, Philadelphia, explains itself. The fish is to be mounted by a taxidermist, but would be so much better preserved by the Wickersheimer process that we always regret to hear of a fine fish being stuffed:—

SOLE'S CAMP, Maine, Sept. 20th.

Messrs. A. B. Shipley & Son:—I suppose by this time you think I have forgotten you, but to-day I have the pleasure of sending you a trout (*Salmo fontinalis*) that weighed eight and a quarter pounds when caught. I took him on a fly-rod and played him an hour and a quarter. As you wanted a good sized one for mounting I send the fish to you.

JOHN A. SCHULZE, Rangeley, Maine.

THE "REDDING" TROUT FLY.—A new species of fly has been found to inhabit the fly books of anglers in California and is occasionally found sporting itself at or near the ends of their lines. Of this new fly the *Olympian* says: "This fly has been made by a fishing tackle dealer in this city, and named by him after B. B. Redding, one of our State Fish Commissioners. The Redding deer fly has the hair of the deer wart reversed on the upper part of the hook so as to open when drawn through the water. The lower part, or body, is made of green peacock hair."

FIVE MILLION FISH HOOKS.—The Germantown Telegraph says: "The only firm in the world that is said to make fish-hooks by machinery is located at New Haven, Conn. They received an order the other day for five million hooks from New York. The order is reported to have been sent by the editor of FOREST AND STREAM, who is anxious to take a tilt at the St. Lawrence bass!"

All right, neighbor; when they come we'll ask you to go along, if you'll dig the worms.

# Game Bag and Gun.

GAME IN SEPTEMBER IN SEPTEMBER.

<p>Moose, <i>Alce americana</i>. Caribou, <i>Rangifer caribou</i>. Elk or wapiti, <i>Cervus canadensis</i>. Belt or Virginia deer, <i>C. virginianus</i>. Squirrels—red, black and gray. Hares—brown and gray. Reed or rice bird, <i>Dulichamps argyrea</i>. Wild turkey, <i>Meleagris gallopavo</i>. Pinnated grouse or prairie chicken, <i>Cyrtonyx cupido</i>. Ruffed grouse or pheasant, <i>Bonasa umbellus</i>. Quail or partridge, <i>Oreortyx virginianus</i>. Sora, rail, <i>Porzana carolina</i>.</p>	<p>Woodcock, <i>Philohela minor</i>. Black-bellied plover, ox-eye, <i>Squatarola beldingi</i>. Long-billed curlew, <i>Numenius longirostris</i>. Turnstone or calico back, <i>Streptopelia interpres</i>. Red-breasted snipe, dowitcher, <i>Macrophthalmus griseus</i>. Red-backed sandpiper, or ox-bird, <i>Tringa americana</i>. Great marbled godwit, or marlin, <i>Limosa fedoa</i>. Willet, <i>Tringa semipalmatus</i>. Tattler, <i>Totanus melanotos</i>. Yellow-shanks, <i>Totanus bartripes</i>.</p>
--	--

\*This enumeration is general, and is in conflict with many of the State laws.  
"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, oyster-catcher, snipe bird, phalaropes, avocets, etc., coming under the group *Limacina*, or shore birds.  
Many States permit prairie fowl (pinnated grouse) shooting after Aug. 15th.

## A CONTRAST.

CARL DITTMAR SAYS.

Writing to Sportsmen.

"I pledge my word of honor that I have never sent, and never will send, powder for sporting purposes which should have the slightest trace of nitro-glycerine in its composition." Letter in ROD AND GUN, Aug. 14th, 1875, Vol. VI., page 380.

"If some gentlemen have damaged their guns it would only be by negligence, and by not following my directions. It is absolutely impossible to damage a gun, weak or strong, except by careless loading. If powder is used according to my instructions, a letter in ROD AND GUN, Aug. 14th, 1875, Vol. VI., No. 18.

"When I first commenced making this new powder I had no more experience than your correspondent, but I have not had a single accident, although I have fired more than two thousand times in a variety of guns." Letter same as above.

"In conclusion I would say that sportsmen and riflemen are and have been experimenting with my new powder all over the country, and the testimonials thus far received are in the highest degree satisfactory." Letter in FOREST AND STREAM, June 22nd, 1875, Vol. IV., page 315.

We add, for comparison with the sworn statement quoted above, only one quotation. It is from a letter of Carl Dittmar, in the FOREST AND STREAM, March 16th, 1875, the italics our own:—

"Since 1st of September, last year, I make an entirely different powder, much harder grain, not so compressible as the first. But even with the softest kind I made in the first time I have not been able to injure my guns."

## ECHOES OF THE "DITTMAR SPORTING POWDER."

ELMIRA, N. Y., Sept. 26th.

Editor Forest and Stream:—I have just finished reading your exhaustive article on the "Dittmar Powder," for which many thanks. I was indebted to your subscriber and correspondent, Dr. T. S. Up de Graff ("Bodines") for the privilege. J. B. C.

Editor Forest and Stream:—I have read your "Dittmar Sporting Powder" article, and take pleasure in saying that I like it very much. The general plan I have adopted, viz., to begin at the bottom and build up in a solid and gradual manner, so as to make your readers see clearly the reason why Dittmar powder must be dangerous, is just the way and the only way. You have done nobly. I look with much interest for the balance of your article. X.

NEW YORK, Sept. 25th.

Editor Forest and Stream:—I must thank you very heartily for your excellent article published in this week's FOREST AND STREAM on the "Dittmar Sporting Powder." If every lover of the gun would consider what he is using and the danger he is placing himself in by using this explosive, there would be fewer shattered guns, hands and heads. Fact is fact; truth is truth, every time. Warn the sportsmen and you are doing your duty. Yours truly, E. H. R.

NEW YORK, Sept. 25th.

Editor Forest and Stream:—I have read the article on "Dittmar Sporting Powder," in your issue of the 23d inst., and take great pleasure in thanking you for exposing the qualities of said powder. I have used the powder to some extent, fortunately without accident; but it is needless to say that I shall never dare to use it again. I believe that I never saw any account of the explosion that occurred at the office of the "Dittmar Powder Manufacturing Company" (No. 2. Am I right?), some time since, in your paper. Would it not be well to refer to the same in your future article on the powder? Again congratulating you upon exposing the dangerous compound to the public, and especially to the sporting fraternity, I remain, yours very truly, S. A.

(Extracts from a letter dated Sept. 13th.)

Mr. Nash gave us very little information about the loading of the exploded shell, beyond the charge, and on the other hand the Dittmar Company gave us about as little about the powder in the case; for it is impossible not to agree with you, Mr. Editor, that their experiment proved nothing. The danger of powder depends mostly, perhaps entirely, upon the speed with which the pressure

is developed, instead of the actual pressure itself. And I don't believe it possible to construct anything in the shape of a gauge that can properly test the strain on barrels caused by too sudden evolution of gas. It is a great pity that the company could not have experimented on some strong musket barrels, or something of the sort.

Mr. Dittmar should have no hard feelings against Mr. Nash, or any one else. The question is too important to allow business interests to have a feather's weight of influence. He should be thankful for criticisms, and do his best to remedy defects. It is the duty of any sportsman knowing defects to point them out, and the duty of sporting papers to publish them. At this age of the world the presumption is generally in favor of anything new, but with a thing so important in its effects as powder, the presumption is and should be against anything new. Every such thing must expect to fight its way into favor, and its owners should respect that conservatism which demands positive conviction before yielding.

T. S. VAN DYKE.

#### DOG POISONING IN MINNESOTA.

WINDOM, Minn., Sept 20th, 1880.

*Editor Forest and Stream.*—The letter of "Wausee" from Fairmount, this State, dated on the 1st inst., and recently published in the FOREST AND STREAM, escaped my notice until to-day, and that you will allow one of the "pot-hunters of Windom" space for reply I assume, and in doing so I find it necessary to ask you to reprint the following portion of "Wausee's" letter:—

"The recent wholesale poisoning of bird dogs in Cottonwood County, and the equivalent in the local press, certainly the *Windom Reporter* in regard thereto, are still topics of peculiar interest to non-resident sportsmen in Minnesota. True, the people of Windom, many of whom are sportsmen, and some of them 'then dandy sportsmen,' are now changing their opinion and explaining things away, as they begin to perceive that the dastardly act was in no manner for the owners of such valuable dogs have not been slow to shake the mud of Windom from their hoofs and seek their sport in less perilous regions. In future the pot-hunters of Windom will have to look out for their own way, but the hotels and business houses of the village, as well as the neighboring farmers, will probably miss the ready cash which the average visiting sportsman lavishes so profusely during the hunting season.

In this State the chicken season begins Aug. 15th. On the 10th of that month some seven or eight dogs belonging to citizens of Windom were poisoned—by whom, or through what motive, remains yet a mystery. About the same time dogs in a neighboring village met a similar fate. I am credibly told a day or two before the 10th the "non-resident" sportsman came. On the following Wednesday a dog from Memphis died about two miles in the country, and a day or two later a St. Louis dog was poisoned in the Clark House barn. Hence it will be seen that the Windom sportsmen are the principal losers of dogs, poisoned, as many firmly believe, in the interest of a "non-resident," but for various reasons I will not assert that the theory is correct. But it will be seen that what was begun here in a "wholesale" way, upon our own bird dogs, while "Wausee" attempts to show that the "wholesale" poisoning was directed toward the dogs of the visiting sportsman, who only lost two; and I have no doubt the Memphis dog ate the poison that was laid for the Windom dogs. Poisoned meat was found in the yards of several residents, as well as near the dead St. Louis dog, and one dog died in the very door of its owner.

The effort of "Wausee" to cause it to appear that this unfortunate and disreputable business was indorsed and condoned by the people of this community, or the newspaper in question, is as "dastardly" as the poisoning itself, but "Wausee" is aware that his party was not warmly welcomed, and evidently is trying to "get even" with us by false representations.

"The business men," say, "miss the ready cash," will they? How lamentable! This theory patronized one hotel and two livery stables. No one else, but the "lavish" their "ready cash" and one noticeable feature with these "visiting" sportsmen is that they bring their ammunition with them, and even try to pay their hotel bills with birds shot with ammunition bought elsewhere. So much for the "ready cash" they "lavished" in Windom. This is the extent of the business they gave the town, and had it been practicable "Wausee" and his friends would have brought with them their hotels and livers also.

Any of the "non-resident" sportsmen are in ill odor for the hogish manner displayed in their hunting birds for market, thus making the country over which they hunt help bear their expenses while here, and sending the money out of town for the very material with which the birds are shot.

The money the farmers receive from such men as "Wausee" will rarely be desired to return them. Farmers complain seriously at the ruthless manner in which these "non-resident" sportsmen trespass upon their growing crops, which this year have proven slight barriers to their frequently driving through fields of flax and "letting lose the dogs" of sport, and when renouncing against it the farmer is repulsed with profanity. These are by no means isolated cases. In another instance, a farmer by the name of Pickens, was on his own field by one of these "non-resident," "money dispensing" gentlemen, who coolly drove off without apologizing, not however, without begging the farmer not to return the compliment with a rifle he had in his hand at the time.

If "non-resident" sportsmen are not cordially received in Windom it is for faults of their own, of the character indicated, but the least intimation that their dogs were poisoned on account of their "ready cash" being so ridiculously and criminally false. The local sportsmen regret the poisoning, and deprecate it as much as "Wausee," and none more than the writer, and we hope your correspondent will yet learn that the people of Windom are too brave to wreak their dislike upon men by such merciless attacks upon innocent and defenseless dogs.

Sportsmen have come and gone, and will return again next year, while others have gone, we hope, not to return until they learn to treat the country with ordinary respect. Every sportsman who comes with anything in his breast like "doing unto others," etc., will be cordially welcomed, as dozens who have been here this year will attest, and these are they who "lavish" their "ready cash" among the "business men" in the sense "Wausee" implies.

"WINDOM POT-HUNTER."

#### MINNESOTA FIELD SPORTS.

*Editor Forest and Stream.*—

My brief article in your issue of Aug. 19th has brought me several letters from widely separate points, asking for information relative to the country. As I have no axe to grind, and as all the letter writers claim to be sportsmen good and true, and vital subscribers (as they should be) to the FOREST AND STREAM, I ask space in your columns for a few particulars.

This town, Burdetteville, is the eastern town of Todd County, Minn. Todd County, being wholly on the western side of the Mississippi River, and about one hundred and forty miles from St. Paul. No railroad enters the county, Little Falls and Sauk Centre being the nearest railroad points, Little Falls being twenty miles from this town and Sauk Centre thirty. The eastern part of the county is principally timber, but with fine stretches of prairie and many fine meadows. The soil is excellent. The country, especially the eastern half, fairly blossoms with lakes—some with high bold shores, others with marshy borders. I am living at the outlet of Little Swan Lake, a beautiful sheet of water about one and three-quarter miles long by one-half mile wide. Three miles above is Big Swan Lake, nearly three times as large: the two are connected by Swan River. Three miles southwest are Bass and Long Lakes, about the size of the former. Two and three miles south are the Big and Little lakes, a trifle smaller. Three miles north is Rice Lake, which is merely a large marsh, its surface nearly covered with wild rice. Big Swan has also large rice beds.

There are also many pond-holes and marshes. All of the lakes abound with fish, every variety almost being found save trout. Spring and fall the duck shooting is grand; but few geese comparatively are found here. I presume, in fact I know, that tons of geese are killed here last hunting season. Bears and wolves are not "thick," but more or less are killed every year. As for rabbits, fifty a day, in the winter, would not be a large bag. Being off the railroad, sportsmen never find their way here. In the two years I have been in the county, I have never seen but one sporting party, and mine is the only breach-loading shot gun in town.

Now a word personal, as it is asked for: I am a Massachusetts clergyman, and my inclings; am a sportsman in the true sense of the term. I shall return East this winter, I think. I have had and am having magnificent sport. If any true sportsman, who neither swears or gets drunk, wishes to enjoy himself, this is the place where he can have the utmost pleasure.

Hon. Leon Lourde, of Little Falls, and Hon. C. M. Loring, of Minneapolis, have been in camp for two days at Long Lake, two miles from here. They report the finest bass, pike and pickerel in the State have ever experienced. Mr. Loring caught fifteen fish, one of them a pickerel weighing fifteen pounds, in one morning before breakfast.

Ducks are flocking in abundance; Rice Lake is reported full of them. J. F. LOCKE.

#### ALI. ABOUT WILD RICE.

RICE LAKE, Sept. 23d.

*Editor Forest and Stream.*—

As the subject of wild rice is receiving a great amount of attention from many of your readers, perhaps the following will be of benefit to a few. I have been here.

When wild rice becomes ripe in the fall, the seed drops from the stalk into the water, and immediately sinks to the bottom. Here it lies all winter, perfectly dormant, until the following spring, when it begins to sprout about the 1st of May, and reaches the surface about the middle of June, according to the depth and temperature of the water. For a month it seems to grow very slowly, but, after that, its growth is wonderful. About the 1st of September it stands two to five inches above the surface, and the seed, getting ripe, commences to fall into the water, and continues doing so as long as there is any grain left upon the stalk. The old straw is torn up by the wind, and floats away or sinks to the bottom.

In Rice Lake the Chippewa Indians have the exclusive privilege of gathering the wild rice—the *nodus operanti* is as follows: An Indian kneels in the bow of his canoe, generally a dug-out, and draws it through the rice with his paddle; a squaw, seated at the stern with a small light cedar stick, the shape of a marline-spike, about three feet long, in each hand, draws the rice toward them with the stick in one hand until the heads are over the canoe, when she strikes them a couple of quick light strokes with the other stick, knocking the seed into the boat. Upon doing this she lets go the rice, and repeats the operation upon the other side, the canoe going all the time. In this manner they will gather two to five bushels per day, according to the crops.

That wild rice is the favorite food of ducks I am quite certain; and, were I possessed of a pond or lake, to which I desired to attract them, I would plant it in preference to anything else. It is quite hardy, and, with a little care at first, will grow almost anywhere. It has been grown successfully in the Ottawa River, and Dr. Everhart, President of the Lackawanna Game Protective Association, I believe, whom I met here last fall trying his hand at the ducks, secured a barrel from C. Gilchrist, Inspector of Fisheries for Rice Lake. He planted it in some of the streams in Pennsylvania and it grew well. Mr. Gilchrist also sent a barrel to Stockton, Cal., last winter, where it was planted and this spring sprouted, but was drowned out by the breaking away of the levee during highwater, covering it with ten or twelve feet of water.

#### HOW TO SOW THE RICE.

The proper conditions for the successful growth of wild rice areas follows: Two to four feet of water, if soft, warm and free from minerals all the better, soft muddy bottom; it will grow on sand and gravel, though it will be thin and stunted for a couple of years, but at the end of that time, if undisturbed by wind or current, the accumulation of old straw at the bottom will form a mud bed and a good crop of rice will be the consequence. Five years ago, when I ever came to Rice Lake, I put up tent on Spooke Island; all around it there was a hard, sandy bottom, and about thirty feet from shore there was a thin line of rice, about twenty feet wide, through which I used to swim to get to the clear water beyond when bathing. This year the rice was so thick and heavy the Indians were gathering there.

Weeds and moss will retard its growth somewhat, but it generally crowds out other water plants. When once started it is impossible to eradicate it, except by pulling it up when young or drowning it out with tar or other sticky material; also, it will spread in every direction and will get so thick that a person can hardly paddle a canoe through it.

After being thoroughly soaked in plenty of soft water it is planted as follows: Two men go in a boat, one paddling the other sowing in the old old-fashioned manner of sowing grain by hand. If the pond is exposed to heavy winds or strong currents, sow thickly; if sheltered and free from current sow thinly, as it will spread more quickly by doing so.

Blackbirds are passionately fond of it in the milk state, and tame geese are simply "terrors," sometimes clearing out a whole bed. Keep them out at all times.

F. C. G.

*WILD RICE FROM RICE LAKE, ONTARIO.*—Many inquiries reach me about procuring and growing wild rice. Through your columns I state a few facts which may serve as a general answer to correspondents. In 1876 I bought from Charles Gilchrist, Esq., of Harwood, several bushels as an experiment, and sowed the same in a bay of the Ottawa River. The following autumn it grew to a height of from six to eight feet, was full of grain, which enabled me to gather about twelve bushels for use elsewhere. Since then I have renewed the sowing occasionally and kept up the growth. This fall I intend sowing some twenty or thirty bushels more. In addition to its utility as food in the shape of rice bread or cakes and pudding, this plant has wonderful powers of cleaning and cooling the temperature of water and muddy bays. It is such a strong feeder that it absorbs the principal part of the nutriment on which rank weeds subsist, and which in solution accumulates to form a caky coating of mud in marshy bogs. It also grows so high and thick as to shelter the water and keep it cool. I consider it one of the most valuable aids in fish ponds for the above reasons, as well as because it breeds and furnishes great quantities of insect food for young fish. Of course its value as an attraction for ducks is well known. The stock gathered at Rice Lake is of the finest kind, and being attended to by an active and intelligent man like Mr. Gilchrist, it is well prepared for shipment.

W. F. WHITCHER.

Rideau Bank, Ottawa, Sept. 16th.

*A COMPANION OF FORESTER.*—New York, Sept. 23d.—*Editor Forest and Stream.*—Will you allow me to call your attention to the death of Mr. A. L. Williams, of Candandaigua, which took place five days ago. Mr. Williams formerly lived in Newark, and after that, in company with "Frank Forester," William S. Porter and other famous old sportsmen. He was a model sportsman in every respect, a thorough good shot and fly fisherman, always scornful anything approaching pot hunting or poaching, and ever ready to give the best place, either in the water or on the river, to a friend. Mr. Williams was a naturalist of no mean order, perfectly competent to set up a rare bird or preserve a fine specimen of a wild flower. Of late years Ralston, Pa., was one of his favorite haunts, and many happy days I have spent with him on the beautiful Lycoming. He taught me all I know in the way of casting a fly for bass and trout, and also wing shooting, and for twenty years we have shot and fished together. As I said before, a truer sportsman or better friend I never knew.

W. HOLBERTON.

*NEW YORK—WINDOR Farm, Broome County, Sept. 14th.*—The shooting season has opened with good prospects. Have been out three days since Sept. 1st for grouse. Bagged in all twenty-two grouse, and squirrels are more abundant than they have been for several years. This morning I killed six woodcock. They are through moulting, and have settled down upon their old grounds. A few ducks have passed in their flight. Yesterday I bagged two black ducks and four teal on the Susquehanna River. Fishing is all good. Perch and pickerel readily take live bait or strike for the spoon hook, and bass are as hungry as ever. The lakes and ponds about here are in good condition, and sportsmen are having average luck in these waters. With a friend I fished an hour and a half in the Susquehanna, one day last week. The catch was eleven black bass, weighing fourteen pounds and a half, I have captured a number of walleye, and also spotted bass, near Cayuga. Perch and pickerel are all good. These fish, once common, though for several years but few have been taken, are returning to our waters.

CLIFTON.

*POWDER MEASURE.*—*Editor Forest and Stream.*—I enclose on page 11, Vol. 15, a "Member, Montgomery Shooting Club," in attempting to correct a "Montpelier Manchester Shooting Club," is nearly as wide of the mark as the gentleman he attempts to "coach." The pound Troy is divided into ounces, pennyweights and grains. There are no drachms in Troy weight. The pound apothecary, which is the same as the pound Troy, is differently divided into ounces, drachms, scruples and grains. The pound avoirdupois, which is different from either of the recently mentioned, is that by which powder and shot are always weighed, is divided into ounces, drachms and grains, viz., twenty-seven and one-third grains make one drachm; sixteen drachms one ounce; sixteen ounces one pound. If your correspondents will weigh their charges by this table they will correspond with the standard measures. The grains are same in all weights.

OKOIL.

*OUR DEWNOT LETTER.*—The season is fairly upon us, but the lingering heat of summer which makes memorable these fervent September days is a handicap for the devotees of the gun. Nevertheless, many mighty hunters are seen in the gathering places of the tribe hereabout, as they flit into town on their way to the north woods of Michigan, where "the red deer and roebuck abound." I have of late noticed on the streets many well accounted and experienced sportsmen, and you may expect not tales of ill fortune deter them, and you may expect with the first grateful change to hear entertaining tales of their achievements. New York City and State are well represented in this influx of woodmen.

Of purely local matters I may mention the fact that that prince of sportsmen, Ed. Gillman, accompanied by Dr. Fred Anderson, formerly a well known Cincinnati

and now a summer dweller on beautiful Grosse Isle near the mouth of Detroit, go down to Point Monille Club grounds next Monday for a hack at duck shooting, stirred to the venture by yesterday's receipt of as pretty a lot of blue-winged teal as I have ever seen. They were killed by hospitable Jack Jardine, and have already been sent to the hotel and game stores and thence to the more particular enjoyment of those lovers of gamey flavor who frequent the headquarters of sportsmen who find a field of operations in Michigan. Duck are now very plentiful and the kill for a week last past has been such as set the blood tingling and made business cares irksome. C. A. Mack, of Detroit, has struck it rich on the plantation of a friend about thirty-five miles from Louisville, Ky., on the Short Line Railroad. The aforesaid plantation is literally alive with quail, but being a private preserve your readers who do not enjoy the acquaintance of the reigning baron will, I fear, be obliged to content themselves with a week's shooting there in imagination. How friend Banks would revel in it if he could snatch the time from looking after the substantial but sordid affairs of FOREST AND STREAM.

JUDITH BASIN.—One of our soldier correspondents sends these notes on Judith Basin:—

What days have I passed in that same "Judith Basin" in which Col. Pickett and Mr. Massiter were two years ago. On clear days one is able to "stand and measure the earth" from some of its points. The changing hues of the mountain sides at different hours of the day is enough to fill the soul of a poet with poetry. And then the fish and game—skis, mountain sheep, deer, antelope and all kinds of fowl. In the swift waters of its rivers the gamiest kind of trout. I say no more, but only hope that some one will go there that can tell "all about it, and how it is done." The best way to reach there is to go to Benton, via Missouri River, and there see Dennis Halpine. He will either go himself or furnish men that will, and see about horses and all that sort of thing. A moment ago I spoke of narrating facts. I leave one at yet. On the 31 of this month, being out of meat, I started out hunting, and on my way back to the hills I went across a bare alkali spot. On this spot I found a medium sized rattlesnake. Thinking to have a little sport, I pulled the ramrod out of my gun and commenced poking him. Snakes do hiss! for this fellow did so twice. *Sabe?* ARTHUR HAIGHT.

QUEBEC.—Montreal, Sept. 13th.—In company with friend C. A. Beatty, of Phillipsburg, P. Q., I spent the first two days of the open season at the mouth of the Missisquoi River, and in the surrounding marshes, where we bagged a few black duck, more snipe, less woodcock, and caught about forty bass (small-mouthed). My pleasure was somewhat dampened by our big-footed "Canadian" cook, who treated and broke my 13 ounce Scribner rod. I sent it for repairs to its maker at St. John, and received it back to-day as good as new. During the past week I have shot over most of the best ground and water up the Ottawa River as far as Buckingham, Quebec, but to little effect, as the "Pot Hunter" was ahead of me in August. We have plenty of game laws, but so far they are almost a cipher. Sept. 1st the grass and weeds along the small creeks in the Missisquoi marshes were trampled down by our dogs who, during August, had been running down the fatted ducks. I think I had bred there. If the directors of our game protection societies would take as much interest in enforcing the game laws as they do in getting up grand annual dinners, we might expect at least a portion of the laws put into effect. STANSTAD.

A PISTOL ATTACHMENT.—Waterville, N. Y., Sept. 13th.—On reading your article "Pistol Arms," in the FOREST AND STREAM, Sept. 10th, p. 1, I thought such a pistol, with your son's best recommendation, would my 13 ounce Scribner. Did it ever occur to me that in shooting a pistol the thumb of the right hand has nothing to do, and that it might play a very important part in that act. I presume not, but about a year since that idea made so strong an impression in the mind of my boy that he carried out the idea in actual experiment, applying one to a revolver, and with it he could beat all the gunners in our vicinity. It is simply a brace for the thumb. Just imagine about one-third of the bowl of a teaspoon placed on the side of a pistol, just at the right point to receive that ball of the thumb. That is, in short, the idea. The brace is so hinged, and attached to the hammer, that when the arm is discharged and the thumb taken off, the brace is folded up against the side of the pistol, and when cocked again the brace is thrown down ready to receive the thumb.

Now you have no idea how much firmer a grip can be obtained by a use of the thumb, thus, than without it. If such a pistol as you referred to is to be made, I should like to know the address of the party, to open a correspondence on the subject. R. S. B.

BUFFALO NOTES.—Sept. 20th.—Plover in large numbers are being shot on the river and lake beach in Canada. . . . James Rafferty, and a party of gentlemen from Wyoming County, leave this week for Iowa, where they will introduce themselves to the prairie chickens. . . . Blackbird shooting on Strawberry Island and in Cherry's marsh is affording plenty of sport for those who seek it. Alois Vincent has had his old game pipe straightened for the fun. William Christian and Henry A. Roy, of this city, and members of the Audubon Club, left for the far West last week for a two weeks' hunt. It will be their fault if they don't have good luck, as they have taken with them one of the best broken and stanchest dogs in the city, loaned them by his owner, John DeWolf, Esq.

PENNSYLVANIA NOTES.—A correspondent of the Germantown (Pa.) Telegraph, writing from Bellefonte, says that the work of the sports club there has resulted in an increase of game and fish. Deer, and black and grey squirrels are numerous this year; pheasants and partridges abundant in the Alleghenies, some distance from Bellefonte. The same paper says that black-bellied plover are more abundant this fall than for a number of years. They have made their appearance in large numbers in Chester County, where they have not been seen, except here and there a scattered bird or two, for over thirty

years. They seldom go so far from the seacoast. Of course they are always to be found at this season in lower Delaware, and portions of Maryland and New Jersey.

FIVE QUESTIONS ANSWERED.—Charleston, S. C., Sept. 20th.—Editor Forest and Stream:—1. Will you please settle the controversy (if you can) in regard to Dittmar powder? 2. Is it dangerous to life and limb? 3. Has any gun, beside that of Dr. Nash's, been burst by this powder? 4. Why has it not burst my gun? 5. Or others of reliable make?

Ans.—1. We have settled it. 2. You can judge for yourself. 3. Yes. See our editorial columns. 4. There is a special providence, which, according to the proverb, watches over children, blind men and fools. To these three must now be added a fourth: users of "Dittmar Sporting Powder." 5. Dr. Nash's gun was of reliable make for black powder. Please define "reliable" with reference to the Dittmar compound.
